[NASA-CR-160569] N80-21981
LIGHT AIRCRAFT
Medical considerations in light aircraft accidents
A80-32582
LIPID METABOLISM
Content of lipids in blood and tissues of animals during hypodynamia
[NASA-TM-76023] N80-21967
LIVER
Effect of syrepar and oxaphenamide on liver function in experimental hypokinesia
[NASA-TM-76011] N80-21973
LYMPH
Main trends in experimental morphological research in angiology and outlook for its development
[NASA-TM-75980] N80-21978

M

MAGNESIUM
Effect of space flight on sodium, copper, manganese and magnesium content in the skeletal bones
[NASA-TM-75506] N80-21025
MAN MACHINE SYSTEMS
Determination and elimination of low-frequency zero-level oscillations of an EKG during automated processing
A80-31633
Complex statistical analysis of the detection of the QRS complex --- in electrocardiography
A80-31634
Measurement of local indices of operator performance in the tracking mode
A80-31635
Recognition of EKG structural elements in an automated complex
A30-31636
Analog-digital converter for the ELKAR electrocardiograph
A80-31637
Design principles for a system of automated processing of cardiological data on the M-6000 computer
A80-31638
Research on new electronic display technologies
[AD-A079323] N80-21035
Advanced industrial robot control systems
[PB80-106396] N80-21986
MANGANESE
Effect of space flight on sodium, copper, manganese and magnesium content in the skeletal bones
[NASA-TM-75506] N80-21025
MARINE TRANSPORTATION
Marine traffic data of Chicago, Illinois and South Shore of Lake Michigan
[AD-A080060] N80-21979
MASKING
Influence of auditory fatigue on masked speech intelligibility
A80-31800
MATHEMATICAL MODELS
Influence of diastolic fibre orientation on the left ventricular power generation
A80-29685
Further observations on modelling of the cardiovascular function in the electrical model
A80-29687
MEDICAL EQUIPMENT
Development of a stereofluoroscopy system
[NASA-CR-160568] N80-21972
MEMBRANE STRUCTURES
Vibration of the basilar membrane in the mammalian cochlea
A80-31480
A theoretical basis for microwave and RF field effects on excitable cellular membranes
A80-32305
MEMORY
K-lines: A theory of memory
[AD-A078116] N80-21030

MENTAL PERFORMANCE
K-lines: A theory of memory
[AD-A078116] N80-21030
METABOLISM
Effect of hyperbaric oxygenation on carbohydrate metabolism protein synthesis in the myocardium during sustained hypodynamia
[NASA-TM-76012] N80-21974
MICROBIOLOGY
Effect of scenedesmus acuminatus green algae extracts on the development of Candida lipolytic yeast in gas condensate-containing media
[NASA-TM-76081] N80-21965
MICROWAVES
Influence of microwave irradiation on the resistance of rats to transversely applied g forces
A80-31446
Preliminary results of microwave effects on the central nervous system of a primate /Macaca mulatta/
A80-32595
Acute microwave irradiation with regard to a case recently monitored at Begin Hospital
A80-32600
The effect of variety and maturity on the quality of freeze-dried carrots. The effect of microwave blanching on the nutritional and textural quality of freeze-dried spinach
[NASA-CR-160567] N80-21982
MILITARY AVIATION
Liquid conditioned suit and its use in alleviating heat stress in military flying
A80-31584
MODULATION TRANSFER FUNCTION
MTF of the defocused optical system of the human eye for incoherent monochromatic light
A80-30673
MONOCHROMATIC RADIATION
MTF of the defocused optical system of the human eye for incoherent monochromatic light
A80-30673
MORPHOLOGY
Main trends in experimental morphological research in angiology and outlook for its development
[NASA-TM-75980] N80-21978
MORTALITY
Model for measuring the health impact from changing levels of ambient air pollution: Morbidity study
[PB80-107030] N80-21027
MOTION PERCEPTION
Dynamic vision under vibration and changes with curvature of transparencies
A80-31589
MOTION SICKNESS
Investigation of the predictive value of electronystagmograms /ENGs/ in professional-selection vestibulometry
A80-32235
MOTION SICKNESS DRUGS
Prophylaxis and treatment of seasickness
[NASA-TM-76108] N80-21024
MOUNTAIN INHABITANTS
Cardiac output at high altitude --- Russian book
A80-30434
MUSCLE RELAXANTS
Metabolism and activity of zoxazolamine in white rats during forced immobilization with and without hyperthermia
[NASA-TM-76074] N80-21968
MUSCULOSKELETAL SYSTEM
Effect of space flight on sodium, copper, manganese and magnesium content in the skeletal bones
[NASA-TM-75506] N80-21025
MYOCARDIAL INFARCTION
Diagnostic accuracy of the conventional 12-lead and the orthogonal Frank-lead electrocardiograms in detection of myocardial infarctions with classifiers using continuous and Bernoulli features
A80-30873
MYOCARDIUM
Influence of diastolic fibre orientation on the left ventricular power generation
A80-29685
Coagulating activity of the blood, vascular wall, and myocardium under hypodynamia conditions
[NASA-TM-76056] N80-21023
Effect of hyperbaric oxygenation on carbohydrate metabolism protein synthesis in the myocardium during sustained hypodynamia
[NASA-TM-76012] N80-21974

N

NEUROPHYSIOLOGY
The representation of colours in the cerebral cortex
A80-29421
Effects of motor patterns on water-soluble and membrane proteins and cholinesterase activity in subcellular fractions of rat brain tissue
[NASA-TM-76115] N80-21963
NOISE (SOUND)
Plasma cortisol levels and auditory functioning in humans exposed to short and prolonged durations of noise
N80-21018
NOISE INJURIES
An investigation of the effects of impulse noise exposure on man - Impulse noise with a relatively low peak level
A80-30854
NOISE POLLUTION
The influence of intermittent aircraft noise on sleep. II
A80-32584
NOISE REDUCTION
A psychoacoustic study of impulsive helicopter noise
A80-30813
Determination and elimination of low-frequency zero-level oscillations of an EKG during automated processing
A80-31633
NOISE TOLERANCE
An investigation of the effects of impulse noise exposure on man - Impulse noise with a relatively low peak level
A80-30854
NUCLEOTIDES
Effect of immobilization stress on the level of macroergic phosphates in the blood of rats
[NASA-TM-76021] N80-21959

O

OPERATOR PERFORMANCE
Measurement of local indices of operator performance in the tracking mode
A80-31635
OPERATORS (PERSONNEL)
Measurement of local indices of operator performance in the tracking mode
A80-31635
OPTICAL MEASUREMENT
MTF of the defocused optical system of the human eye for incoherent monochromatic light
A80-30673
ORTHOSTATIC TOLERANCE
Investigation of transitional characteristics of the equilibrium preservation system --- human vertical posture response during acceleration
A80-29909
OTOLOGY
Impedance measurement - Importance in otologic assessment of air flight personnel
A80-32592
OXYGEN CONSUMPTION
Changes of gas metabolism, gas homeostatis and tissue respiration in rats during prolonged hypokinesia
[NASA-TM-75982] N80-21966
Effect of hyperbaric oxygenation on carbohydrate metabolism protein synthesis in the myocardium during sustained hypodynamia
[NASA-TM-76012] N80-21974
OXYGEN METABOLISM
The circadian rhythm of aerobic efficiency
A80-32231
Changes of gas metabolism, gas homeostatis and tissue respiration in rats during prolonged hypokinesia
[NASA-TM-75982] N80-21966

OXYGEN TENSION
Determination of oxygen tension in the subcutaneous tissue of cosmonauts during the Salyut-6 mission
A80-30518

P

PATHOLOGICAL EFFECTS
Model for measuring the health impact from changing levels of ambient air pollution: Morbidity study
[PB80-107030] N80-21027

PATTERN RECOGNITION
Recognition of EKG structural elements in an automated complex
A80-31636

PHOTOCHEMICAL REACTIONS
Physical and chemical studies of chlorophyll in microemulsions
[COO-4452-001] N80-21969

PHYSICAL EXAMINATIONS
The application of echocardiography to the cardiological evaluation of flight personnel
A80-32586
Abdominal echotomography - Its place in the evaluation of flight personnel
A80-32587

PHYSICAL EXERCISE
Use of a cardioleader to monitor the heart rate of cosmonauts during physical exercises and under conditions of a low-pressure suit onboard Salyut 6
A80-30515
The circadian rhythm of aerobic efficiency
A80-32231
Effects of motor patterns on water-soluble and membrane proteins and cholinesterase activity in subcellular fractions of rat brain tissue
[NASA-TM-76115] N80-21963
Hazards of high altitude decompression sickness during falls in barometric pressure from 1 atm to a fraction thereof
[NASA-TM-76015] N80-21977
Principles for classification of work load for women
[NASA-TM-76084] N80-21983

PHYSICAL FITNESS
Reliability and information content of tests with cardioleader in cyclic types of sports
[NASA-TM-76090] N80-21975

PHYSIOLOGICAL EFFECTS
An investigation of the effects of impulse noise exposure on man - Impulse noise with a relatively low peak level
A80-30854
Acute microwave irradiation with regard to a case recently monitored at Begin Hospital
A80-32600
Plasma cortisol levels and auditory functioning in humans exposed to short and prolonged durations of noise
N80-21018
Effect of immobilization stress on the level of macroergic phosphates in the blood of rats
[NASA-TM-76021] N80-21959
Effects of immobilization articular cartilage: Autohistoradiographic findings with S35
[NASA-TM-76070] N80-21961
Effects of motor patterns on water-soluble and membrane proteins and cholinesterase activity in subcellular fractions of rat brain tissue
[NASA-TM-76115] N80-21963
The effects of restraint on uptake of radioactive sulfate in the salivary and gastric secretions of rats with pyloric ligation
[NASA-TM-76073] N80-21964
Changes of gas metabolism, gas homeostatis and tissue respiration in rats during prolonged hypokinesia
[NASA-TM-75982] N80-21966
Content of lipids in blood and tissues of animals during hypodynamia
[NASA-TM-76023] N80-21967
Age related changes in the bone tissue under conditions of hypokinesia
[NASA-TM-76019] N80-21971
Effect of syrepar and oxaphenamide on liver function in experimental hypokinesia
[NASA-TM-76011] N80-21973
Effect of hyperbaric oxygenation on carbohydrate metabolism protein synthesis in the myocardium during sustained hypodynamia
[NASA-TM-76012] N80-21974
Hazards of high altitude decompression sickness during falls in barometric pressure from 1 atm to a fraction thereof
[NASA-TM-76015] N80-21977
Main trends in experimental morphological research in angiology and outlook for its development
[NASA-TM-75980] N80-21978
Principles for classification of work load for women
[NASA-TM-76084] N80-21983

PHYSIOLOGICAL FACTORS
Aeromedical and physiologic aspects of fighter pilot selection and performance - Theoretical considerations
A80-31586

PHYSIOLOGICAL RESPONSES
Cardiac output at high altitude --- Russian book
A80-30434
A physical study of vibratory stress - Physiological interpretation - Importance in aircraft accidents
A80-32580
The influence of intermittent aircraft noise on sleep. II
A80-32584
Preliminary results of microwave effects on the central nervous system of a primate /Macaca mulatta/
A80-32595

PHYSIOLOGICAL TESTS
Procedures and facilities for studying the capacity for work of cosmonauts
A80-30514

PHYSIOLOGY
Design characteristics of an imitation system for the study of physiological processes on a digital computer
A80-31635

PILOT PERFORMANCE
Aeromedical and physiologic aspects of fighter pilot selection and performance - Theoretical considerations
A80-31586
Effects of alcohol on aircrew performance - A field study
A80-31588
The place of the psychological factor among the causes of aircraft accidents in general aviation
A80-32583
Summary of Department of Transportation/Federal Aviation Administration task force on crew workload report
[AD-A068189] N80-21032

PILOT SELECTION
Aeromedical and physiologic aspects of fighter pilot selection and performance - Theoretical considerations
A80-31586

PITCHING MOMENTS
Human comfort response to random motions with a dominant pitching motion
[NASA-CR-159140] N80-21034

PRESERVING
The effect of variety and maturity on the quality of freeze-dried carrots. The effect of microwave blanching on the nutritional and textural quality of freeze-dried spinach
[NASA-CR-160567] N80-21982

PRODUCTION ENGINEERING
Advanced industrial robot control systems
[PB80-106396] N80-21986

PROPHYLAXIS
Prophylaxis and treatment of seasickness
[NASA-TM-76108] N80-21024

PROPRIOCEPTION
Preservation of equilibrium in orthograde and inverted body positions
[NASA-TM-76112] N80-21976

PROTECTIVE CLOTHING
A study of agent-reactive fabrics for use in protective clothing
[AD-A079940] N80-21984

PSYCHOACOUSTICS
A psychoacoustic study of impulsive helicopter noise
A80-30813

The psychoacoustic effects of aircraft noise on sleep - An in situ study
A80-30815

PSYCHOLOGICAL FACTORS
Psycho-social aspects of aircraft accidents
A80-31591
The place of the psychological factor among the causes of aircraft accidents in general aviation
A80-32583

PSYCHOLOGICAL TESTS
The psychological experiments 'Self-interrogation' and 'Relaxation'
A80-30520

PSYCHOPHYSICS
MTF of the defocused optical system of the human eye for incoherent monochromatic light
A80-30673

PUBLIC HEALTH
Model for measuring the health impact from changing levels of ambient air pollution: Morbidity study
[PB80-107030] N80-21027

PULMONARY FUNCTIONS
Effect of gas-mixture density on the performance of the respiratory system
A80-32232

R

RADIATION DOSAGE
Changes in the rhythmicity of the cerebral bioelectric potentials of head-shielded rabbits subjected to roentgen irradiation of the body in the minimum lethal dose
A80-30456
Acute microwave irradiation with regard to a case recently monitored at Begin Hospital
A80-32600

RADIATION EFFECTS
Significance of blood flow in calculations of temperature in laser irradiated tissue
A80-29179
A theoretical basis for microwave and RF field effects on excitable cellular membranes
A80-32305
Preliminary results of microwave effects on the central nervous system of a primate /Macaca mulatta/
A80-32595
Absorption characteristics of prolate spheroidal model of man and animals at and near resonance frequency
[PB80-108293] N80-21028

RADIATION TOLERANCE
Influence of microwave irradiation on the resistance of rats to transversely applied g forces
A80-31446

RADIO COMMUNICATION
Marine traffic data of Chicago, Illinois and South Shore of Lake Michigan
[AD-A080060] N80-21979

RADIOBIOLOGY
Influence of microwave irradiation on the resistance of rats to transversely applied g forces
A80-31446
A theoretical basis for microwave and RF field effects on excitable cellular membranes
A80-32305
Fifth Working Conference (Space Biology) at the 21st Plenary Session of COSPAR
[NASA-TM-76107] N80-21017

REFLEXES
Visual learning and interhemispherical interaction
A80-30455

RELAXATION (PHYSIOLOGY)
The psychological experiments 'Self-interrogation' and 'Relaxation'
A80-30520

RENAL FUNCTION
Influence of longitudinal accelerations on fluid-electrolyte metabolism and renal function under conditions of immersion
A80-32230
Effect of normobaric hyperoxia on renal ammoniogenesis
A80-32594

RESEARCH AND DEVELOPMENT
Ballistocardiography - Past, present and future
A80-29677
Genesis of the sphygmogram from the kinetocardiogram
A80-29681

RESPIRATORY SYSTEM
Effect of gas-mixture density on the performance of the respiratory system
A80-32232

RETINAL IMAGES
Saccadic eye movements and body sway
A80-32414

RHYTHM (BIOLOGY)
Changes in the rhythmicity of the cerebral bioelectric potentials of head-shielded rabbits subjected to roentgen irradiation of the body in the minimum lethal dose
A80-30456.

RIDING QUALITY
Human comfort response to dominant random motions in longitudinal modes of aircraft motion
[NASA-CR-159186] N80-21033
Human comfort response to random motions with a dominant pitching motion
[NASA-CR-159140] N80-21034

ROBOTS
Advanced industrial robot control systems
[PB80-106396] N80-21986

ROTATING ENVIRONMENTS
Investigation of the predictive value of electronystagmograms /ENGs/ in professional-selection vestibulometry
A80-32235

S

SACCADIC EYE MOVEMENTS
Saccadic eye movements and body sway
A80-32414

SALYUT SPACE STATION
Medical research work onboard the Soyuz 30-Salyut 6 orbital laboratory
A80-30513
Determination of oxygen tension in the subcutaneous tissue of cosmonauts during the Salyut-6 mission
A80-30518

SCENEDESMUS
Effect of scenedesmus acuminatus green algae extracts on the development of Candida lipolytic yeast in gas condensate-containing media
[NASA-TM-76081] N80-21965

SEA ROUGHNESS
Prophylaxis and treatment of seasickness
[NASA-TM-76108] N80-21024

SEATS
Vibration transmission through different helicopter seat cushions
A80-32596

SECRETIONS
The effects of restraint on uptake of radioactive sulfate in the salivary and gastric secretions of rats with pyloric ligation
[NASA-TM-76073] N80-21964

SERVOMECHANISMS
Advanced industrial robot control systems
[PB80-106396] N80-21986

SHORT HAUL AIRCRAFT
Human comfort response to random motions with a dominant pitching motion
[NASA-CR-159140] N80-21034

SIGNAL DETECTION
Complex statistical analysis of the detection of the QRS complex --- in electrocardiography
A80-31634

SLEEP
The psychoacoustic effects of aircraft noise on sleep - An in situ study
A80-30815
Sleep pattern variation during adaptation to high-altitude hypoxia
A80-32234
The influence of intermittent aircraft noise on sleep. II
A80-32584

SOCIAL FACTORS
Psycho-social aspects of aircraft accidents
A80-31591

SODIUM
Effect of space flight on sodium, copper, manganese and magnesium content in the skeletal bones
[NASA-TM-75506] N80-21025
SOLAR ENERGY ABSORBERS
Physical and chemical studies of chlorophyll in microemulsions
[COO-4452-001] N80-21969
SOYUZ SPACECRAFT
Medical research work onboard the Soyuz 30-Salyut 6 orbital laboratory
A80-30513
SPACE FLIGHT
Effect of space flight on sodium, copper, manganese and magnesium content in the skeletal bones
[NASA-TM-75506] N80-21025
SPACE FLIGHT STRESS
Observation of the vestibular function during space flight
A80-30517
Determination of oxygen tension in the subcutaneous tissue of cosmonauts during the Salyut-6 mission
A80-30518
The psychological experiments 'Self-interrogation' and 'Relaxation'
A80-30520
Influence of microwave irradiation on the resistance of rats to transversely applied g forces
A80-31446
SPACE SUITS
Use of a cardioleader to monitor the heart rate of cosmonauts during physical exercises and under conditions of a low-pressure suit onboard Salyut 6
A80-30515
SPACEBORNE EXPERIMENTS
Fifth Working Conference (Space Biology) at the 21st Plenary Session of COSPAR
[NASA-TM-76107] N80-21017
SPACECRAFT CONTAMINATION
Guidelines for spacecraft cleanliness control
[ESA-PSS-51/QRA-23-ESTEC-ISS-1] N80-21985
SPACECRAFT ENVIRONMENTS
Testing evaluation of the electrochemical organic content analyzer
[NASA-CR-160569] N80-21981
SPECIFICATIONS
Guidelines for spacecraft cleanliness control
[ESA-PSS-51/QRA-23-ESTEC-ISS-1] N80-21985
SPEECH RECOGNITION
Influence of auditory fatigue on masked speech intelligibility
A80-31800
SPHYGMOGRAPHY
Clinical application of carotid electrosphygmography
A80-29680
Genesis of the sphygmogram from the kinetocardiogram
A80-29681
Sphygmographic assessment of arterial distensibility in patients at risk of degenerative arterial disease
A80-29682
Comparative examination of the pulse of both right and left carotid arteries
A80-29683
STATISTICAL ANALYSIS
Complex statistical analysis of the detection of the QRS complex --- in electrocardiography
A80-31634
STEREOSCOPY
Development of a stereofluoroscopy system
[NASA-CR-160568] N80-21972
STRESS (PHYSIOLOGY)
Adrenocortical response in rats subjected to a stress of restraint by immobilization whether accompanied by hypothermia or not
[NASA-TM-76119] N80-21015
Atherosclerotic changes of vessels caused by restriction of movement
[NASA-TM-76022] N80-21020
Effect of immobilization stress on the level of macroergic phosphates in the blood of rats
[NASA-TM-76021] N80-21959
Effects of immobilization articular cartilage: Autohistoradiographic findings with S35
[NASA-TM-76070] N80-21961
Effects of motor patterns on water-soluble and membrane proteins and cholinesterase activity in subcellular fractions of rat brain tissue
[NASA-TM-76115] N80-21963
The effects of restraint on uptake of radioactive sulfate in the salivary and gastric secretions of rats with pyloric ligation
[NASA-TM-76073] N80-21964
Changes of gas metabolism, gas homeostatis and tissue respiration in rats during prolonged hypokinesia
[NASA-TM-75982] N80-21966
Content of lipids in blood and tissues of animals during hypodynamia
[NASA-TM-76023] N80-21967
Age related changes in the bone tissue under conditions of hypokinesia
[NASA-TM-76019] N80-21971
Effect of syrepar and oxaphenamide on liver function in experimental hypokinesia
[NASA-TM-76011] N80-21973
Effect of hyperbaric oxygenation on carbohydrate metabolism protein synthesis in the myocardium during sustained hypodynamia
[NASA-TM-76012] N80-21974
Hazards of high altitude decompression sickness during falls in barometric pressure from 1 atm to a fraction thereof
[NASA-TM-76015] N80-21977
Main trends in experimental morphological research in angiology and outlook for its development
[NASA-TM-75980] N80-21978
STRUCTURAL VIBRATION
Vibration transmission through different helicopter seat cushions
A80-32596
SUBMERGING
Influence of longitudinal accelerations on fluid-electrolyte metabolism and renal function under conditions of immersion
A80-32230
Functional state of the cardiovascular system following a three-day immersion and prophylactic rotations in a small-radius centrifuge
A80-32233
SUITS
Liquid conditioned suit and its use in alleviating heat stress in military flying
A80-31584

T

TASK COMPLEXITY
Summary of Department of Transportation/Federal Aviation Administration task force on crew workload report
[AD-A068189] N80-21032
TASTE
Electrogustometric studies in orbital flight
A80-30516
TECHNOLOGY TRANSFER
Development of a stereofluoroscopy system
[NASA-CR-160568] N80-21972
TEMPERATURE EFFECTS
Liquid conditioned suit and its use in alleviating heat stress in military flying
A80-31584
THERMOREGULATION
Role of thyroxin in the thermoregulation of albino rats following cold acclimation
A80-31075
THORAX
Dynamic characteristics of the thorax connected with the heart action
A80-29686
THRESHOLDS (PERCEPTION)
Suprathreshold processing of complex visual stimuli - Evidence for linearity in contrast perception
A80-32413
THYROXINE
Role of thyroxin in the thermoregulation of albino rats following cold acclimation
A80-31075
TISSUES (BIOLOGY)
Significance of blood flow in calculations of temperature in laser irradiated tissue
A80-29179

Determination of oxygen tension in the subcutaneous tissue of cosmonauts during the Salyut-6 mission
A80-30518
Absorption characteristics of prolate spheroidal model of man and animals at and near resonance frequency
[PB80-108293] N80-21028
Formulation of a preliminary assessment of halogenated organic compounds in man and environmental media
[PB80-112170] N80-21029
Changes of gas metabolism, gas homeostatis and tissue respiration in rats during prolonged hypokinesia
[NASA-TM-75982] N80-21966

TOMOGRAPHY
Abdominal echotomography - Its place in the evaluation of flight personnel
A80-32587

TOXICOLOGY
The importance of toxicological studies in aircraft accidents
A80-32578

TRAFFIC
Marine traffic data of Chicago, Illinois and South Shore of Lake Michigan
[AD-A080060] N80-21979

TRANQUILIZERS
Effect of tranquilizers on animal resistance to the adequate stimuli of the vestubular apparatus
[NASA-TM-76109] N80-21960

U

ULCERS
Gastric ulcers affecting pilots of the Peruvian air force
A80-32599
Reduction of the duration of restraint for the production of experimental ulcers in rats: Application to the study of protective substances
[NASA-TM-76136] N80-21016

UROLOGY
Effect of normobaric hyperoxia on renal ammoniogenesis
A80-32594

V

VASCULAR SYSTEM
Coagulating activity of the blood, vascular wall, and myocardium under hypodynamia conditions
[NASA-TM-76056] N80-21023

VASOCONSTRICTION
An evaluation protocol for fighter aircrew with non specific ST-T abnormalities
A80-31585

VASODILATION
An evaluation protocol for fighter aircrew with non specific ST-T abnormalities
A80-31585

VEGETABLES
The effect of variety and maturity on the quality of freeze-dried carrots. The effect of microwave blanching on the nutritional and textural quality of freeze-dried spinach
[NASA-CR-160567] N80-21982

VEGETATION GROWTH
Effect of scenedesmus acuminatus green algae extracts on the development of Candida lipolytic yeast in gas condensate-containing media
[NASA-TM-76081] N80-21965

VERTICAL MOTION
Investigation of transitional characteristics of the equilibrium preservation system --- human vertical posture response during acceleration
A80-29909

VESTIBULAR NYSTAGMUS
Investigation of the predictive value of electronystagmograms /ENGs/ in professional-selection vestibulometry
A80-32235

VESTIBULAR TESTS
Investigation of the predictive value of electronystagmograms /ENGs/ in professional-selection vestibulometry
A80-32235

Glycerol test in diagnosing increased intralabyrinth pressure
[NASA-TM-76110] N80-21022

VESTIBULES
Observation of the vestibular function during space flight
A80-30517
Cold shivering activity after unilateral destruction of the vestibular apparatus
[NASA-TM-76099] N80-21021
Effect of tranquilizers on animal resistance to the adequate stimuli of the vestubular apparatus
[NASA-TM-76109] N80-21960

VIBRATION EFFECTS
Dynamic vision under vibration and changes with curvature of transparencies
A80-31589

VIBRATION MEASUREMENT
Use of double pulse holography for vibration analysis on a human ear in vivo
A80-29359
Dynamic characteristics of the thorax connected with the heart action
A80-29686

VIBRATION MODE
Vibration of the basilar membrane in the mammalian cochlea
A80-31480

VIBRATION TESTS
Vibration transmission through different helicopter seat cushions
A80-32596

VIBRATIONAL STRESS
A physical study of vibratory stress - Physiological interpretation - Importance in aircraft accidents
A80-32580

VISION
Considerations with regard to a test of the Essilor visiotest
A80-32585

VISUAL ACUITY
Dynamic vision under vibration and changes with curvature of transparencies
A80-31589

VISUAL DISCRIMINATION
Visual learning and interhemispherical interaction
A80-30455

VISUAL FIELDS
Central field of vision and electroculography in moderate hypoxia
A80-32588

VISUAL PERCEPTION
Visual learning and interhemispherical interaction
A80-30455
Flicker-induced asymmetries in border enhancement and the distinction between brightness and darkness systems
A80-30674
Suprathreshold processing of complex visual stimuli - Evidence for linearity in contrast perception
A80-32413
Study of pilot's sight direction on Mercure flight simulator
A80-32590

VISUAL STIMULI
Suprathreshold processing of complex visual stimuli - Evidence for linearity in contrast perception
A80-32413

W

WATER QUALITY
Testing evaluation of the electrochemical organic content analyzer
[NASA-CR-160569] N80-21981

WEIGHTLESSNESS
Use of a cardioleader to monitor the heart rate of cosmonauts during physical exercises and under conditions of a low-pressure suit onboard Salyut 6
A80-30515
Observation of the vestibular function during space flight
A80-30517

WINDSHIELDS
Dynamic vision under vibration and changes with curvature of transparencies
A80-31589
WORK CAPACITY
Procedures and facilities for studying the capacity for work of cosmonauts
A80-30514
The circadian rhythm of aerobic efficiency
A80-32231
WORKLOADS (PSYCHOPHYSIOLOGY)
Summary of Department of Transportation/Federal Aviation Administration task force on crew workload report
[AD-A068189] N80-21032
Principles for classification of work load for women
[NASA-TM-76084] N80-21983

X

X RAYS
Changes in the rhythmicity of the cerebral bioelectric potentials of head-shielded rabbits subjected to roentgen irradiation of the body in the minimum lethal dose
A80-30456

Y

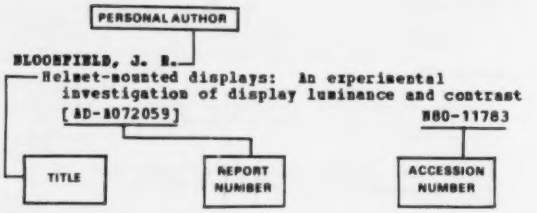
YEAST
Effect of scenedesmus acuminatus green algae extracts on the development of Candida lipolytic yeast in gas condensate-containing media
[NASA-TM-76081] N80-21965

blank page

PERSONAL AUTHOR INDEX

AEROSPACE MEDICINE AND BIOLOGY / *A Continuing Bibliography (Suppl. 208)* JULY 1980

Typical Personal Author Index Listing



PERSONAL AUTHOR
BLOOMFIELD, J. R.
Helmet-mounted displays: An experimental investigation of display luminance and contrast
[AD-A072059]
N80-11783
TITLE
REPORT NUMBER
ACCESSION NUMBER

The title of the document is used to provide the user with a brief description of the subject matter. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstract in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

A

ADAVAL, S. K.
An evaluation protocol for fighter aircrew with non specific ST-T abnormalities
A80-31585

AFANASENKO, N. E.
Determination and elimination of low-frequency zero-level oscillations of an EKG during automated processing
A80-31633

AKHTAR, M.
An evaluation protocol for fighter aircrew with non specific ST-T abnormalities
A80-31585

ALEKSANDROVA, E. A.
Influence of longitudinal accelerations on fluid-electrolyte metabolism and renal function under conditions of immersion
A80-32230

ALEKSINA, L. A.
Effects of hypokinesia and hypodynamia on the intraorganic arteries of the heart
[NASA-TM-76069] N80-21026

ALLEN, M. A.
The crew activity planning system bus interface unit
[NASA-CR-160566] N80-21980

ANDERSON, T.
Advanced industrial robot control systems
[PB80-106396] N80-21986

ANDREYEV, S. V.
Coagulating activity of the blood, vascular wall, and myocardium under hypodynamia conditions
[NASA-TM-76056] N80-21023

ANIKINA, A. Y.
On the cellular autoimmune mechanism for eliminating erythrocytes normally and under extreme influences
[NASA-TM-75735] N80-21014

AOSHIMA, K.
An investigation of the effects of impulse noise exposure on man - Impulse noise with a relatively low peak level
A80-30854

AUFFRET, R.
Medical considerations in light aircraft accidents
A80-32582

B

BABICH, V. M.
Vibration of the basilar membrane in the mammalian cochlea
A80-31480

BADES, T.
Effect of normobaric hyperoxia on renal ammoniogenesis
A80-32594

BANCROFT, W. H., JR.
Kinetocardiography - Past and present
A80-29679

BANNERJEE, P. K.
Liquid conditioned suit and its use in alleviating heat stress in military flying
A80-31584

BARANSKI, S.
Medical research work onboard the Soyuz 30-Salyut 6 orbital laboratory
A80-30513
Procedures and facilities for studying the capacity for work of cosmonauts
A80-30514
Use of a cardioleader to monitor the heart rate of cosmonauts during physical exercises and under conditions of a low-pressure suit onboard Salyut 6
A80-30515
Electrogustometric studies in orbital flight
A80-30516
Observation of the vestibular function during space flight
A80-30517
Determination of oxygen tension in the subcutaneous tissue of cosmonauts during the Salyut-6 mission
A80-30518
The psychological experiments 'Self-interrogation' and 'Relaxation'
A80-30520

BAUM, S. A.
Establishment of the repeatability of performance of the SA103C three year old child test dummies
[PB80-112204] N80-21036

BEECK, M.-A.
Use of double pulse holography for vibration analysis on a human ear in vivo
A80-29359

BENDER, J.
Advanced industrial robot control systems
[PB80-106396] N80-21986

BENNETTI, T. E.
Plasma cortisol levels and auditory functioning in humans exposed to short and prolonged durations of noise
N80-21018

BERG, E.
Advanced industrial robot control systems
[PB80-106396] N80-21986

BIKOV, I. I.
Initial dynamics of the EKG during an electrical defibrillation of the heart
[NASA-TM-76002] N80-21019

BILMES, B. I.
Effect of scenedesmus acuminatus green algae extracts on the development of Candida lipolytic yeast in gas condensate-containing media
[NASA-TM-76081] N80-21965

BLANC, P.
Considerations regarding sudden deafness - Aeronautical incidents
A80-32591

Impedance measurement - Importance in otologic assessment of air flight personnel A80-32592

BLOSZCZYNSKI, R.
Medical research work onboard the Soyuz 30-Salyut 6 orbital laboratory A80-30513
Procedures and facilities for studying the capacity for work of cosmonauts A80-30514
Use of a cardioleader to monitor the heart rate of cosmonauts during physical exercises and under conditions of a low-pressure suit onboard Salyut 6 A80-30515
Electrogustometric studies in orbital flight A80-30516
Observation of the vestibular function during space flight A80-30517
Determination of oxygen tension in the subcutaneous tissue of cosmonauts during the Salyut-6 mission A80-30518
The psychological experiments 'Self-interrogation' and 'Relaxation' A80-30520

BOISSIN, J. P.
On the feasibility of contact lenses for flight personnel A80-32589

BORREDON, P.
A physical study of vibratory stress - Physiological interpretation - Importance in aircraft accidents A80-32580

BORREDON, P. J.-P.
Investigation of the cardiac inotropic effect occurring at the onset of hypoxic hypoxia A80-32593

BOUR, L. J.
MTF of the defocused optical system of the human eye for incoherent monochromatic light A80-30673

BRESLAV, I. S.
Effect of gas-mixture density on the performance of the respiratory system A80-32232

BROWN, D.
Advanced industrial robot control systems
[PB80-106396] N80-21986

BUCHEL, L.
Adrenocortical response in rats subjected to a stress of restraint by immobilization whether accompanied by hypothermia or not
[NASA-TM-76119] N80-21015
Reduction of the duration of restraint for the production of experimental ulcers in rats: Application to the study of protective substances
[NASA-TM-76136] N80-21016
Metabolism and activity of zoxazolamine in white rats during forced immobilization with and without hyperthermia
[NASA-TM-76074] N80-21968

BUZUNOV, V. A.
Principles for classification of work load for women
[NASA-TM-76084] N80-21983

C

CAIN, C. A.
A theoretical basis for microwave and RF field effects on excitable cellular membranes A80-32305

CANNON, M. W.
Suprathreshold processing of complex visual stimuli - Evidence for linearity in contrast perception A80-32413

CARNOW, B. W.
Model for measuring the health impact from changing levels of ambient air pollution: Morbidity study
[PB80-107030] N80-21027

CHARTERS, R. H.
Marine traffic data of Chicago, Illinois and South Shore of Lake Michigan
[AD-A080060] N80-21979

CHAYVIALLE, J. A.
The effects of restraint on uptake of radioactive sulfate in the salivary and gastric secretions of rats with pyloric ligation
[NASA-TM-76073] N80-21964

CHAZOV, E. I.
Coagulating activity of the blood, vascular wall, and myocardium under hypodynamia conditions
[NASA-TM-76056] N80-21023

CHEBOTAREV, I. P.
Initial dynamics of the EKG during an electrical defibrillation of the heart
[NASA-TM-76002] N80-21019

CHEKAILO, M. A.
Design principles for a system of automated processing of cardiological data on the M-6000 computer A80-31638

CHERESHAROV, L.
Effects of motor patterns on water-soluble and membrane proteins and cholinesterase activity in subcellular fractions of rat brain tissue
[NASA-TM-76115] N80-21963

CHERNOMORETS, V. A.
Measurement of local indices of operator performance in the tracking mode A80-31635

CHERRY, J. J., III
Marine traffic data of Chicago, Illinois and South Shore of Lake Michigan
[AD-A080060] N80-21979

CHERTKOVA, E. S.
Fermentative activity of neutrophil leukocytes in rats under conditions of hypoxic hypoxia A80-30457

CHEVALERAUD, J.
Central field of vision and electroculography in moderate hypoxia A80-32588

CHEVALERAUD, J. P.
Considerations with regard to a test of the Essilor visiotest A80-32585

CHLEBUS, H.
Clinical application of carotid electrosphygmography A80-29680
Sphygmographic assessment of arterial distensibility in patients at risk of degenerative arterial disease A80-29682
Comparative examination of the pulse of both right and left carotid arteries A80-29683

CISWICKA-SZNAJDERMAN, M.
Sphygmographic assessment of arterial distensibility in patients at risk of degenerative arterial disease A80-29682

CONRAD, J.
Acute microwave irradiation with regard to a case recently monitored at Begin Hospital A80-32600

CUETO DUTHURBURU, A.
Gastric ulcers affecting pilots of the Peruvian air force A80-32599

D

DAMONGEOT, A.
A psychoacoustic study of impulsive helicopter noise A80-30813

DANIIAROV, S. B.
Cardiac output at high altitude A80-30434

DANILIN, V. P.
Sleep pattern variation during adaptation to high-altitude hypoxia A80-32234

DARNAUD, B.
Central field of vision and electroculography in moderate hypoxia A80-32588

DAVENPORT, R. J.
Testing evaluation of the electrochemical organic content analyzer
[NASA-CR-160569] N80-21981

DEKANOSIDZE, T. I.
Atherosclerotic changes of vessels caused by restriction of movement
[NASA-TM-76022] N80-21020

DELAHAYE, R. P.
Abdominal echotomography - Its place in the evaluation of flight personnel
A80-32587
Acute microwave irradiation with regard to a case recently monitored at Begin Hospital
A80-32600

DELCROIX, J. P.
The importance of toxicological studies in aircraft accidents
A80-32578

DESANTIS, E.
Effects of immobilization articular cartilage: Autohistoradiographic findings with S35
[NASA-TM-76070] N80-21961

DIGIOVANNI, C.
Effects of immobilization articular cartilage: Autohistoradiographic findings with S35
[NASA-TM-76070] N80-21961

DIGO, R. J.
The place of the psychological factor among the causes of aircraft accidents in general aviation
A80-32583

DOROKHOVA, B. R.
Influence of longitudinal accelerations on fluid-electrolyte metabolism and renal function under conditions of immersion
A80-32230

DOURY, P.
Acute microwave irradiation with regard to a case recently monitored at Begin Hospital
A80-32600

DRONIOU, J.
The application of echocardiography to the cardiological evaluation of flight personnel
A80-32586

DUBININA, L. G.
Investigation of the effect of space flight factors on chromosomes in seeds
[NASA-TM-76113] N80-21962

DURET, J. C.
The application of echocardiography to the cardiological evaluation of flight personnel
A80-32586

DZHAVAKHISHVILI, N. A.
Main trends in experimental morphological research in angiology and outlook for its development
[NASA-TM-75980] N80-21978

DZHUGAN, P. K.
Analog-digital converter for the ELKAR electrocardiograph
A80-31637

E

ECONOMOS, A. C.
Favorable effects of the antioxidants sodium and magnesium thiazolidine carboxylate on the vitality and life span of Drosophila and mice
A80-29085

EMRI, I.
Dynamic characteristics of the thorax connected with the heart action
A80-29686

ERICKSON, M. D.
Formulation of a preliminary assessment of halogenated organic compounds in man and environmental media
[PB80-112170] N80-21029

F

FARLEY, W. N.
Research on new electronic display technologies
[AD-A079323] N80-21035

FEDEROV, I. V.
Content of lipids in blood and tissues of animals during hypodynamia
[NASA-TM-76023] N80-21967

FEIGIN, G. V.
Changes in the rhythmicity of the cerebral bioelectric potentials of head-shielded rabbits subjected to roentgen irradiation of the body in the minimum lethal dose
A80-30456

FISCHLER, H.
Investigation of the cardiac inotropic effect occurring at the onset of hypoxic hypoxia
A80-32593

FLAGEAT, J.
Abdominal echotomography - Its place in the evaluation of flight personnel
A80-32587

FLOURNOY-GILL, Z.
Model for measuring the health impact from changing levels of ambient air pollution: Morbidity study
[PB80-107030] N80-21027

FRITZE, W.
Use of double pulse holography for vibration analysis on a human ear in vivo
A80-29359

G

GAGNEUX, J. M.
The psychoacoustic effects of aircraft noise on sleep - An in situ study
A80-30815

GALITSKII, A. K.
Design principles for a system of automated processing of cardiological data on the M-6000 computer
A80-31638

GALLAIRE, D.
Reduction of the duration of restraint for the production of experimental ulcers in rats: Application to the study of protective substances
[NASA-TM-76136] N80-21016

GALUSKO, Y. S.
Changes of gas metabolism, gas homeostatis and tissue respiration in rats during prolonged hypokinesia
[NASA-TM-75982] N80-21966

GENIN, A. M.
Hazards of high altitude decompression sickness during falls in barometric pressure from 1 atm to a fraction thereof
[NASA-TM-76015] N80-21977

GINSBURG, A. P.
Suprathreshold processing of complex visual stimuli - Evidence for linearity in contrast perception
A80-32413

GOEDHARD, W. J. A.
Ballistocardiography - Past, present and future
A80-29677

GRIGOREV, A. I.
Influence of longitudinal accelerations on fluid-electrolyte metabolism and renal function under conditions of immersion
A80-32230

GROUSSET, C.
Investigation of the cardiac inotropic effect occurring at the onset of hypoxic hypoxia
A80-32593

GUTMANN, J. C.
Research on new electronic display technologies
[AD-A079323] N80-21035

GVISHIANI, G. S.
Atherosclerotic changes of vessels caused by restriction of movement
[NASA-TM-76022] N80-21020

H

HAY, G. C.
Summary of Department of Transportation/Federal Aviation Administration task force on crew workload report
[AD-A068189] N80-21032

HERMASZEWSKI, M.
Medical research work onboard the Soyuz 30-Salyut 6 orbital laboratory
A80-30513
Procedures and facilities for studying the capacity for work of cosmonauts
A80-30514
Use of a cardioleader to monitor the heart rate of cosmonauts during physical exercises and under conditions of a low-pressure suit onboard Salyut 6
A80-30515
Electrogustometric studies in orbital flight
A80-30516

Observation of the vestibular function during space flight
A80-30517

Determination of oxygen tension in the subcutaneous tissue of cosmonauts during the Salyut-6 mission
A80-30518

The psychological experiments 'Self-interrogation' and 'Relaxation'
A80-30520

HIKICHI, T.
An investigation of the effects of impulse noise exposure on man - Impulse noise with a relatively low peak level
A80-30854

HIRAMATSU, S.
An investigation of the effects of impulse noise exposure on man - Impulse noise with a relatively low peak level
A80-30854

An investigation of the effects of impulse noise exposure on man - Impulse noise with a relatively low peak level
A80-30854

HOUSE, C. D.
Summary of Department of Transportation/Federal Aviation Administration task force on crew workload report
[AD-A068189] N80-21032

HOYLE, F.
The identification of the 3-micron spectral feature in galactic infrared sources
A80-30342

J

JAGODIC, A.
Further observations on modelling of the cardiovascular function in the electrical model
A80-29687

JAIN, U.
Diagnostic accuracy of the conventional 12-lead and the orthogonal Frank-lead electrocardiograms in detection of myocardial infarctions with classifiers using continuous and Bernoulli features
A80-30873

JERNIGAN, M. E.
Compensation for distortion in eye-movement monitors
A80-29178

JOHNSTON, P. A.
Influence of auditory fatigue on masked speech intelligibility
A80-31800

JUZNIC, G.
Noninvasive access to cardiovascular dynamics: Experimental and applied; Proceedings of the Eleventh European Congress on Ballistocardiography, Noninvasive Cardiography, and Cardiovascular Dynamics, Univerza v Ljubljani, Ljubljana, Yugoslavia, March 20-22, 1978
A80-29676

Genesis of the sphygmogram from the kinetocardiogram
A80-29681

Dynamic characteristics of the thorax connected with the heart action
A80-29686

Further observations on modelling of the cardiovascular function in the electrical model
A80-29687

K

KALACHEVA, E. L.
Effect of gas-mixture density on the performance of the respiratory system
A80-32232

KARAKASHYAN, A. N.
Principles for classification of work load for women
[NASA-TM-76084] N80-21983

KARAVAYEVA, N. N.
Effect of scenedesmus acuminatus green algae extracts on the development of Candida lipolytic yeast in gas condensate-containing media
[NASA-TM-76081] N80-21965

KARPALA, F.
Compensation for distortion in eye-movement monitors
A80-29178

KASYMOVA, G. A.
Effect of scenedesmus acuminatus green algae extracts on the development of Candida lipolytic yeast in gas condensate-containing media
[NASA-TM-76081] N80-21965

KENTERA, D.
Evaluation of the pulse contour method in beat-to-beat determination of the cardiac output in small laboratory animals
A80-29684

KENTON, E.
Signs and display systems: Graphic design and human engineering. A bibliography with abstracts
[PB80-803158] N80-21031

KHINCHIKASHVILI, N. V.
Effect of tranquilizers on animal resistance to the adequate stimuli of the vestubular apparatus
[NASA-TM-76109] N80-21960

KLEIN, M. J.
Preliminary results of microwave effects on the central nervous system of a primate /Macaca mulatta/
A80-32595

KLEITZ, C.
Abdominal echotomography - Its place in the evaluation of flight personnel
A80-32587

KOBAKHIDZE, N. G.
Atherosclerotic changes of vessels caused by restriction of movement
[NASA-TM-76022] N80-21020

KOLESNIK, A. G.
Effect of space flight on sodium, copper, manganese and magnesium content in the skeletal bones
[NASA-TM-75506] N80-21025

KOMISSAROVA, N. A.
Effect of space flight on sodium, copper, manganese and magnesium content in the skeletal bones
[NASA-TM-75506] N80-21025

KOVALENKO, Y. A.
Changes of gas metabolism, gas homeostatis and tissue respiration in rats during prolonged hypokinesia
[NASA-TM-75982] N80-21966

KOVTUN, V. P.
Express-diagnostic criteria of the cardiohemodynamic efficiency of juvenile athletes
A80-32216

KREITLOW, H.
Use of double pulse holography for vibration analysis on a human ear in vivo
A80-29359

KRIVOSHCHEKOV, S. G.
The circadian rhythm of aerobic efficiency
A80-32231

KUBICZKOVA, J.
Medical research work onboard the Soyuz 30-Salyut 6 orbital laboratory
A80-30513

Procedures and facilities for studying the capacity for work of cosmonauts
A80-30514

Use of a cardioleader to monitor the heart rate of cosmonauts during physical exercises and under conditions of a low-pressure suit onboard Salyut 6
A80-30515

Electrogustometric studies in orbital flight
A80-30516

Observation of the vestibular function during space flight
A80-30517

Determination of oxygen tension in the subcutaneous tissue of cosmonauts during the Salyut-6 mission
A80-30518

The psychological experiments 'Self-interrogation' and 'Relaxation'
A80-30520

KULIKOVA, M. V.
Glycerol test in diagnosing increased intralabyrinth pressure
[NASA-TM-76110] N80-21022

KUBAN, V.
Psycho-social aspects of aircraft accidents
A80-31591

KUNZRU, G. N.
An evaluation protocol for fighter aircrew with non specific ST-T abnormalities
A80-31585

KUZMINA, G. I.
Cold shivering activity after unilateral destruction of the vestibular apparatus
[NASA-TM-76099] N80-21021

L

LAMBERT, E.
The effects of restraint on uptake of radioactive sulfate in the salivary and gastric secretions of rats with pyloric ligation
[NASA-TM-76073] N80-21964

LANDUKHOVA, E. F.
Sleep pattern variation during adaptation to high-altitude hypoxia
A80-32234

LAVERNHE, J.
Medical considerations in light aircraft accidents
A80-32582
The place of the psychological factor among the causes of aircraft accidents in general aviation
A80-32583

LEE, H.
Absorption characteristics of prolate spheroidal model of man and animals at and near resonance frequency
[PB80-108293] N80-21028

LEIBOWITZ, H. W.
Saccadic eye movements and body sway
A80-32414

LIBIAN, L.
Adrenocortical response in rats subjected to a stress of restraint by immobilization whether accompanied by hypothermia or not
[NASA-TM-76119] N80-21015

LIENHARD, F.
Investigation of the cardiac inotropic effect occurring at the onset of hypoxic hypoxia
A80-32593

LIENHART, H.
Considerations regarding sudden deafness - Aeronautical incidents
A80-32591
Impedance measurement - Importance in otologic assessment of air flight personnel
A80-32592

LIMAR, D. Y.
Glycerol test in diagnosing increased intralabyrinth pressure
[NASA-TM-76110] N80-21022

LIN, C. S.
Advanced industrial robot control systems
[PB80-106396] N80-21986

LOBOVA, T. M.
Content of lipids in blood and tissues of animals during hypodynamia
[NASA-TM-76023] N80-21967

LUH, J.
Advanced industrial robot control systems
[PB80-106396] N80-21986

LYSENKO, IU. V.
Investigation of the predictive value of electronystagmograms /ENGs/ in professional-selection vestibulometry
A80-32235

M

MACKAY, R. A.
Physical and chemical studies of chlorophyll in microemulsions
[COO-4452-001] N80-21969

MAILLE, M.
Considerations with regard to a test of the Essilor visiotest
A80-32585

MAILYAN, E. S.
Changes of gas metabolism, gas homeostatis and tissue respiration in rats during prolonged hypokinesia
[NASA-TM-75982] N80-21966

MAKAROV, G. A.
Effect of hyperbaric oxygenation on carbohydrate metabolism protein synthesis in the myocardium during sustained hypodynamia
[NASA-TM-76012] N80-21974

MAKASHVILI, M. A.
Visual learning and interhemispherical interaction
A80-30455

MAKEEV, S. M.
Complex statistical analysis of the detection of the QRS complex
A80-31634

MAKSIMOVICH, Y. B.
Effect of tranquilizers on animal resistance to the adequate stimuli of the vestubular apparatus
[NASA-TM-76109] N80-21960

MALKIN, V. B.
Sleep pattern variation during adaptation to high-altitude hypoxia
A80-32234

MAMASAKHLISOV, G. V.
Investigation of transitional characteristics of the equilibrium preservation system
A80-29909

MARIN, M.
Investigation of the cardiac inotropic effect occurring at the onset of hypoxic hypoxia
A80-32593

MARTENS, W. L.
Influence of auditory fatigue on masked speech intelligibility
A80-31800

MASLOVA, E. M.
Recognition of EKG structural elements in an automated complex
A80-31636
Design principles for a system of automated processing of cardiological data on the M-6000 computer
A80-31638

MASSARD, J.-D.
Investigation of the cardiac inotropic effect occurring at the onset of hypoxic hypoxia
A80-32593

MCHEDLISHVILI, M. G.
Atherosclerotic changes of vessels caused by restriction of movement

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

CALIFORNIA
University of California, Berkeley
COLORADO
University of Colorado, Boulder
DISTRICT OF COLUMBIA
Library of Congress
GEORGIA
Georgia Institute of Technology, Atlanta
ILLINOIS
The John Crerar Library, Chicago
MASSACHUSETTS
Massachusetts Institute of Technology, Cambridge
MISSOURI
Linda Hall Library, Kansas City
NEW YORK
Columbia University, New York
OKLAHOMA
University of Oklahoma, Bizzell Library
PENNSYLVANIA
Carnegie Library of Pittsburgh
WASHINGTON
University of Washington, Seattle

NASA publications (those indicated by an "*" following the accession number) are also received by the following public and free libraries:

CALIFORNIA
Los Angeles Public Library
San Diego Public Library
COLORADO
Denver Public Library
CONNECTICUT
Hartford Public Library
MARYLAND
Enoch Pratt Free Library, Baltimore
MASSACHUSETTS
Boston Public Library
MICHIGAN
Detroit Public Library
MINNESOTA
Minneapolis Public Library
MISSOURI
Kansas City Public Library
St. Louis Public Library
NEW JERSEY
Trenton Public Library
NEW YORK
Brooklyn Public Library
Buffalo and Erie County Public Library
Rochester Public Library
New York Public Library
OHIO
Akron Public Library
Cincinnati Public Library
Cleveland Public Library
Dayton Public Library
Toledo Public Library
TENNESSEE
Memphis Public Library
TEXAS
Dallas Public Library
Fort Worth Public Library
WASHINGTON
Seattle Public Library
WISCONSIN
Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols "#" and "*", from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

AEROSPACE MEDICINE AND BIOLOGY

A CONTINUING BIBLIOGRAPHY WITH INDEXES

(Supplement 209)

A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in July 1980 in

- *Scientific and Technical Aerospace Reports (STAR)*
- *International Aerospace Abstracts (IAA).*

Scientific and Technical Information Branch 1980
National Aeronautics and Space Administration
Washington, DC

NASA SP-7011 and its supplements are available from the National Technical Information Service (NTIS). Questions on the availability of the predecessor publications, Aerospace Medicine and Biology (Volumes I - XI) should be directed to NTIS.

This Supplement is available from the National Technical Information Service (NTIS), Springfield, Virginia 22161, at the price $7.00 domestic; $14.00 foreign.

INTRODUCTION

This Supplement to *Aerospace Medicine and Biology* (NASA SP-7011) lists 169 reports, articles and other documents announced during July 1980 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*. The first issue of the bibliography was published in July 1964; since that time, monthly supplements have been issued.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the earth's atmosphere or in interplanetary space. References describing similar effects of biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis is placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion.

Each entry in the bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged in two major sections: *IAA Entries* and *STAR Entries*, in that order. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR*, including the original accession numbers from the respective announcement journals. This procedure, which saves time and money, accounts for the slight variation in citation appearances.

Two indexes -- subject and personal author -- are included.

An annual index will be prepared at the end of the calendar year covering all documents listed in the 1980 Supplements.

AVAILABILITY OF CITED PUBLICATIONS

IAA ENTRIES (A80-10000 Series)

All publications abstracted in this Section are available from the Technical Information Service, American Institute of Aeronautics and Astronautics, Inc. (AIAA), as follows: Paper copies of accessions are available at $7.00 per document up to a maximum of 40 pages. The charge for each additional page is $0.25. Microfiche(1) of documents announced in *IAA* are available at the rate of $3.00 per microfiche on demand, and at the rate of $1.25 per microfiche for standing orders for all *IAA* microfiche. The price for the *IAA* microfiche by category is available at the rate of $1.50 per microfiche plus a $1.00 service charge per category per issue. Microfiche of all the current AIAA Meeting Papers are available on a standing order basis at the rate of $1.50 per microfiche.

Minimum air-mail postage to foreign countries is $1.00 and all foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to AIAA Technical Information Service. Please refer to the accession number when requesting publications.

STAR ENTRIES (N80-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code followed by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page vii.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard $3.50 price, for those documents identified by a # symbol.)

---

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size, containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction).

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Documents Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free.

Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

SUBSCRIPTION AVAILABILITY

This publication is available on subscription from the National Technical Information Service (NTIS). The annual subscription rate for the monthly supplements, excluding the annual cumulative index, is $65.00 domestic; $130.00 foreign. All questions relating to the subscriptions should be referred to NTIS.

Two electrochemical depolarized carbon dioxide concentrator subsystems were evaluated against baseline lithium hydroxide for (1) the baseline orbiter when expanded to accommodate a crew of seven (mission option one), (2) an extended duration orbiter with a power extension package to reduce fuel cell expendables (mission option two), and (3) an extended duration orbiter with a full capability power module to eliminate fuel cell expendables (mission option three). The electrochemical depolarized carbon dioxide concentrator was also compared to the solid amine regenerable carbon dioxide removal concept. Water recovery is not required for Mission Option One since sufficient water is generated by the fuel cells. The vapor compression distillation subsystem was evaluated for mission option two and three only. Weight savings attainable using the vapor compression distillation subsystem for water recovery versus on-board water storage were determined. Combined carbon dioxide removal and water recovery was evaluated to determine the effect on regenerable carbon dioxide removal subsystem selection. R.E.S.

A80-12230 * **Soil stabilization by a prokaryotic desert crust - Implications for Precambrian land biota.** S. E. Campbell (Boston University, Boston, Mass.), *Origins of Life*, vol. 9, Sept. 1979, p. 335-348. 24 refs. NSF Grants No. GA-43391; No. EAR-76-84233; No. EAR-76-84233-A01; Grant No. NsG-7588.

The ecology of the cyanophyte-dominated stromatolitic mat forming the ground cover over desert areas of Utah and Colorado is investigated and implications for the formation of mature Precambrian soils are discussed. The activation of the growth of the two species of filamentous cyanophyte identified and the mobility of their multiple trichromes upon wetting are observed, accompanied by the production and deposition of a sheath capable of accreting and stabilizing sand and clay particles. The formation of calcium carbonate precipitates upon the repeated wetting and drying of desert crust is noted, and it is suggested that the desert crust community may appear in fossil calcrete deposits as lithified microscopic tubes and cellular remains of algal trichromes. The invasion of dry land by both marine and freshwater algae on the model of the desert crust is proposed to be responsible for the accumulation, stabilization and biogenic modification of mature Precambrian soils. A.L.W.

AEROSPACE MEDICINE AND BIOLOGY

A Continuing Bibliography (Suppl. 209)

AUGUST 1980

IAA ENTRIES

A80-32685 **Origin of life - Consideration of alternatives to proteins and nucleic acids.** G. L. Nelsestuen (Minnesota, University, St. Paul, Minn.). *Journal of Molecular Evolution*, vol. 15, Mar. 1980, p. 59-72. 24 refs. Grant No. NIH-HL-15728.

Starting with relatively simple, nonhydrolyzable compounds in aqueous solution, entirely spontaneous condensations give rise to polymers that contain purines, pyrimidines, amino acids, coenzymes, lipid components and even phosphate. The presence of certain lipid micelles allows significant product formation at millimolar substrate concentrations. The first step involves formation of a Michael adduct from alpha-beta-unsaturated carbonyl compounds and various nucleophiles. Polymerization of these adducts occurs via sequential Knoevenagel condensations. All reactions take place readily at temperatures below 45 C. The polymers can act as macromolecular catalysts as evidenced by hydrolytic activity. The purines and pyrimidines in the polymers appear to be capable of both base pairing and stacking interactions with ribonucleic acids. Specific examples of potential alternatives to base pairing are presented. These results are discussed from the standpoint of the spontaneous development of reproducing molecules. Proteins and nucleic acids may be evolutionary developments which have displaced earlier biopolymers. (Author)

A80-32748 * **Role of thermal and exercise factors in the mechanism of hypervolemia.** V. A. Convertino, J. E. Greenleaf, and E. M. Bernauer (NASA, Ames Research Center, Biomedical Research Div., Moffett Field, Calif.). *Journal of Applied Physiology: Respiratory Environmental and Exercise Physiology*, vol. 48, Apr. 1980, p. 657-664. 40 refs.

The present study was undertaken to determine whether the chronic increase in plasma volume, resulting from heat exposure and exercise training, was due only to elevated rectal temperature or whether there were additional nonthermal factors related to the exercise. The study was conducted on eight volunteer, healthy, moderately trained male college subjects (18-26 yr). Exercise-induced hypervolemia was associated with thermal factor(s) that contributed 40% and nonthermal factors that accounted for the remaining 60%. In addition, some nonthermal, exercise-induced factors were twofold increases in plasma osmotic and vasopressin levels during exercise, and a fivefold increase in resting plasma protein content. S.D.

A80-32749 * **Exercise training-induced hypervolemia - Role of plasma albumin, renin, and vasopressin.** V. A. Convertino, P. J. Brock, L. C. Keil, E. M. Bernauer, and J. E. Greenleaf (NASA, Ames Research Center, Biomedical Research Div., Moffett Field, Calif.). *Journal of Applied Physiology: Respiratory Environmental and Exercise Physiology*, vol. 48, Apr. 1980, p. 665-669. 32 refs.

The purpose of the present study was twofold: (1) to determine the rate of induction and decay of exercise-training hypervolemia with a short-duration high-intensity training regimen; and (2) to assess the protein, osmotic, and endocrine responses that contribute to that mechanism. The test subjects were eight volunteer, healthy, trained college men (20-22 yr) engaged in isotonic exercise on a bicycle ergometer. Factors associated with plasma hypervolemia during training are identified. The results suggest that an efficient procedure for increasing plasma volume is the daily performance of high-intensity isotonic leg exercise for 2 h/day. S.D.

A80-32750 **Control of skin blood flow during exercise by thermal reflexes and baroreflexes.** M. F. Roberts (John B. Pierce Foundation Laboratory, New Haven, Conn.) and C. B. Wenger (Yale University, New Haven, Conn.). *Journal of Applied Physiology: Respiratory Environmental and Exercise Physiology*, vol. 48, Apr. 1980, p. 717-723. 32 refs. Grants No. NIH-HL-17732; No. NIH-HL-20634; No. NIH-ES-00354.

An experimental study was carried out on four healthy male subjects to assess the relationship between forearm blood flow, internal temperature, and cardiac stroke volume during supine and upright exercise at cool to hot ambient temperatures. The objective was to determine how vasodilator reflexes responsive to increased body temperature interact with vasoconstrictor reflexes responsive to impaired cardiac filling. The reduced stroke volume during upright exercise in the heat shows that gravity compounds the effect of cutaneous venodilation by allowing blood to pool in dependent limbs and thus impairing cardiac filling. The proportionality between reduced stroke volume and reduced forearm blood flow suggests that the reduction in blood flow may be mediated by cardiopulmonary baroreflexes which are activated by reduced cardiac filling pressure. S.D.

A80-32751 * **Excursion of vibrating microelectrodes in tissue.** E. W. Kanabus, C. Feldstein, and D. W. Crawford (California Institute of Technology, Jet Propulsion Laboratory, Pasadena; Southern California University, Los Angeles, Calif.). *Journal of Applied Physiology: Respiratory Environmental and Exercise Physiology*, vol. 48, Apr. 1980, p. 737-741. 7 refs. Grants No. NIH-HL-14138; No. NIH-HL-18969.

The paper deals with a vibrating microelectrode holder consisting of a support rod attached to the cone of a miniature loudspeaker. This holder facilitates a microelectrode penetration into arterial wall tissue, eliminates surface dimpling, and relieves polarographic artifacts believed to be due to tissue compression. The paper presents construction and performance details of the electrode holder, and evaluates the extent of possible damage incurred during such vibration by measuring electrode motion relative to surrounding tissue in an excised segment of femoral artery in the rabbit. It is concluded that under proper vibratory conditions microelectrodes can be easily inserted into the arterial wall with minimum tissue disturbance. S.D.

A80-32833 * **Temperature and frequency dependence of ultrasonic attenuation in selected tissues.** P. M. Gammell, D. H. L. Croissette (California Institute of Technology, Jet Propulsion Laboratory, Pasadena; Southern California, University, Los Angeles, Calif.), and R. C. Heyser (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, Calif.). *Ultrasound in Medicine and Biology*, vol. 5, 1979, p. 269-277. 29 refs. NSF Grant No. APR-75-17388.

Ultrasonic attenuation over the frequency range of 1.5-10 MHz has been measured as a function of temperature for porcine liver, backfat, kidney and spleen as well as for a single specimen of human liver. The attenuation in these excised specimens increases nearly linearly with frequency. Over the temperature range of approximately 4-37 C the attenuation decreases with increasing temperature for most soft tissue studied. (Author)

A80-32835 * **Wipe-rinse technique for quantitating microbial contamination on large surfaces.** L. E. Kirschner and J. R. Puleo (California Institute of Technology, Jet Propulsion Laboratory, Planetary Protection Laboratory, Cape Canaveral, Fla.). *Applied and Environmental Microbiology*, vol. 38, Sept. 1979, p. 466-470. 22 refs. Contract No. NAS7-100.

The evaluation of an improved wipe-rinse technique for the bioassay of large areas was undertaken due to inherent inadequacies in the cotton swab-rinse technique to which assay of spacecraft is currently restricted. Four types of contamination control cloths were initially tested. A polyester-bonded cloth (PBC) was selected for further evaluation because of its superior efficiency and handling characteristics. Results from comparative tests with PBC and cotton swabs on simulated spacecraft surfaces indicated a significantly higher recovery efficiency for the PBC than for the cotton (90.4 versus 75.2%). Of the sampling area sites studied, PBC was found to be most effective on surface areas not exceeding 0.74 sq m (8.0 sq ft). (Author)

A80-32836 **The psychophysics of sensory systems (Psikhofizika sensornykh sistem).** Edited by B. F. Lomov and Iu. M. Zabrodin. Moscow, Izdatel'stvo Nauka, 1979. 200 p. In Russian.

The present collection of papers is concerned with the latest trends in psychophysical research, experimental techniques and procedures, and the findings of specific studies. Papers are presented on the dynamic aspects of signal detection, detection threshold variance and its causes, physiological premises of the laws of psychophysics, and regulation of sensory perception in psychiatric subjects. V.L.

A80-32837 # **Dynamic aspects of detection (Dinamicheskie aspekty protsessa obnaruzheniia).** Iu. M. Zabrodin, V. N. Nosulenko, and A. P. Pakhomov. In: The psychophysics of sensory systems. Moscow, Izdatel'stvo Nauka, 1979, p. 9-46. 27 refs. In Russian.

The dynamic aspects of sensory processes are discussed with reference to signal detection. The instabilities of the sensory image and decision-making processes associated with signal detection are investigated by a number of the existing theoretical and experimental tools of modern psychophysics. Guidelines for future studies of sensory phenomena by a dynamic systems approach are suggested. V.L.

A80-32838 # **Detection threshold variance and its causes (Variativnost' porogov obnaruzheniia i ee prichiny).** E. Z. Frishman. In: The psychophysics of sensory systems. Moscow, Izdatel'stvo Nauka, 1979, p. 46-64. 73 refs. In Russian.

The dynamics of signal detection threshold is discussed in relation to introversion and extroversion, arousal, habituation, and drug administration. Since detection thresholds are found to depend on many variables, it is suggested that the threshold dynamics might provide a more adequate way of subject characterization. It is shown that in order to correctly define the mechanisms of the subject responses, the psychophysical threshold measurements must be combined with the concepts of signal detection theory. V.L.

A80-32839 # **Detection and recognition of pure tones in noise (Obnaruzhenie i raspoznavanie chistykh tonov v shume).** D. M. Green, D. Veber, and D. Dunkan. In: The psychophysics of sensory systems. Moscow, Izdatel'stvo Nauka, 1979, p. 64-80. 6 refs. In Russian.

A new theorem which relates signal recognition to signal detection is investigated experimentally to verify its validity. In the experiment, the subjects, after 3 to 5 days of training, were to detect and identify acoustic signals of 500, 1100, 1900, and 2700 Hz against a continuous noise background of 46 dB. Experimental results are found to be in reasonably good agreement with the expected probability of correct signal identification predicted by the recognition theorem. V.L.

A80-32840 # **A review of advances in modern psychophysics /Strategies in psychophysical analyses/ (Obzor dostizhenii v sovremennoi psikhofizike /Strategii v psikhofizicheskikh analizakh/).** H.-G. Geissler. In: The psychophysics of sensory systems. Moscow, Izdatel'stvo Nauka, 1979, p. 81-94. 75 refs. In Russian.

The paper reviews general trends in modern psychophysics with particular reference to the systems approach in psychophysical analysis, systems analysis in formal generalization of discrete structures, and relations between the physical reality and mental experiences. The following features of the system approach in psychophysics are emphasized: the use of multivariate empirical relations between the input and the output, identification and decomposition of subsystems, and the use of heuristic rating criteria in identification and decomposition. V.L.

A80-32841 # **Physiological premises of the laws of psychophysics (Fiziologicheskie predposylki zakonov psikhofiziki).** A. N. Lebedev, B. G. Bovin, A. V. Pasynkova, V. A. Sadov, and Iu. A. Shpatenko. In: The psychophysics of sensory systems. Moscow, Izdatel'stvo Nauka, 1979, p. 94-106. 5 refs. In Russian.

Perceptual processes and memory are studied in relation to the bioelectric activity of the brain. It is suggested that during the process of perception the signals are transformed into oscillatory systems consisting of wave sequences. The wave sequences are characterized by definite combinations of phase and period which are determined by the neuron activity fluctuations. The mechanisms whereby the signals transmitted by the receptors are matched against the signals stored in the memory are investigated. Experimental results are presented. V.L.

A80-32842 # **Possible sources of false-alarm responses and psychophysiological optimization mechanisms of weak-signal detection (Vozmozhnye istochniki reaktsii lozhnoi trevogi i psikhofiziologicheskie mekhanizmy optimizatsii protsessa obnaruzheniia slabykh signalov).** N. I. Chuprikova. In: The psychophysics of sensory systems. Moscow, Izdatel'stvo Nauka, 1979, p. 121-128. 9 refs. In Russian.

A80-32843 # **Accuracy of perception in the tracking of continuous signals (O kharakteristikakh tochnosti vospriiatiia pri slezhenii za nepreryvnymi signalami).** A. P. Chernyshev and V. G. Zazykin. In: The psychophysics of sensory systems. Moscow, Izdatel'stvo Nauka, 1979, p. 189-198. 14 refs. In Russian.

A80-32846 # **Assessment of physical working capacity in clinic and athletics (Opredelenie fizicheskoi rabotosposobnosti v klinike i sporte).** I. V. Aulik. Moscow, Izdatel'stvo Meditsina, 1979. 192 p. 114 refs. In Russian.

The monograph outlines methods of using graded physical exercises for the diagnosis of the status of practically healthy persons, patients, and athletes. The concepts of 'health' and 'physical working capacity' are discussed. The necessity of assessing the so-called dynamic health is stressed. An original method of quantitative evaluation of physical working capacity in clinic and athletics is proposed. A review of literature regarding the influence of hypokinesia on one's health condition is given. A methodology is presented for assessing selected indicators of physical working capacity. Attention is given to methods of evaluating the working capacity of children and juveniles, as well as patients and convalescents. Basic principles of maintaining and enhancing physical working capacity are briefly outlined. In particular, physiological essentials of motor tests are briefly described. S.D.

A80-32854 # **Social and psychological problems of extended space missions.** B. J. Bluth (California State University, Northridge, Calif.). *American Institute of Aeronautics and Astronautics, International Meeting and Technical Display on Global Technology 2000, Baltimore, Md., May 6-8, 1980, Paper 80-0826.* 8 p. 37 refs.

As space missions become longer and more routine, the socio/psychological factors become more significant. Russian experiences with difficulties in the area of socio/psychological problems in long duration space flight are noted which point to critical areas that impinge on safety and mission effectiveness. These include communication distortion, interpersonal hostility, and mixed nationality crew misunderstanding and disharmony. Recent reports from the National Transportation Safety Board on aircraft accidents show lack of assertiveness can be a major factor in flight accidents, and work with groups in isolation and confinement raises important questions related to authority systems, sexually mixed crews, and means of crew selection. Optimization of safety and crew effectiveness on long duration space missions requires carefully researched, designed, and tested training and organizational systems. (Author)

A80-32973 **Effects of spatial parameters on the perceptual organization of a bistable motion display.** A. J. Pantle and J. T. Petersik (Miami University, Oxford, Ohio). *Perception and Psychophysics,* vol. 27, no. 4, Apr. 1980, p. 307-312. 14 refs. Contract No. F33615-76-C-5006.

In a dynamic visual display which consisted of two alternating frames, each with three line elements, the individual elements which possessed a high degree of spatial correspondence from one frame to the next were paired perceptually and moved about locally. Any remaining elements moved independently and followed different movement rules. When there was no high degree of spatial correspondence of any elements across frames, or when the interval of time between frames was long, the elements behaved as a perceptual unit and moved about as a group. The local pairings and movements appeared to be mediated by a process with different functional characteristics from those of the process which mediated the wholistic movement of the elements as a group. (Author)

A80-32974 **Static and dynamic factors in the perception of rotary motion.** M. L. Braunstein and K. R. Stern (California, University, Irvine, Calif.). *Perception and Psychophysics,* vol. 27, no. 4, Apr. 1980, p. 313-320. 14 refs. NSF Grant No. BNS-76-81499.

Direction of rotation and static slant judgments were collected for a series of outline plane forms in four experiments with 106 subjects. Direction was judged more accurately for forms displaying the same perspective gradients as trapezoids, but with right-angled contours, than for trapezoids. There was no consistent differences among these forms in judged slant. Direction of rotation judgments were affected by a static false interposition cue, with interposition increasing the proportion of veridical judgments when placed in conflict with a relative size gradient and decreasing this proportion when a size gradient was absent. Both a dynamic factor (contour angle change) and a static factor (misperceived relative distance of the vertical sides) were found to affect perceived direction of rotation, with direction judgments based primarily on the dynamic factor. (Author)

A80-32976 **Psychological problems of space flight (Psikhologicheskie problemy kosmicheskikh poletov).** Edited by B. F. Lomov and N. D. Samsonov. Moscow, Izdatel'stvo Nauka, 1979. 240 p. In Russian.

Papers based on investigations and cosmonaut observation are presented concerning the psychological aspects of manned space flight. Specific topics include the role of the human factor in space flights, the modeling of human activity in space flight, means of increasing cosmonaut effectiveness, crew member interactions during emergency situations, operator ability during continuous activity and the investigation of cosmonaut cognitive styles in individual and group activities. Particular attention is also given to the psychological problems of cosmonaut preparation, including weightlessness adaptation, preparation for emotional stress, the use of spacecraft trainers and the evaluation of progress in flight vehicle control training, and to human factors engineering aspects of space psychology, including the design of cosmonaut mobility devices, the optimization of human visual abilities during space flight, and the use of psychological principles in the resolution of man-machine system operational problems. A.L.W.

A80-32977 # **Psychological problems of space flight (Psikhologicheskie problemy kosmicheskogo poleta).** B. F. Lomov. In: Psychological problems of space flight. Moscow, Izdatel'stvo Nauka, 1979, p. 5-17. 40 refs. In Russian.

The problems with which the new discipline of space psychology is to be concerned, arising in the various stages of manned space flight, are surveyed. Consideration is given to the psychological aspects of spacecraft design development, cosmonaut selection, the preparation of cosmonauts for space flight, the space flight itself and the period of readaptation following space flight. In addition to current problems, it is noted that space psychology must also deal with those problems arising from future technological innovations determining the duration and activities of future space flights. A.L.W.

A80-32978 # **The role of the human factor in space flights (Rol' chelovecheskogo faktora v kosmicheskikh poletakh).** G. T. Beregovoi. In: Psychological problems of space flight. Moscow, Izdatel'stvo Nauka, 1979, p. 17-24. 12 refs. In Russian.

Consideration is given to the characteristically human, as opposed to technical or biological, aspects of manned space flight. The nature of cosmonaut activities is discussed as a specific category of labor with emphasis on the selection of individuals with the required psychological and physical capacities and the role of cosmonaut as observer. Man-machine systems are considered in relation to spacecraft control under the unique condition of weightlessness, and illusory sensations experienced by astronauts and cosmonauts are reported. The importance of space psychology in dealing with the human factors in space flight is concluded. A.L.W.

A80-32979 # **Space exploration prospects and psychology (Perspektivy osvoeniia kosmosa i psikhologiia).** A. A. Leonov. In: Psychological problems of space flight. Moscow, Izdatel'stvo Nauka, 1979, p. 25-28. In Russian.

Psychological problems hindering the successful completion of space missions are discussed as factors which must be overcome in the future exploration of space. Attention is given to the creation of artificial gravity in large, permanent orbital space stations and to the problem of preventing sensory deprivation during long-duration space flights and lunar exploration. The significance of psychological compatibility among members of space crews spending long periods of time in isolation is considered, taking into account the special conditions of the space flight environment. Finally, problems requiring psychological stability arising during space flights are illustrated by the circumstances of various space accidents, and it is pointed out that, in addition to stresses caused by weightlessness, the disturbance of circadian rhythms may have a considerable influence in the genesis of unsatisfactory situations. A.L.W.

A80-32980 # **The appearence of certain human psychological traits during space flight (Proiavlenie nekotorykh psikhofiziologicheskikh osobennostei cheloveka v usloviiakh kosmicheskogo poleta).** V. I. Sevast'ianov. In: Psychological problems of space flight. Moscow, Izdatel'stvo Nauka, 1979, p. 29-37. 14 refs. In Russian.

Examples of the various types of effects the space flight environment may have on human psychology are presented. Personal experience with space motion sickness and difficulties in orientation perception during the period of weightlessness adaptation are related, along with improvements in visual perception and motor coordination. The organization of cosmonaut tasks so as to increase the effectiveness of activities while taking into account psychological and psychophysical limitations during weightlessness adaptation is discussed, and emotional and mental states experienced during flight are considered. Finally, interpersonal relations between crew members are discussed, and the necessity for the planning of the psychological safety of spaceflights in stressed. A.L.W.

A80-32981 # **Several characteristics of crew activity during space flight (Nekotorye osobennosti deiatel'nosti ekipazha v usloviiakh kosmicheskogo poleta).** P. R. Popovich and Iu. P. Artiukhin. In: Psychological problems of space flight. Moscow, Izdatel'stvo Nauka, 1979, p. 38-41. In Russian.

Various characteristics of cosmonaut activity are examined, with particular attention given to those connected with spacecraft living conditions and interactions with space technology. The missions and spacecraft designs of the Vostok, Soyuz and Salyut programs are reviewed, stressing the increases in cabin space represented by successive spacecraft. The advantages of two- and three-member crews are indicated, and the psychological compatibility of crew members is briefly considered. The complexity of cosmonaut duties during the Soyuz-Salyut mission in which the authors participated is discussed, and the increasing complexity of present and future missions is pointed out. A.L.W.

A80-32982 # **The modeling of human activity in space flight (Modelirovanie deiatel'nosti cheloveka v kosmicheskom polete).** G. M. Kolesnikov. In: Psychological problems of space flight. Moscow, Izdatel'stvo Nauka, 1979, p. 42-46. 13 refs. In Russian.

The modeling of human activity is discussed as it relates to the bionic and human activity planning approaches to increasing cosmonaut effectiveness. Various structural, operating systems and heuristic models of human activity are indicated, and a multi-level hierarchical model incorporating the above principles is formulated. The development of models of cosmonaut activity from human activity models is examined, taking into account the influence of weightlessness and stress factors encountered in the space environment, and it is noted that the validity of the models can only be determined by future flights and ground simulations. A.L.W.

A80-32983 # **The investigation of the influence of space flight conditions on the statistical characteristics of operator activity (Issledovanie vliianiia uslovii kosmicheskogo poleta na statisticheskie kharakteristiki operatorskoi deiatel'nosti).** B. V. Volynov, F. D. Sukhanov, L. D. Smirichevskii, and A. J. Iakovlev. In: Psychological problems of space flight. Moscow, Izdatel'stvo Nauka, 1979, p. 47-52. 5 refs. In Russian.

A method for analyzing the influence of the specific conditions of space flight on the statistical characteristics of human operator activity during tracking operations is developed. The human operator in the control task is represented in a systems analysis approach as a system transforming an input vector into an output vector by a process governed by a linear mathematical operator and an error function characterized by a normalized correlation function. The correlation function is determined experimentally on the basis of the ergodic and steady-state characteristic of a random error process in manual tracking simulator tests for the fundamental operation and under disturbing conditions. Results indicate that the presence of disturbing conditions influences not only the dispersion of operator errors, but the normalized correlation coefficient, and should be taken into account in instrument design. A.L.W.

A80-32984 # **The investigation of operator activity in the performance of standard activities under conditions simulating extended space flight (Issledovanie operatorskoi deiatel'nosti pri vypolnenii tipovykh funktsii v usloviiakh, modeliruiushchikh dlitel'nyi kosmicheskii polet).** L. D. Smirichevskii. In: Psychological problems of space flight. Moscow, Izdatel'stvo Nauka, 1979, p. 53-60. In Russian.

A80-32985 # **Possible means for increasing the effectiveness of cosmonaut activity (Vozmozhnye puti povysheniia effektivnosti deiatel'nosti kosmonavta).** N. V. Krylova and V. Iu. Krylov. In: Psychological problems of space flight. Moscow, Izdatel'stvo Nauka, 1979, p. 61-68. 8 refs. In Russian.

A method for obtaining an integral evaluation of performance quality in a systems approach is proposed as a means of increasing cosmonaut effectiveness. The method involves the analysis of operator activity and the derivation of quality criteria, the construction of a laboratory model of the activity, laboratory modeling of the psychophysiological and environmental states which may arise during the performance of the activity, the determination of an integral evaluation of performance quality, taking into account external conditions and the psychophysiological state of the operator, and the application of the evaluation to increasing actual operator effectiveness. Results of simulator experiments demonstrate the validity of predictions made on the basis of an integral evaluation of performance quality, and indicate that in-flight testing of cosmonaut performance in an activity simulator would allow the evaluation of spacecraft control abilities. A.L.W.

A80-32986 # **The evaluation of the effectiveness of crew work under stress (Otsenka effektivnosti raboty ekipazha v usloviiakh stressa).** G. P. Shibanov. In: Psychological problems of space flight. Moscow, Izdatel'stvo Nauka, 1979, p. 69-84. 5 refs. In Russian.

The evaluation of the effectiveness of cosmonaut performance during each step of activities as an operator-controller, a repair worker and a back-up to automatic equipment is examined. Attention is given to the stages of (1) information search, perception and interpretation; (2) information evaluation and the partitioning of informative indicators; (3) the formation of a conceptual model of the activity and solution finding; and (4) the practical realization of the solution arrived at under conditions of space flight stress. The evaluation of the psychological preparation of persons to deal with emergency situations of different severities is also discussed. A.L.W.

A80-32987 # **Some aspects of space crew member interactions in emergency situations (Nekotorye aspekty vzaimodeistviia chlenov kosmicheskogo ekipazha v avariinykh situatsiiakh).** V. L. Pavlov. In: Psychological problems of space flight. Moscow, Izdatel'stvo Nauka, 1979, p. 84-90. 12 refs. In Russian.

A social psychological analysis of space crew member interactions during the elimination of an emergency situation is presented. Consideration is given to the influence of the unexpectedness and lack of time in emergency situations on the organizational structure of the crew, intercrew verbal and nonverbal communication and the coordination of competitive activities. Requirements for the experimental investigation of the effectiveness of small group interactions in emergency-type situations are then formulated. A.L.W.

A80-32988 # **The possibility of distinguishing between emotional stress levels according to speech indicators in aerospace activities (O vozmozhnosti vydeleniia urovnei emotsional'nogo stressa po rechevym pokazateliam v praktike letno-kosmicheskoi deiatel'nosti).** I. S. Zamaletdinov, N. V. Krylova, S. A. Kiselev, and E. V. Trufanova. In: Psychological problems of space flight. Moscow, Izdatel'stvo Nauka, 1979, p. 91-101. 13 refs. In Russian.

The applicability of psycholinguistic tests to the determination of the levels of emotional stress in aerospace activities is considered. An experiment in which experienced and first-time parachutists were given a series of tests (free association, constrained and free narration, thematic apperception, and operational memory) prior to and immediately following parachute jumps, with test results compared to responses recorded 1-2 days before the jump, is reported, and results of a component analysis of the data allowing the division of the parachutists into three basic groups based on test responses are presented. Results are then used to formulate a hierarchy of emotional stress levels separable according to speech indicators, and it is concluded that the technique may be valuable in further investigations of emotional states. A.L.W.

A80-32989 # Assurance of stable work capacity during prolonged space flight (Voprosy obespecheniia ustoichivoi rabotosposobnosti cheloveka v dlitel'nom kosmicheskom polete). A. N. Litsov and I. F. Saraev. In: Psychological problems of space flight. Moscow, Izdatel'stvo Nauka, 1979, p. 101-105. 11 refs. In Russian.

The factors influencing astronaut performance during prolonged space flight are reviewed. Attention is given to the cyclogram of crew activities, to the dependence of crew work capacity on the time of day, and to the organization of work with regard to reliability and efficiency of the performance. Measures necessary to achieve successful operator performance are pointed out including the development of the optimum conditions of daily work in all stages of preparation and flight, careful selection of crew on the basis of psychological and physiological characteristics of each astronaut, improvement of human stress resistance, and the onboard availability of a means for enhancing the functional capacities of astronauts. L.M.

A80-32990 # Investigation of operator work capacity under conditions of continuous activity (Issledovanie rabotosposobnosti operatora v usloviiakh rezhima nepreryvnoi deiatel'nosti). V. V. Pozdniakov. In: Psychological problems of space flight. Moscow, Izdatel'stvo Nauka, 1979, p. 106-109. 7 refs. In Russian.

The effects of a regime of continuous activity on the quality and effectiveness of the manual control of a dynamic system are investigated. Eight subjects familiar with aviation technology performed a compensatory tracking task lasting 18 min at four- to five-hour intervals over the course of 74 h within a 10-day period, and twice daily during the remainder of the experiment. Measurements of control quality, as indicated by the sum of the square of the mathematical expectancy and the observed dispersion of tracking the target to within the required accuracy, and of control effectiveness, as indicated by the intensity of error information flow, reveal compensatory tracking performance to deteriorate from 25 to 30% during a period of continuous activity, increasing to initial levels following a night's sleep and subsequently decreasing with the amount of performance reduction depending in all cases on task difficulty. A.L.W.

A80-32991 # Dependence of the activity and behavior of individuals and groups on the characteristics of the individual cognitive styles (Obuslovlennost' deiatel'nosti i povedeniia lichnosti i gruppy osobennostiami individual'nykh kognitivnykh stilei). I. S. Zamaletdinov and O. I. Zhdanov. In: Psychological problems of space flight. Moscow, Izdatel'stvo Nauka, 1979, p. 110-114. 5 refs. In Russian.

The characteristics of individual operator behavior, group interaction, and behavioral pattern of individuals and groups in the process of performing professional tasks under stringent conditions are examined. An attempt is made to interpret these characteristics in terms of the specific features of the individual cognitive styles and group interactions. V.P.

A80-32992 # Possible approaches to the study of cosmonaut cognitive behavioral styles during individual and group activity (Vozmozhnye podkhody k izucheniiu stilia poznavatel'nogo povedeniia kosmonavta v individual'nom i gruppovom variantakh deiatel'nosti). O. I. Zhdanov. In: Psychological problems of space flight. Moscow, Izdatel'stvo Nauka, 1979, p. 115-118. 6 refs. In Russian.

A80-32994 # The preservation capacity of spacecraft control skills during extended flights (O sokhrannosti navykov upravleniia kosmicheskim korablem v usloviiakh dlitel'nykh poletov). V. A. Popov and A. K. Popov. In: Psychological problems of space flight. Moscow, Izdatel'stvo Nauka, 1979, p. 123-129. In Russian.

Means of preserving spacecraft and spacecraft systems control skills during prolonged space flights are discussed. The inadequacies of present preflight preparation procedures in forming control skills and selecting the necessary skill evaluation criteria are examined, with attention given to the lack of indicators of the consequences of control activities in ground-based flight simulators. The complexity of skill formation is illustrated for the case of compensatory tracking, and logic conditions involved in the task are examined. Existing simplified in-flight control training facilities are considered, and a technique for maintaining fully developed control skills during extended flight by the remote control of a miniature spacecraft model within the spacecraft cabin is proposed. A.L.W.

A80-32995 # Psychophysiological selection, crew staffing and preparation for space flight (Psikhofiziologicheskii otbor, komplektovanie ekipazhei i podgotovka k kosmicheskomu poletu). M. A. Novikov. In: Psychological problems of space flight. Moscow, Izdatel'stvo Nauka, 1979, p. 130-135. In Russian.

A80-32996 # Adaptation to weightlessness (K voprosu ob adaptatsii v nevesomosti). L. A. Kitaev-Smyk. In: Psychological problems of space flight. Moscow, Izdatel'stvo Nauka, 1979, p. 135-152. 39 refs. In Russian.

The paper is concerned with the physiological and psychological effects of exposure to weightlessness. Experiments in a revolving space station simulator show that in short-duration exposure, subjects can be classified into active and passive groups based on their emotional and motor response pattern. In long-duration exposure, all subjects exhibit the passive response pattern. Particular consideration is given to motion sickness, distortion of space perception, and change in sleep and eating habits. V.L.

A80-32997 # Methodological and organizational principles of the psychological preparation of cosmonauts (Metodicheskie i organizatsionnye printsipy psikhologicheskoi podgotovki kosmonavtov). V. P. Stupnitskii. In: Psychological problems of space flight. Moscow, Izdatel'stvo Nauka, 1979, p. 152-160. 9 refs. In Russian.

The fundamental methodological and organizational principles of the psychological preparation of cosmonauts for activity in the space flight environment are discussed. It is pointed out that psychological training must take into account individual personality factors in the mobilization of the necessary mental functions, the formation of conceptual models of spaceflight activities and the effective utilization of psychological resources, and thus must occur throughout the active training period. Consideration is then given to the various personality characteristics, individual tactics of problem-solving in a critical situation, and the methodological principles based on these considerations underlying training during the learning, perfecting and preflight states of spaceflight preparation. A.L.W.

A80-32998 # Objectivization of the basic elements of the process of crew preparation for space flight (Ob'ektivizatsiia osnovnykh elementov protsessa podgotovki ekipazha k kosmicheskomu poletu). R. B. Bogdashevskii, G. I. Vorob'ev, V. M. Usov, and V. I.

Iaropolov. In: Psychological problems of space flight. Moscow, Izdatel'stvo Nauka, 1979, p. 160-164. In Russian.

The objectivization of the basic components of space flight preparation by various mathematical and computational procedures is discussed. Basic approaches followed in the objectivization of cosmonaut preparation and problems in maintaining it are indicated. Problems arising from the training of cosmonauts on trainers instead of the actual spacecraft are then considered, with attention given to questions of the required degrees of similarity of the trainer to the spacecraft, the identification and characterization of component operator activities, and the determination of cosmonaut suitability and flight readiness in accordance with a formalized framework and defined criteria. The necessary level of automation in the evaluation of the state of crew preparation is considered, and a training regime consisting of compulsory and free periods of trainer instruction is proposed. A.L.W.

A80-32999 # **Psychological training of an astronaut operator under the conditions of emotional stress (Psikhologicheskaia podgotovka kosmonavta-operatora v usloviiakh emotsional'nogo stressa).** I. B. Solov'eva. In: Psychological problems of space flight. Moscow, Izdatel'stvo Nauka, 1979, p. 164-169. In Russian.

Psychological training of astronauts is discussed with regard to the ways of ensuring the efficiency of astronaut performance under complex and emergency flight conditions. In order to achieve this objective, the astronaut must be trained to retain the ability to function efficiently under emotional stress. A stress situation where danger is combined with information deficiency and lack of time can be simulated for instance by parachute jumping with simultaneous performance of various assignments. V.L.

A80-33000 # **Physiological aspects of the psychophysiological security of cosmonaut preparation on trainer apparatus (Fiziologicheskie aspekty psikhofiziologichoskogo obespecheniia podgotovki kosmonatov na trenazhere).** V. P. Zaval'niuk, N. P. Anakhov, and E. G. Singatulin. In: Psychological problems of space flight. Moscow, Izdatel'stvo Nauka, 1979, p. 169-172. In Russian.

A80-33001 # **Psychological training of astronauts using flight simulators (Psikhologicheskaia podgotovka kosmonavtov na professional'nykh trenazherakh).** V. M. Usov, R. B. Bogdashevskii, and A. V. Belozerov. In: Psychological problems of space flight. Moscow, Izdatel'stvo Nauka, 1979, p. 172-177. 7 refs. In Russian.

General principles of the professional training of cosmonauts using ground-based flight simulators are discussed with particular reference to training sequencing and psychological research in this field. Consideration is given to the methods used to evaluate the efficiency and psychophysiological responses of the operator under various control and environmental situations. The proposed special statistical evaluation technique includes discriminatory analysis, the use of a multiparameter regression model, and the use of nonparametric criteria to verify the statistical hypotheses. V.L.

A80-33002 # **The role and significance of the crew instructor in cosmonaut training (Rol' i znachenie instruktora ekipazha v podgotovke kosmonavta).** E. G. Diatlov and V. A. Dmitrov. In: Psychological problems of space flight. Moscow, Izdatel'stvo Nauka, 1979, p. 178-181. In Russian.

The duties and responsibilities of the space crew instructor during cosmonaut training are discussed. The major areas and principles of cosmonaut instruction are indicated, and the psychological observations and professional decisions required of the instructor are considered, in light of the required psychological preparation of the crew to deal with problems arising upon extended and complex space flights and the mental state of the crew. Changes in the roles of instructors with changing cosmonaut roles are noted, with attention given to the evolution of the instructor from a physiological trainer to a specialist engaged in preparing the crew for effective and reliable activity in the course of an extended space flight. Finally, the professional and educational requirements of the instructor are outlined. A.L.W.

A80-33003 # **A variance method of objective evaluation of the training process and learning level of operators in flight vehicle control regimes (Dispersionnyi metod ob'ektivnoi otsenki protsessa trenirovki i stepeni obuchennosti operatorov v rezhimakh upravleniia letatel'nymi apparatami).** V. P. Varenov, G. P. Shibanov, L. V. Riabinin, E. F. Lobanov, and V. V. Rodchenko. In: Psychological problems of space flight. Moscow, Izdatel'stvo Nauka, 1979, p. 181-187. In Russian.

A80-33004 # **Engineering and psychological aspects of maintenance work in space (Inzhenerno-psikhologicheskie voprosy tekhnicheskogo obsluzhivaniia v kosmose).** V. N. Stepanov and E. N. Stepanov. In: Psychological problems of space flight. Moscow, Izdatel'stvo Nauka, 1979, p. 188-194. 5 refs. In Russian.

The strategy of spacecraft equipment servicing during spaceflights is discussed within the framework of engineering psychology. The effect of weightlessness and other factors of space flight are analyzed with respect to the astronaut performance. The results of experimental studies during space missions and simulated space flights indicate that about 60% of maintenance operations take significantly more time in space than on the ground. V.L.

A80-33005 # **The design of maneuvering units for cosmonauts in referenceless space and requirements for engineering psychology (Proektirovanie ustanovok peremeshcheniia kosmonavta v bezopornom prostranstve i trebovaniia inzhenernoi psikhologii).** Iu. N. Glazkov. In: Psychological problems of space flight. Moscow, Izdatel'stvo Nauka, 1979, p. 194-203. 12 refs. In Russian.

The role of engineering psychology in the design and testing of maneuvering units for cosmonauts working in free space is discussed. Constraints on mobility and perception imposed by the space suit are pointed out, and the physiological and psychological effects of weightlessness and the lack of a reference system for the cosmonaut at a distance from the spacecraft and without a tether are considered. The characteristics of the cosmonaut-maneuvering unit system are examined, taking into account its dynamics and the role of the cosmonaut as both the operator and the object of control, and possible cosmonaut trajectories with respect to the spacecraft are considered. Results of the experimental simulation of cosmonaut maneuvering in the vicinity of the spacecraft with an idealized maneuvering unit are presented and the control characteristics of the cosmonaut-maneuvering unit are examined. Finally, the inadequacies of airborne, underwater and model simulations of maneuvering in the space environment are indicated and the utility of space-borne testing is pointed out. A.L.W.

A80-33006 # **Engineering-psychological aspects of optimizing human visual work capacity in space flight (Inzhenerno-psikhologicheskie aspekty optimizatsii zritel'noi rabotosposobnosti cheloveka v kosmicheskom polete).** V. M. Kazachkov, V. I. Metlik, E. N. Khludeev, and E. V. Khrunov. In: Psychological problems of space flight. Moscow, Izdatel'stvo Nauka, 1979, p. 203-209. In Russian.

A80-33007 # **The feasibility and psychological aspects of verbal interaction of man and automatic systems (O vozmozhnostiakh i psikhologicheskikh aspektakh rechevogo obshcheniia cheloveka i avtomaticheskoi sistemy).** V. N. Trunin-Donskoi. In: Psychological problems of space flight. Moscow, Izdatel'stvo Nauka, 1979, p. 210-214. 8 refs. In Russian.

Verbal communication between man and machine is examined as a possible means of improving technology control effectiveness in the space flight environment. Developments in computer technology and artificial intelligence leading to the possibility of speech understanding by an automatic system are considered, and possible applications of such systems in astronaut motion control and the remote control of extravehicular space robots are indicated. The psychological problems which may arise in man-computer communication during future extended planetary manned space flights are discussed, with attention given to means of ensuring accuracy, astronaut and machine roles, and the believability of machine commands. It is pointed out that the speech communication system must be capable of verifying operator identity, and that crews must be psychologically trained to deal with artificial intelligence systems. A80-33008 # **Reflection of the dynamics of the psychophysiological state of the human operator in his speech signals (Otrazhenie v radioobmene dinamiki psikhofiziologicheskogo sostoianiia cheloveka-operatora).** A. V. Nikonov. In: Psychological problems of space flight. Moscow, Izdatel'stvo Nauka, 1979, p. 214-219. 5 refs. In Russian.

The present paper deals with the problem of monitoring and controlling the psychophysiological state and the functional efficiency of crew members during space missions. Means of using the information provided through telemetry, TV, and radio-link channels to assess the psychophysiological state and operational efficiency of the crew are examined. V.P.

A80-33009 # **Construction of a model simulating human-operator activity in manual rendezvous control (Postroenie modeli, imitiruiushchei deiatel'nost' cheloveka-operatora pri ruchnom upravlenii kosmicheskim korablem na etape sblizheniia).** S. A. Minaev and I. P. Meshcheriakov. In: Psychological problems of space flight. Moscow, Izdatel'stvo Nauka, 1979, p. 219-231. 13 refs. In Russian.

The activity of a human operator during manual rendezvous control is examined on the basis of the operator's information field. The activity of the operator is broken down into several stages. It is shown that the activity under consideration can be effectively interpreted as a combination of algorithmic descriptions in the form of logic circuits and individual and compensating servo operations, which can be modeled by the method of equivalent describing functions. V.P.

A80-33183 **A microprocessor-controlled echocardiographic tracking system.** M. S. Hostetler (Akron, University, Akron, Ohio), L. E. Roemer, G. S. Malindzak, Jr. (Akron, University, Akron; Northeastern Ohio Universities, Rootstown, Ohio), E. J. Cauffield (Northeastern Ohio Universities, Rootstown, Ohio), and M. L. Petrovick (U.S. Environmental Protection Agency, Health Effects Research Laboratory, Chapel Hill, N.C.). *IEEE Transactions on Biomedical Engineering,* vol. BME-27, May 1980, p. 249-254. Research supported by the American Heart Association and Northeastern Ohio Universities.

A real-time echocardiographic tracking system (ETS) has been designed and implemented to provide continuous real-time information on the position and motion of cardiac structures such as the anterior and posterior left ventricular wall. The ETS is capable of tracking two separate cardiac structures simultaneously and simplifies the task of extracting the dynamic positional information from an M-mode echocardiogram. A study has been performed to demonstrate the feasibility of analyzing and processing signals from the motion of the left ventricular septal and posterior wall on three normal adult male subjects. This study demonstrates that the ETS can provide reliable and useful information relative to the simultaneous motion of the endocardial surface of the anterior and posterior walls of the left ventricle and of the mitral valve. From this information, it will be possible to evaluate dynamic ventricular function in human subjects noninvasively and in real time. (Author)

A80-33311 # **Abiogenic synthesis of nucleoside-like compounds under the influence of extremal factors (Abiogennyi sintez nukleozidopodobnykh soedinenii pod vliianiem ekstremal'nykh faktorov).** M. A. Khenokh, E. A. Kuzicheva, N. V. Tsupkina, N. I. Kon'shin, A. L. Mashinskii, and G. S. Nechitailo (Akademiia Nauk SSSR, Institut Tsitologii, Leningrad, USSR). *Akademiia Nauk SSSR, Doklady,* vol. 249, no. 3, 1979, p. 749-752. 8 refs. In Russian.

The paper deals with a space-borne experiment aimed at studying the feasibility of nonbiological synthesis of nucleosides in a space environment with allowance for the influence of various energy sources. To this end, a Medusa facility containing evacuated ampules made of quartz and molybdenum glass, with dry mixtures of adenine ribose, adenine desoxyribose, and thymine desoxyribose in molar proportion, was exposed for 10 months at the outer wall of Salyut 6. The results are diagrammed, tabulated, and analyzed. V.P.

A80-33363 # **Suppression of the biosynthesis of sphingomyelin under gamma irradiation and exposure to ubiquinone-9 (Ugnetenie biosinteza sfingomielina v pecheni krys pri gamma-obluchenii i nagruzkakh ubikhinonom-9).** I. K. Kolomiitseva, E. G. Novoselova, E. A. Obol'nikova, G. I. Samokhvalov, and A. M. Kuzin (Akademiia Nauk SSSR, Institut Biologicheskoi Fiziki, Pushchino, USSR). *Akademiia Nauk SSSR, Doklady,* vol. 251, no. 1, 1980, p. 240-242. 10 refs. In Russian.

The paper investigates the influence of ubiquinone-9 on the incorporation of 2-C-14-glycerin into phosphatidylcholine, phosphatidylethanolamine, and sphingomyelin of the liver under healthy conditions and 48 hr after gamma irradiation of rats at a dose of 800 rad. The objective is to elucidate the influence of ubiquinone-9, gamma irradiation and their combined action on the biosynthesis of basic structural phospholipids of organelles in the rat liver. It follows from the analysis of the results that the biosynthesis of common lipids (triglycerides and phospholipids) in the rat liver remains unchanged upon incorporation of C-14-glycerin 48 hr after 800-rad gamma irradiation, exposure to ubiquinone-9 and their combined action. Factors influencing the abatement of sphingomyelin biosynthesis are identified. S.D.

A80-33873 **Diagnosis and quantification of aortic stenosis with pulsed Doppler echocardiography.** J. B. Young, M. A. Quinones, A. D. Waggoner, and R. R. Miller (Baylor College of Medicine; Methodist Hospital, Houston, Tex.). *American Journal of Cardiology,* vol. 45, May 1980, p. 987-994. 27 refs. Research supported by the American Heart Association; Grant No. NIH-HL-17269.

Pulsed Doppler echocardiography was used to evaluate patients with clinical characteristics of aortic stenosis, all of whom subsequently underwent complete diagnostic cardiac catheterization. The findings in patients with aortic stenosis were compared with those of normal subjects and of patients with a prosthetic aortic valve. The premise examined was that the presence of disturbed or turbulent flow distal to the aortic valve in the ascending aorta would allow detection and quantification of aortic valve stenosis. The Doppler technique was found to be successful in identifying the presence of aortic stenosis and in distinguishing between aortic valves with areas greater or smaller than 1.0 sq cm. S.D.

A80-33874 **Sources of variability in echocardiographic measurements.** J. M. Felner, B. A. Blumenstein, R. C. Schlant, A. D. Carter, B. N. Alimurung, M. J. Johnson, S. W. Sherman, M. W. Klicpera, M. H. Kutner, and L. W. Drucker (Emory University, Atlanta, Ga.). *American Journal of Cardiology,* vol. 45, May 1980, p. 995-1004. 22 refs.

The paper analyzes results of a large, complex experiment designed to estimate sources of variability, including human factors, in echocardiographic measurements. The objectives of the experi-

best copy available

ment were to quantify the sources of variability inherent in echocardiographic measurements, to assess the statistical and clinical significance of these sources of variability by comparing their relative magnitudes, and to identify possible variance-reducing modifications in the procedures used to obtain echocardiographic measurements. It is shown that variability within and between interpreters can be a significant factor influencing the accuracy of echocardiographic measurements. Each echocardiogram should be read at least twice by each of at least two interpreters. Minimally, each echocardiogram should be read either by one interpreter on two separate occasions or by two interpreters. S.D.

A80-33875 **Clinical uses of two dimensional echocardiography.** M. N. Kotler, G. S. Mintz, B. L. Segal, and W. R. Parry (Hahnemann Medical College and Hospital, Philadelphia, Pa.). *American Journal of Cardiology,* vol. 45, May 1980, p. 1061-1062. 104 refs.

The added advantages of two-dimensional echocardiography over M mode electrocardiography in the diagnosis of cardiac disorders occurring in adults are reviewed. The increased diagnostic utility of two-dimensional echocardiography is highlighted by examining clinical applications relative to coronary artery disease, mitral valve disease, left ventricular outflow obstruction, the tricuspid valve, pulmonary valve, endocarditis, prosthetic valves, pericardial effusion, cardiac masses, aortic aneurysms, and interatrial septum and right atrium. With newer designs and modifications, including digital scan conversion and Doppler flow capabilities, two-dimensional echocardiography may provide better images and more information. S.C.

A80-33881 # **Translational motion of anthropomorphic mechanisms in the pulsed excitation mode (Peredvizhenie antropomorfnykh mekhanizmov pri impul'snykh vozdeistviiakh).** V. A. Vasenin, R. A. Velershtein, and A. M. Formal'skii. In: Dynamics of controllable systems. Novosibirsk, Izdatel'stvo Nauka, 1979, p. 53-71. 20 refs. In Russian.

The paper considers the ballistic motion of a walking machine, that is, motion that takes place without the aid of controlling actions. This ballistic motion is accomplished by stepwise changes of velocity, i.e., by pulsed excitation of the joints of the machine. Solutions are obtained for the linear and nonlinear problems of ballistic motion of a walking machine. B.J.

Medvedev, A. G. Leskov, and A. S. Iushchenko. In: Dynamics of controllable systems. Novosibirsk, Izdatel'stvo Nauka, 1979, p. 224-236. 5 refs. In Russian.

The design of an interactive system for the control of manipulators is presented. Attention is given to the block diagram, the mathematical model of the control system and of the robot mechanisms, and the stability of motion. B.J.

A80-34229 * **Electrophoretic cell separation by means of microspheres.** A. J. K. Smolka, B. H. Nerren (NASA, Marshall Space Flight Center, Space Sciences Laboratory, Huntsville, Ala.), S. Margel, and A. Rembaum (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, Calif.). *Biochimica et Biophysica Acta,* vol. 558, 1979, p. 246-255. 20 refs. Research supported by the Universities Space Research Association and NASA.

The electrophoretic mobility of fixed human erythrocytes immunologically labeled with poly(vinylpyridine) or poly(glutaraldehyde) microspheres was reduced by approximately 40%. This observation was utilized in preparative scale electrophoretic separations of fixed human and turkey erythrocytes, the mobilities of which under normal physiological conditions do not differ sufficiently to allow their separation by continuous flow electrophoresis. We suggest that resolution in the electrophoretic separation of cell subpopulations, currently limited by finite and often overlapping mobility distributions, may be significantly enhanced by immunospecific labeling of target populations using microspheres. A80-34475 # **Acute cardiovascular adaptation to altitude (Sur l'adaptation cardiovasculaire aiguë à l'altitude).** A. M. Cession-Fossion, J. Juchmes, A. Brose, J. Lecomte (Liège, Université, Liège, Belgium), and G. Roland (Liège, Université, Cointe-Ougrée, Belgium). *Société Royale des Sciences de Liège, Bulletin,* vol. 48, no. 9-10, 1979, p. 407-412. 15 refs. In French.

The effects of sudden altitude exposure on catecholamine levels in the blood and urine are investigated in order to discover the role of orthosympathetic regulation in cardiovascular adaptation to altitude. Cardiovascular functions, characterized by measurements of heart rate and arterial pressure, orthosympathetic stimulation levels, characterized by catecholamine elimination, and glomerular filtration levels, determined from creatinine elimination measurements, were measured in six subjects at sea level and following a move to 3580 m. None of the subjects experienced mountain sickness, and measurements revealed permanent tachycardia and a transitory hypertension, which were not accompanied by changes in glomerular filtration, nonradrenalinuria or adrenalinuria during the first two days of altitude exposure. It is thus concluded that the altitude response of the cardiovascular system is brought about by the stimulation of arterial chemoreceptors by hypoxia, which causes an orthosympathetic tachycardia without significant vasoconstriction. A80-34499 # **Greenhouses in space (Kosmicheskie oranzherei).** M. Milov and G. Rusakova. *Aviatsiia i Kosmonavtika,* Mar. 1980, p. 36, 37. In Russian.

Space experiments have shown that vegetables and plants producing grains grow and develop better under natural conditions than in space. The present paper deals with research work carried out in space to study and circumvent the unfavorable effect of space factors on plant growth. V.P.

A80-35401 **Cochlear anatomy related to cochlear micromechanics - A review.** D. J. Lim (Ohio State University, Columbus, Ohio). *(Acoustical Society of America, Meeting, 97th, Cambridge, Mass., June 11-15, 1979.) Acoustical Society of America, Journal,* vol. 67, May 1980, p. 1686-1695. 43 refs. Research supported by the Deafness Research Foundation; Contract No. F33615-77-C-0512.

The paper reviews morphological characteristics along the length of the cochlea that may be suggestive of an additional tuning mechanism in the organ of Corti besides the basilar membrane. Such characteristics include an orderly gradation in height of the sensory cilia along the length of the cochlea, gradations in width and thickness in the movable portion of the tectorial membrane, and gradations in the relationship between the tectorial membrane and the slope of the reticular lamina along the length of the cochlea. V.L.

A80-35675 **Splenic erythropoiesis in polycythemic response of the rat to high-altitude exposure.** L. C. Ou, D. Kim, W. M. Layton, Jr., and R. P. Smith (Dartmouth College, Hanover, N.H.). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 48, May 1980, p. 857-861. 19 refs. Grants No. NIH-HL-21159; No. NIH-HL-14127.

The role of splenic erythropoiesis in the polycythemic response of rats to simulated high altitudes is investigated. Male rats were exposed to 30 days of simulated altitudes from 12,000 to 20,000 ft, following which the spleens of half the altitude-exposed rats were removed 24 h before killing. Red cell and reticulocyte counts and spleen size are found to increase sharply following 30 days at altitudes greater than 18,000 ft; however, the reticulocyte count is sharply lowered following splenectomy. Histological examination reveals splenic erythropoiesis to also increase with altitude, while studies of Fe-59 intake show no altitude-related changes in Fe-59 uptake by the bone marrow or liver. Results suggest that rat spleen is primarily responsible for the increased erythropoiesis in response to hypoxia, and may exert inhibitory effect on bone marrow erythropoiesis. Observations of a slow decrease in reticulocytosis in intact rats returned to sea level conditions suggest the presence of a persistent hypoxia-induced stimulus or a committed pool of reticulocyte precursors. A.L.W.

A80-35751 * Insulin binding and glucose uptake of adipocytes in rats adapted to hypergravitational force. M. Kobayashi, C. E. Mondon, and J. Oyama (NASA, Ames Research Center, Biomedical Research Div., Moffett Field; Stanford University, Palo Alto, Calif.). *American Journal of Physiology*, vol. 238, Apr. 1980, p. E330-E335. 27 refs. NASA-supported research; Grant No. NIH-AM-07217.

Rats were exposed to 4.15 g for 1 yr and weight and age matched, and lean noncentrifuged rats were used as control groups. Rats exposed to chronic hypergravity (hypergravic rats) were found to show lower ambient insulin levels, greater food intake with smaller body weight gain, and decreased size of isolated adipocytes. The ability of adipocytes from the hypergravic rats to bind insulin was increased. With Scatchard analysis, both number and affinity of receptors were increased. In contrast to the increased binding, glucose transport was found to be decreased in adipocytes from these animals. However, when the data were expressed as a percentage of maximal effect, the half maximal insulin effect for both the hypergravic and lean control groups was produced at an insulin concentration of 0.23 + or - 0.02 ng/ml, which was lower than the insulin concentration of 0.31 + or - 0.02 ng/ml for the weight-matched control group (P less than 0.05). This increased insulin sensitivity in the hypergravic group was accounted for by an increased number of receptors. (Author)

A80-35778 Binocular retinal image motion during active head rotation. R. M. Steinman (Maryland, University, College Park, Md.) and H. Collewijn (Maryland, University, College Park, Md.; Rotterdam, Universiteit, Rotterdam, Netherlands). *Vision Research*, vol. 20, no. 5, 1980, p. 415-429. 16 refs. Research supported by the Nederlandse Organisatie voor Zuiver-Wetenschappelijk Onderzoek; NSF Grant No. BNS-77-16474.

Horizontal binocular eye and head movements of four human subjects were recorded by means of the sensor coil-rotating magnetic field technique while they actively rotated their heads about a vertical axis and maintained fixation on a distant target. The frequency and peak-to-peak amplitude of these rotations ranged from about 0.25 Hz to 5 Hz and 30 deg to 15 arcmin. Eye movement compensation of such head rotations was far from perfect and compensation was different in each eye. Average retinal image speed was on the order of 4 deg/sec within each eye and the speed of the changes in retinal image position between the eyes was on the order of 3 deg/sec. Vision, subjectively, remained fused, stable and clear. Attention is called to implications of these results for visual and oculomotor physiology. (Author)

A80-35779 Grating induction - A new type of aftereffect. C. W. Tyler and K. Nakayama (Smith-Kettlewell Institute of Visual Sciences, San Francisco, Calif.). *Vision Research*, vol. 20, no. 5, 1980, p. 437-441. 11 refs. Research supported by the Smith-Kettlewell Eye Research Foundation; Grants No. NIH-5-R01-EY-01582; No. NIH-5-S01-RR-05566.

After adaptation to a spatiotemporal counterphase flickering grating, a fine grating of the same orientation may be perceived in a uniform blank field. The spatial frequency of the induced grating remains approximately constant at about 18 c/deg regardless of the spatial frequency of the adapting spatiotemporal grating. It does not exhibit interocular transfer. The induced grating is not produced by contingent aftereffects, spatial frequency doubling, retinal afterimages, spatial frequency inhibition, Fourier harmonics or any other known type of aftereffect. It therefore represents a new class of aftereffect in the human visual system, suggesting unsuspected neuronal interactions in monocular pathways. (Author)

A80-35859 # Investigation of the kinetics of pyrolysis of amino acids (Issledovanie kinetiki piroliza aminokislot). G. A. Lavrent'ev, A. S. Timoshchenko, T. F. Strigunkova, and I. A. Egorov (Akademiia Nauk SSSR, Institut Biokhimii, Moscow, USSR). *Akademiia Nauk SSSR, Doklady*, vol. 251, no. 2, 1980, p. 486-489. 13 refs. In Russian.

The pyrolysis of 0.01 M aqueous solutions of amino acids has been studied by several investigators, while pyrolysis of some specific amino acids under anhydrous conditions was accomplished by Olafsson and Bryan (1971). The objective of the present study is to simulate the geochemical processes under relatively anhydrous conditions by pyrolysis of a dry mixture of amino acids and investigation of the kinetics of the process. V.P.

A80-35860 # Changes in concentration of 2,3-glycerodiphosphoric acid in rat erythrocytes during adaptation to hypoxia (Izmeneniia kontsentratsii 2,3-difosfoglitserinovoi kisloty v eritrotsitakh krys pri adaptatsii k gipoksii). O. I. Moiseeva, A. K. Baishukurova, and V. M. Alekseev (Akademiia Nauk SSSR, Institut Fiziologii, Leningrad, USSR). *Akademiia Nauk SSSR, Doklady*, vol. 251, no. 2, 1980, p. 504, 505. 12 refs. In Russian.

A80-36059 * The implications and limitations of the findings of the Viking organic analysis experiment. K. Biemann (MIT, Cambridge, Mass.). *Journal of Molecular Evolution*, vol. 14, Dec. 1979, p. 65-70. 15 refs. Contract No. NAS1-9684; Grants No. NGR-22-009-005; No. NsG-7432.

The gas chromatograph mass spectrometer instrument of the Viking mission has demonstrated the absence of organic compounds in the immediate surface layer of the two landing sites. The demonstration of the successful operation of the instrument (comparison of ground-based test data with those obtained during interplanetary flight and the data from the surface of the planet) and its limitations (e.g., the detection of highly cross-linked polymers or polymeric carbon suboxide) are reviewed. The measurements for bound water are based on indirect data, the detectability of evolved carbon dioxide and ammonia is poor, and oxygen, liberated from the soil samples, can not be detected. (Author)

A80-36060 Possible oxidant sources in the atmosphere and surface of Mars. D. M. Hunten (Arizona, University, Tucson, Ariz.). *Journal of Molecular Evolution*, vol. 14, Dec. 1979, p. 71-78. 27 refs.

The stability of CO2 in the Martian atmosphere and the factors responsible for the red color of the planet are discussed in terms of the possible sources of oxidants in the Martian atmosphere and surface. The photochemistry of hydrogen in the Martian atmosphere is examined, and the presence of large quantities of OH predicted by various models and responsible for the oxidation of carbon compounds, including organic carbon not detected by Viking, to CO2 is pointed out. The oxidation of surface iron on Mars by adsorbed water vapor is considered, and it is pointed out that on Mars, oases of humidity may be even more hostile towards life than the average region. It is concluded that the above mechanisms, under consideration long before the Viking landing, are capable of accounting for the various types of oxidants implicated in Viking observations. A.L.W.

A80-36062 * Heterogeneous phase reactions of Martian volatiles with putative regolith minerals. B. C. Clark, S. L. Kenley, D. L. O'Brien (Martin Marietta Aerospace, Planetary Sciences Laboratory, Denver, Colo.), G. R. Huss (New Mexico, University, Albuquerque, N. Mex.), R. Mack (NASA, Ames Research Center, Moffett Field, Calif.), and A. K. Baird (Pomona College, Claremont, Calif.). *Journal of Molecular Evolution*, vol. 14, Dec. 1979, p. 91-102. 17 refs. Contracts No. NAS1-9000; No. NAS1-11855; No. NAS1-11858.

The chemical reactivity of several minerals thought to be present in Martian fines is tested with respect to gases known in the Martian atmosphere. In these experiments, liquid water is excluded from the system, environmental temperatures are maintained below 0 C, and the solar illumination spectrum is stimulated in the visible and UV using a xenon arc lamp. Reactions are detected by mass spectrometric analysis of the gas phase over solid samples. No reactions were detected for Mars nominal gas over sulfates, nitrates, chloride, nontronite clay, or magnetite. Oxidation was not observed for basaltic glass, nontronite, and magnetite. However, experiments incorporating SO2 gas - an expected product of volcanism and intrusive volatile release - gave positive results. Displacement of CO2 by SO2 occurred in all four carbonates tested. These reactions are catalyzed by irradiation with the solar simulator. A calcium nitrate hydrate released NO2 in the presence of SO2. These results have implications for the cycling of atmospheric CO2, H2O, and N2 through the regolith. (Author)

A80-36065 * The photolytic degradation and oxidation of organic compounds under simulated Martian conditions. J. Oro and G. Holzer (Houston, University, Houston, Tex.). *Journal of Molecular Evolution,* vol. 14, Dec. 1979, p. 153-160. 21 refs. Contract No. NAS1-9685; Grant No. NGR-44-005-002.

Cosmochemical considerations suggest various potential sources for the accumulation of organic matter on Mars. However the Viking Molecular Analysis did not indicate any indigenous organic compounds on the surface of Mars. Their disappearance from the top layer is most likely caused by the combined action of the high solar radiation flux and various oxidizing species in the Martian atmosphere and regolith. In this study the stability of several organic substances and a sample of the Murchison meteorite was tested under simulated Martian conditions. After adsorption on powdered quartz, samples of adenine, glycine and naphthalene were irradiated with UV light at various oxygen concentrations and exposure times. In the absence of oxygen, adenine and glycine appeared stable over the given irradiation period, whereas a definite loss was observed in the case of naphthalene, as well as in the volatilizable and pyrolizable content of the Murchison meteorite. The presence of oxygen during UV exposure caused a significant increase in the degradation rate of all samples. It is likely that similar processes have led to the destruction of organic materials on the surface of Mars. (Author)

A80-36066 * Simulation of the Viking biology experiments - An overview. H. P. Klein (NASA, Ames Research Center, Moffett Field, Calif.). *Journal of Molecular Evolution,* vol. 14, Dec. 1979, p. 161-165. 24 refs.

In the present paper, ground-based investigations of the Viking Martian biology data, which have resulted in reasonable simulations of these data, are reviewed. These simulations, which in strong oxidants, UV-treated materials, iron-containing clays, or iron salts were used as Martian analogs, are capable of explaining the ambiguity between the GCMS (gas-chromatography mass-spectrometry) experiments, in which no organic compounds were found on Mars, and the Labeled Release experiments, in which added organics were decomposed. V.P.

A80-36067 * Completion of the Viking Labeled Release experiment on Mars. G. V. Levin and P. A. Straat (Biospherics, Inc., Rockville, Md.). *Journal of Molecular Evolution,* vol. 14, Dec. 1979, p. 167-183. 15 refs. Contracts No. NAS1-9690; No. NASw-3162.

The final Labeled Release (LR) cycle on each Viking lander tested a surface sample that had been stored for several months at approximately 10 C prior to the onset of the active sequence. At each lander site, activity was strongly diminished. This thermal sensitivity of the active agent on the surface of Mars is consistent with a biological explanation of the LR experiment. At the end of one of these cycles, the incubation mixture was heated to 50 C to release any radioactive gas trapped in the sample matrix. The results suggest that more than one carbon substrate is involved in the LR reaction on Mars. The thermal data from the stored samples, coupled with data from previous cycles, have formed the basis for evaluation of the thermal decomposition of the Mars active agent. The slope of the resulting Arrhenius plot has been used to test the fit of other flight data and to calculate the activation energy for thermal decomposition of the Mars agent. The results and their interpretation still leave unresolved the question of whether the Mars LR data were generated by biological or chemical activity. (Author)

A80-36068 * Laboratory simulations of the Viking Labeled Release experiment - Kinetics following second nutrient injection and the nature of the gaseous end product. G. V. Levin and P. A. Straat (Biospherics, Inc., Rockville, Md.). *Journal of Molecular Evolution,* vol. 14, Dec. 1979, p. 185-197. 8 refs. Contracts No. NAS1-9690; No. NASw-3162.

Injection of (C-14)-labeled nutrient onto Mars soil produced an evolution of C-14 gas in the Viking Labeled Release (LR) experiment. However, a second injection of nutrient seven days later was followed by an abrupt diminution of the amount of radioactive gas in the test cell. Simulation experiments performed in the LR Test Standards Module (TSM) have yielded a plausible explanation for this diminution. Radioactive carbon gases were injected into the TSM test cell in the presence and absence of two Mars analog soils. After equilibration, water was injected and its effect observed. The results indicate that the flight data following second nutrient injection can be explained on a physico-chemical basis involving a carbon dioxide/water/soil equilibrium in the test cell. The results also suggest that the gaseous end product of the Labeled Release reaction on Mars is more likely carbon dioxide than carbon monoxide. (Author)

A80-36069 * A model of Martian surface chemistry. V. I. Oyama and B. J. Berdahl (NASA, Ames Research Center, Extraterrestrial Research Div., Moffett Field, Calif.). *Journal of Molecular Evolution,* vol. 14, Dec. 1979, p. 199-210. 46 refs.

Alkaline earth and alkali metal superoxides and peroxides, gamma-Fe2O3 and carbon suboxide polymer, are proposed to be constituents of the Martian surface material. These reactive substances explain the water modified reactions and thermal behaviors of the Martian samples demonstrated by all of the Viking Biology Experiments. It is also proposed that the syntheses of these substances result mainly from electrical discharges between wind-mobilized particles at Martian pressures; plasmas are initiated and maintained by these discharges. Active species in the plasma either combine to form or react with inorganic surfaces to create the reactive constituents. (Author)

A80-36070 * Laboratory simulations of the pyrolytic release experiments - An interim report. J. S. Hubbard (Georgia Institute of Technology, Atlanta, Ga.). *Journal of Molecular Evolution,* vol. 14, Dec. 1979, p. 211-221. 17 refs. Grant No. NsG-7069.

During its operation on Mars the pyrolytic release experiment (PR) detected the fixation of small amounts of CO2 and/or CO. Laboratory simulations of the experimental conditions were made in an attempt to substantiate the previous conclusion that these reactions were chemical rather than biological. After pretreatment and incubation under various conditions, pyrolytic analysis was used to indicate the extent of surface catalyzed conversion of (C-14)O2 or (C-14)O to (C-14)-organic compounds. This abiotic synthesis was detected in experiments with three iron oxides, viz. hematite, magnetite and maghemite. When the incubation atmosphere was supplemented with water vapor, the levels of synthesis were in a range comparable to that detected in the Viking PR tests. An abiotic synthesis was also detected in experiments with a mixture of clays and minerals (Mars analog soil) or with montmorillonite artificially enriched in iron. With either substratum the reaction appeared to be the result of a photocatalytic synthesis of (C-14)-organics from (C-14)O and surface hydroxyl groups. This process was not dependent on the presence of water vapor in the incubation atmosphere. Although a duplication of the Viking data has not been achieved, these findings support the abiotic interpretation of the PR results. (Author)

A80-36071 The Viking mission - Implications for life on Mars. L. Margulis (Boston University, Boston, Mass.), P. Mazur (Oak Ridge National Laboratory, Oak Ridge, Tenn.), E. S. Barghoorn (Harvard University, Cambridge, Mass.), H. O. Halvorson (Brandeis University, Waltham, Mass.), T. H. Jukes (California, University, Berkeley, Calif.), and I. R. Kaplan (California, University, Los Angeles, Calif.). *Journal of Molecular Evolution,* vol. 14, Dec. 1979, p. 223-232. 28 refs.

The results of the Viking Biology experiments are best explained by non-biological phenomena: The interaction of the reagents with the materials comprising the regolith. Conditions of water activity, temperature, availability of carbon sources and others in most regions of the planet are too extreme for survival and growth of any known earth microorganisms. Although the possibility persists that some very unusual form of life is somewhere on that planet the evidence is best interpreted as negative. Even though there is no evidence for current life on Mars, whether or not life ever originated there is not known. (Author)

A80-36195 * **The role of metal ions in chemical evolution - Polymerization of alanine and glycine in a cation-exchanged clay environment.** J. G. Lawless and N. Levi (NASA, Ames Research Center, Moffett Field, Calif.). *Journal of Molecular Evolution*, vol. 13, Nov. 1979, p. 281-286. 33 refs.

The effect of the exchangeable cation on the condensation of glycine and alanine was investigated using a series of homoionic bentonites. A cycling procedure of drying, warming and wetting was employed. Peptide bond formation was observed, and the effectiveness of metal ions to catalyze the condensation was Cu(2+) greater than Ni(2) approximately equals Zn(2+) greater than Na(+). Glycine showed 6% of the monomer incorporated into oligomers with the largest detected being the pentamer. Alanine showed less peptide bond formation (a maximum of 2%) and only the dimer was observed. (Author)

A80-36197 **A new estimate of sequence divergence of mitochondrial DNA using restriction endonuclease mappings.** N. Kaplan and C. H. Langley (National Institutes of Health, National Institute of Environmental Health Sciences, Research Triangle Park, N.C.). *Journal of Molecular Evolution*, vol. 13, Nov. 1979, p. 295-304. 18 refs.

A new estimate of the sequence divergence of mitochondrial DNA in related species using restriction enzyme maps is constructed. The estimate is derived assuming a simple Poisson-like model for the evolutionary process and is chosen to maximize an expression which is a reasonable approximation to the true likelihood of the restriction map data. Using this estimate, four sets of mitochondrial DNA data are analyzed and discussed. (Author)

A80-36198 **The effect of clays on the oligomerization of HCN.** J. P. Ferris, E. H. Edelson, N. M. Mount (Rensselaer Polytechnic Institute, Troy, N.Y.), and A. E. Sullivan. *Journal of Molecular Evolution*, vol. 13, Nov. 1979, p. 317-330. 29 refs. NSF Grant No. CHE-76-11000.

The reactions of HCN and its oligomers are investigated in aqueous solutions at pH 8-9 and 25 C, in accordance with the primitive earth model in which aqueous solutions of HCN and diaminomaleonitrile react with clay mineral sediments. It is found that the oligomerization of 0.1 M HCN in aqueous solution is inhibited by monmorillonite and kaolinite. The rate of reaction of cyanide was approximately the same in the presence and absence of clays, which shows that the inhibitory effect of clays might be due to their interaction with an HCN oligomer and not HCN itself. The inhibition of oligomer formation is due to the clay-catalyzed decomposition of diaminomaleonitrile. The significance of these reactions in chemical evolution is discussed. V.L.

A80-36225 # **The psychophysiological characteristics of air traffic controller activity (Psikhofiziologicheskie osobennosti deiatel'nosti aviatsionnykh dispetcherov).** N. I. Frolov, A. N. Kol'tsov, and V. A. Sergeev. *Voenno-Meditsinskii Zhurnal*, Mar. 1980, p. 49-53. 11 refs. In Russian.

The psychophysiological factors associated with the work of an air traffic controller at various stages in his shift are investigated. Measurements of arterial pressure, heart rate, resting and stress electrocardiograms, critical frequency for light flash discrimination, muscle strength and static endurance, sensorimotor reaction time, excess reactions and sensorimotor coordination were used as indicators of the functional state of flight controllers, with 8-h duty periods, and air motion directors, with longer duty periods alternating with 48-72-hr off-duty periods. Results demonstrate the high levels of mental and emotional stress involved in the performance of air traffic control and guidance duties, and recommendations concerning the selection and optimal rest periods and duty cycles of the various classes of air traffic controllers are offered. A.L.W.

A80-36250 **On auditory evoked potentials and heart rate in man during whole-body vibration.** P. Ullsperger and H. Seidel (Zentralinstitut für Arbeitsmedizin, Berlin, East Germany). *European Journal of Applied Physiology*, vol. 43, no. 3, 1980, p. 183-192. 25 refs.

Auditory evoked brain potentials and heart rate were recorded from three healthy male subjects during sinusoidal whole-body vibration exposure in the longitudinal /+ or - a(z)/ direction (two intensities, I1 and I2) and under no-vibration control conditions according to a change-over design. All conditions were performed at a constant noise level. The part of vibration-synchronous activity contaminating the averaged evoked potentials (AEP) was eliminated by means of a subtraction technique. The AEP amplitude N1-P2 showed a significant decrease during vibration exposure; this decrease was slightly greater during I2 than during I1. Except for a shortening of P2 due to vibration of I1, the peak latencies did not change significantly. The heart rate increased when subjects were exposed to vibration at I1; there were interindividually opposite significant changes under I2 exposure. Time effects and subject effects were also proved. The AEPs are considered to be an informative means of studying the effect of vibration on central nervous information processing. (Author)

INACTIVATION OF ENTEROVIRUSES BY OZONE Ph.D. Thesis
Dipak Roy 1979 137 p
Avail: Univ. Microfilms Order No. 8009151

The kinetics of inactivation of enteroviruses was studied to a continuous flow, constant temperature reactor. Poliovirus 1 (Mahoney) was used as a model enteroviruses to study the mechanism of inactivation and to evaluate the effects of different environmental parameters on the kinetics of inactivation. Virus survival curves under all experimental conditions were observed to follow a similar pattern; a rapid rate of inactivation for the initial period followed by a slow rate of inactivation. The all or none effect, previously associated with ozone disinfection, was markedly absent. The survival curves did not follow single order kinetics: it is believed that the inherent nature of the virus may be responsible for this observation. Dissert. Abstr.

ROLE OF ADRENALS IN THE MOBILIZATION OF CARBOHYDRATE AND FAT RESOURCES AFTER OVERSTIMULATION OF RATS
G. G. Khechninashvili Jan. 1980 13 p refs Transl. into ENGLISH FROM Farmakol. Toksikol. (USSR), v. 35, no. 5, 1972 p 575-580 Transl. by Scientific Translation Service, Santa Barbara, Calif. Original doc. prep. by USSR Acad. of Med. Sci., Leningrad
(Contract NASw-3198)
(NASA-TM-75974) Avail: NTIS HC A02/MF A01 CSCL 06C

The role of the cortical and cerebral layers of the adrenal glands in mobilizing carbohydrate and fatty resources in response to the effect of an extreme stimulant was investigated. It is shown that following adrenodemedullation and adrenalectomy, the leading role is played by the secretion of the adrenal medullary layer, whereas the role of suprarenals in the mobilization of fats is only slightly pronounced. INCORPORATION OF GLYCINE-2-C-14 IN ACID-INSOLUBLE PROTEINS OF RAT BONES AND TEETH DURING HYPOKINESIA AND ADMINISTRATION OF THYROCALCITONINE
A. I. Volozhin, L. I. Stekolnikov, N. N. Uglova, and V. Ye. Potkin Dec. 1979 8 p refs Transl. into ENGLISH from Farmakol. Toksikol. (USSR), v. 37, no. 2, 1974, p 223-226 Original language document was announced as A72-40432 Transl. by Scientific Translation Service, Santa Barbara, Calif.
(Contract NASw-3198)
(NASA-TM-75981) Avail: NTIS HC A02/MF A01

A forced limitation of the motor activity in rats (from 5 to 60 days) results in reduced incorporation of glycine 2-C14 in the total acid insoluble proteins of limb bones and its increase in the teeth and mandibular-maxillary bones. Daily administration of five micrograms of thyrocalcitonine together with polyvinylpyrrolidone normalizes the protein metabolism in the bone tissues during the 40 days of experimentation. E.D.K.

THE EFFECT OF RESTRAINING ON THE HEART RATE IN GUINEA PIGS

H. Mikiskova Jan. 1980 12 p refs Transl. into ENGLISH from Activ. Nerv Super/ (Czech.), v. 10, no. 4, 1968 p 382-388 Transl. by Scientific Translation Service, Santa Barbara, Calif.
(Contract NASw-3198)
(NASA-TM-76006) Avail: NTIS HC A02/MF A01 CSCL 06C

The emotional effect of different applications of electrodes and the fixation for cariographic examination was investigated using guinea pigs. The effect of the stress is discussed in terms of heart rhythm and behavior. R.E.S.

N80-22964 State Univ. of New York at Stony Brook.

MULTIVARIATE ANALYSIS OF PHYSIOLOGICAL RESPONSE TO ENVIRONMENTAL STRESS Ph.D. Thesis

Edith Alker Zang 1979 396 p
Avail: Univ. Microfilms Order No. 8007325

Forty-five physiological response variables were recorded at various time intervals on three volunteers during each of one hundred experimental sessions conducted in a controlled environmental chamber. Besides the physiological measurements, fourteen environmental variables were also recorded to examine their influence on the subjects during the tests. The data was analyzed using multivariate techniques including factor analysis nonmetric multidimensional scale analysis and regression analysis to determine the relationship among the variables under varying environmental combinations, and also to evaluate the effectiveness of these techniques when applied to physiological data. The results of the analyses indicate that multivariate techniques, particularly factor analysis, can accurately summarize the complex highly interactive physiological reactions recorded in the study. Dissert. Abstr.

N80-22965 Columbia Univ., New York.

MATHEMATICAL MODELING, SIMULATION, AND STABILITY OF THE RESPIRATORY CONTROL SYSTEM Ph.D. Thesis

Edward Firouztale 1979 288 p
Avail: Univ. Microfilms Order No. 8008722

A mathematical model of the respiratory control system was developed. This model consisted of a sub-model of the oxygen and carbon dioxide stores and a second sub-model of the controlling system. The models together with the reference parameter values, were used to simulate the effects of various periods of apnea (periods of nonbreathing) and recovery from apnea. The results are of interest in connection with studies of sudden infant death syndrome. Simulation and linear stability analysis were used to determine the stability of the system and, in particular, the gain that will render the respiratory control system unstable. It was found that limit cycles exist and that the cardiac output has a major effect on stability of the respiratory control system. Finally, the effect of O2-CO2 interactions at the controller level, on stability, was studied. Dissert. Abstr.

N80-22966 Michigan Univ., Ann Arbor.

INVESTIGATION OF CIRCADIAN RHYTHMS ON SELECT PSYCHOMOTOR AND NEUROLOGICAL FUNCTIONS Ph.D. Thesis

Andris Freivalds 1979 280 p
Avail: Univ. Microfilms Order No. 8007740

The existence of circadian rhythms in response variables that relate most meaningfully to the physiological and neurological state of the body throughout the day and which may be indices of performance was investigated. Various models, including a 2-parameter, 3-parameter and 6-parameter cosine model and an autoregressive model were fit to the data. For the variables with data pooled across subjects and days, the averaging effect tended to minimize the better fit of higher order models. The 2-parameter cosine model is sufficient to explain a (normal) average rhythm. On the other hand, the individual subject data of resting heart rate was more variable and yielded significantly better fits with the higher order models for all three subjects. Dissert. Abstr.

N80-22967*# National Aeronautics and Space Administration, Washington, D. C.

REACTIVITY OF ORGANISM IN PROLONGED SPACE FLIGHTS

P. V. Vasilyev Jan. 1980 14 p refs Transl. into ENGLISH from Astronaut. Acta (Austria), v. 17, 1972 p 107-112 Transl. by Scientific Translation Service, Santa Barbara, Calif.
(NASA-TM-75975) Avail: NTIS HC A02/MF A01 CSCL 06S

An analysis of published data are presented as well as the results of experiments which show that the state of weightlessness and hypodynamia result in a reduced orthostatic and vestibular resistance, increased sensitivity to infections, decreased endurance of accelerations and physical exercises, and altered reactivity of the organism to drugs. Various consequences of weightlessness on the human body, especially weightlessness combined with other factors linked to long space flights are also considered. R.C.T.

DYNAMICS OF CHANGE OF LIPID AND MONOAMINE METABOLISMS AND THE BLOOD COAGULATION SYSTEM DURING EXPERIMENTAL ATHEROSCLEROSIS CAUSED BY RESTRICTION OF MOVEMENT

G. S. Gvishiani and N. G. Kobakhidze Apr. 1980 5 p Transl. into ENGLISH from Soobshch. Akad. Nauk Gruz SSR (USSR), v. 60, no. 2, 1970 p 445-447 Transl. by Kanner (Leo) Associates, Redwood City, Calif. Original doc. prep. by Georgian SSR Acad. of Sci., Tbilisi, USSR
(Contract NASw-3199)
(NASA-TM-76033) Avail: NTIS HC A02/MF A01 CSCL 06S

Shifts in lipid, catecholamine, and blood coagulation systems following various periods (1, 2, 3, and 4 months) of experimentally induced atherosclerosis were studied. The same indices were studied in the tissues of the myocardium, liver, and brain stem-reticular formation after decapitation of the animals at the end of the experiment. Periodic motion restriction caused an increase in blood beta-lipoproteins in the rabbits at the beginning of the experiment. An increase in general cholesterol content and a decrease in the lecithincholesterol index were established at the end of the experiment. Myocardial beta-lipoprotein and brain stem reticular formation general cholesterol contents were elevated; catecholamine content was increased at the end of the experiment. In the initial months, free adrenaline basically increased, while in later months blood adrenaline decreased and blood noradrenaline increased. R.E.S.

N80-22969*# National Aeronautics and Space Administration, Washington, D. C.

STATE OF THE BODY IN DISORDERS OF DIURNAL PHYSIOLOGICAL RHYTHMS AND LONG-TERM HYPOKINESIA

S. N. Razin and A. V. Rychko Mar. 1980 7 p Transl. into ENGLISH from Vrach. Delo, no. 5, 1976 p 104-106 Transl. by Kanner (Leo) Associates, Redwood City, Calif.
(Contract NASw-3199)
(NASA-TM-76051) Avail: NTIS HC A02/MF A01 CSCL 06S

In order to study the effects of hypokinesia and circadian rhythm restructuring on the morphological and functional status of the hypothalamo-hypophysic-adrenal system, young male Wistar rats were placed in small cages for varying periods. The animals were decapitated and preparations were made from sections of the brain and adrenals and numerous destructive changes were noted in the investigated regions of the brain, indicating that the condition of these areas is directly affected by disruption of established rhythms in physiological processes. LOW FREQUENCY ACOUSTIC DETECTION IN SUPPORT OF HUMAN DETECTION RANGE PREDICTION Final Report, Sep. 1978 - Sep. 1979

S. A. Fidell, R. D. Horonjeff, and D. M. Green Oct. 1979 88 p refs
(Contract DAAK51-78-C-00133; DA Proj. 1L1-62209-AH-76)
(AD-A080579; BBN-4006; USARTL-TR-79-25) Avail: NTIS HC A05/MF A01 CSCL 06/16

This project resulted in modifications to the acoustic range prediction software that were intended to increase the accuracy with which the program predicts detection ranges for targets that are audible primarily at low frequencies. These modifications were based on interpretations of the findings of a psychoacoustic experiment that sought to determine the effective masking bandwidth for human observers at frequencies as low as 40 Hz. The rationale for this experimentation was based on an extensive search of the masking literature. The possibility that acoustic detection ranges of unaided human observers are affected by infrasonic emissions of helicopters was considered both analytically and empirically. It was concluded from a literature review that the prospects for 'infrasonic cueing' of conventional acoustic detection were doubtful. A two-alternative forced choice task in which infrasound was available as a cue to detection produced results consistent with that conclusion. GRA

PERFORMANCE IN TASKS DIFFERING IN MEMORY LOAD AND ITS RELATIONSHIP WITH HABITUAL ACTIVITY PHASE AND BODY TEMPERATURE

Jan E. Froeberg Apr. 1979 28 p refs
(FOA-C-52002-H6) Avail: NTIS HC A03/MF A01

Twenty-four hour patterns in tasks differing in memory load were studied during a 75 hour vigil. Differences in performance were also studied between morning and evening active subjects, and between body temperature and performance rhythms. The task with a high memory load showed a 24 hr rhythm which was in inverse phase with the less memory loaded task and with body temperature. This was true only for the first 24 hr cycle, after that the memory loaded task tended to follow the other two variables, except in the case of the most extreme morning types for whom the inverse relationship continued to exist. NOISE EFFECTS. EFFECTS OF NOISE EXPOSURE ON BLOOD CIRCULATION AND RESPIRATION OF MAN. PART 1: RESULTS OF A TWO-HOUR NOISE EXPOSURE ON GROUPS OF YOUNGER AND OLDER PEOPLE

A. J. M. Roevekamp and W. Passchier-Vermeer Jun. 1978 123 p refs

(IG-TNO-B-373-E) Avail: NTIS HC A06/MF A01

The influence of noise exposure on blood circulation and respiration was studied. The effects of such noise on the following parameters were examined: heartbeat frequency; absolute impedance plethysmogram: the total alternating current resistance of an extremity (arm, finger); relative impedance plethysmogram: the amplitude of that part of the alternating current resistance of an extremity, which varies with the heartbeat frequency; diastolic and systolic blood pressure and pulse pressure; and respiratory frequency. The results are compared to the effects caused by exposure to traffic noise and by exposure to a constant high sound level. Author (ESA)

BIOCHEMICAL CHANGES IN HUMANS UPON EXPOSURE TO OZONE AND EXERCISE

Suzanne Chaney, Paulette DeWitt, Wendy Blowquist, Keith Muller, Robert Bruce, and George Goldstein Aug. 1979 53 p refs

(PB80-105554; EPA-600/1-79-026) Avail: NTIS HC A04/MF A01 CSCL 06S

A total of 44 human subjects were exposed to 784 micrograms/cu m (0.4 ppm) ozone and 30 human subjects were exposed to air as controls. A four hour exposure was given on each of five consecutive days. Half of each group received a higher level of treadmill exercise than the other half. Nine biochemical blood parameters were measured pre and post exposure, red blood cell glutathione reductase, vitamin E, red blood cell cholinesterase, red blood cell glucose-6-phosphate dehydrogenase, lactic acid dehydrogenase, alpha sub I antitrypsin, haptoglobin, complement C3, and igM. Of these variables only vitamin E, red blood cell glucose-6-phosphate denydrogenase, and complement C3 showed significant changes due to treatment. GRA

MODELS OF HUMAN DECISION MAKING IN MULTI-TASK SITUATIONS: EVENT DETECTION, ATTENTION ALLOCATION, AND IMPLICATIONS FOR COMPUTER AIDING Ph.D. Thesis

Joel Sandor Greenstein 1979 120 p

Avail: Univ. Microfilms Order No. 8009048

Human decision making in multi-task situations is discussed. Mathematical models of human event detection and attention allocation performance in multi-task situations were developed and validated in a specific multiple process monitoring situation. The implications these models have for the design and implementation of computer aided decision making systems are also discussed. Dissert. Abstr.

THEORY OF THE DECISION/PROBLEM STATE

Duncan L. Dieterly Apr. 1980 21 p refs

(NASA-TM-81192; AFHRL/H80-104; A-8161) Avail: NTIS HC A02/MF A01 CSCL 05J

A theory of the decision-problem state was introduced and elaborated. Starting with the basic model of a decision-problem condition, an attempt was made to explain how a major decision-problem may consist of subsets of decision-problem conditions composing different condition sequences. In addition, the basic classical decision-tree model was modified to allow for the introduction of a series of characteristics that may be encountered in an analysis of a decision-problem state. The resulting hierarchical model reflects the unique attributes of the decision-problem state. The basic model of a decision-problem condition was used as a base to evolve a more complex model that is more representative of the decision-problem state and may be used to initiate research on decision-problem states. R.E.S.

PROBLEM SOLVING AND DECISIONMAKING: AN INTEGRATION
Duncan L. Dieterly Apr. 1980 20 p refs Prepared in cooperation with Air Force Human Resources Lab., Moffett Field, Calif.
(NASA-TM-81191; AFHRL/H80-103; A-8160) Avail: NTIS HC A02/MF A01 CSCL 05J

An attempt was made to redress a critical fault of decisionmaking and problem solving research-a lack of a standard method to classify problem or decision states or conditions. A basic model was identified and expanded to indicate a possible taxonomy of conditions which may be used in reviewing previous research or for systematically pursuing new research designs. A generalization of the basic conditions was then made to indicate that the conditions are essentially the same for both concepts, problem solving and decisionmaking. R.E.S.

MODELING THE HUMAN AS A CONTROLLER IN A MULTI-TASK ENVIRONMENT Ph.D. Thesis
Thiruvenkatasamy Govindaraj 1979 139 p
Avail: Univ. Microfilms Order No. 8009046

Two models were developed for the human controller in multitask siturations with preview. In the simpler heuristic model, control actions are performed when projected weighted error from the previewed reference exceeds a threshold. The second is a more rigorous analytical model based on optimal control theory. Performance of the model and the subjects are compared in terms of various remote manipulator systems (RMS) measures. For a good match, the RMS lateral error of the model is close to that of the experimental runs. The discrete task performance is compared in terms of RMS differences between the times the subject initiated the discrete tasks and the times the model initiated the corresponding tasks. Results for various experimental conditions are given, and the model match is discussed.

PERFORMANCE CHARACTERIZATION OF A BOSCH CO SUB 2 REDUCTION SUBSYSTEM Final Report
D. B. Heppner, T. M. Hallick, and F. H. Schubert Feb. 1980 40 p refs
(Contract NAS2-10204)
(NASA-CR-152342; LST-TR-379-11) Avail: NTIS HC A03/MF A01 CSCL 06K

The performance of Bosch hardware at the subsystem level (up to five-person capacity) in terms of five operating parameters was investigated. The five parameters were: (1) reactor temperature, (2) recycle loop mass flow rate, (3) recycle loop gas composition (percent hydrogen), (4) recycle loop dew point and (5) catalyst density. Experiments were designed and conducted in which the five operating parameters were varied and Bosch performance recorded. A total of 12 carbon collection cartridges provided over approximately 250 hours of operating time. Generally, one cartridge was used for each parameter that was varied. The Bosch hardware was found to perform reliably and reproducibly. No startup, reaction initiation or carbon containment problems were observed. Optimum performance points/ranges were identified for the five parameters investigated. The performance curves agreed with theoretical projections. R.E.S.

TOTAL AIRCREW WORKLOAD STUDY FOR THE AMST. VOLUME 1: RESULTS Final Report, Mar. 1976 - Nov. 1977
Ralph P. Madero, George A. Sexton, David Gunning, and Richard Moss Wright-Patterson AFB, Ohio AFFDL Feb. 1979 67 p refs 2 Vol.
(Contract F33615-76-C-3614; AF Proj. 2403)
(AD-A076422; AFFDL-TR-79-3080-Vol-1) Avail: NTIS HC A04/MF A01 CSCL 01/3

There is a growing realization within the USAF that state-of-the-art crew systems may allow cost effective reductions in crew complements. The present study, titled the Total Aircrew Workload Study (TAWS) addresses the minimum crew complement required and conceptually, the crew systems required to support the minimum crew of an Advanced Medium STOL Transport (AMST) in the accomplishment of the tactical transport mission. The study involved the simulation of a total tactical airlift mission which was flown by operational (C-130) tactical airlift aircrews in order to further refine crew complement and crew system concepts established in earlier mockup studies. The results of this study indicate that two pilots, a loadmaster and a crew chief type additional crew member can fly the total AMST mission if provided with adequate state-of-the-art crew system capabilities, as identified in this report. The report is presented in two volumes. Volume 1 describes the TAWS program and presents the results. Volume 2 presents a detailed description of the navigation and communication system used during the TAWS evaluation. GRA

PRELIMINARY ANALYSIS OF WIND TUNNEL TEST OF A 1/2 SCALE MODEL OF AN EJECTING CREWMAN AND EJECTION SEAT Final Report, 15 Sep. 1976 - 30 Sep. 1978
Alastair Anthony May 1979 46 p ref
(Contract F33615-76-C-0530; AF Proj. 7231)
(AD-A069229; AMRL-TR-78-107; Working-Paper-210-8) Avail: NTIS HC A03/MF A01 CSCL 01/3

Doubts were raised as to the integrity of the rest of the structure when the neck member of a model crewman failed during tunnel measurements of the limb forces during ejection. The accuracy of the load estimates used in the pretest stress analysis clearly needed to be checked. Meanwhile, testing was resumed at restricted pressure values with a non-load-measuring replacement for the neck member. From a sampling of the test data, the distribution of bending and torsional moments along the limbs is clearly revealed and with its variation with attitude and Mach number, presents no great surprises. Values critical to the stress analysis confirm the estimated values. The neck pillar, designed by a subcontractor, had been designed for sensitivity in bending under the head loads without catering for torsion in the member if these loads should in the event be appreciably offset from its axis. Although there is little confirmation of the magnitude of the head loads, there is some indication the offsets in excess of one inch in these loads are to be expected in the real situation, and that the resulting torsion was the cause of the failure. (AD-A079865; AMRL-TR-75-50-Vol-75) Avail: NTIS
HC A05/MF A01 CSCL 01/2

The USAF C-141A is a transport aircraft powered by four TF33-P-7 turbofan engines. This report provides measured and extrapolated data defining the bioacoustic environments produced by this aircraft operating on a concrete runup pad for three power conditions. Near-field data are reported for ten locations in a wide variety of physical and psychoacoustic measures: overall and band sound pressure levels, C-weighted and A-weighted sound levels, preferred speech interference level, perceived noise level, and limiting times for total daily exposure of personnel with and without standard Air Force ear protectors. Far-field data measured at 19 locations are normalized to standard meteorological conditions and extrapolated from 75-8000 meters to derive sets of equal-value contours for these same seven acoustic measures as functions of angle and distance from the source. This report summarizes an experimental test program conducted with state-of-the-art hypothermia protection equipment. Tests included the following attributes: cold-protection effectiveness, mobility reduction, fatigue induction, ease of donning, buoyancy, aesthetic appeal/wearer confidence, flame resistance and reliability. Cold-protection effectiveness is expressed in terms of survival-time estimates for individuals, with selected body structures, wearing the test articles in 1.7 C (35 F) water. The data from these investigations is intended to collectively support the selection of equipment best suited for use by recreational boaters, Coast Guard crewmen and merchant mariners. GRA

CALIBRATION AND TEST PROCEDURES FOR THREE YEAR OLD CHILD DUMMY Final Report, 1 Feb. 1977 - 1 Nov. 1975
Joseph B. Benson and John W. Melvin 7 Feb. 1979 70 p
(Contract DOT-HS-6-01367)
(PB80-112246; UMICH-HSRI-79-4; DOT-HS-805-070) Avail: NTIS HC A04/MF A01 CSCL 13L

Four three year old child dummies, SA 103C models, were tested to determine the ranges of responses of these dummies in calibration type tests and to refine testing fixtures and techniques. The dummy head accelerometer mounting was revised to reduce ringing, and the ribcage structure attachment modified to eliminate bottoming. A revised loading fixture was designed to facilitate the lumbar spine calibration. The modified dummies produced consistent calibration response data within the proposed limits. GRA

UNCERTAINTY IN ESTIMATES OF THE NUMBER OF EXTRATERRESTRIAL CIVILIZATIONS
P. A. Sturrock Mar. 1980 16 p refs
(Contract NGR-05-020-668)
(NASA-CR-162637; SUIPR-808) Avail: NTIS HC A02/MF A01 CSCL 03B

An estimation of the number N of communicative civilizations is made by means of Drake's formula which involves the combination of several quantities, each of which is to some extent uncertain. It is shown that the uncertainty in any quantity may be represented by a probability distribution function, even if that quantity is itself a probability. The uncertainty of current estimates of N is derived principally from uncertainty in estimates of the lifetime of advanced civilizations. It is argued that this is due primarily to uncertainty concerning the existence of a Galactic Federation which is in turn contingent upon uncertainty about whether the limitations of present-day physics are absolute or (in the event that there exists a yet undiscovered hyperphysics) transient. It is further argued that it is advantageous to consider explicitly these underlying assumptions in order to compare the probable numbers of civilizations operating radio beacons, permitting radio leakage, dispatching probes for radio surveillance for dispatching vehicles for manned surveillance. MANNED MANEUVERING UNIT LATCHING MECHANISM
Charles S. Allton *In* NASA. Langley Res. Center Proc. of the 14th Aerospace Mech. Symp. May 1980 p 9-18 (For primary document see N80-23495 14-31)
Avail: NTIS HC A15/MF A01 CSCL 05H

The astronaut/Manned Maneuvering Unit interface which presented a challenging set of requirements for a latching mechanism, is described. A spring loaded cam segment with variable ratio pulley release actuator was developed to meet the requirements. To preclude jamming of the mechanism, special precautions were taken such as spring loaded bearing points and careful selection of materials to resist cold welding. The mechanism successfully passed a number of tests which partially simulated orbital conditions. R.E.S.

PHOTOCHEMISTRY AND ENZYMOLOGY OF PHOTOSYNTHESIS Progress Report
Richard Radmer 30 Jul. 1979 100 p refs
(Contract EY-76-C-02-3326)
(COO-3326-82) Avail: NTIS HC A05/MF A01

Three basic problems are addressed: (1) the effect of different preparative procedures on various photosynthetic reactions, with particular emphasis on photosystem II reactions in corn bundle sheath chloroplasts; (2) the development and testing of photosystem II assays; and (3) studies of the stoichiometry of electron carriers in bundle sheath chloroplasts, and whether cyclic phosphorylation could be a major pathway in this tissue. The instruments and techniques to be used in investigating the problems are discussed. DOE

STUDIES OF PHOTOSYNTHETIC MEMBRANES USING CHLOROPHYLL FLUORESCENCE LIFETIMES Ph.D. Thesis
Grace Toy Brewington Sep. 1979 189 p refs
(Contract W-7405-eng-48)
(LBL-9795) Avail: NTIS HC A09/MF A01

Using a single photon counting system with spark discharge excitation, the in vivo flouroescence kinetics in samples that had been treated with DCMU/NH2OH, ferricyanide, dithionite, background actinic illumination, and different cations in the buffer were investigated. From the studies it was concluded that: (1) fluoresence at the F sub o level does not arise from pigments that are not connected to the PS II reaction center; (2) a puddle model is inadequate to explain these data; (3) these data can be accommodated by a model in which tau sub 1 arises from the chlorophyll a of the chlorophyll a/b light harvesting complexes, and tau sub 2 arises from chlorophylls more directly affected by the PS II reaction center, such as the PS II chlorophyll a antenna; and (4) the fluorescence lifetime data for samples treated with sodium or magnesium ion are consistent with the models of spillover and alpha change. The fluorescence lifetime behavior in chloroplasts as a function of the redox state of the primary acceptor of PS II was also studied. DOE

EFFECT OF HYDROGEN CHLORIDE ON THE MORPHOLOGY OF BACILLUS SUBTILIS SPORES
H. L. M. Lelieveld 1979 10 p refs Submitted for publication
Avail: NTIS HC A02/MF A01

Gaseous hydrogen chloride, in the presence of a minute amount of water vapor, rapidly inactivates bacterial spores. Scanning electron microscopy showed that the treatment caused spores of Bacillus subtilis to collapse. Based on modern theories of spore structure and resistance, it is likely that hydrogen chloride inactivates, and causes the collapse of spores by breaking disulphide bonds in coat protein and neutralizing, by protonation, peptidoglycan carboxyl groups in the underlying cortex.

STERILIZATION BY MEANS OF HYDROGEN CHLORIDE: INFLUENCE OF PROCESS PARAMETERS ON THE BIOCIDAL ACTIVITY
H. L. M. Lelieveld and H. M. J. vanEijk 1979 40 p refs
Submitted for publication
Avail: NTIS HC A03/MF A01

At ambient temperatures, hydrogen chloride is a strong bactericide. At a partial hydrogen chloride pressure of 30 mmHg, the number of spore bearing colony forming units present in straw-dust particles of 0-32 micrometers was reduced by a factor of more than 50,000 within 60 sec. Naked spores of Bacillus subtilis were reduced in viability by a factor of 100,000 within only 10 sec. Viability of vegetative cells of various kinds of bacteria was reduced by a factor of more than 10 to the 7th power within 10 sec. The manner of administration of the gas influenced the sterilization and must be adapted to the geometry of the surfaces to be sterilized. Increases in treatment time and concentration of hydrogen chloride enhanced the sterilizing effect to a lesser extent when large dust particles were involved. The partial water vapor pressure did not influence the sterilization between 0.3 and 6 mmHg. An increase in temperature decreased the sterilizing effect. Author (ESA)

PULSE TRANSDUCER WITH ARTIFACT SIGNAL ATTENUATOR Patent
Wilbur H. Cash, Jr. (Martin Marietta Aerospace, Denver) and John T. Polhemus, inventors (to NASA) (Martin Marietta Aerospace, Denver) Issued 22 Apr. 1980 4 p Filed 26 Jul. 1978 Supersedes N78-28339 (16 - 19, p 2520) Sponsored by NASA
(NASA-Case-FRC-11012-1; US-Patent-4,198,988;
US-Patent-Appl-SN-928137; US-Patent-Class-128-666;
US-Patent-Class-128-690) Avail: US Patent and Trademark Office CSCL 06B

An artifact signal attenuator for a pulse rate sensor is described. The circuit for attenuating background noise signals is connected with a pulse rate transducer which has a light source and a detector for light reflected from blood vessels of a living body. The heart signal provided consists of a modulated dc signal voltage indicative of pulse rate. The artifact signal resulting from light reflected from the skin of the body comprises both a constant dc signal voltage and a modulated dc signal voltage. The amplitude of the artifact signal is greater and the frequency less than that of the heart signal. The signal attenuator circuit includes an operational amplifier for canceling the artifact signal from the output signal of the transducer and has the capability of meeting packaging requirements for wrist-watch-size packages. TIME FOR RECOVERY FROM SUCCESSIVE BOUTS OF EXERCISE AS MEASURED BY CHANGES IN THE ANAEROBIC THRESHOLD: A COMPARISON OF RECOVERY INTERVALS OF 24 AND 48 HOURS Ph.D. Thesis
Jeffrey Mark Broida 1979 194 p
Avail: Univ. Microfilms Order No. 8010467

The time course for recovery from successive bouts of prolonged and fatiguing exercise was examined to determine if a measure of anaerobic threshold (AT) could be used to differentiate the degree of recovery from exercise frequencies of 3.5 and 7 days per week in which the recovery times were 48 hours and 24 hours respectively. It was concluded that the AT level will decrease if an individual exercises too often with insufficient time for recovery to be complete. Twenty-four hours of recovery time is not sufficient during the first few weeks of prolonged exercise training if the activity consists of running for 45 minutes. Twenty-four hours of recovery time may be sufficient for the 'trained' individual whose physiological mechanisms have had time to adapt. This adaptation period may take from 3 to 6 weeks. Training at the AT either 3.5 or 7 days per week for 45 minutes each session will not increase the AT in a period of 9 weeks. The results of this study indicated that the AT holds potential for being a sensitive indicator of underlying physiological changes resulting from exercise. Dissert. Abstr.

N80-23971 Wayne State Univ., Detroit, Mich.
CORONARY PLEXUS IN MAN AND MONKEY Ph.D. Thesis
Arthur James Jackson 1979 116 p
Avail: Univ. Microfilms Order No. 8010147

The distribution of autonomic nerve fibers in relation to the coronary arteries and their branches is examined, and axon terminals in the region of arterioles and capillaries are identified. The left and right coronary plexuses were studied, macroscopically, in seven human hearts and three monkey (Macaca Mulatta) hearts with the aid of a binocular dissecting microscope. In addition, the coronary arteries and their branches with the adjacent myocardium, from a stump-tail (Macaca Arctoides) and Rhesus monkey, were studied by transmission electron microscopy with and without the 'false neurotransmitter, 5-hydroxydopamine. The results suggest that if the coronary arteries are subject to autonomic control, it may be at the level of the capillary bed. Dissert. Abstr.

N80-23972 Pennsylvania State Univ., University Park.
RELATIONSHIP BETWEEN URINARY 3-METHYLHISTIDINE EXCRETION AND COMPONENTS OF BODY COMPOSITION IN MAN Ph.D. Thesis
Henry Charles Lukaski 1979 124 p
Avail: Univ. Microfilms Order No. 8010079

The relationship between urinary 3-methylhistidine (3-Mehis) excretion and components of body composition was studied in 14 men (mean age 25.2 years). Based on energy and protein intakes derived from seven day dietary records, the subjects were given a meat diet for the first four days and a meat-free diet for the next seven days. Body weight was measured daily and all urine was collected daily and analyzed for creatinine, urea nitrogen, and 3-Mehis. Densitometry and skinfold measurements were performed and total body potassium (TBK), nitrogen (TBN), and water (TBW) were determined. During the meat-free diet, urea nitrogen output was constant, indicating no increase in protein catabolism, creatinine excretion was variable, and 3-Mehis reached its lowest level, endogenous output, on day three. 3-Mehis was more closely related to muscle weight (r = 0.91; p less than 0.001) calculated from measurements of TBK and TBN than to free fat (r = 0.81; p less than 0.001) calculated from densitometry. It is concluded that because endogenous 3-Mehis is closely and significantly related to muscle weight in man, it can be used to study skeletal muscle protein degradation provided that the necessary dietary restrictions are observed. Dissert. Abstr.

Positron emission computed tomography (PCT) represents an important new tool for the noninvasive evaluation and, more importantly, quantification of myocardial performance. Most currently available techniques permit assessment of only one aspect of cardiac function, i.e., myocardial perfusion by gamma scintillation camera imaging with Thallium-201 or left ventricular function by echocardiography or radionuclide angiocardiography. With PCT it may become possible to study all three major segments of myocardial performance, i.e., regional blood flow, mechanical function, and most importantly, myocardial metabolism. Each of these segments can either be evaluated separately or in combination. The principles and technological advantages of the imaging device are described. Currently available radioactive tracers and how they can be employed for the assessment of flow, function and metabolism are reviewed. Possible applications of PCT for the study of cardiac physiology of its potential role in the diagnosis of cardiac disease are discussed. DOE

(SAND-77-7028) Avail: NTIS HC A04/MF A01

The effects of the magnetic field on humans, in particular those wearing pacemakers, was investigated using pacemakers inserted in a simulated (phantom) human being. The tests performed were on a worst case basis. That is, for one set of tests the most sensitive of the several cardiac pacemakers tested was used in the simulated human being (phantom) tests. Furthermore, the largest observed pacemaker lead pickup area was used with the most sensitive pacemaker, and in some of the tests the pacemaker lead was oriented for maximum pickup with the phantom being placed in the strongest magnetic field. A discussion of the types of the tests as well as the electrical pickup mechanism is given. The results are presented and discussed in relation to the development of an electronic, remotely detected credential for personnel identification within security areas. R.E.S.

A DISCRIMINANT ANALYSIS OF PILOT PERFORMANCE PREDICTION AND SELECTION FOR AIR-TO-AIR COMBAT Ph.D. Thesis
Dwight Wilson Polk 1979 108 p
Avail: Univ. Microfilms Order No. 8010554

Data from Southeast Asian conflict were partitioned into five epochs. Four sets of discriminant functions based on training and experience factors were derived. Each set of functions was obtained from the data of a particular epoch and was used to predict the results of a subsequent epoch. Predicted and actual results provided the basis for determining the effectiveness of computed discriminant functions in predicting successes and failures in decisive engagements. For the majority of the cases studied discriminant functions predicted results correctly in approximately the same proportions as a random classification process. However, when air combat maneuvering training of tactical flying experience were used to predict results in an early period of the conflict, the discriminant function predictions exceeded random classifications in accuracy by better than ten percent. In the last period of the conflict, flight position which is actually a pseudo training and experience factor because of the confounding of training and experience information within it was an effective indicator of engagement outcomes. These results are consistent with a tactical analysis of the conflict. Dissert. Abstr.

CLARIFICATION PROCESS: RESOLUTION OF DECISION-PROBLEM CONDITIONS
Duncan L. Dieterly May 1980 24 p refs
(NASA-TM-81193; AFHRL-H-80-101; A-8162) Avail: NTIS HC A02/MF A01 CSCL 05J

A model of a general process which occurs in both decisionmaking and problem-solving tasks is presented. It is called the clarification model and is highly dependent on information flow. The model addresses the possible constraints of individual indifferences and experience in achieving success in resolving decision-problem conditions. As indicated, the application of the clarification process model is only necessary for certain classes of the basic decision-problem condition. With less complex decision problem conditions, certain phases of the model may be omitted. The model may be applied across a wide range of decision problem conditions. The model consists of two major components: (1) the five-phase prescriptive sequence (based on previous approaches to both concepts) and (2) the information manipulation function (which draws upon current ideas in the areas of information processing, computer programming, memory, and thinking). The two components are linked together to provide a structure that assists in understanding the process of resolving problems and making decisions. R.E.S.

PREPARATION COST AND DUAL-TASK PERFORMANCE: FURTHER EVIDENCE AGAINST A GENERAL TIME-SHARING FACTOR
Harold L. Hawkins, Elizabeth Ollich-Rodriquez, Thomas O. Halloran, R. Daniel Ketchum, David B. Bachmann, and Gerald M. Reicher Aug. 1979 38 p ref
(Contract N00014-77-C-0643; NR Proj. 150-407)
(AD-A080857; TR-5) Avail: NTIS HC A03/MF A01 CSCL 05/8

The time-sharing performance of 12 pilot trainees and 12 subjects with no pilot training was evaluated on 8 dual-task and 4 single-task conditions. Three task characteristics-input modality (auditory or visual), output modality (vocal or manual), and task difficulty (easy or difficult)--were systematically manipulated across conditions in an effort to vary the nature of the specific time-sharing demands imposed. To assess their generality, time-sharing factors were correlated across task conditions. A factor was considered general if it correlated across conditions imposing dissimilar time-sharing demands. The result suggest that (a) neither an ability to time-share efficiently nor an ability to effectively prepare for multiple tasks is a general factor in dual-task performance, and (b) effective preparation for multiple tasks is a skill that increases with piloting experience. A80-32751
Coronary plexus in man and monkey
N80-23971

ARTERIOSCLEROSIS
Dynamics of change of lipid and monoamine metabolisms and the blood coagulation system during experimental atherosclerosis caused by restriction of movement
[NASA-TM-76033] N80-22968
Possibilities of forecasting hypercholesterinemia in pilots
[NASA-TM-76087] N80-23975

ARTIFICIAL INTELLIGENCE
The feasibility and psychological aspects of verbal interaction of man and automatic systems
A80-33007

ASTRONAUT MANEUVERING EQUIPMENT
The design of maneuvering units for cosmonauts in referenceless space and requirements for engineering psychology
A80-33005

ASTRONAUT PERFORMANCE
Social and psychological problems of extended space missions
[AIAA PAPER 80-0826] A80-32854
Psychological problems of space flight --- Russian book
A80-32976
The role of the human factor in space flights
A80-32978
Several characteristics of crew activity during space flight
A80-32981
The modeling of human activity in space flight
A80-32982
The investigation of the influence of space flight conditions on the statistical characteristics of operator activity
A80-32983
The investigation of operator activity in the performance of standard activities under conditions simulating extended space flight
A80-32984
Possible means for increasing the effectiveness of cosmonaut activity
A80-32985
The evaluation of the effectiveness of crew work under stress --- in spacecraft
A80-32986
Assurance of stable work capacity during prolonged space flight
A80-32989
Possible approaches to the study of cosmonaut cognitive behavioral styles during individual and group activity
A80-32992
The preservation capacity of spacecraft control skills during extended flights
A80-32994
Engineering and psychological aspects of maintenance work in space
A80-33004
Engineering-psychological aspects of optimizing human visual work capacity in space flight
A80-33006
Reflection of the dynamics of the psychophysiological state of the human operator in his speech signals
A80-33008
Construction of a model simulating human-operator activity in manual rendezvous control
A80-33009
Utilization of general psychological principles for solving problems concerning the operation of man/machine systems
A80-33010

ASTRONAUT TRAINING
Psychophysiological selection, crew staffing and preparation for space flight
A80-32995
Methodological and organizational principles of the psychological preparation of cosmonauts
A80-32997
Objectivization of the basic elements of the process of crew preparation for space flight
A80-32998
Psychological training of an astronaut operator under the conditions of emotional stress
A80-32999
Physiological aspects of the psychophysiological security of cosmonaut preparation on trainer apparatus
A80-33000
Psychological training of astronauts using flight simulators
A80-33001
The role and significance of the crew instructor in cosmonaut training
A80-33002

ATHLETES
Assessment of physical working capacity in clinic and athletics --- Russian book
A80-32846

ATMOSPHERIC COMPOSITION
Possible oxidant sources in the atmosphere and surface of Mars
A80-36060

ATTENUATORS
Pulse transducer with artifact signal attenuator --- heart rate sensors
[NASA-CASE-FRC-11012-1] N80-23969

AUDITORY PERCEPTION
Detection and recognition of pure tones in noise
A80-32839
Cochlear anatomy related to cochlear micromechanics - A review
A80-35401

AUDITORY STIMULI
On auditory evoked potentials and heart rate in man during whole-body vibration
A80-36250

AUTOMATA THEORY
Semiautomatic and interactive control systems for manipulator robots
A80-33897

AUTOMATIC CONTROL
Semiautomatic and interactive control systems for manipulator robots
A80-33897

B

BACTERICIDES
Effect of hydrogen chloride on the morphology of Bacillus subtilis spores
N80-23967
Sterilization by means of hydrogen chloride: Influence of process parameters on the biocidal activity
N80-23968

BALLISTIC TRAJECTORIES
Translational motion of anthropomorphic mechanisms in the pulsed excitation mode
A80-33881

BARORECEPTORS
Control of skin blood flow during exercise by thermal reflexes and baroreflexes
A80-32750

BEHAVIOR
Effects of fatigue on human behavior and performance. Citations from the NTIS data base
[PB80-804263] N80-22978
Behavior and physiological effects of noise, volume 3. Citations from the NTIS data base
[PB80-803869] N80-22979

BENTONITE
The effect of clays on the oligomerization of HCN
A80-36198

BIBLIOGRAPHIES
Effects of fatigue on human behavior and performance. Citations from the NTIS data base
[PB80-804263] N80-22978

Behavior and physiological effects of noise, volume 3. Citations from the NTIS data base

Biological effects of laser radiation, volume 2. Citations from the NTIS data base
[PB80-803935] N80-22980
Color vision. Citations from the NTIS data base
[PB80-803992] N80-22981

BINOCULAR VISION
Binocular retinal image motion during active head rotation
A80-35778

BIOACOUSTICS
Temperature and frequency dependence of ultrasonic attenuation in selected tissues
A80-32833

BIOASSAY
Wipe-rinse technique for quantitating microbial contamination on large surfaces
A80-32835

BIOASTRONAUTICS
Psychological problems of space flight --- Russian book
A80-32976
Psychological problems of space flight
A80-32977
The role of the human factor in space flights
A80-32978
Space exploration prospects and psychology
A80-32979
The appearence of certain human psychological traits during space flight
A80-32980
The modeling of human activity in space flight
A80-32982
Possible means for increasing the effectiveness of cosmonaut activity
A80-32985
Greenhouses in space --- plant growth in Salyut space station experiments
A80-34499

BIOCHEMISTRY
Biochemical changes in humans upon exposure to ozone and exercise
[PB80-105554] N80-22982

BIODYNAMICS
Cochlear anatomy related to cochlear micromechanics - A review
A80-35401

BIOENGINEERING
Preliminary analysis of wind tunnel test of a 1/2 scale model of an ejecting crewman and ejection seat
[AD-A069229] N80-22990
Calibration and test procedures for three year old child dummy
[PB80-112246] N80-23006

BIOINSTRUMENTATION
Excursion of vibrating microelectrodes in tissue
A80-32751
A microprocessor-controlled echocardiographic tracking system
A80-33183
Sources of variability in echocardiographic measurements
A80-33874
Pulse transducer with artifact signal attenuator --- heart rate sensors
[NASA-CASE-FRC-11012-1] N80-23969
Positron emission tomography of the heart
[UCLA-12-1232] N80-23980

BIOLOGICAL EFFECTS
Biological effects of laser radiation, volume 2. Citations from the NTIS data base
[PB80-803935] N80-22980
Proceedings of the Workshop on Electrical and Biological Effects Related to HVDC Transmission
[PNL-3121] N80-23979
Study of the possible effects of 110 kHz electromagnetic fields on humans
[SAND-77-7028] N80-23981

BIOLOGICAL EVOLUTION
Origin of life - Consideration of alternatives to proteins and nucleic acids
A80-32685
A new estimate of sequence divergence of mitochondrial DNA using restriction endonuclease mappings
A80-36197

BIONICS
The modeling of human activity in space flight
A80-32982
Modeling the human as a controller in a multi-task environment
N80-22986
Preliminary analysis of wind tunnel test of a 1/2 scale model of an ejecting crewman and ejection seat
[AD-A069229] N80-22990
Calibration and test procedures for three year old child dummy
[PB80-112246] N80-23006

BIOPHYSICS
Temperature and frequency dependence of ultrasonic attenuation in selected tissues
A80-32833

BIOSYNTHESIS
Abiogenic synthesis of nucleoside-like compounds under the influence of extremal factors
A80-33311
Suppression of the biosynthesis of sphingomyelin under gamma irradiation and exposure to ubiquinone-9
A80-33363

BLOOD
Biochemical changes in humans upon exposure to ozone and exercise
[PB80-105554] N80-22982

BLOOD CIRCULATION
Noise effects. Effects of noise exposure on blood circulation and respiration of man. Part 1: Results of a two-hour noise exposure on groups of younger and older people
[IG-TNO-B-373-E] N80-22977

BLOOD FLOW
Control of skin blood flow during exercise by thermal reflexes and baroreflexes
A80-32750

BLOOD PLASMA
Role of thermal and exercise factors in the mechanism of hypervolemia
A80-32748
Exercise training-induced hypervolemia - Role of plasma albumin, renin, and vasopressin
A80-32749

BODY COMPOSITION (BIOLOGY)
Relationship between urinary 3-methylhistidine excretion and components of body composition in man
N80-23972

BODY TEMPERATURE
Role of thermal and exercise factors in the mechanism of hypervolemia
A80-32748
Performance in tasks differing in memory load and its relationship with habitual activity phase and body temperature
[FOA-C-52002-H6] N80-22974

C

C-5 AIRCRAFT
USAF bioenvironmental noise data handbook. Volume 120. C-5A aircraft, near and far-field noise
[AD-A079866] N80-22992

C-135 AIRCRAFT
USAF bioenvironmental noise data handbook. Volume 134. KC-135A aircraft in the modified AF32A-52A noise suppressor, far-field noise
[AD-A079872] N80-22998

C-141 AIRCRAFT
USAF bioenvironmental noise data handbook. Volume 75: C-141A aircraft, near and far-field noise
[AD-A079865] N80-22991

CARBOHYDRATES
Role of adrenals in the mobilization of carbohydrate and fat resources after overstimulation of rats
[NASA-TM-75974] N80-22956

CARBON DIOXIDE
Possible oxidant sources in the atmosphere and surface of Mars
A80-36060

CARBON DIOXIDE REMOVAL
Performance characterization of a Bosch CO sub 2 reduction subsystem
[NASA-CR-152342] N80-22987
CARBON SUBOXIDES
A model of Martian surface chemistry
A80-36069
CARBON 14
Incorporation of glycine-2-C-14 in acid-insoluble proteins of rat bones and teeth during hypokinesia and administration of thyrocalcitonine
[NASA-TM-75981] N80-22959
CARDIOLOGY
Sources of variability in echocardiographic measurements
A80-33874
Clinical uses of two dimensional echocardiography
A80-33875
CARDIOVASCULAR SYSTEM
Acute cardiovascular adaptation to altitude
A80-34475
Time for recovery from successive bouts of exercise as measured by changes in the anaerobic threshold: A comparison of recovery intervals of 24 and 48 hours
N80-23970
Possibilities of forecasting hypercholesterinemia in pilots
[NASA-TM-76087] N80-23975
CARTILAGE
Animal experimental research on microstructural behavior on the hyaline arthroidal cartilage after immobilization and remobilization
[NASA-TM-76050] N80-22958
CATALYSIS
Laboratory simulations of the pyrolytic release experiments - An interim report
A80-36070
CATECHOLAMINE
Catecholamines of the adrenal medula and their morphological changes during adaptation to repeated immobilization stress
[NASA-TM-76068] N80-22970
CELLS (BIOLOGY)
Insulin binding and glucose uptake of adipocytes in rats adapted to hypergravitational force
A80-35751
CENTRAL NERVOUS SYSTEM
Procedure of practical exercise with students on the pathogenic effect of accelerations on the organism
[NASA-TM-76120] N80-23976
CHEMICAL ANALYSIS
The implications and limitations of the findings of the Viking organic analysis experiment
A80-36059
CHEMICAL COMPOSITION
The implications and limitations of the findings of the Viking organic analysis experiment
A80-36059
Heterogeneous phase reactions of Martian volatiles with putative regolith minerals
A80-36062
CHEMICAL EVOLUTION
Investigation of the kinetics of pyrolysis of amino acids
A80-35859
The role of metal ions in chemical evolution - Polymerization of alanine and glycine in a cation-exchanged clay environment
A80-36195
The effect of clays on the oligomerization of HCN
A80-36198
CHEMICAL REACTIONS
The effect of clays on the oligomerization of HCN
A80-36198
CHLOROPHYLLS
Studies of photosynthetic membranes using chlorophyll fluorescence lifetimes
[LBL-9795] N80-23966
CHOLESTEROL
Possibilities of forecasting hypercholesterinemia in pilots
[NASA-TM-76087] N80-23975
CIRCADIAN RHYTHMS
Investigation of circadian rhythms on select psychomotor and neurological functions
N80-22966
State of the body in disorders of diurnal physiological rhythms and long-term hypokinesia
[NASA-TM-76051] N80-22969
CLINICAL MEDICINE
Assessment of physical working capacity in clinic and athletics --- Russian book
A80-32846
Diagnosis and quantification of aortic stenosis with pulsed Doppler echocardiography
A80-33873
Clinical uses of two dimensional echocardiography
A80-33875
Automated system for diagnosing craniocerebral injury
[NASA-TM-76097] N80-22972
An experimental evaluation of selected rewarming therapies for the treatment of profound accidental hypothermia, part 2
[AD-A078292] N80-23978
CLOSED ECOLOGICAL SYSTEMS
Greenhouses in space --- plant growth in Salyut space station experiments
A80-34499
Performance characterization of a Bosch CO sub 2 reduction subsystem
[NASA-CR-152342] N80-22987
COCHLEA
Cochlear anatomy related to cochlear micromechanics - A review
A80-35401
COCKPITS
Cockpit thermal stress and aircrew thermal strain during routine Jaguar operations
[FPRC/REPT-1376] N80-22976
COGNITIVE PSYCHOLOGY
Dependence of the activity and behavior of individuals and groups on the characteristics of the individual cognitive styles
A80-32991
Possible approaches to the study of cosmonaut cognitive behavioral styles during individual and group activity
A80-32992
COLD TOLERANCE
Experimental evaluations of selected immersion hypothermia protection equipment
[AD-A080470] N80-23003
COLOR VISION
Color vision. Citations from the NTIS data base
[PB80-803992] N80-22981
COMBAT
A discriminant analysis of pilot performance prediction and selection for air-to-air combat
N80-23984
COMPENSATORY TRACKING
Investigation of operator work capacity under conditions of continuous activity
A80-32990
COMPUTER NETWORKS
Automated system for diagnosing craniocerebral injury
[NASA-TM-76097] N80-22972
CONFERENCES
Proceedings of the Fifteenth Annual Conference on Manual Control
[AD-A080563] N80-23004
Proceedings of the Workshop on Electrical and Biological Effects Related to HVDC Transmission
[PNL-3121] N80-23979
CONTROL SIMULATION
Mathematical modeling, simulation, and stability of the respiratory control system
N80-22965
CONTROLLERS
Modeling the human as a controller in a multi-task environment
N80-22986
CORTI ORGAN
Cochlear anatomy related to cochlear micromechanics - A review
A80-35401
COSMONAUTS
Possible approaches to the study of cosmonaut cognitive behavioral styles during individual and group activity
A80-32992
Methodological and organizational principles of the psychological preparation of cosmonauts
A80-32997

The role and significance of the crew instructor in cosmonaut training
A80-33002
The design of maneuvering units for cosmonauts in referenceless space and requirements for engineering psychology
A80-33005

CREW PROCEDURES (PREFLIGHT)
Objectivization of the basic elements of the process of crew preparation for space flight
A80-32998

CYANIDES
The effect of clays on the oligomerization of HCN
A80-36198

D

DATA PROCESSING
A discriminant analysis of pilot performance prediction and selection for air-to-air combat
N80-23984

DATA REDUCTION
A discriminant analysis of pilot performance prediction and selection for air-to-air combat
N80-23984

DECISION MAKING
Models of human decision making in multi-task situations: Event detection, attention allocation, and implications for computer aiding
N80-22983
Theory of the decision/problem state
[NASA-TM-81192] N80-22984
Problem solving and decisionmaking: An integration
[NASA-TM-81191] N80-22985
Clarification process: Resolution of decision-problem conditions
[NASA-TM-81193] N80-23985

DEOXYRIBONUCLEIC ACID
A new estimate of sequence divergence of mitochondrial DNA using restriction endonuclease mappings
A80-36197

DETECTION
Summaries of some reports of 1978 concerning results of field experiments for visibility
[DFVLR-MITT-79-11] N80-23983

DIAGNOSIS
Automated system for diagnosing craniocerebral injury
[NASA-TM-76097] N80-22972

DIAMINES
The effect of clays on the oligomerization of HCN
A80-36198

DIRECT CURRENT
Proceedings of the Workshop on Electrical and Biological Effects Related to HVDC Transmission
[PNL-3121] N80-23979

DISPLAY DEVICES
Effects of spatial parameters on the perceptual organization of a bistable motion display
A80-32973

DISTANCE
Summaries of some reports of 1978 concerning results of field experiments for visibility
[DFVLR-MITT-79-11] N80-23983

DOPPLER EFFECT
Diagnosis and quantification of aortic stenosis with pulsed Doppler echocardiography
A80-33873

DRUGS
Procedure of practical exercise with students on the pathogenic effect of accelerations on the organism
[NASA-TM-76120] N80-23976

DUMMIES
Calibration and test procedures for three year old child dummy
[PB80-112246] N80-23006

DYNAMIC CONTROL
Reflection of the dynamics of the psychophysiological state of the human operator in his speech signals
A80-33008
Translational motion of anthropomorphic mechanisms in the pulsed excitation mode
A80-33881

DYNAMIC RESPONSE
Dynamic aspects of detection --- sensory processes in psychophysics
A80-32837

E

ECHOCARDIOGRAPHY
A microprocessor-controlled echocardiographic tracking system
A80-33183
Diagnosis and quantification of aortic stenosis with pulsed Doppler echocardiography
A80-33873
Sources of variability in echocardiographic measurements
A80-33874
Clinical uses of two dimensional echocardiography
A80-33875

EJECTION SEATS
Preliminary analysis of wind tunnel test of a 1/2 scale model of an ejecting crewman and ejection seat
[AD-A069229] N80-22990

ELECTRIC FIELDS
Proceedings of the Workshop on Electrical and Biological Effects Related to HVDC Transmission
[PNL-3121] N80-23979

ELECTROCARDIOGRAPHY
The effect of restraining on the heart rate in guinea pigs
[NASA-TM-76006] N80-22962

ELECTRODES
Excursion of vibrating microelectrodes in tissue
A80-32751

ELECTROMAGNETIC FIELDS
Study of the possible effects of 110 kHz electromagnetic fields on humans
[SAND-77-7028] N80-23981

ELECTROPHORESIS
Electrophoretic cell separation by means of microspheres
A80-34229

ELECTROPHYSIOLOGY
The effect of restraining on the heart rate in guinea pigs
[NASA-TM-76006] N80-22962

EMERGENCIES
Some aspects of space crew member interactions in emergency situations
A80-32987

EMOTIONAL FACTORS
The possibility of distinguishing between emotional stress levels according to speech indicators in aerospace activities
A80-32988
Psychological training of an astronaut operator under the conditions of emotional stress
A80-32999

ENDOCRINE SECRETIONS
Exercise training-induced hypervolemia - Role of plasma albumin, renin, and vasopressin
A80-32749

ENGINE NOISE
USAF bioenvironmental noise data handbook. Volume 136: F-111A aircraft in the AF32A-13 noise suppressor, far-field noise
[AD-A079874] N80-23000

ENVIRONMENTAL TESTS
Multivariate analysis of physiological response to environmental stress
N80-22964

ENZYMES
Origin of life - Consideration of alternatives to proteins and nucleic acids
A80-32685
A new estimate of sequence divergence of mitochondrial DNA using restriction endonuclease mappings
A80-36197

ENZYMOLOGY
Photochemistry and enzymology of photosynthesis
[COO-3326-82] N80-23965

ERYTHROCYTES
Electrophoretic cell separation by means of microspheres
A80-34229

Splenic erythropoiesis in polycythemic response of the rat to high-altitude exposure
A80-35675
Changes in concentration of 2,3-glycerodiphosphoric acid in rat erythrocytes during adaptation to hypoxia
A80-35860

EXCRETION
Relationship between urinary 3-methylhistidine excretion and components of body composition in man
N80-23972

EXOBIOLOGY
Simulation of the Viking biology experiments - An overview
A80-36066
Completion of the Viking Labeled Release experiment on Mars
A80-36067
Laboratory simulations of the Viking Labeled Release experiment - Kinetics following second nutrient injection and the nature of the gaseous end product
A80-36068
The Viking mission - Implications for life on Mars
A80-36071
Aerospace Medicine and Biology: A continuing bibliography with indexes, supplement 205
[NASA-SP-7011(205)] N80-22963

EXTRATERRESTRIAL COMMUNICATION
Uncertainty in estimates of the number of extraterrestrial civilizations
[NASA-CR-162637] N80-23007

EXTRATERRESTRIAL LIFE
Simulation of the Viking biology experiments - An overview
A80-36066
Completion of the Viking Labeled Release experiment on Mars
A80-36067
Laboratory simulations of the Viking Labeled Release experiment - Kinetics following second nutrient injection and the nature of the gaseous end product
A80-36068
The Viking mission - Implications for life on Mars
A80-36071
Uncertainty in estimates of the number of extraterrestrial civilizations
[NASA-CR-162637] N80-23007

EXTRAVEHICULAR ACTIVITY
The design of maneuvering units for cosmonauts in referenceless space and requirements for engineering psychology
A80-33005
EVA manipulation and assembly of space structure columns
[NASA-CR-3285] N80-23988

EYE MOVEMENTS
Binocular retinal image motion during active head rotation
A80-35778

F

F-4 AIRCRAFT
USAF bioenvironmental noise data handbook. Volume 121: F-4C aircraft, near and far-field noise
[AD-A079867] N80-22993
USAF bioenvironmental noise data handbook. Volume 131: F-4 aircraft in the AF32A-14 noise suppressor, near and far-field noise
[AD-A079869] N80-22995

F-5 AIRCRAFT
USAF bioenvironmental noise data handbook. Volume 132: F-5 aircraft in the AF32A-16 noise suppressor, near and far-field noise
[AD-A079870] N80-22996

F-15 AIRCRAFT
USAF bioenvironmental noise data handbook. Volume 133: F-15 aircraft in the AF32A-23 noise suppressor, near and far-field noise
[AD-A079871] N80-22997

F-106 AIRCRAFT
USAF bioenvironmental noise data handbook. Volume 135: F-106 aircraft in the AF32A-17 noise suppressor, near and far-field noise
[AD-A079873] N80-22999

F-111 AIRCRAFT
USAF bioenvironmental noise data handbook. Volume 136: F-111A aircraft in the AF32A-13 noise suppressor, far-field noise
[AD-A079874] N80-23000

FABRICS
Wipe-rinse technique for quantitating microbial contamination on large surfaces
A80-32835

FATIGUE (BIOLOGY)
Effects of fatigue on human behavior and performance. Citations from the NTIS data base
[PB80-804263] N80-22978
Time for recovery from successive bouts of exercise as measured by changes in the anaerobic threshold: A comparison of recovery intervals of 24 and 48 hours
N80-23970

FIGHTER AIRCRAFT
USAF bioenvironmental noise data handbook. Volume 140: F-16 aircraft in the AF32A-25 noise suppressor, near and far-field noise
[AD-A079875] N80-23001

FLIGHT CONTROL
A variance method of objective evaluation of the training process and learning level of operators in flight vehicle control regimes
A80-33003

FLIGHT CREWS
The role and significance of the crew instructor in cosmonaut training
A80-33002
Total aircrew workload study for the AMST. Volume 1: Results
[AD-A076422] N80-22988
Total aircrew workload study for the AMST. Volume 2: Communication navigation description
[AD-A076498] N80-22989

FLIGHT SIMULATION
The investigation of operator activity in the performance of standard activities under conditions simulating extended space flight
A80-32984

FLIGHT SIMULATORS
Psychological training of astronauts using flight simulators
A80-33001

FLIGHT STRESS (BIOLOGY)
Cockpit thermal stress and aircrew thermal strain during routine Jaguar operations
[FPRC/REPT-1376] N80-22976

FLUID FLOW
Rhythmic vortex currents and their significance in human physiology
[MPIS-1/1979] N80-23982

G

GAMMA RAYS
Suppression of the biosynthesis of sphingomyelin under gamma irradiation and exposure to ubiquinone-9
A80-33363

GAS ANALYSIS
Laboratory simulations of the Viking Labeled Release experiment - Kinetics following second nutrient injection and the nature of the gaseous end product
A80-36068

GAS CHROMATOGRAPHY
Evaluation of thyroid hormones by gas chromatography
[DFVLR-FB-79-07] N80-22975

GASTROINTESTINAL SYSTEM
Influence of experimental hypokinesia on gastric secretory function
[NASA-TM-76034] N80-23974

GERMANY
Psychological selection of Spacelab payload specialists. The evaluation of German applicants
[ESA-TT-586] N80-23987

GLUCOSE
Insulin binding and glucose uptake of adipocytes in rats adapted to hypergravitational force
A80-35751

GLYCEROLS
Suppression of the biosynthesis of sphingomyelin under gamma irradiation and exposure to ubiquinone-9
A80-33363

Changes in concentration of 2,3-glycerodiphosphoric acid in rat erythrocytes during adaptation to hypoxia
A80-35860

GLYCINE
Incorporation of glycine-2-C-14 in acid-insoluble proteins of rat bones and teeth during hypokinesia and administration of thyrocalcitonine
[NASA-TM-75981] N80-22959

GRAVITATIONAL EFFECTS
Insulin binding and glucose uptake of adipocytes in rats adapted to hypergravitational force
A80-35751

GROUP DYNAMICS
Dependence of the activity and behavior of individuals and groups on the characteristics of the individual cognitive styles
A80-32991
Possible approaches to the study of cosmonaut cognitive behavioral styles during individual and group activity
A80-32992

H

HANDBOOKS
USAF bioenvironmental noise data handbook. Volume 140: F-16 aircraft in the AF32A-25 noise suppressor, near and far-field noise
[AD-A079875] N80-23001

HEAD MOVEMENT
Binocular retinal image motion during active head rotation
A80-35778

HEALTH
Assessment of physical working capacity in clinic and athletics --- Russian book
A80-32846

HEALTH PHYSICS
Proceedings of the Workshop on Electrical and Biological Effects Related to HVDC Transmission
[PNL-3121] N80-23979
Study of the possible effects of 110 kHz electromagnetic fields on humans
[SAND-77-7028] N80-23981

HEARING
Low frequency acoustic detection in support of human detection range prediction
[AD-A080579] N80-22973

HEART
Positron emission tomography of the heart
[UCLA-12-1232] N80-23980

HEART DISEASES
Diagnosis and quantification of aortic stenosis with pulsed Doppler echocardiography
A80-33873
Clinical uses of two dimensional echocardiography
A80-33875
Possibilities of forecasting hypercholesterinemia in pilots
[NASA-TM-76087] N80-23975

HEART FUNCTION
A microprocessor-controlled echocardiographic tracking system
A80-33183
Coronary plexus in man and monkey
N80-23971

HEART RATE
On auditory evoked potentials and heart rate in man during whole-body vibration
A80-36250
The effect of restraining on the heart rate in guinea pigs
[NASA-TM-76006] N80-22962
Pulse transducer with artifact signal attenuator --- heart rate sensors
[NASA-CASE-FRC-11012-1] N80-23969

HEART VALVES
State of the mitral valve in rabbits with hypokinesia
[NASA-TM-76003] N80-22957

HEMODYNAMICS
Dynamics of change of lipid and monoamine metabolisms and the blood coagulation system during experimental atherosclerosis caused by restriction of movement
[NASA-TM-76033] N80-22968

HEMOGLOBIN
Changes in concentration of 2,3-glycerodiphosphoric acid in rat erythrocytes during adaptation to hypoxia
A80-35860

HIGH ALTITUDE
Splenic erythropoiesis in polycythemic response of the rat to high-altitude exposure
A80-35675

HIGH GRAVITY ENVIRONMENTS
Insulin binding and glucose uptake of adipocytes in rats adapted to hypergravitational force
A80-35751

HISTIDINE
Relationship between urinary 3-methylhistidine excretion and components of body composition in man
N80-23972

HORMONES
Evaluation of thyroid hormones by gas chromatography
[DFVLR-FB-79-07] N80-22975

HUMAN BEHAVIOR
Dependence of the activity and behavior of individuals and groups on the characteristics of the individual cognitive styles
A80-32991
Possible approaches to the study of cosmonaut cognitive behavioral styles during individual and group activity
A80-32992
Models of human decision making in multi-task situations: Event detection, attention allocation, and implications for computer aiding
N80-22983
Theory of the decision/problem state
[NASA-TM-81192] N80-22984
Problem solving and decisionmaking: An integration
[NASA-TM-81191] N80-22985

HUMAN BODY
On auditory evoked potentials and heart rate in man during whole-body vibration
A80-36250
Rhythmic vortex currents and their significance in human physiology
[RPIS-1/1979] N80-23982

HUMAN FACTORS ENGINEERING
Psychological problems of space flight --- Russian book
A80-32976
The role of the human factor in space flights
A80-32978
The modeling of human activity in space flight
A80-32982
Possible means for increasing the effectiveness of cosmonaut activity
A80-32985
The preservation capacity of spacecraft control skills during extended flights
A80-32994
Engineering and psychological aspects of maintenance work in space
A80-33004
The design of maneuvering units for cosmonauts in referenceless space and requirements for engineering psychology
A80-33005
Engineering-psychological aspects of optimizing human visual work capacity in space flight
A80-33006
Reflection of the dynamics of the psychophysiological state of the human operator in his speech signals
A80-33008
Models of human decision making in multi-task situations: Event detection, attention allocation, and implications for computer aiding
N80-22983
Total aircrew workload study for the AMST. Volume 1: Results
[AD-A076422] N80-22988
Total aircrew workload study for the AMST. Volume 2: Communication navigation description
[AD-A076498] N80-22989
Preliminary analysis of wind tunnel test of a 1/2 scale model of an ejecting crewman and ejection seat
[AD-A069229] N80-22990

Additional studies of chemically treated clothing for personnel protection from biting flies
[AD-A080612] N80-23002
Calibration and test procedures for three year old child dummy
[PB80-112246] N80-23006
Study of the possible effects of 110 kHz electromagnetic fields on humans
[SAND-77-7028] N80-23981
Preparation cost and dual-task performance: Further evidence against a general time-sharing factor
[AD-A080857] N80-23986

HUMAN PERFORMANCE
The psychophysics of sensory systems --- Russian book
A80-32836
Detection and recognition of pure tones in noise
A80-32839
A review of advances in modern psychophysics /Strategies in psychophysical analyses/
A80-32840
Physiological premises of the laws of psychophysics
A80-32841
Investigation of circadian rhythms on select psychomotor and neurological functions
N80-22966
Preparation cost and dual-task performance: Further evidence against a general time-sharing factor
[AD-A080857] N80-23986

HUMAN REACTIONS
Possible sources of false-alarm responses and psychophysiological optimization mechanisms of weak-signal detection
A80-32842
Accuracy of perception in the tracking of continuous signals
A80-32843
On auditory evoked potentials and heart rate in man during whole-body vibration
A80-36250
Multivariate analysis of physiological response to environmental stress
N80-22964
Noise effects. Effects of noise exposure on blood circulation and respiration of man. Part 1: Results of a two-hour noise exposure on groups of younger and older people
[IG-TNO-B-373-E] N80-22977

HYDROGEN CHLORIDES
Effect of hydrogen chloride on the morphology of Bacillus subtilis spores
N80-23967
Sterilization by means of hydrogen chloride: Influence of process parameters on the biocidal activity
N80-23968

HYPERVOLEMIA
Role of thermal and exercise factors in the mechanism of hypervolemia
A80-32748
Exercise training-induced hypervolemia - Role of plasma albumin, renin, and vasopressin
A80-32749

HYPODYNAMIA
Effect of prolonged hypodynamia on certain physiological functions in dogs
[NASA-TM-75979] N80-22961
Reactivity of organism in prolonged space flights
[NASA-TM-75975] N80-22967

HYPOKINESIA
State of the mitral valve in rabbits with hypokinesia
[NASA-TM-76003] N80-22957
Incorporation of glycine-2-C-14 in acid-insoluble proteins of rat bones and teeth during hypokinesia and administration of thyrocalcitonine
[NASA-TM-75981] N80-22959
State of the body in disorders of diurnal physiological rhythms and long-term hypokinesia
[NASA-TM-76051] N80-22969
Influence of experimental hypokinesia on gastric secretory function
[NASA-TM-76034] N80-23974

HYPOTHALAMUS
State of the body in disorders of diurnal physiological rhythms and long-term hypokinesia
[NASA-TM-76051] N80-22969

HYPOTHERMIA
Experimental evaluations of selected immersion hypothermia protection equipment
[AD-A080470] N80-23003
An experimental evaluation of selected rewarming therapies for the treatment of profound accidental hypothermia, part 2
[AD-A078292] N80-23978

HYPOXIA
Splenic erythropoiesis in polycythemic response of the rat to high-altitude exposure
A80-35675
Changes in concentration of 2,3-glycerodiphosphoric acid in rat erythrocytes during adaptation to hypoxia
A80-35860

I

IMAGING TECHNIQUES
Positron emission tomography of the heart
[UCLA-12-1232] N80-23980

IMMOBILIZATION
Effects of audio-visual stimulation on the incidence of restraint ulcers on the Wistar rat
[NASA-TM-75950] N80-22955
Role of adrenals in the mobilization of carbohydrate and fat resources after overstimulation of rats
[NASA-TM-75974] N80-22956
The ulcerogenic effect of bile and bile acid in rats during immobilization stress
[NASA-TM-76054] N80-22960
Effect of prolonged hypodynamia on certain physiological functions in dogs
[NASA-TM-75979] N80-22961
Dynamics of change of lipid and monoamine metabolisms and the blood coagulation system during experimental atherosclerosis caused by restriction of movement
[NASA-TM-76033] N80-22968
Catecholamines of the adrenal medula and their morphological changes during adaptation to repeated immobilization stress
[NASA-TM-76068] N80-22970

IMMUNOLOGY
Electrophoretic cell separation by means of microspheres
A80-34229

INFORMATION THEORY
Clarification process: Resolution of decision-problem conditions
[NASA-TM-81193] N80-23985

INJURIES
Automated system for diagnosing craniocerebral injury
[NASA-TM-76097] N80-22972

INORGANIC CHEMISTRY
A model of Martian surface chemistry
A80-36069

INORGANIC PEROXIDES
A model of Martian surface chemistry
A80-36069

INSECTICIDES
Additional studies of chemically treated clothing for personnel protection from biting flies
[AD-A080612] N80-23002

INSTRUCTORS
The role and significance of the crew instructor in cosmonaut training
A80-33002

INSULIN
Insulin binding and glucose uptake of adipocytes in rats adapted to hypergravitational force
A80-35751

J

JAGUAR AIRCRAFT
Cockpit thermal stress and aircrew thermal strain during routine Jaguar operations
[FPRC/REPT-1376] N80-22976

JET AIRCRAFT
USAF bioenvironmental noise data handbook. Volume 140: F-16 aircraft in the AF32A-25 noise suppressor, near and far-field noise
[AD-A079875] N80-23001

JET AIRCRAFT NOISE
  USAF bioenvironmental noise data handbook. Volume 75: C-141A aircraft, near and far-field noise [AD-A079865] N80-22991
  USAF bioenvironmental noise data handbook. Volume 120. C-5A aircraft, near and far-field noise [AD-A079866] N80-22992
  USAF bioenvironmental noise data handbook. Volume 121: F-4C aircraft, near and far-field noise [AD-A079867] N80-22993
  USAF bioenvironmental noise data handbook. Volume 128: T-38 aircraft in the AF32A-18 noise suppressor, near and far-field noise [AD-A079868] N80-22994
  USAF bioenvironmental noise data handbook. Volume 131: F-4 aircraft in the AF32A-14 noise suppressor, near and far-field noise [AD-A079869] N80-22995
  USAF bioenvironmental noise data handbook. Volume 132: F-5 aircraft in the AF32A-16 noise suppressor, near and far-field noise [AD-A079870] N80-22996
  USAF bioenvironmental noise data handbook. Volume 133: F-15 aircraft in the AF32A-23 noise suppressor, near and far-field noise [AD-A079871] N80-22997
  USAF bioenvironmental noise data handbook. Volume 134. KC-135A aircraft in the modified AF32A-52A noise suppressor, far-field noise [AD-A079872] N80-22998
  USAF bioenvironmental noise data handbook. Volume 135: F-106 aircraft in the AF32A-17 noise suppressor, near and far-field noise [AD-A079873] N80-22999
  USAF bioenvironmental noise data handbook. Volume 136: F-111A aircraft in the AF32A-13 noise suppressor, far-field noise [AD-A079874] N80-23000

K

KINESTHESIA
  On the preservation of equilibrium in the orthograde and inverted positions of the body [NASA-TM-76141] N80-23977

L

LARGE SPACE STRUCTURES
  EVA manipulation and assembly of space structure columns [NASA-CR-3285] N80-23988
LASER OUTPUTS
  Biological effects of laser radiation, volume 2. Citations from the NTIS data base [PB80-803935] N80-22980
LATCHES
  Manned maneuvering unit latching mechanism N80-23497
LEARNING
  A variance method of objective evaluation of the training process and learning level of operators in flight vehicle control regimes A80-33003
LIFE SCIENCES
  Origin of life - Consideration of alternatives to proteins and nucleic acids A80-32685
LIFE SUPPORT SYSTEMS
  Greenhouses in space --- plant growth in Salyut space station experiments A80-34499
LIVER
  Suppression of the biosynthesis of sphingomyelin under gamma irradiation and exposure to ubiquinone-9 A80-33363
  The ulcerogenic effect of bile and bile acid in rats during immobilization stress [NASA-TM-76054] N80-22960
LONG DURATION SPACE FLIGHT
  Social and psychological problems of extended space missions [AIAA PAPER 80-0826] A80-32854
  Space exploration prospects and psychology A80-32979
  The investigation of operator activity in the performance of standard activities under conditions simulating extended space flight A80-32984
  Assurance of stable work capacity during prolonged space flight A80-32989
  The preservation capacity of spacecraft control skills during extended flights A80-32994

M

MAN MACHINE SYSTEMS
  Psychological problems of space flight A80-32977
  Several characteristics of crew activity during space flight A80-32981
  Possible means for increasing the effectiveness of cosmonaut activity A80-32985
  The evaluation of the effectiveness of crew work under stress --- in spacecraft A80-32986
  Engineering and psychological aspects of maintenance work in space A80-33004
  The feasibility and psychological aspects of verbal interaction of man and automatic systems A80-33007
  Construction of a model simulating human-operator activity in manual rendezvous control A80-33009
  Utilization of general psychological principles for solving problems concerning the operation of man/machine systems A80-33010
  A microprocessor-controlled echocardiographic tracking system A80-33183
  Modeling the human as a controller in a multi-task environment N80-22986
  Preliminary analysis of wind tunnel test of a 1/2 scale model of an ejecting crewman and ejection seat [AD-A069229] N80-22990
  Proceedings of the Fifteenth Annual Conference on Manual Control [AD-A080563] N80-23004
  Manned maneuvering unit latching mechanism N80-23497
  Preparation cost and dual-task performance: Further evidence against a general time-sharing factor [AD-A080857] N80-23986
  EVA manipulation and assembly of space structure columns [NASA-CR-3285] N80-23988
MANEUVERABILITY
  Manned maneuvering unit latching mechanism N80-23497
MANIPULATORS
  Semiautomatic and interactive control systems for manipulator robots A80-33897
MANNED SPACE FLIGHT
  Psychological problems of space flight --- Russian book A80-32976
  Psychological problems of space flight A80-32977
  The role of the human factor in space flights A80-32978
  The appearence of certain human psychological traits during space flight A80-32980
  Several characteristics of crew activity during space flight A80-32981
  The investigation of the influence of space flight conditions on the statistical characteristics of operator activity A80-32983
  Possible means for increasing the effectiveness of cosmonaut activity A80-32985

Some aspects of space crew member interactions in emergency situations
A80-32987

Assurance of stable work capacity during prolonged space flight
A80-32989

Engineering-psychological aspects of optimizing human visual work capacity in space flight
A80-33006

The feasibility and psychological aspects of verbal interaction of man and automatic systems
A80-33007

Reflection of the dynamics of the psychophysiological state of the human operator in his speech signals
A80-33008

MANUAL CONTROL

Investigation of operator work capacity under conditions of continuous activity
A80-32990

Construction of a model simulating human-operator activity in manual rendezvous control
A80-33009

Proceedings of the Fifteenth Annual Conference on Manual Control
[AD-A080563] N80-23004

MARS ATMOSPHERE

Possible oxidant sources in the atmosphere and surface of Mars
A80-36060

Heterogeneous phase reactions of Martian volatiles with putative regolith minerals
A80-36062

MARS ENVIRONMENT

The photolytic degradation and oxidation of organic compounds under simulated Martian conditions
A80-36065

MARS SURFACE

Possible oxidant sources in the atmosphere and surface of Mars
A80-36060

Heterogeneous phase reactions of Martian volatiles with putative regolith minerals
A80-36062

Simulation of the Viking biology experiments - An overview
A80-36066

MARS SURFACE SAMPLES

The implications and limitations of the findings of the Viking organic analysis experiment
A80-36059

The photolytic degradation and oxidation of organic compounds under simulated Martian conditions
A80-36065

Completion of the Viking Labeled Release experiment on Mars
A80-36067

Laboratory simulations of the Viking Labeled Release experiment - Kinetics following second nutrient injection and the nature of the gaseous end product
A80-36068

A model of Martian surface chemistry
A80-36069

Laboratory simulations of the pyrolytic release experiments - An interim report
A80-36070

The Viking mission - Implications for life on Mars
A80-36071

MATHEMATICAL MODELS

Mathematical modeling, simulation, and stability of the respiratory control system
N80-22965

Models of human decision making in multi-task situations: Event detection, attention allocation, and implications for computer aiding
N80-22983

Modeling the human as a controller in a multi-task environment
N80-22986

MECHANICAL DEVICES

Manned maneuvering unit latching mechanism
N80-23497

MENTAL PERFORMANCE

Possible approaches to the study of cosmonaut cognitive behavioral styles during individual and group activity
A80-32992

Performance in tasks differing in memory load and its relationship with habitual activity phase and body temperature
[FOA-C-52002-H6] N80-22974

METAL IONS

The role of metal ions in chemical evolution - Polymerization of alanine and glycine in a cation-exchanged clay environment
A80-36195

METHODOLOGY

Methodological and organizational principles of the psychological preparation of cosmonauts
A80-32997

MICROBIOLOGY

Inactivation of enteroviruses by ozone
N80-22954

MICROELECTRONICS

Excursion of vibrating microelectrodes in tissue
A80-32751

MICROORGANISMS

Wipe-rinse technique for quantitating microbial contamination on large surfaces
A80-32835

MICROPROCESSORS

A microprocessor-controlled echocardiographic tracking system
A80-33183

MICROSTRUCTURE

Animal experimental research on microstructural behavior on the hyaline arthroidal cartilage after immobilization and remobilization
[NASA-TM-76050] N80-22958

MINERAL DEPOSITS

Heterogeneous phase reactions of Martian volatiles with putative regolith minerals
A80-36062

MITOCHONDRIA

A new estimate of sequence divergence of mitochondrial DNA using restriction endonuclease mappings
A80-36197

MOLECULAR BIOLOGY

Origin of life - Consideration of alternatives to proteins and nucleic acids
A80-32685

MONOCULAR VISION

Grating induction - A new type of aftereffect
A80-35779

MONTMORILLONITE

The effect of clays on the oligomerization of HCN
A80-36198

MORPHOLOGY

Cochlear anatomy related to cochlear micromechanics - A review
A80-35401

State of the mitral valve in rabbits with hypokinesia
[NASA-TM-76003] N80-22957

MOTION PERCEPTION

Static and dynamic factors in the perception of rotary motion
A80-32974

MULTIVARIATE STATISTICAL ANALYSIS

Multivariate analysis of physiological response to environmental stress
N80-22964

MUSCULAR FATIGUE

Effect of prolonged hypodynamia on certain physiological functions in dogs
[NASA-TM-75979] N80-22961

MYELIN

Suppression of the biosynthesis of sphingomyelin under gamma irradiation and exposure to ubiquinone-9
A80-33363

N

NERVES

Coronary plexus in man and monkey
N80-23971

NEUROLOGY

Automated system for diagnosing craniocerebral injury [NASA-TM-76097] N80-22972

NEUROPHYSIOLOGY

Investigation of circadian rhythms on select psychomotor and neurological functions N80-22966

Vestibular recruitment [NASA-TM-76088] N80-22971

Coronary plexus in man and monkey N80-23971

NOISE

USAF bioenvironmental noise data handbook. Volume 140: F-16 aircraft in the AF32A-25 noise suppressor, near and far-field noise [AD-A079875] N80-23001

NOISE (SOUND)

Noise effects. Effects of noise exposure on blood circulation and respiration of man. Part 1: Results of a two-hour noise exposure on groups of younger and older people [IG-TNO-B-373-E] N80-22977

Behavior and physiological effects of noise, volume 3. Citations from the NTIS data base [PB80-803869] N80-22979

NOISE MEASUREMENT

USAF bioenvironmental noise data handbook. Volume 75: C-141A aircraft, near and far-field noise [AD-A079865] N80-22991

USAF bioenvironmental noise data handbook. Volume 120. C-5A aircraft, near and far-field noise [AD-A079866] N80-22992

USAF bioenvironmental noise data handbook. Volume 121: F-4C aircraft, near and far-field noise [AD-A079867] N80-22993

USAF bioenvironmental noise data handbook. Volume 128: T-38 aircraft in the AF32A-18 noise suppressor, near and far-field noise [AD-A079868] N80-22994

USAF bioenvironmental noise data handbook. Volume 131: F-4 aircraft in the AF32A-14 noise suppressor, near and far-field noise [AD-A079869] N80-22995

USAF bioenvironmental noise data handbook. Volume 132: F-5 aircraft in the AF32A-16 noise suppressor, near and far-field noise [AD-A079870] N80-22996

USAF bioenvironmental noise data handbook. Volume 133: F-15 aircraft in the AF32A-23 noise suppressor, near and far-field noise [AD-A079871] N80-22997

USAF bioenvironmental noise data handbook. Volume 134. KC-135A aircraft in the modified AF32A-52A noise suppressor, far-field noise [AD-A079872] N80-22998

NOISE POLLUTION

USAF bioenvironmental noise data handbook. Volume 135: F-106 aircraft in the AF32A-17 noise suppressor, near and far-field noise [AD-A079873] N80-22999

USAF bioenvironmental noise data handbook. Volume 136: F-111A aircraft in the AF32A-13 noise suppressor, far-field noise [AD-A079874] N80-23000

NOISE REDUCTION

USAF bioenvironmental noise data handbook. Volume 75: C-141A aircraft, near and far-field noise [AD-A079865] N80-22991

USAF bioenvironmental noise data handbook. Volume 120. C-5A aircraft, near and far-field noise [AD-A079866] N80-22992

USAF bioenvironmental noise data handbook. Volume 121: F-4C aircraft, near and far-field noise [AD-A079867] N80-22993

USAF bioenvironmental noise data handbook. Volume 128: T-38 aircraft in the AF32A-18 noise suppressor, near and far-field noise [AD-A079868] N80-22994

USAF bioenvironmental noise data handbook. Volume 131: F-4 aircraft in the AF32A-14 noise suppressor, near and far-field noise [AD-A079869] N80-22995

USAF bioenvironmental noise data handbook. Volume 132: F-5 aircraft in the AF32A-16 noise suppressor, near and far-field noise [AD-A079870] N80-22996

USAF bioenvironmental noise data handbook. Volume 133: F-15 aircraft in the AF32A-23 noise suppressor, near and far-field noise [AD-A079871] N80-22997

USAF bioenvironmental noise data handbook. Volume 134. KC-135A aircraft in the modified AF32A-52A noise suppressor, far-field noise [AD-A079872] N80-22998

USAF bioenvironmental noise data handbook. Volume 135: F-106 aircraft in the AF32A-17 noise suppressor, near and far-field noise [AD-A079873] N80-22999

USAF bioenvironmental noise data handbook. Volume 136: F-111A aircraft in the AF32A-13 noise suppressor, far-field noise [AD-A079874] N80-23000

USAF bioenvironmental noise data handbook. Volume 140: F-16 aircraft in the AF32A-25 noise suppressor, near and far-field noise [AD-A079875] N80-23001

NUCLEOSIDES

Abiogenic synthesis of nucleoside-like compounds under the influence of extremal factors A80-33311

O

OPERATOR PERFORMANCE

Accuracy of perception in the tracking of continuous signals A80-32843

Dependence of the activity and behavior of individuals and groups on the characteristics of the individual cognitive styles A80-32991

A variance method of objective evaluation of the training process and learning level of operators in flight vehicle control regimes A80-33003

The psychophysiological characteristics of air traffic controller activity A80-36225

OPERATORS (PERSONNEL)

Construction of a model simulating human-operator activity in manual rendezvous control A80-33009

OPTICAL TRACKING

Accuracy of perception in the tracking of continuous signals A80-32843

ORBITAL ASSEMBLY

EVA manipulation and assembly of space structure columns [NASA-CR-3285] N80-23988

ORBITAL WORKERS

The design of maneuvering units for cosmonauts in referenceless space and requirements for engineering psychology A80-33005

ORGANIC COMPOUNDS

The implications and limitations of the findings of the Viking organic analysis experiment A80-36059

The photolytic degradation and oxidation of organic compounds under simulated Martian conditions A80-36065

OSTEOPOROSIS

Incorporation of glycine-2-C-14 in acid-insoluble proteins of rat bones and teeth during hypokinesia and administration of thyrocalcitonine [NASA-TM-75981] N80-22959

OXIDATION

The photolytic degradation and oxidation of organic compounds under simulated Martian conditions A80-36065

OZONE

Inactivation of enteroviruses by ozone N80-22954

Biochemical changes in humans upon exposure to ozone and exercise [PB80-105554] N80-22982

P

PERFORMANCE PREDICTION
A discriminant analysis of pilot performance prediction and selection for air-to-air combat
N80-23984
PERFORMANCE TESTS
Investigation of operator work capacity under conditions of continuous activity
A80-32990
PERSONNEL SELECTION
Psychophysiological selection, crew staffing and preparation for space flight
A80-32995
PHOTOCHEMICAL REACTIONS
Heterogeneous phase reactions of Martian volatiles with putative regolith minerals
A80-36062
Laboratory simulations of the pyrolytic release experiments - An interim report
A80-36070
PHOTOLYSIS
The photolytic degradation and oxidation of organic compounds under simulated Martian conditions
A80-36065
PHOTOOXIDATION
Possible oxidant sources in the atmosphere and surface of Mars
A80-36060
PHOTOSYNTHESIS
Photochemistry and enzymology of photosynthesis
[COO-3326-82] N80-23965
Studies of photosynthetic membranes using chlorophyll fluorescence lifetimes
[LBL-9795] N80-23966
PHYSICAL EXERCISE
Role of thermal and exercise factors in the mechanism of hypervolemia
A80-32748
Exercise training-induced hypervolemia - Role of plasma albumin, renin, and vasopressin
A80-32749
Control of skin blood flow during exercise by thermal reflexes and baroreflexes
A80-32750
Assessment of physical working capacity in clinic and athletics --- Russian book
A80-32846
Multivariate analysis of physiological response to environmental stress
N80-22964
Biochemical changes in humans upon exposure to ozone and exercise
[PB80-105554] N80-22982
Time for recovery from successive bouts of exercise as measured by changes in the anaerobic threshold: A comparison of recovery intervals of 24 and 48 hours
N80-23970
PHYSICAL FITNESS
Time for recovery from successive bouts of exercise as measured by changes in the anaerobic threshold: A comparison of recovery intervals of 24 and 48 hours
N80-23970
PHYSICAL WORK
Assessment of physical working capacity in clinic and athletics --- Russian book
A80-32846
Investigation of operator work capacity under conditions of continuous activity
A80-32990
PHYSIOLOGICAL EFFECTS
Adaptation to weightlessness
A80-32996
Effects of audio-visual stimulation on the incidence of restraint ulcers on the Wistar rat
[NASA-TM-75950] N80-22955
State of the mitral valve in rabbits with hypokinesia
[NASA-TM-76003] N80-22957
The ulcerogenic effect of bile and bile acid in rats during immobilization stress
[NASA-TM-76054] N80-22960
The effect of restraining on the heart rate in guinea pigs
[NASA-TM-76006] N80-22962
Multivariate analysis of physiological response to environmental stress
N80-22964
Dynamics of change of lipid and monoamine metabolisms and the blood coagulation system during experimental atherosclerosis caused by restriction of movement
[NASA-TM-76033] N80-22968
State of the body in disorders of diurnal physiological rhythms and long-term hypokinesia
[NASA-TM-76051] N80-22969
Noise effects. Effects of noise exposure on blood circulation and respiration of man. Part 1: Results of a two-hour noise exposure on groups of younger and older people
[IG-TNO-B-373-E] N80-22977
Effects of fatigue on human behavior and performance. Citations from the NTIS data base
[PB80-804263] N80-22978
Behavior and physiological effects of noise, volume 3. Citations from the NTIS data base
[PB80-803869] N80-22979
Biochemical changes in humans upon exposure to ozone and exercise
[PB80-105554] N80-22982
Influence of experimental hypokinesia on gastric secretory function
[NASA-TM-76034] N80-23974
Procedure of practical exercise with students on the pathogenic effect of accelerations on the organism
[NASA-TM-76120] N80-23976
PHYSIOLOGICAL FACTORS
Physiological premises of the laws of psychophysics
A80-32841
The appearance of certain human psychological traits during space flight
A80-32980
Physiological aspects of the psychophysiological security of cosmonaut preparation on trainer apparatus
A80-33000
PHYSIOLOGICAL RESPONSES
Effect of prolonged hypodynamia on certain physiological functions in dogs
[NASA-TM-75979] N80-22961
PHYSIOLOGICAL TESTS
Assessment of physical working capacity in clinic and athletics --- Russian book
A80-32846
PHYSIOLOGY
Ideas of I. M. Sechenov in aviation and space medicine
[NASA-TM-75976] N80-23973
PILOT PERFORMANCE
A discriminant analysis of pilot performance prediction and selection for air-to-air combat
N80-23984
PILOT SELECTION
A discriminant analysis of pilot performance prediction and selection for air-to-air combat
N80-23984
PILOTS (PERSONNEL)
Possibilities of forecasting hypercholesterinemia in pilots
[NASA-TM-76087] N80-23975
PITUITARY GLAND
State of the body in disorders of diurnal physiological rhythms and long-term hypokinesia
[NASA-TM-76051] N80-22969
PLANTS (BOTANY)
Greenhouses in space --- plant growth in Salyut space station experiments
A80-34499
POLYCYTHEMIA
Splenic erythropoiesis in polycythemic response of the rat to high-altitude exposure
A80-35675
POLYMERIZATION
Origin of life - Consideration of alternatives to proteins and nucleic acids
A80-32685
The role of metal ions in chemical evolution - Polymerization of alanine and glycine in a cation-exchanged clay environment
A80-36195

POLYMERS
Electrophoretic cell separation by means of microspheres
A80-34229
POSITRONS
Positron emission tomography of the heart
[UCLA-12-1232] N80-23980
POSTURE
On the preservation of equilibrium in the orthograde and inverted positions of the body
[NASA-TM-76141] N80-23977
PROBABILITY THEORY
Uncertainty in estimates of the number of extraterrestrial civilizations
[NASA-CR-162637] N80-23007
PROBLEM SOLVING
Theory of the decision/problem state
[NASA-TM-81192] N80-22984
Problem solving and decisionmaking: An integration
[NASA-TM-81191] N80-22985
Clarification process: Resolution of decision-problem conditions
[NASA-TM-81193] N80-23985
PROPRIOCEPTION
On the preservation of equilibrium in the orthograde and inverted positions of the body
[NASA-TM-76141] N80-23977
PROTECTIVE CLOTHING
Additional studies of chemically treated clothing for personnel protection from biting flies
[AD-A080612] N80-23002
Experimental evaluations of selected immersion hypothermia protection equipment
[AD-A080470] N80-23003
PROTEIN METABOLISM
Incorporation of glycine-2-C-14 in acid-insoluble proteins of rat bones and teeth during hypokinesia and administration of thyrocalcitonine
[NASA-TM-75981] N80-22959
Dynamics of change of lipid and monoamine metabolisms and the blood coagulation system during experimental atherosclerosis caused by restriction of movement
[NASA-TM-76033] N80-22968
Relationship between urinary 3-methylhistidine excretion and components of body composition in man
N80-23972
PSYCHOACOUSTICS
Detection and recognition of pure tones in noise
A80-32839
PSYCHOLINGUISTICS
The possibility of distinguishing between emotional stress levels according to speech indicators in aerospace activities
A80-32988
PSYCHOLOGICAL FACTORS
Social and psychological problems of extended space missions
[AIAA PAPER 80-0826] A80-32854
Psychological problems of space flight --- Russian book
A80-32976
Psychological problems of space flight
A80-32977
Space exploration prospects and psychology
A80-32979
The appearence of certain human psychological traits during space flight
A80-32980
The modeling of human activity in space flight
A80-32982
Methodological and organizational principles of the psychological preparation of cosmonauts
A80-32997
Objectivization of the basic elements of the process of crew preparation for space flight
A80-32998
Psychological training of an astronaut operator under the conditions of emotional stress
A80-32999
Physiological aspects of the psychophysiological security of cosmonaut preparation on trainer apparatus
A80-33000
Psychological training of astronauts using flight simulators
A80-33001
Engineering and psychological aspects of maintenance work in space
A80-33004
The design of maneuvering units for cosmonauts in referenceless space and requirements for engineering psychology
A80-33005
Engineering-psychological aspects of optimizing human visual work capacity in space flight
A80-33006
The feasibility and psychological aspects of verbal interaction of man and automatic systems
A80-33007
Utilization of general psychological principles for solving problems concerning the operation of man/machine systems
A80-33010
Psychological selection of Spacelab payload specialists. The evaluation of German applicants
[ESA-TT-586] N80-23987
PSYCHOLOGICAL TESTS
The possibility of distinguishing between emotional stress levels according to speech indicators in aerospace activities
A80-32988
PSYCHOLOGY
Models of human decision making in multi-task situations: Event detection, attention allocation, and implications for computer aiding
N80-22983
Theory of the decision/problem state
[NASA-TM-81192] N80-22984
Problem solving and decisionmaking: An integration
[NASA-TM-81191] N80-22985
Clarification process: Resolution of decision-problem conditions
[NASA-TM-81193] N80-23985
PSYCHOMOTOR PERFORMANCE
Investigation of circadian rhythms on select psychomotor and neurological functions
N80-22966
PSYCHOPHYSICS
The psychophysics of sensory systems --- Russian book
A80-32836
Dynamic aspects of detection --- sensory processes in psychophysics
A80-32837
Detection threshold variance and its causes --- sensory perception in psychophysics
A80-32838
A review of advances in modern psychophysics /Strategies in psychophysical analyses/
A80-32840
Physiological premises of the laws of psychophysics
A80-32841
Possible sources of false-alarm responses and psychophysiological optimization mechanisms of weak-signal detection
A80-32842
PSYCHOPHYSIOLOGY
Possible sources of false-alarm responses and psychophysiological optimization mechanisms of weak-signal detection
A80-32842
Psychophysiological selection, crew staffing and preparation for space flight
A80-32995
Reflection of the dynamics of the psychophysiological state of the human operator in his speech signals
A80-33008
PULSE RATE
Pulse transducer with artifact signal attenuator --- heart rate sensors
[NASA-CASE-FRC-11012-1] N80-23969
PYROLYSIS
Investigation of the kinetics of pyrolysis of amino acids
A80-35859
Laboratory simulations of the pyrolytic release experiments - An interim report
A80-36070

R

RADIATION DAMAGE
Biological effects of laser radiation, volume 2. Citations from the NTIS data base
[PB80-803935] N80-22980
RADIATION EFFECTS
Suppression of the biosynthesis of sphingomyelin under gamma irradiation and exposure to ubiquinone-9
A80-33363
RADIATION MEDICINE
Positron emission tomography of the heart
[UCLA-12-1232] N80-23980
REACTION KINETICS
Investigation of the kinetics of pyrolysis of amino acids
A80-35859
Laboratory simulations of the Viking Labeled Release experiment - Kinetics following second nutrient injection and the nature of the gaseous end product
A80-36068
Photochemistry and enzymology of photosynthesis
[COO-3326-82] N80-23965
Studies of photosynthetic membranes using chlorophyll fluorescence lifetimes
[LBL-9795] N80-23966
REFLEXES
Effect of prolonged hypodynamia on certain physiological functions in dogs
[NASA-TM-75979] N80-22961
REGOLITH
Heterogeneous phase reactions of Martian volatiles with putative regolith minerals
A80-36062
RENDEZVOUS GUIDANCE
Construction of a model simulating human-operator activity in manual rendezvous control
A80-33009
RESEARCH AND DEVELOPMENT
Space exploration prospects and psychology
A80-32979
RESPIRATORY RATE
Noise effects. Effects of noise exposure on blood circulation and respiration of man. Part 1: Results of a two-hour noise exposure on groups of younger and older people
[IG-TNO-B-373-E] N80-22977
RESPIRATORY SYSTEM
Mathematical modeling, simulation, and stability of the respiratory control system
N80-22965
RETENTION (PSYCHOLOGY)
Performance in tasks differing in memory load and its relationship with habitual activity phase and body temperature
[FOA-C-52002-H6] N80-22974
RETINAL IMAGES
Binocular retinal image motion during active head rotation
A80-35778
ROBOTS
Semiautomatic and interactive control systems for manipulator robots
A80-33897
ROTATION
Static and dynamic factors in the perception of rotary motion
A80-32974

S

SECRETIONS
The ulcerogenic effect of bile and bile acid in rats during immobilization stress
[NASA-TM-76054] N80-22960
Influence of experimental hypokinesia on gastric secretory function
[NASA-TM-76034] N80-23974
SEMICIRCULAR CANALS
Vestibular recruitment
[NASA-TM-76088] N80-22971
SENSORIMOTOR PERFORMANCE
Accuracy of perception in the tracking of continuous signals
A80-32843
SENSORY PERCEPTION
The psychophysics of sensory systems --- Russian book
A80-32836
Dynamic aspects of detection --- sensory processes in psychophysics
A80-32837
Detection threshold variance and its causes --- sensory perception in psychophysics
A80-32838
Detection and recognition of pure tones in noise
A80-32839
A review of advances in modern psychophysics /Strategies in psychophysical analyses/
A80-32840
Physiological premises of the laws of psychophysics
A80-32841
Possible sources of false-alarm responses and psychophysiological optimization mechanisms of weak-signal detection
A80-32842
SENSORY STIMULATION
Effects of audio-visual stimulation on the incidence of restraint ulcers on the Wistar rat
[NASA-TM-75950] N80-22955
SEPARATION
Electrophoretic cell separation by means of microspheres
A80-34229
SHORT TAKEOFF AIRCRAFT
Total aircrew workload study for the AMST. Volume 1: Results
[AD-A076422] N80-22988
Total aircrew workload study for the AMST. Volume 2: Communication navigation description
[AD-A076498] N80-22989
SIGNAL DETECTION
Dynamic aspects of detection --- sensory processes in psychophysics
A80-32837
Detection threshold variance and its causes --- sensory perception in psychophysics
A80-32838
Detection and recognition of pure tones in noise
A80-32839
Possible sources of false-alarm responses and psychophysiological optimization mechanisms of weak-signal detection
A80-32842
SIGNAL DETECTORS
Pulse transducer with artifact signal attenuator --- heart rate sensors
[NASA-CASE-FRC-11012-1] N80-23969
SIGNAL MEASUREMENT
Sources of variability in echocardiographic measurements
A80-33874
SIGNAL RECEPTION
The psychophysics of sensory systems --- Russian book
A80-32836
Accuracy of perception in the tracking of continuous signals
A80-32843
SIGNAL TO NOISE RATIOS
Detection and recognition of pure tones in noise
A80-32839
SKIN (ANATOMY)
Control of skin blood flow during exercise by thermal reflexes and baroreflexes
A80-32750
SOCIAL FACTORS
Social and psychological problems of extended space missions
[AIAA PAPER 80-0826] A80-32854
Some aspects of space crew member interactions in emergency situations
A80-32987
SOLID SURFACES
Wipe-rinse technique for quantitating microbial contamination on large surfaces
A80-32835
SOUND TRANSDUCERS
Low frequency acoustic detection in support of human detection range prediction
[AD-A080579] N80-22973
Pulse transducer with artifact signal attenuator --- heart rate sensors
[NASA-CASE-FRC-11012-1] N80-23969

SPACE EXPLORATION
Space exploration prospects and psychology
A80-32979

SPACE FLIGHT
Psychological training of astronauts using flight simulators
A80-33001

SPACE FLIGHT STRESS
Psychological problems of space flight --- Russian book
A80-32976
The appearence of certain human psychological traits during space flight
A80-32980
The investigation of the influence of space flight conditions on the statistical characteristics of operator activity
A80-32983
The evaluation of the effectiveness of crew work under stress --- in spacecraft
A80-32986
The possibility of distinguishing between emotional stress levels according to speech indicators in aerospace activities
A80-32988
Psychological training of an astronaut operator under the conditions of emotional stress
A80-32999
Reactivity of organism in prolonged space flights
[NASA-TM-75975]
N80-22967

SPACE FLIGHT TRAINING
Psychological problems of space flight
A80-32977
Psychophysiological selection, crew staffing and preparation for space flight
A80-32995
Objectivization of the basic elements of the process of crew preparation for space flight
A80-32998
A variance method of objective evaluation of the training process and learning level of operators in flight vehicle control regimes
A80-33003
Utilization of general psychological principles for solving problems concerning the operation of man/machine systems
A80-33010

SPACE MAINTENANCE
Engineering and psychological aspects of maintenance work in space
A80-33004

SPACE MISSIONS
Space exploration prospects and psychology
A80-32979

SPACE PERCEPTION
Effects of spatial parameters on the perceptual organization of a bistable motion display
A80-32973

SPACE SIMULATORS
The modeling of human activity in space flight
A80-32982
The investigation of operator activity in the performance of standard activities under conditions simulating extended space flight
A80-32984

SPACE TRANSPORTATION SYSTEM
EVA manipulation and assembly of space structure columns
[NASA-CR-3285]
N80-23988

SPACEBORNE EXPERIMENTS
Abiogenic synthesis of nucleoside-like compounds under the influence of extremal factors
A80-33311
Greenhouses in space --- plant growth in Salyut space station experiments
A80-34499
Simulation of the Viking biology experiments - An overview
A80-36066

SPACECRAFT CABIN ATMOSPHERES
Performance characterization of a Bosch CO sub 2 reduction subsystem
[NASA-CR-152342]
N80-22987

SPACECRAFT CABIN SIMULATORS
Physiological aspects of the psychophysiological security of cosmonaut preparation on trainer apparatus
A80-33000

SPACECRAFT CONTAMINATION
Wipe-rinse technique for quantitating microbial contamination on large surfaces
A80-32835

SPACECRAFT CONTROL
The preservation capacity of spacecraft control skills during extended flights
A80-32994

SPACECRAFT ENVIRONMENTS
The investigation of the influence of space flight conditions on the statistical characteristics of operator activity
A80-32983
Greenhouses in space --- plant growth in Salyut space station experiments
A80-34499

SPACECRAFT MOTION
Psychological training of astronauts using flight simulators
A80-33001

SPACECRAFT TRACKING
The investigation of the influence of space flight conditions on the statistical characteristics of operator activity
A80-32983

SPACECREWS
Social and psychological problems of extended space missions
[AIAA PAPER 80-0826]
A80-32854
Several characteristics of crew activity during space flight
A80-32981
The evaluation of the effectiveness of crew work under stress --- in spacecraft
A80-32986
Some aspects of space crew member interactions in emergency situations
A80-32987
Psychophysiological selection, crew staffing and preparation for space flight
A80-32995
Objectivization of the basic elements of the process of crew preparation for space flight
A80-32998
Psychological selection of Spacelab payload specialists. The evaluation of German applicants
[ESA-TT-586]
N80-23987

SPACELAB
Psychological selection of Spacelab payload specialists. The evaluation of German applicants
[ESA-TT-586]
N80-23987

SPLEEN
Splenic erythropoiesis in polycythemic response of the rat to high-altitude exposure
A80-35675

STATISTICAL ANALYSIS
The investigation of the influence of space flight conditions on the statistical characteristics of operator activity
A80-32983
Uncertainty in estimates of the number of extraterrestrial civilizations
[NASA-CR-162637]
N80-23007

STERILIZATION
Effect of hydrogen chloride on the morphology of Bacillus subtilis spores
N80-23967
Sterilization by means of hydrogen chloride: Influence of process parameters on the biocidal activity
N80-23968

STRESS (PHYSIOLOGY)
Effects of audio-visual stimulation on the incidence of restraint ulcers on the Wistar rat
[NASA-TM-75950]
N80-22955
State of the mitral valve in rabbits with hypokinesia
[NASA-TM-76003]
N80-22957
Animal experimental research on microstructural behavior on the hyaline arthroidal cartilage after immobilization and remobilization
[NASA-TM-76050]
N80-22958
The ulcerogenic effect of bile and bile acid in rats during immobilization stress
[NASA-TM-76054]
N80-22960
Multivariate analysis of physiological response to environmental stress
N80-22964

Dynamics of change of lipid and monoamine metabolisms and the blood coagulation system during experimental atherosclerosis caused by restriction of movement
[NASA-TM-76033] N80-22968
State of the body in disorders of diurnal physiological rhythms and long-term hypokinesia
[NASA-TM-76051] N80-22969
Catecholamines of the adrenal medula and their morphological changes during adaptation to repeated immobilization stress
[NASA-TM-76068] N80-22970
Effects of fatigue on human behavior and performance. Citations from the NTIS data base
[PB80-804263] N80-22978
Time for recovery from successive bouts of exercise as measured by changes in the anaerobic threshold: A comparison of recovery intervals of 24 and 48 hours
N80-23970
Influence of experimental hypokinesia on gastric secretory function
[NASA-TM-76034] N80-23974
Procedure of practical exercise with students on the pathogenic effect of accelerations on the organism
[NASA-TM-76120] N80-23976

STRESS (PSYCHOLOGY)
The possibility of distinguishing between emotional stress levels according to speech indicators in aerospace activities
A80-32988
Psychological training of an astronaut operator under the conditions of emotional stress
A80-32999
The effect of restraining on the heart rate in guinea pigs
[NASA-TM-76006] N80-22962

SYSTEM EFFECTIVENESS
The evaluation of the effectiveness of crew work under stress --- in spacecraft
A80-32986
Investigation of operator work capacity under conditions of continuous activity
A80-32990

SYSTEMS ENGINEERING
Semiautomatic and interactive control systems for manipulator robots
A80-33897

T

T-38 AIRCRAFT
USAF bioenvironmental noise data handbook. Volume 128: T-38 aircraft in the AF32A-18 noise suppressor, near and far-field noise
[AD-A079868] N80-22994

TARGET RECOGNITION
Summaries of some reports of 1978 concerning results of field experiments for visibility
[DFVLR-MITT-79-11] N80-23983

TEMPERATURE EFFECTS
Role of thermal and exercise factors in the mechanism of hypervolemia
A80-32748
Cockpit thermal stress and aircrew thermal strain during routine Jaguar operations
[FPRC/REPT-1376] N80-22976

THERAPY
An experimental evaluation of selected rewarming therapies for the treatment of profound accidental hypothermia, part 2
[AD-A078292] N80-23978

THERMOREGULATION
Control of skin blood flow during exercise by thermal reflexes and baroreflexes
A80-32750

THRESHOLDS (PERCEPTION)
Detection threshold variance and its causes --- sensory perception in psychophysics
A80-32838
Possible sources of false-alarm responses and psychophysiological optimization mechanisms of weak-signal detection
A80-32842

THYROID GLAND
Evaluation of thyroid hormones by gas chromatography
[DFVLR-FB-79-07] N80-22975

TIME SHARING
Preparation cost and dual-task performance: Further evidence against a general time-sharing factor
[AD-A080857] N80-23986

TISSUES (BIOLOGY)
Excursion of vibrating microelectrodes in tissue
A80-32751
Temperature and frequency dependence of ultrasonic attenuation in selected tissues
A80-32833
State of the mitral valve in rabbits with hypokinesia
[NASA-TM-76003] N80-22957

TOMOGRAPHY
Positron emission tomography of the heart
[UCLA-12-1232] N80-23980

TRAINING EVALUATION
A variance method of objective evaluation of the training process and learning level of operators in flight vehicle control regimes
A80-33003

TRANSLATIONAL MOTION
Translational motion of anthropomorphic mechanisms in the pulsed excitation mode
A80-33881

TRANSMISSION LINES
Proceedings of the Workshop on Electrical and Biological Effects Related to HYDC Transmission
[PNL-3121] N80-23979

TRANSPORT AIRCRAFT
Total aircrew workload study for the AMST. Volume 1: Results
[AD-A076422] N80-22988
Total aircrew workload study for the AMST. Volume 2: Communication navigation description
[AD-A076498] N80-22989

TUNING
Cochlear anatomy related to cochlear micromechanics - A review
A80-35401

U

U.S.S.R.
Automated system for diagnosing craniocerebral injury
[NASA-TM-76097] N80-22972
Ideas of I. M. Sechenov in aviation and space medicine
[NASA-TM-75976] N80-23973

ULCERS
Effects of audio-visual stimulation on the incidence of restraint ulcers on the Wistar rat
[NASA-TM-75950] N80-22955
The ulcerogenic effect of bile and bile acid in rats during immobilization stress
[NASA-TM-76054] N80-22960

ULTRASONIC RADIATION
Temperature and frequency dependence of ultrasonic attenuation in selected tissues
A80-32833

V

VERBAL COMMUNICATION
The feasibility and psychological aspects of verbal interaction of man and automatic systems
A80-33007

VERY LOW FREQUENCIES
Low frequency acoustic detection in support of human detection range prediction
[AD-A080579] N80-22973

VESTIBULES
Vestibular recruitment
[NASA-TM-76088] N80-22971

VIBRATION EFFECTS
On auditory evoked potentials and heart rate in man during whole-body vibration
A80-36250

VIKING LANDER SPACECRAFT
The implications and limitations of the findings of the Viking organic analysis experiment
A80-36059
Simulation of the Viking biology experiments - An overview
A80-36066

Laboratory simulations of the Viking Labeled Release experiment - Kinetics following second nutrient injection and the nature of the gaseous end product
A80-36068
A model of Martian surface chemistry
A80-36069
Laboratory simulations of the pyrolytic release experiments - An interim report
A80-36070
The Viking mission - Implications for life on Mars
A80-36071

VIKING LANDER 2
Completion of the Viking Labeled Release experiment on Mars
A80-36067

VIRUSES
Inactivation of enteroviruses by ozone
N80-22954

VISIBILITY
Summaries of some reports of 1978 concerning results of field experiments for visibility
[DFVLR-MITT-79-11] N80-23983

VISUAL OBSERVATION
Engineering-psychological aspects of optimizing human visual work capacity in space flight
A80-33006

VISUAL PERCEPTION
Accuracy of perception in the tracking of continuous signals
A80-32843
Static and dynamic factors in the perception of rotary motion
A80-32974
Grating induction - A new type of aftereffect
A80-35779
Color vision. Citations from the NTIS data base
[PB80-803992] N80-22981

VOICE COMMUNICATION
The feasibility and psychological aspects of verbal interaction of man and automatic systems
A80-33007
Reflection of the dynamics of the psychophysiological state of the human operator in his speech signals
A80-33008

VORTICES
Rhythmic vortex currents and their significance in human physiology
[NPIS-1/1979] N80-23982

W

WALKING MACHINES
Translational motion of anthropomorphic mechanisms in the pulsed excitation mode
A80-33881

WEIGHTLESSNESS
Adaptation to weightlessness
A80-32996
Reactivity of organism in prolonged space flights
[NASA-TM-75975] N80-22967

WORK CAPACITY
Assessment of physical working capacity in clinic and athletics --- Russian book
A80-32846
Assurance of stable work capacity during prolonged space flight
A80-32989
Investigation of operator work capacity under conditions of continuous activity
A80-32990
The preservation capacity of spacecraft control skills during extended flights
A80-32994
Engineering-psychological aspects of optimizing human visual work capacity in space flight
A80-33006

WORKLOADS (PSYCHOPHYSIOLOGY)
The psychophysiological characteristics of air traffic controller activity
A80-36225
Total aircrew workload study for the AMST. Volume 1: Results
[AD-A076422] N80-22988
Total aircrew workload study for the AMST. Volume 2: Communication navigation description
[AD-A076498] N80-22989

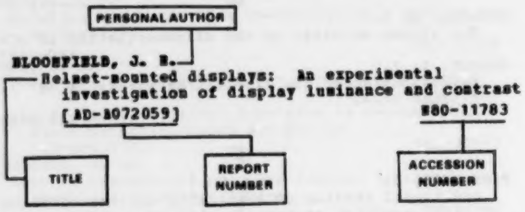
PERSONAL AUTHOR INDEX

AEROSPACE MEDICINE AND BIOLOGY / *A Continuing Bibliography (Suppl. 209)* **AUGUST 1980**

Typical Personal Author Index Listing



PERSONAL AUTHOR
BLOOMFIELD, J. R.
Helmet-mounted displays: An experimental investigation of display luminance and contrast
[AD-A072059]
N80-11783
TITLE
REPORT NUMBER
ACCESSION NUMBER

The title of the document is used to provide the user with a brief description of the subject matter. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstract in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

A

ALEKSEEV, V. N.
Changes in concentration of 2,3-glycerodiphosphoric acid in rat erythrocytes during adaptation to hypoxia
A80-35860

ALIMURUNG, B. N.
Sources of variability in echocardiographic measurements
A80-33874

ALLTON, C. S.
Manned maneuvering unit latching mechanism
N80-23497

ANAKHOV, N. P.
Physiological aspects of the psychophysiological security of cosmonaut preparation on trainer apparatus
A80-33000

ANTHONY, A.
Preliminary analysis of wind tunnel test of a 1/2 scale model of an ejecting crewman and ejection seat
[AD-A069229] N80-22990

ARTIUKHIN, IU. P.
Several characteristics of crew activity during space flight
A80-32981

AULIK, I. V.
Assessment of physical working capacity in clinic and athletics
A80-32846

B

BACHMANN, D. B.
Preparation cost and dual-task performance: Further evidence against a general time-sharing factor
[AD-A080857] N80-23986

BAIRD, A. K.
Heterogeneous phase reactions of Martian volatiles with putative regolith minerals
A80-36062

BAISHUKUROVA, A. K.
Changes in concentration of 2,3-glycerodiphosphoric acid in rat erythrocytes during adaptation to hypoxia
A80-35860

BARGHOORN, E. S.
The Viking mission - Implications for life on Mars
A80-36071

BELOZEROV, A. V.
Psychological training of astronauts using flight simulators
A80-33001

BENSON, J. B.
Calibration and test procedures for three year old child dummy
[PB80-112246] N80-23006

BERDAHL, B. J.
A model of Martian surface chemistry
A80-36069

BEREGOVOI, G. T.
The role of the human factor in space flights
A80-32978

BERNAUER, E. M.
Role of thermal and exercise factors in the mechanism of hypervolemia
A80-32748

Exercise training-induced hypervolemia - Role of plasma albumin, renin, and vasopressin
A80-32749

BIEMANN, K.
The implications and limitations of the findings of the Viking organic analysis experiment
A80-36059

BLOMQUIST, W.
Biochemical changes in humans upon exposure to ozone and exercise
[PB80-105554] N80-22982

BLUMENSTEIN, B. A.
Sources of variability in echocardiographic measurements
A80-33874

BLUTH, B. J.
Social and psychological problems of extended space missions
[AIAA PAPER 80-0826] A80-32854

BOGDASHEVSKII, R. B.
Objectivization of the basic elements of the process of crew preparation for space flight
A80-32998

Psychological training of astronauts using flight simulators
A80-33001

BOVIN, B. G.
Physiological premises of the laws of psychophysics
A80-32841

BRACKEN, T. D.
Proceedings of the Workshop on Electrical and Biological Effects Related to HVDC Transmission
[PNL-3121] N80-23979

BRAUNSTEIN, M. L.
Static and dynamic factors in the perception of rotary motion
A80-32974

BREWINGTON, G. T.
Studies of photosynthetic membranes using chlorophyll fluorescence lifetimes
[LBL-9795] N80-23966

BROCK, P. J.
Exercise training-induced hypervolemia - Role of plasma albumin, renin, and vasopressin
A80-32749

BROIDA, J. M.
Time for recovery from successive bouts of exercise as measured by changes in the anaerobic threshold: A comparison of recovery intervals of 24 and 48 hours
N80-23970

BROSE, A.
Acute cardiovascular adaptation to altitude
A80-34475

BRUCE, R.
Biochemical changes in humans upon exposure to ozone and exercise
[PB80-105554] N80-22982

BUDCZINSKI, C.
Psychological selection of Spacelab payload specialists. The evaluation of German applicants
[ESA-TT-586] N80-23987

BUELL, R.
Summaries of some reports of 1978 concerning results of field experiments for visibility
[DFVLR-MITT-79-11] N80-23983

C

CARTER, A. D.
Sources of variability in echocardiographic measurements
A80-33874

CASH, W. H., JR.
Pulse transducer with artifact signal attenuator
[NASA-CASE-FRC-11012-1] N80-23969

CAUFFIELD, E. J.
A microprocessor-controlled echocardiographic tracking system
A80-33183

CESSION-FOSSION, A. M.
Acute cardiovascular adaptation to altitude
A80-34475

CHANEY, S.
Biochemical changes in humans upon exposure to ozone and exercise
[PB80-105554] N80-22982

CHERNYSHEV, A. P.
Accuracy of perception in the tracking of continuous signals
A80-32843

CHUPRIKOVA, N. I.
Possible sources of false-alarm responses and psychophysiological optimization mechanisms of weak-signal detection
A80-32842

CLARK, B. C.
Heterogeneous phase reactions of Martian volatiles with putative regolith minerals
A80-36062

COCHRANE, L. A.
Cockpit thermal stress and aircrew thermal strain during routine Jaguar operations
[FPRC/REPT-1376] N80-22976

COLLEWIJN, H.
Binocular retinal image motion during active head rotation
A80-35778

CONVERTINO, V. A.
Role of thermal and exercise factors in the mechanism of hypervolemia
A80-32748
Exercise training-induced hypervolemia - Role of plasma albumin, renin, and vasopressin
A80-32749

CRAWFORD, D. W.
Excursion of vibrating microelectrodes in tissue
A80-32751

CROISSETTE, D. H. L.
Temperature and frequency dependence of ultrasonic attenuation in selected tissues
A80-32833

D

DEWITT, P.
Biochemical changes in humans upon exposure to ozone and exercise
[PB80-105554] N80-22982

DIATLOV, E. G.
The role and significance of the crew instructor in cosmonaut training
A80-33002

DIETERLY, D. L.
Theory of the decision/problem state
[NASA-TM-81192] N80-22984
Problem solving and decisionmaking: An integration
[NASA-TM-81191] N80-22985
Clarification process: Resolution of decision-problem conditions
[NASA-TM-81193] N80-23985

DMITROV, V. A.
The role and significance of the crew instructor in cosmonaut training
A80-33002

DRUCKER, L. W.
Sources of variability in echocardiographic measurements
A80-33874

DUNKAN, D.
Detection and recognition of pure tones in noise
A80-32839

E

EDELSON, E. H.
The effect of clays on the oligomerization of HCN
A80-36198

EGOROV, I. A.
Investigation of the kinetics of pyrolysis of amino acids
A80-35859

F

FARNWORTH, B.
Additional studies of chemically treated clothing for personnel protection from biting flies
[AD-A080612] N80-23002

FELDSTEIN, C.
Excursion of vibrating microelectrodes in tissue
A80-32751

FELNER, J. M.
Sources of variability in echocardiographic measurements
A80-33874

FERRIS, J. P.
The effect of clays on the oligomerization of HCN
A80-36198

FIDELL, S. A.
Low frequency acoustic detection in support of human detection range prediction
[AD-A080579] N80-22973

FIROUZTALE, E.
Mathematical modeling, simulation, and stability of the respiratory control system
N80-22965

FORMALSKII, A. M.
Translational motion of anthropomorphic mechanisms in the pulsed excitation mode
A80-33881

FREIVALDS, A.
Investigation of circadian rhythms on select psychomotor and neurological functions
N80-22966

FRISHMAN, E. Z.
Detection threshold variance and its causes
A80-32838

FROBERG, J. E.
Performance in tasks differing in memory load and its relationship with habitual activity phase and body temperature
[FOA-C-52002-H6] N80-22974

FROLOV, M. I.
The psychophysiological characteristics of air traffic controller activity
A80-36225

G

GAMMELL, P. M.
Temperature and frequency dependence of ultrasonic attenuation in selected tissues
A80-32833

GAZENKO, O. G.
Ideas of I. M. Sechenov in aviation and space medicine
[NASA-TM-75976] N80-23973

GEISSLER, H.-G.
A review of advances in modern psychophysics /Strategies in psychophysical analyses/
A80-32840

GEORGE, F. L.
Proceedings of the Fifteenth Annual Conference on Manual Control
[AD-A080563] N80-23004

GIBSON, T. M.
Cockpit thermal stress and aircrew thermal strain during routine Jaguar operations
[FPRC/REPT-1376] N80-22976

GLAZKOV, IU. N.
The design of maneuvering units for cosmonauts in referenceless space and requirements for engineering psychology
A80-33005

GOETERS, K. M.
Psychological selection of Spacelab payload specialists. The evaluation of German applicants
[ESA-TT-586] N80-23987

GOLDSTEIN, G.
Biochemical changes in humans upon exposure to ozone and exercise
[PB80-105554] N80-22982

GOVINDARAJ, T.
Modeling the human as a controller in a multi-task environment
N80-22986

GREEN, D. M.
Detection and recognition of pure tones in noise
A80-32839
Low frequency acoustic detection in support of human detection range prediction
[AD-A080579] N80-22973

GREENLEAF, J. E.
Role of thermal and exercise factors in the mechanism of hypervolemia
A80-32748
Exercise training-induced hypervolemia - Role of plasma albumin, renin, and vasopressin
A80-32749

GREENSTEIN, J. S.
Models of human decision making in multi-task situations: Event detection, attention allocation, and implications for computer aiding
N80-22983

GUNNING, D.
Total aircrew workload study for the AMST. Volume 1: Results
[AD-A076422] N80-22988
Total aircrew workload study for the AMST. Volume 2: Communication navigation description
[AD-A076498] N80-22989

GURCHIN, A. F.
Automated system for diagnosing craniocerebral injury
[NASA-TM-76097] N80-22972

GVISHIANI, G. S.
Dynamics of change of lipid and monoamine metabolisms and the blood coagulation system during experimental atherosclerosis caused by restriction of movement
[NASA-TM-76033] N80-22968

H

HALLICK, T. M.
Performance characterization of a Bosch CO sub 2 reduction subsystem
[NASA-CR-152342] N80-22987

HALLORAN, T. O.
Preparation cost and dual-task performance: Further evidence against a general time-sharing factor
[AD-A080857] N80-23986

HALVORSON, H. O.
The Viking mission - Implications for life on Mars
A80-36071

HARNETT, R. M.
Experimental evaluations of selected immersion hypothermia protection equipment
[AD-A080470] N80-23003
An experimental evaluation of selected rewarming therapies for the treatment of profound accidental hypothermia, part 2
[AD-A078292] N80-23978

HARRISON, E. A.
Biological effects of laser radiation, volume 2. Citations from the NTIS data base
[PB80-803935] N80-22980
Color vision. Citations from the NTIS data base
[PB80-803992] N80-22981

HARRISON, M. H.
Cockpit thermal stress and aircrew thermal strain during routine Jaguar operations
[FPRC/REPT-1376] N80-22976

HAWKINS, H. L.
Preparation cost and dual-task performance: Further evidence against a general time-sharing factor
[AD-A080857] N80-23986

HEPPNER, D. B.
Performance characterization of a Bosch CO sub 2 reduction subsystem
[NASA-CR-152342] N80-22987

HEYSER, R. C.
Temperature and frequency dependence of ultrasonic attenuation in selected tissues
A80-32833

HOCMAN, G.
Catecholamines of the adrenal medula and their morphological changes during adaptation to repeated immobilization stress
[NASA-TM-76068] N80-22970

HOFFMANN, H. E.
Summaries of some reports of 1978 concerning results of field experiments for visibility
[DFVLR-MITT-79-11] N80-23983

HOLZER, G.
The photolytic degradation and oxidation of organic compounds under simulated Martian conditions
A80-36065

HORONJEFF, R. D.
Low frequency acoustic detection in support of human detection range prediction
[AD-A080579] N80-22973

HOSTETLER, M. S.
A microprocessor-controlled echocardiographic tracking system
A80-33183

HUBBARD, J. S.
Laboratory simulations of the pyrolytic release experiments - An interim report
A80-36070

HUNTEN, D. M.
Possible oxidant sources in the atmosphere and surface of Mars
A80-36060

HUSS, G. R.
Heterogeneous phase reactions of Martian volatiles with putative regolith minerals
A80-36062

I

IAKOVLEV, A. J.
The investigation of the influence of space flight conditions on the statistical characteristics of operator activity
A80-32983

IAROPOLOV, V. I.
Objectivization of the basic elements of the process of crew preparation for space flight
A80-32998

IUSHCHENKO, A. S.
Semiautomatic and interactive control systems for manipulator robots
A80-33897

J

JACKSON, A. J.
Coronary plexus in man and monkey
N80-23971

JOHNSON, M. J.
Sources of variability in echocardiographic measurements
A80-33874

JUCHMES, J.
Acute cardiovascular adaptation to altitude
A80-34475

JUKES, T. H.
The Viking mission - Implications for life on Mars
A80-36071

K

KANABUS, E. W.
Excursion of vibrating microelectrodes in tissue
A80-32751

KAPLAN, I. R.
The Viking mission - Implications for life on Mars
A80-36071

KAPLAN, N.
A new estimate of sequence divergence of mitochondrial DNA using restriction endonuclease mappings
A80-36197

KAZACHKOV, V. N.
Engineering-psychological aspects of optimizing human visual work capacity in space flight
A80-33006

KEIL, L. C.
Exercise training-induced hypervolemia - Role of plasma albumin, renin, and vasopressin
A80-32749

KENLEY, S. L.
Heterogeneous phase reactions of Martian volatiles with putative regolith minerals
A80-36062

KETCHUM, R. D.
Preparation cost and dual-task performance: Further evidence against a general time-sharing factor
[AD-A080857] N80-23986

KHECHINASHVILI, G. G.
Role of adrenals in the mobilization of carbohydrate and fat resources after overstimulation of rats
[NASA-TM-75974] N80-22956

KHENOKH, M. A.
Abiogenic synthesis of nucleoside-like compounds under the influence of extremal factors
A80-33311

KHLUDEEV, E. E.
Engineering-psychological aspects of optimizing human visual work capacity in space flight
A80-33006

KHRUNOV, E. V.
Engineering-psychological aspects of optimizing human visual work capacity in space flight
A80-33006

KIM, D.
Splenic erythropoiesis in polycythemic response of the rat to high-altitude exposure
A80-35675

KIRSCHNER, L. E.
Wipe-rinse technique for quantitating microbial contamination on large surfaces
A80-32835

KISELEV, S. A.
The possibility of distinguishing between emotional stress levels according to speech indicators in aerospace activities
A80-32988

KITAEV-SMYK, L. A.
Adaptation to weightlessness
A80-32996

KLEIN, H. P.
Simulation of the Viking biology experiments - An overview
A80-36066

KLICPERA, M. W.
Sources of variability in echocardiographic measurements
A80-33874

KOBAKHIDZE, N. G.
Dynamics of change of lipid and monoamine metabolisms and the blood coagulation system during experimental atherosclerosis caused by restriction of movement
[NASA-TM-76033] N80-22968

KOBAYASHI, M.
Insulin binding and glucose uptake of adipocytes in rats adapted to hypergravitational force
A80-35751

KOLESNIKOV, G. N.
The modeling of human activity in space flight
A80-32982

KOLOMIITSEVA, I. K.
Suppression of the biosynthesis of sphingomyelin under gamma irradiation and exposure to ubiquinone-9
A80-33363

KOLTSOV, A. N.
The psychophysiological characteristics of air traffic controller activity
A80-36225

KONSHIN, N. I.
Abiogenic synthesis of nucleoside-like compounds under the influence of extremal factors
A80-33311

KOTLER, M. N.
Clinical uses of two dimensional echocardiography
A80-33875

KOVALENKO, Y. A.
Ideas of I. M. Sechenov in aviation and space medicine
[NASA-TM-75976] N80-23973

KREMLEVA, E. V.
Automated system for diagnosing craniocerebral injury
[NASA-TM-76097] N80-22972

KRYLOV, V. IU.
Possible means for increasing the effectiveness of cosmonaut activity
A80-32985

KRYLOVA, N. V.
Possible means for increasing the effectiveness of cosmonaut activity
A80-32985
The possibility of distinguishing between emotional stress levels according to speech indicators in aerospace activities
A80-32988

KUEHNEMANN, W.
Summaries of some reports of 1978 concerning results of field experiments for visibility
[DFVLR-MITT-79-11] N80-23983

KUHL, D. E.
Positron emission tomography of the heart
[UCLA-12-1232] N80-23980

KUTNER, M. H.
Sources of variability in echocardiographic measurements
A80-33874

KUZICHEVA, E. A.
Abiogenic synthesis of nucleoside-like compounds under the influence of extremal factors
A80-33311

KUZIN, A. M.
Suppression of the biosynthesis of sphingomyelin under gamma irradiation and exposure to ubiquinone-9
A80-33363

KVETNANSKY, R.
Catecholamines of the adrenal medula and their morphological changes during adaptation to repeated immobilization stress
[NASA-TM-76068] N80-22970

L

LAMBERT, R.
Effects of audio-visual stimulation on the incidence of restraint ulcers on the Wistar rat
[NASA-TM-75950] N80-22955

LANGLEY, C. H.
A new estimate of sequence divergence of mitochondrial DNA using restriction endonuclease mappings
A80-36197

LAVRENTEV, G. A.
Investigation of the kinetics of pyrolysis of amino acids
A80-35859

LAWLESS, J. G.
The role of metal ions in chemical evolution - Polymerization of alanine and glycine in a cation-exchanged clay environment
A80-36195

LAYTON, W. M., JR.
Splenic erythropoiesis in polycythemic response of the rat to high-altitude exposure
A80-35675

LEBEDEV, A. N.
Physiological premises of the laws of psychophysics
A80-32841

LECOMTE, J.
Acute cardiovascular adaptation to altitude
A80-34475

LEE, R. A.
USAF bioenvironmental noise data handbook. Volume 128: T-38 aircraft in the AF32A-18 noise suppressor, near and far-field noise
[AD-A079868] N80-22994
USAF bioenvironmental noise data handbook. Volume 131: F-4 aircraft in the AF32A-14 noise suppressor, near and far-field noise
[AD-A079869] N80-22995

USAF bioenvironmental noise data handbook. Volume 132: F-5 aircraft in the AF32A-16 noise suppressor, near and far-field noise
[AD-A079870] N80-22996
USAF bioenvironmental noise data handbook. Volume 133: F-15 aircraft in the AF32A-23 noise suppressor, near and far-field noise
[AD-A079871] N80-22997
USAF bioenvironmental noise data handbook. Volume 134. KC-135A aircraft in the modified AF32A-52A noise suppressor, far-field noise
[AD-A079872] N80-22998
USAF bioenvironmental noise data handbook. Volume 135: F-106 aircraft in the AF32A-17 noise suppressor, near and far-field noise
[AD-A079873] N80-22999
USAF bioenvironmental noise data handbook. Volume 136: F-111A aircraft in the AF32A-13 noise suppressor, far-field noise
[AD-A079874] N80-23000
USAF bioenvironmental noise data handbook. Volume 140: F-16 aircraft in the AF32A-25 noise suppressor, near and far-field noise
[AD-A079875] N80-23001

LELIEVELD, H. L. M.
Effect of hydrogen chloride on the morphology of Bacillus subtilis spores N80-23967
Sterilization by means of hydrogen chloride: Influence of process parameters on the biocidal activity N80-23968

LEONOV, A. A.
Space exploration prospects and psychology A80-32979

LESKOV, A. G.
Semiautomatic and interactive control systems for manipulator robots A80-33897

LEVI, N.
The role of metal ions in chemical evolution - Polymerization of alanine and glycine in a cation-exchanged clay environment A80-36195

LEVIN, G. V.
Completion of the Viking Labeled Release experiment on Mars A80-36067
Laboratory simulations of the Viking Labeled Release experiment - Kinetics following second nutrient injection and the nature of the gaseous end product A80-36068

LIM, D. J.
Cochlear anatomy related to cochlear micromechanics - A review A80-35401

LINDSAY, I. S.
Additional studies of chemically treated clothing for personnel protection from biting flies
[AD-A080612] N80-23002

LITSOV, A. N.
Assurance of stable work capacity during prolonged space flight A80-32989

LOBANOV, E. F.
A variance method of objective evaluation of the training process and learning level of operators in flight vehicle control regimes A80-33003

LOMOV, B. F.
The psychophysics of sensory systems A80-32836
Psychological problems of space flight A80-32976
Psychological problems of space flight A80-32977

LOUGHEAD, T. E.
EVA manipulation and assembly of space structure columns
[NASA-CR-3285] N80-23988

LUCHKO, G. D.
Automated system for diagnosing craniocerebral injury
[NASA-TM-76097] N80-22972

LUKASKI, H. C.
Relationship between urinary 3-methylhistidine excretion and components of body composition in man N80-23972

M

MACK, R.
Heterogeneous phase reactions of Martian volatiles with putative regolith minerals A80-36062

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

CALIFORNIA
University of California, Berkeley
COLORADO
University of Colorado, Boulder
DISTRICT OF COLUMBIA
Library of Congress
GEORGIA
Georgia Institute of Technology, Atlanta
ILLINOIS
The John Crerar Library, Chicago
MASSACHUSETTS
Massachusetts Institute of Technology, Cambridge
MISSOURI
Linda Hall Library, Kansas City
NEW YORK
Columbia University, New York
OKLAHOMA
University of Oklahoma, Bizzell Library
PENNSYLVANIA
Carnegie Library of Pittsburgh
WASHINGTON
University of Washington, Seattle

NASA publications (those indicated by an "*" following the accession number) are also received by the following public and free libraries:

CALIFORNIA
Los Angeles Public Library
San Diego Public Library
COLORADO
Denver Public Library
CONNECTICUT
Hartford Public Library
MARYLAND
Enoch Pratt Free Library, Baltimore
MASSACHUSETTS
Boston Public Library
MICHIGAN
Detroit Public Library
MINNESOTA
Minneapolis Public Library
MISSOURI
Kansas City Public Library
St. Louis Public Library
NEW JERSEY
Trenton Public Library
NEW YORK
Brooklyn Public Library
Buffalo and Erie County Public Library
Rochester Public Library
New York Public Library
OHIO
Akron Public Library
Cincinnati Public Library
Cleveland Public Library
Dayton Public Library
Toledo Public Library
TENNESSEE
Memphis Public Library
TEXAS
Dallas Public Library
Fort Worth Public Library
WASHINGTON
Seattle Public Library
WISCONSIN
Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols "#" and "*", from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

ACCESSION NUMBER RANGES

Accession numbers cited in this Supplement fall within the following ranges.

STAR (N-10000 Series)	N80-24259 – N80-26263
IAA (A-10000 Series)	A80-36307 – A80-40538

This bibliography was prepared by the NASA Scientific and Technical Information Facility operated for the National Aeronautics and Space Administration by PRC Data Services Company.

NASA SP-7011(210)

AEROSPACE MEDICINE AND BIOLOGY

A CONTINUING BIBLIOGRAPHY WITH INDEXES

(Supplement 210)

A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in August 1980 in

- *Scientific and Technical Aerospace Reports (STAR)*
- *International Aerospace Abstracts (IAA).*

NASA Scientific and Technical Information Branch 1980
National Aeronautics and Space Administration
Washington, DC

NASA SP-7011 and its supplements are available from the National Technical Information Service (NTIS). Questions on the availability of the predecessor publications, Aerospace Medicine and Biology (Volumes I - XI) should be directed to NTIS.

This supplement is available as NTISUB/123/093 from the National Technical Information Service (NTIS), Springfield, Virginia 22161 at the price of $7.00 domestic; $14.00 foreign.

INTRODUCTION

This Supplement to *Aerospace Medicine and Biology* (NASA SP-7011) lists 115 reports, articles and other documents announced during August 1980 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*. The first issue of the bibliography was published in July 1964; since that time, monthly supplements have been issued.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the earth's atmosphere or in interplanetary space. References describing similar effects of biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis is placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion.

Each entry in the bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged in two major sections: *IAA Entries* and *STAR Entries*, in that order. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR*, including the original accession numbers from the respective announcement journals. This procedure, which saves time and money, accounts for the slight variation in citation appearances.

Two indexes -- subject and personal author -- are included.

An annual index will be prepared at the end of the calendar year covering all documents listed in the 1980 Supplements.

AVAILABILITY OF CITED PUBLICATIONS

IAA ENTRIES (A80-10000 Series)

All publications abstracted in this Section are available from the Technical Information Service, American Institute of Aeronautics and Astronautics, Inc. (AIAA), as follows: Paper copies of accessions are available at $7.00 per document up to a maximum of 40 pages. The charge for each additional page is $0.25. Microfiche (1) of documents announced in *IAA* are available at the rate of $3.00 per microfiche on demand, and at the rate of $1.25 per microfiche for standing orders for all *IAA* microfiche. The price for the *IAA* microfiche by category is available at the rate of $1.50 per microfiche plus a $1.00 service charge per category per issue. Microfiche of all the current AIAA Meeting Papers are available on a standing order basis at the rate of $1.50 per microfiche.

Minimum air-mail postage to foreign countries is $1.00 and all foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to AIAA Technical Information Service. Please refer to the accession number when requesting publications.

STAR ENTRIES (N80-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code followed by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page vii.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard $3.50 price, for those documents identified by a # symbol.)

---

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size, containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction).

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Documents Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free.

Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

SUBSCRIPTION AVAILABILITY

This publication is available on subscription from the National Technical Information Service (NTIS). The annual subscription rate for the monthly supplements, excluding the annual cumulative index, is $65.00 domestic; $130.00 foreign. All questions relating to the subscriptions should be referred to NTIS.

EXTENDED DURATION ORBITER STUDY: CO2 REMOVAL AND WATER RECOVERY Final Report
R. D. Marshall, G. S. Ellis, F. H. Schubert, and R. A. Wynveen
May 1979 91 p refs
(Contract NAS9-15218)
(NASA-CR-160317; LSI-ER-319-24) Avail: NTIS
HC A05/MF A01 CSCL 06K

Two electrochemical depolarized carbon dioxide concentrator subsystems were evaluated against baseline lithium hydroxide for (1) the baseline orbiter when expanded to accommodate a crew of seven (mission option one), (2) an extended duration orbiter with a power extension package to reduce fuel cell expendables (mission option two), and (3) an extended duration orbiter with a full capability power module to eliminate fuel cell expendables (mission option three). The electrochemical depolarized carbon dioxide concentrator was also compared to the solid amine regenerable carbon dioxide removal concept. Water recovery is not required for Mission Option One since sufficient water is generated by the fuel cells. The vapor compression distillation subsystem was evaluated for mission option two and three only. Weight savings attainable using the vapor compression distillation subsystem for water recovery versus on-board water storage were determined. Combined carbon dioxide removal and water recovery was evaluated to determine the effect on regenerable carbon dioxide removal subsystem selection. R.E.S.

A80-12230 * **Soil stabilization by a prokaryotic desert crust - Implications for Precambrian land biota.** S. E. Campbell (Boston University, Boston, Mass.), *Origins of Life*, vol. 9, Sept. 1979, p. 335-348. 24 refs. NSF Grants No. GA-43391; No. EAR-76-84233; No. EAR-76-84233-A01; Grant No. NsG-7588.

The ecology of the cyanophyte-dominated stromatolitic mat forming the ground cover over desert areas of Utah and Colorado is investigated and implications for the formation of mature Precambrian soils are discussed. The activation of the growth of the two species of filamentous cyanophyte identified and the mobility of their multiple trichromes upon wetting are observed, accompanied by the production and deposition of a sheath capable of accreting and stabilizing sand and clay particles. The formation of calcium carbonate precipitates upon the repeated wetting and drying of desert crust is noted, and it is suggested that the desert crust community may appear in fossil calcrete deposits as lithified microscopic tubes and cellular remains of algal trichromes. The invasion of dry land by both marine and freshwater algae on the model of the desert crust is proposed to be responsible for the accumulation, stabilization and biogenic modification of mature Precambrian soils. A.L.W.

AEROSPACE MEDICINE AND BIOLOGY

A Continuing Bibliography (Suppl. 210)

SEPTEMBER 1980

IAA ENTRIES

A80-36373 # **A comparative evaluation of the coagulation properties of lymph and blood at high altitude (Sravnitel'naia otsenka koaguliatsionnykh svoistv limfy i krovi v usloviiakh vysokogor'ia).** S. B. Daniiarov and V. V. Pukhov (Kirgizskii Gosudarstvennyi Meditsinskii Institut, Frunze, Kirgiz SSR). *Fiziologicheskii Zhurnal SSSR*, vol. 66, Mar. 1980, p. 374-379. 19 refs. In Russian.

Changes in lymph and blood coagulation during altitude acclimatization are investigated. The coagulation times and coagulabilities of thoracic duct lymph and arterial blood samples taken from dogs at an altitude of 760 m and on the third, 14th and 30th days following transport to an altitude of 3200 m were determined by a variety of tests. It is found that the coagulabilities of both blood and lymph decrease in response to high altitudes, particularly on the third day of altitude adaptation. On the subsequent days, coagulability increases to levels approaching those of the controls. In addition, more significant changes were observed in blood coagulation than in lymph coagulation. A.L.W.

A80-36374 # **Thermoregulation according to central and peripheral temperatures at high ambient temperatures /Mathematical model investigation/ (O reguliatsii po tsentral'noi i perifericheskoi temperaturam pri teplovykh vozdeistviiakh /Issledovanie na matematicheskoi modeli/).** I. I. Ermakova (Akademiia Nauk Ukrainskoi SSR, Institut Kibernetiki, Kiev, Ukrainian SSR). *Fiziologicheskii Zhurnal SSSR*, vol. 66, Mar. 1980, p. 394-399. 15 refs. In Russian.

A theoretical analysis of the roles of central and peripheral temperatures in the human thermoregulation process at elevated ambient temperatures is presented. Computer simulations were performed using a two-part model of human thermophysical properties (heat transfer) and thermoregulatory processes for the cases of thermoregulation according to brain (hypothalamus) temperature and according to the combined effects of brain and mean blood temperature in response to stepwise increases in ambient temperature from 29 to 40 C. Results of modeling of the transient and steady responses to elevated temperatures indicate that at low values of the amplification coefficient relating the magnitude of the response to that of the stimulus, the role of peripheral regulation is insignificant, while the influence of peripheral thermosensors is evident at high amplification coefficients, with regulation according to central temperature ensuring the accuracy of the regulatory response and regulation according to peripheral indicators ensuring its stability. A.L.W.

A80-36375 # **The effects of cold acclimatization on the activity of acid peptide-hydrolases in lysosome-enriched fractions of rat brain and liver tissues (Vliianie akklimatsii k kholodu na aktivnost' kislykh peptid-gidrolaz v obogashchennykh lizosomami fraktsiiakh tkanei mozga i pecheni krys).** L. V. Lomakina and V. S. Shugalei (Rostovskii-na-Donu Gosudarstvennyi Universitet, Rostov-on-Don, USSR). *Fiziologicheskii Zhurnal SSSR*, vol. 66, Mar. 1980, p. 400-403. 8 refs. In Russian.

A80-36461 **Temporal brightness enhancement studied with a large sample of observers - Evidence for individual differences in brightness perception.** R. W. Bowen and K. A. Markell (Loyola University, Chicago, Ill.). *Perception and Psychophysics*, vol. 27, no. 5, May 1980, p. 465-476. 20 refs. NSF Grant No. BNS-78-17779.

A80-36775 # **Possibilities and limitations of the application of psychological tests (Möglichkeiten und Grenzen der Anwendung psychologischer Tests).** H. Kaspras (Medizinischer Dienst des Verkehrswesens, Berlin, East Germany). *Technisch-ökonomische Information der zivilen Luftfahrt*, vol. 15, no. 6, 1979, p. 319-323. In German.

The problem of improving flight safety by achieving better integration between the pilot and his working environment is examined. Attention is given to the use of psychodiagnostic processes in the appraisal of civil air traffic. Factors which are examined include reaction time, observation reliability, self control, behavior under stress and personal characteristics. Finally, problems in testing are covered which include concerns that a short test can yield unrealistic results due to subject emotions resulting from the special test situation. M.E.P.

A80-37100 # **The ultrastructure of the brain during hypoxia (Ul'trastruktura mozga pri gipoksii).** N. N. Bogolepov. Moscow, Izdatel'stvo Meditsina, 1979. 168 p. 198 refs. In Russian.

An electron microscopic analysis of the changes in brain ultrastructure brought about by exposure to various forms of hypoxia is presented. Micrographs were obtained under conditions of experimental hypoxic hypoxia, ischemia and histotoxic hypoxia as well as from patients suffering from terminal brain circulation disturbances. Changes in general cell morphology, mitochondrial and organelle ultrastructures, microvacuolization, nerve cell membranes, cytoplasmic and nuclear osmium affinity, lipid granules, lysosomes, dendrites, axons, interneuronal contact ultrastructure, glial cells and brain capillary ultrastructure are examined. Consideration is also given to indicators of reversible and irreversible changes of neuron ultrastructure, and results are compared with pathological information obtainable by light microscopy. A.L.W.

A80-37122 # **Adaptive control algorithms and optimization of robot-manipulator motion (Algoritmy adaptivnogo upravleniia i optimizatsiia dvizheniia robota-manipuliatora).** G. D. Penev and V. N. Neokesariiskii. In: Mechanics of controlled motion. (A80-37112 15-13) Leningrad, Izdatel'stvo Leningradskogo Universiteta, 1979, p. 143-159. 10 refs. In Russian.

The adaptive control proposed in the present paper ensures a motion along a programmed trajectory, in the presence of disturbances, in the space of the robot's generalized coordinates, and also a motion along a programmed trajectory, where the control error vanishes at t tending to infinity, in the absence of disturbances. An approach to the construction of an optimal programmed trajectory of motion for a given trajectory in three-dimensional space is proposed. V.P.

A80-37457 **Motion control system development for a mobile robot.** D. E. Okhotsimski (Akademiia Nauk SSSR, Institut Prikladnoi Matematiki, Moscow, USSR). In: Automatic control in space; Proceedings of the Eighth Symposium, Oxford, England, July 2-6, 1979. Oxford, Pergamon Press, Ltd., 1980, p. 251-256.

Problems associated with the development of the motion control system for automatic mobile robots are discussed. The investigations have been performed with the breadboards of six-legged walking robot and automatic robot moving on wheels. Some results are presented. (Author)

A80-37463 **Problems of motion control for mobile robots.** A. K. Platonov (Akademiia Nauk SSSR, Institut Prikladnoi Matematiki, Moscow, USSR). In: Automatic control in space; Proceedings of the Eighth Symposium, Oxford, England, July 2-6, 1979. Oxford, Pergamon Press, Ltd., 1980, p. 303-310.

The problems are considered to develop the multi-purpose system of motion control for a mobile robot. The hierarchic structure of the control system allows to organize the hierarchy of subgoals for every goal of robot's activity and construct the process of dynamic variation of subgoals according of the robot's state and environment conditions. The constructive method is proposed to organize such a control system and the possibility of its implementation is investigated for an example of the integrated walking robot motion control. (Author)

A80-37465 **Motion control of biped walking robots.** V. V. Beletskii (Akademiia Nauk SSSR, Institut Prikladnoi Matematiki, Moscow, USSR). In: Automatic control in space; Proceedings of the Eighth Symposium, Oxford, England, July 2-6, 1979. Oxford, Pergamon Press, Ltd., 1980, p. 317-322. 6 refs.

The problem of planar motion control is considered for a walking robot consisting of a ponderous trunk and a pair of imponderable two-link legs suspended to a point of the trunk. The two-stage control algorithm is constructed to follow the prescribed programmed motion. At the first stage the vertical stabilization is provided through the moments at joints. At the second stage of the control problem solution the longitudinal and angular stabilizations are attained due to the above moments as well as the choice of the sequential step length and duration. The overall control algorithm (synthesis of the joint moments, choice of step length and duration) is described by finite formulae. The report is illustrated by a film taken off the display screen. (Author)

A80-37515 **Nucleotide-amino acid interactions and their relation to the genetic code.** J. Reuben and F. E. Polk (Houston, University, Houston, Tex.). *Journal of Molecular Evolution,* vol. 15, May 1980, p. 103-112. 26 refs.

The apparent dissociation constants of the complexes of AMP with the methyl esters of amino acids in aqueous solution exhibit good correlations with features of the genetic code and with the frequencies of occurrence of amino acid residues in proteins. Thus it is likely that chemically selective nucleotide-amino acid interactions were involved in the processes of chemical evolution that have led to the emergence of the genetic code. Based on these correlations a storage device for the information regarding nucleotide-amino acid interactions is proposed. It involves processes of simultaneous polymerization to polynucleotides and polypeptides. (Author)

A80-37516 * **Synthesis of peptides from amino acids and ATP with lysine-rich proteinoid.** T. Nakashima and S. W. Fox (Miami, University, Coral Gables, Fla.). *Journal of Molecular Evolution,* vol. 15, May 1980, p. 161-168. 29 refs. Grant No. NGR-10-007-008.

The paper examines the synthesis of peptides from aminoacids and ATP with a lysine-rich protenoid. The latter in aqueous solution catalyzes the formation of peptides from free amino acids and ATP; this catalytic activity is not found in acidic protenoids, even though the latter contain a basic aminoacid. The pH optimum for the synthesis is about 11, but it is appreciable below 8 and above 13. Temperature data indicate an optimum at 20 C or above, with little increase in rate up to 60 C. Pyrophosphate can be used instead of ATP, but the yields are lower. The ATP-aided syntheses of peptides in aqueous solution occur with several types of proteinous aminoacids. A.T.

A80-37523 **Limb flail injuries and the effect of extremity restraints in USAF ejections - 1971-1978.** W. F. Belk (USAF, Inspection and Safety Center, Norton AFB, Calif.). *SAFE Journal,* vol. 10, Summer 1980, p. 18-21. 8 refs.

The USAF experience with limb flail injuries in noncombat ejections for 1971-1978 is reported. USAF mishap data files were searched for trauma resulting from windblast/wind flail. Four hundred forty-seven (447) open seat ejections for which airspeed was recorded and evidence was not obliterated by other impacts were identified. Among these ejections, 33 individuals incurred significant wind flail injuries. These cases are reported by aircraft type, knots indicated airspeed on ejection, method of initiation, and injuries incurred. Probability of flail injury by airspeed is calculated. Comparisons of arm flail probabilities show little difference between D-ring and sidearm seats. Seats with active leg restraints had fewer lower extremity injuries. (Author)

A80-37524 * **Residual effects of alcohol on aircrew performance.** L. M. Wise (Heidelberg College, Tiffin, Ohio). *SAFE Journal,* vol. 10, Summer 1980, p. 28-31. 20 refs.

Studies on the significance of alcohol effects on a complex high risk task such as flying a high performance vehicle in a hostile environment are reported. Attention is given to results obtained with experiments to determine the effect of alcohol on a simple flying task. Further, a study performed on residual effects of alcohol is described, which was undertaken because of the discrepancy between the FAA regulation, requiring an elapsed time of 8 hours between drinking and flying, and the reports of residual physiological effects in the literature cited. This study, it is shown, compared a 30 minute post alcohol condition with a 14 hour post ingestion condition and employed oversight errors as a measure of alcohol effects. It was found that responses after 14 hours were much more like those 30 minutes after drinking than they were like those under the no alcohol condition. In conclusion, the relevance of these findings to many industrial man/machine settings is stressed. M.E.P.

A80-37573 * **Sensors, controls, and man-machine interface for advanced teleoperation.** A. K. Bejczy (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, Calif.). *Science,* vol. 208, June 20, 1980, p. 1327-1335. Contract No. NAS7-100.

Some advances are reviewed which have been made in teleoperator (i.e., mechanical activities performed by mechanical devices at a remote site under remote control) technology through introduction of sensors, computers, automation, and new man-machine interface devices and techniques for remote manipulator control. The state of the art is summarized and some basic problems and challenging developments are examined. V.P.

A80-37696 **New work force roles resulting from new technology.** V. D. Hopkin (RAF, Institute of Aviation Medicine, Farnborough, Hants., England). In: Air Traffic Control Association, Annual Fall Conference, 24th, Atlantic City, N.J., October 15-19, 1979, Proceedings. Washington, D.C., Air Traffic Control Association, Inc., 1979, p. 68-75.

As technology expands, not only does the list of functions that could be done by the machine lengthen, but also the efficiency with which the machine could do them is enhanced. According to the criteria by which technology is judged, man should do less and the machine should do more. Most technological advances are genuine aids as long as man remains central to the system. In ATC, this stage has been reached some time ago. The present paper deals with the difficulties which may arise in designing satisfactory roles for man as his functions come to depend more on technology. The influence of technological changes on such concepts as professional pride, status, responsibility, interest, challenge, skill, trust, and satisfaction are examined. V.P.

A80-37698 **Pilot reactions to communicating with a talking computer.** E. Shochet (FAA, National Aviation Facilities Experimental Center, Atlantic City, N.J.). In: Air Traffic Control Association, Annual Fall Conference, 24th, Atlantic City, N.J., October 15-19, 1979, Proceedings. Washington, D.C., Air Traffic Control Association, Inc., 1979, p. 92-97.

Some experience obtained with the VRS (Voice Response System), designed to provide pilots with a limited preflight weather briefing, is reviewed. The prototype model provided three weather products: hourly surface observations, terminal forecasts, and grid wind alofts. A survey of pilot responses to the use of the VRS showed that 56 percent of the pilots found the VRS information satisfactory for preflight planning. By using the computer to perform routine briefing tasks, the specialist can concentrate on more demanding and personal communication tasks. V.P.

A80-37901 # **Effects of sustained exposure to hypoxic environment on temporal discrimination behaviour in rats.** I. Sakurai, E. Sakaguchi, H. Osada, T. Sakaguchi, and R. Yurugi (Japan Air Self-Defense Force, Aeromedical Laboratory, Tachikawa, Tokyo, Japan). *Japan Air Self Defence Force, Aeromedical Laboratory, Reports,* vol. 20, Dec. 1979, p. 129-134. 10 refs. In Japanese, with abstract in English.

The effects of sustained hypoxia on the brain function were studied by testing the change in the behavior of rats in a hypoxic environment. The animals were trained on the DRL15'LH5' schedule of food reinforcement under a normoxic environment. After their behavior showed temporal discrimination, the rats were exposed to a simulated altitude of 5500 in a hypobaric chamber for one week; and alteration of the operant behavior was then examined. It was found that (1) the stable performance maintained in a steady state by DRL15'LH5' schedule under normoxic environment was disrupted during the exposure to the altitude, (2) response and reinforcement rates declined during a few days of the initial stage of the exposure and then returned to the control levels, (3) the inter-response time tended to be longer during the exposure, and (4) these results suggest a close relationship between the disrupted temporal discrimination and functional inhibition in the brain cortex during the exposure to hypoxic environment. A.T.

A80-37902 # **Structural difference between stage 1 and REM on sleep EEG.** Y. Kurihara, I. Saito (Japan Air Self-Defense Force, Aeromedical Laboratory, Tachikawa, Tokyo, Japan), and F. Konjiki (Japan Air Self-Defense Force, Aeromedical Laboratory, Tachikawa, Tokyo; Nippon Medical College, Kawasaki, Japan). *Japan Air Self Defence Force, Aeromedical Laboratory, Reports,* vol. 20, Dec. 1979, p. 135-140. 8 refs. In Japanese, with abstract in English.

The paper analyzes the concept that there is no structural difference between the sleep EEG of stage 1 and REM stage, and that they differ only by the presence or absence of rapid eye movements and muscle activities. The method of factor analysis was applied to differentiate these stages in four subjects. The results of variance analysis showed that the stage 1 scores represented the interindividual differences, and the REM scores depicted the significant differences between the 1st stage EEG and the REM EEG. The stage 1 loading is more pronounced in a mean amplitude, the number of peaks, and the distribution index of peaks; the REM stage has a lower amplitude, it is slower, and has more fast wave components indicating the desynchronized activities in the REM stage. A.T.

A80-37903 # **Statistical studies on blood pressure of JASDF pilots - Comparison with Japanese adult males.** Y. Kurihara, Y. Matsuba, and I. Saito (Japan Air Self-Defense Force, Aeromedical Laboratory, Tachikawa, Tokyo, Japan). *Japan Air Self Defence Force, Aeromedical Laboratory, Reports,* vol. 20, Dec. 1979, p. 141-151. 35 refs. In Japanese, with abstract in English.

A comparison of the blood pressure level of the JASDF pilots with Japanese males in general was made. The blood pressure of pilots from their periodic health examinations and those of adult males were calculated from the blood pressure distribution tables of the Japanese nutrition survey. The age of both groups ranged from 20 to 49 in 1975-1976. The results showed that: (1) systolic and diastolic blood pressure distribution curves of the pilots were lower by about 10 mm of Hg synthetically than those of adult males; (2) each dispersion of systolic and diastolic blood pressure curves of the pilots was smaller than those of adult males; (3) the lower blood pressure of the pilots was recognized in each group with systolic and diastolic pressures; (4) the correlation between the age and the diastolic blood pressure was statistically significant for both groups, but that of the systolic blood pressure was only significant for adult males. It was concluded that pilots' blood pressures correspond to those of younger men; specifically, the blood pressures of men in the 40-49 age group are almost equivalent to those of men under 30 years old. A.T.

A80-37904 # **Study on the changes of electroencephalogram, heart rate and respiratory rate during all night sleep.** M. Goto, I. Saito, and M. Ono (Japan Air Self-Defense Force, Aeromedical Laboratory, Tachikawa, Tokyo, Japan). *Japan Air Self Defence Force, Aeromedical Laboratory, Reports,* vol. 20, Dec. 1979, p. 153-161. 9 refs. In Japanese, with abstract in English.

A study of the changes of brain waves (EEG) and respiratory circulating responses during all-night sleep is presented. The sleep stage Rechtschaffen method (hypnogram) was also compared with a new method which extracted a specific slow component of brain waves by a rectified integration system. The measurements of EEG from the central to the occipital sphere, the electronystagmogram, the electromyogram from M. mentalis, the heart rate, plethysmograph (pulse wave), the respiratory rate, blood pressure and rectal temperature were recorded by a polygraph and a magnetic tape recorder. It was found that: (1) EEG during sleep changed to a high voltage slow pattern in accordance with the depth of the sleep stage; (2) respiratory and heart rate decreased in accordance with the depth of the sleep stage, and increased during the REM stage; (3) the amplitudes of the plethysmogram increased in accordance with the sleep stage, and decreased during the REM stage; and (4) the synchronized fluctuations of the hypnogram, respiratory, and the heart rate were observed during the sleep stage, but this symptom disappeared during the deep sleep stage. A.T.

A80-37905 # **Application of LED on-off control system to centrifuge acceleration load.** M. Ono (Japan Air Self-Defense Force, Aeromedical Laboratory, Tachikawa, Tokyo, Japan). *Japan Air Self Defence Force, Aeromedical Laboratory, Reports,* vol. 20, Dec. 1979, p. 163-167. 6 refs. In Japanese, with abstract in English.

An application of an automatically continuous LED control system with a digital IC is described. The system consists of the pulse oscillation circuit, a 4 bit counter, a BCD decoder, perception signal circuits and a power supply. The basic clock pulse is generated by pulse oscillation circuit using 2 transistors, and then changed into a BCD code by the 4 bit counter circuit. Two LED's are connected to each of the decoder terminals, and 30 LED's are arranged at the same space on a circular arc and are switched-on sequentially one by one from the periphery to the center. The system is capable of selecting two methods: (1) the light of the LED directed toward the center is off at the position where the perception switch is pressed, and then the light starts to run again from the periphery without time lag when the button is released, and (2) the running light of LED is locked at the position when the perception swich button is pressed, and then the light begins to run again from that position when the button is released. It is concluded that this system can use an ac battery as a power supply, and can be applied to each axis of X, Y, and Z. A.T.

A80-38453 **Muscular work as thermal behavior in humans.** M. Caputa and M. Cabanac (Lyon I, Université, Oullins, Rhône, France). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 48, June 1980, p. 1020-1023. 20 refs. Research supported by the Institut National de la Santé et de la Recherche Médicale; Centre National de la Recherche Scientifique Grant No. LA-181.

Muscular work performed by human subjects placed on a bicycle ergometer and left to pedal ad lib. for 43 min to warm themselves to attain thermal comfort at an ambient temperature of 10 C is discussed. Esophageal, tympanic, forehead and the hand skin temperatures were recorded, along with noting the pedaling work for each 2 min period. Two experiments were performed: the first with face fanning, and the second with thermal insulation of the head. Face fanning resulted in the decreased tympanic temperature, but in an increased esophageal temperature. In experiments with the head covering, a mild increase in these temperatures was observed; simultaneously, the pedaling intensity decreased and the rate of sweating increased. In general, pedaling work was inversely proportional to the intracranial temperature and independent of the trunk temperature. Therefore, the muscular activity in humans exposed to cold temperatures appears to be governed chiefly by the brain temperature. A.T.

A80-38454 **Chemical and nonchemical components of ventilation during hypercapnic exercise in man.** J. M. Clark, R. D. Sinclair, and J. B. Lenox (Pennsylvania, University, Philadelphia, Pa.; USAF, School of Aerospace Medicine, Brooks AFB, Tex.). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 48, June 1980, p. 1065-1076. 41 refs. Wasserman (Harbor General Hospital; California, University, Torrance, Calif.). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 48, June 1980, p. 1083-1091. 30 refs. Grants No. NIH-HL-19410; No. NIH-HL-11907.

A80-38464 **Effects of aircraft noise on an intelligibility task.** M. D. Arnoult and J. W. Voorhees (Texas Christian University, Fort Worth, Tex.). *Human Factors*, vol. 22, Apr. 1980, p. 183-188. 5 refs. Research supported by the Bell Helicopter Textron Corp.

The recorded sounds of three aircraft (T28 propeller airplane, Bell 204B helicopter, and Bell 206 helicopter) flying directly overhead at 300 ft and 900 ft (91.4 m and 274.3m) were played while subjects engaged in an audiovisual task. The subjects viewed a series of 35-mm color slides of everyday scenes and heard them described by one-word labels. Each label was to be identified as 'Right,' 'Wrong,' or 'Unheard.' The results were in close agreement with previous field studies on the rated 'annoyingness' of aircraft sounds and provided no support for the contention that impulsive helicopter noise ('blade-slap') is disruptive in ways not accounted for by simple measures of loudness level. (Author)

A80-38465 **The event-related brain potential as an index of display-monitoring workload.** J. B. Isreal, C. D. Wickens, G. L. Chesney, and E. Donchin (Illinois, University, Champaign, Ill.). *Human Factors*, vol. 22, Apr. 1980, p. 211-224. 53 refs. Contract No. N00014-76-C-0002.

As an index of task workload, the possible advantages of the event-related brain potential (ERP) over traditional secondary task and physiological measures are described and previous efforts to validate the use of ERPs in this contex are discussed. An experiment is then reported in which perceptual load, incurred by monitoring a simulated air-traffic-control display for discrete events, is assessed using (1) measures of the P300 component of ERPs elicited by auditory probe stimuli and (2) a reaction time secondary task. The ERP measures were found to reflect systematically differences in task workload and to covary closely with the reaction time measure. The results are discussed within the framework of a multidimensional conception of human processing resources and task workload. (Author)

A80-38466 **A test of Fitts' law with moving targets.** R. J. Jagacinski (Ohio State University, Columbus, Ohio), D. W. Repperger (USAF, Aerospace Medical Research Laboratory, Wright-Patterson AFB, Ohio), S. L. Ward, and M. S. Moran (Systems Research Laboratories, Inc., Dayton, Ohio). *Human Factors*, vol. 22, Apr. 1980, p. 225-233. 7 refs. Contract No. F33615-C-76-5001. AF Project 2312V601.

Subjects used either a position or a velocity control system to capture stationary and moving targets. Fitts' Index of Difficulty was found to be a good predictor of capture time for the rate system. However, for the position control system, the Fitts measure failed to predict accurately the capture time for moving targets. An alternate Index of Difficulty measure is proposed which explicitly incorporates a velocity factor and which predicts the overall pattern of capture times for both systems with greater accuracy than Fitts' Index of Difficulty. (Author)

A80-38468 **Instrumented animal systems for toxic assessment of materials.** J. G. Gaume (Douglas Aircraft Co., Long Beach, Calif.). *Journal of Combustion Toxicology*, vol. 7, May 1980, p. 124-133.

The paper deals with two systems developed in an attempt to obtain an endpoint that is more sensitive than Time to Death, Time to Incapacitation, or Time of Useful Function. One is a monitoring system for rats, which displays and records ECGs, respiration, and cage temperature. The rationale for use of the ECGs is that when the hypoxia resulting from exposure to fire gases becomes sufficiently severe, the ECG will show cardiac arrhythmias of progressively more serious nature. The other instrument exposure system utilizes the principle developed by Spugeon, but is of different design. In this system, the animal steps on a contact bar, whose deflection produces a characteristic pattern in the recording, depending on whether the subject is walking in the motor-driven wheel, sitting on the shaft, or has collapsed. The systems have the advantage of providing more information than visual systems. V.P.

A80-38679 **Separation of motions in the problem of stabilization of bipedal locomotion.** Iu. V. Bolotin. *(Akademiia Nauk SSSR, Izvestiia, Mekhanika Tverdogo Tela*, July-Aug. 1979, p. 48-53.) *Mechanics of Solids*, vol. 14, no. 4, 1979, p. 41-45. Translation.

A80-38705 # **The circadian rhythms of biological processes and their adaptive significance in vertebrate onto- and phylogenesis (Sutochnye ritmy biologicheskikh protsessov i ikh adaptivnoe znachenie v onto- i filogeneze pozvonochnykh).** G. D. Gubin and E. Sh. Gerlovin. Novosibirsk, Izdatel'stvo Nauka, 1980. 280 p. 800 refs. In Russian.

The circadian rhythms of biological processes from the cellular to the organismic levels are examined in order to determine variations of these rhythms with development and evolution. The fundamental stages in the development of an understanding of the daily rhythmicity of biological processes are reviewed, and the characteristics of circadian rhythms at various organizational levels in animals are discussed. Attention is then given to the dynamics of the daily rhythms of biological processes in vertebrate liver cells during vertebrate phylogenesis and ontogenesis, and their interactions. Finally, the significance of circadian biological rhythms in the adaptation of organisms to different living conditions and in their response to toxic and pharmocological substances is discussed. A.L.W.

A80-39143 # **Some characteristics of binocular fixation in the discrimination and recognition of objects (Nekotorye osobennosti binokuliarnoi fiksatsii v protsesse razlicheniia i opoznaniia ob'ektov).** E. F. Polezhaev, A. M. Kotliarskii, and V. A. Epikhin. *Fiziologiia Cheloveka,* vol. 6, May-June 1980, p. 447-450. 7 refs. In Russian.

The characteristics of micro- and macroscale eye movements in the binocular fixation of a point object, the recognition of a geometrical shape, and the evaluation of the position of a moving point are investigated. Eye movements were monitored by electromagnetic position transducers mounted on contact lenses worn by the subjects during fixation on a fixed point object, one point of a three-point triangle, and a moving point. The eye motion trajectories recorded indicate that in fixation on a fixed point object, the process of merging precedes the separation of the segments of the retinal projection, implying the splitting of the point on the cortical level. The recognition of a geometrical shape by fixation on one of its points is found to be accompanied by a search mechanism in which left and right eye movements are not symmetrical. Finally, it is found that under conditions when additional searching eye movements are necessary due to target motion, visual position determination is less accurate than in the case of a fixed point. A.L.W.

A80-39144 # **The sensation of vibration (Ob oshchushchenii vibratsii).** E. M. Tsirul'nikov (Akademiia Nauk SSSR, Institut Evoliutsionnoi Fiziologii i Biokhimii, Leningrad, USSR) and V. I. Pudov (Ministerstvo Zdravookhraneniia RSFSR, Nauchno-Issledovatel'skii Institut po Bolezniam Ukha, Gorla, Nosa i Rechi, Leningrad, USSR). *Fiziologiia Cheloveka,* vol. 6, May-June 1980, p. 459-463. 19 refs. In Russian.

The sensations produced by ultrasonic and mechanical vibratory stimuli to the human finger are evaluated and compared in order to investigate the existence of a separate sensation of vibration. Focused square-wave ultrasonic pulses, sinusoidally amplitude modulated ultrasound, and vibrator oscillations were applied to the skin of the index fingers of two subjects, and the perception thresholds were determined at frequencies between 60 and 8000 Hz. Single pulses of ultrasound are reported to elicit sensations of slight contact, changing to drilling, buzzing, or itching as the frequency of pulses increases. The same boring sensation was experienced at the perception thresholds of sinusoidal ultrasonic waves and mechanical vibrations, which were both found to reach minima at frequencies of 250 Hz; the auditory sensations provoked by ultrasound and mechanical vibration were found to differ. Results do not support the idea of separate tactile receptors for low-frequency oscillations but instead indicate the role of the vestibular receptors in vibration perception. A.L.W.

A80-39145 # **The dependence of organism responses on physical load doses under conditions of restricted muscular activity (Zavisimost' reaktsii organizma ot dozirovannykh fizicheskikh nagruzok pri ogranichenii myshechnoi deiatel'nosti).** N. E. Panferova. *Fiziologiia Cheloveka,* vol. 6, May-June 1980, p. 474-477. 5 refs. In Russian.

The applicability of various tests employing physical loads in assessing cardiovascular functions is evaluated as a function of training levels with these loads in a pressure chamber. Two series of experiments were performed in which changes in pulse rate were monitored for the performance of a customary activity (walking on a treadmill) and specialized task (pulling crossbars suspended from rubber shock absorbers) over the course of 30-40 days, and for the performance of a training activity (bicycle ergometer work) and a test activity (step test) over the course of 3-120 days. Results indicate that the usefulness of cardiovascular functional tests with physical loads over long periods of time depends on the type and extent of subject muscular activity during the experiment, with work capacity for unaccustomed tasks decreasing and that for daily activities remaining constant or even increasing with time. It is thus concluded that the muscular activity involved in the physical tests used for assessing human work capacity during extended experiments or space flights must differ from the muscular loads sustained during physical training. A.L.W.

A80-39271 **General characterization of the rheological properties of human soft tissues based on measurements made by the local cyclic loading method and a simple phenomenological model of these properties.** E. V. Belaia (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *(Mekhanika Kompozitnykh Materialov,* July-Aug. 1979, p. 737-741.) *Mechanics of Composite Materials,* vol. 15, no. 4, Jan. 1980, p. 479-482. Translation.

A80-39272 **Thermoregulatory mechanisms and their therapeutic implications; Proceedings of the Fourth International Symposium on the Pharmacology of Thermoregulation, Oxford University, Oxford, England, July 30-August 3, 1979.** Symposium supported by the U.S. Navy, Beecham Pharmaceuticals, Institut de Recherches Servier, et al.; Contract No. N00014-78-G-0062. Edited by B. Cox (Manchester, Victoria University, Manchester, England), P. Lomax (California, University, Los Angeles, Calif.), A. S. Milton (Aberdeen, University, Aberdeen, Scotland), and E. Schönbaum (Organon International, Oss, Netherlands). Basel, S. Karger AG, 1980. 319 p. $39.

Papers are presented on current research on the pharmacology of thermoregulation and its implications for clinical treatment. Specific topics include the roles of the various neurotransmitters in central thermoregulation, the role of dopamine in temperature regulation during exercise, the effects of marijuana on human thermoregulation in a hot environment, historical views of the role of fever in disease, malignant hyperthermia and its treatment with dantrolene sodium, the comparative thermoregulatory effects of narcotic analgesics, hypothermic responses to neurotensin, and the effects of thyrotropin releasing hormone on body temperature. Attention is also given to the effects of calcium injection into the caudal hypothalamus on body temperature and metabolic rate, behavioral thermoregulation in the capsaicin-desensitized rat, temperature perception and regulation in high-pressure heliox environments, and medical research in the Arctic. A.L.W.

A80-39273 **Neurotransmitter mapping in central thermoregulation.** J. Frens (Utrecht, Rijksuniversiteit, Utrecht, Netherlands). In: Thermoregulatory mechanisms and their therapeutic implications; Proceedings of the Fourth International Symposium on the Pharmacology of Thermoregulation, Oxford, England, July 30-August 3, 1979. Basel, S. Karger AG, 1980, p. 1-5. 12 refs.

The sites of activity of neurotransmitters in the neuronal network of the central thermoregulatory system are investigated. Competitive antagonists to the neurotransmitters (serotonin), dopamine and acetylcholine were injected intraventricularly into goats at different ambient temperatures, and changes in body temperature and peripheral vasomotor tone were monitored. Results are interpreted in terms of a thermoregulatory model in which dopamine acts in the heat loss pathway and in vasodilation and gives rise to noradrenaline, which acts to inhibit heat production. Heat loss but not vasodilation is antagonized by 5-hydroxytryptamine and dopamine inhibitors, while acetylcholine acts to stimulate heat production. It is suggested that behavioral thermoregulation might also be regulated by the same neurotransmitters. A.L.W.

A80-39274 The role of dopamine in temperature regulation during exercise stress. C. V. Gisolfi, F. Mora, M. Beattie, P. T. Wall, S. Brown, and S. Magnes (Iowa, University, Iowa City, Iowa). In: Thermoregulatory mechanisms and their therapeutic implications; Proceedings of the Fourth International Symposium on the Pharmacology of Thermoregulation, Oxford, England, July 30-August 3, 1979. Basel, S. Karger AG, 1980, p. 31, 32. 10 refs. Contract No. N00014-75-C-0597.

The role of dopamine in thermoregulation under conditions of exercise-induced thermal loads is investigated. Injections of the specific dopamine receptor blocker pimozide and apomorphine were given to rats before the start of 30 min of treadmill exercise in a cool (24 C) environment, and core and skin temperatures and oxygen consumption were monitored. Pimozide is found to produce a significant hyperthermic response to work, while apomorphine microinjected into the preoptic/anterior hypothalamic nuclei produced dose-dependent attenuations in core temperature and elevations in skin temperature without affecting the ability of the animal to exercise. Results are interpreted as evidence of the role of the hypothalamic dopaminergic system in heat dissipation under thermal loads. A.L.W.

A80-39275 Marijuana and human thermoregulation in a hot environment. R. T. Jones, R. Maddock, T. R. Farrell, and R. Herning (California, University, San Francisco, Calif.). In: Thermoregulatory mechanisms and their therapeutic implications; Proceedings of the Fourth International Symposium on the Pharmacology of Thermoregulation, Oxford, England, July 30-August 3, 1979. Basel, S. Karger AG, 1980, p. 62-64. Grants No. PHS-HSM-42-73-181; No. PHS-DA-4RG012; No. PHS-DA-01696.

The effects of marijuana (tetrahydrocannabinol) on human thermoregulation at normal and high ambient temperatures are investigated. Subjects smoked either a marijuana cigarette containing 18 mg of tetrahydrocannabinol or a placebo cigarette in a room maintained at 40 C and their body temperatures, skin conductances, heart rates and subjective intoxication over a two-hour period were compared with those of a control group smoking both a marijuana and a placebo cigarette in random order at an ambient temperature of 23 C. Core and finger temperatures are found to increase from 0.6 to 1.3 C after smoking marijuana in a hot room, while core temperature initially decreased and then increased 0.3 C and finger temperature decreased 3.8 C at 23 C, with the placebo having no effect on body temperature. Observations of the cessation or sharp decrease in sweating for 20 min after smoking in the hot room suggest that the increased body temperature observed is at least partially due to decreased sweating. Results are consistent with tetrahydrocannabinol-induced hyperthermia found in animals at high ambient temperatures, which may be due to the anticholinergic and adrenergic effects of cannabis. A.L.W.

A80-39276 Human malignant hyperthermia - Treatment with dantrolene sodium. C. A. Taylor, Jr. and B. H. Hoff (Wisconsin, University, Madison, Wis.). In: Thermoregulatory mechanisms and their therapeutic implications; Proceedings of the Fourth International Symposium on the Pharmacology of Thermoregulation, Oxford, England, July 30-August 3, 1979. Basel, S. Karger AG, 1980, p. 145-147. 19 refs.

A case history of the treatment of human anesthesia-induced malignant hyperthermia, a pharmacogenetic muscle disorder characterized by fever, muscle rigidity and cardiovascular collapse, by the administration of dantrolene sodium, is presented. The patient had undergone uneventful surgery with vestibular Meniere's syndrome using anesthesia including thiopental, succinylcholine, nitrous oxide and enflurane, following which she was slow to awaken and exhibited a temperature of 40 C. Treatment included surface cooling, with no effect, and two doses of intravenous dantrolene sodium following the appearance of shivering, muscle rigor, a deterioration of the blood gas buffer base and tachycardia. An hour following the second dose of dantroline, body temperature, acid-base status and prothrombin time had returned to normal without additional treatment, and remained so. Dantrolene is considered to act within the muscle cell by preventing the release of calcium ions from the sarcoplasmic reticulum, although the relation between the elevated levels of myoplasmic calcium ions observed in malignant hyperthermia and heat production is not clear, and is concluded to be efficacious in the treatment of the syndrome in humans. A.L.W.

A80-39277 Hypothermic responses to neurotensin in vertebrates. C. B. Nemeroff, G. Bissette, P. J. Manberg, S. I. Moore, G. N. Ervin, A. J. Osbahr, and A. J. Prange (North Carolina, University, Chapel Hill, N.C.). In: Thermoregulatory mechanisms and their therapeutic implications; Proceedings of the Fourth International Symposium on the Pharmacology of Thermoregulation, Oxford, England, July 30-August 3, 1979. Basel, S. Karger AG, 1980, p. 180-185. 21 refs. Grants No. PHS-MH-32316; No. PHS-HD-03110; No. PHS-MH-22536.

The thermoregulatory responses of several vertebrate species to the injection of the possible neurotransmitter peptide neurotensin are investigated. Intracranial injections of neurotensin were administered to pigeons, ground squirrels, woodchucks, golden hamsters, rabbits, guinea pigs, gerbils, Swiss-Webster mice, Sprague-Dawley rats and rhesus monkeys at ambient temperatures of 4 and 25 C, and colonic temperatures were monitored for a period of two hours. In addition, the effects of pretreatments with the neurotransmitter modifiers atropine, naloxone, haloperidol, phenoxybenzamine, propanolol, L-triiodothyronine, apomorphine and thyrotropin releasing hormone in rats were evaluated. Hypothermia was observed following neurotensin treatment in all mammals except the rabbit and the obligatory hibernators, which was not altered by pretreatment with agents which block cholinergic, alpha and beta adrenergic and opiate receptors or by the electrolytic destruction of brain sites rich in neurotensin. Hypothermia was also observed to be potentiated by the dopamine antagonist halperidol and antagonized by thyrotropin releasing hormone. It is concluded that neurotensin may play a physiological role in thermoregulation, possibly by the inhibition of metabolic heat production. A.L.W.

A80-39278 Effect of intrahippocampal TRH on body temperature in hibernating and awake ground squirrels. T. L. Stanton, A. L. Beckman, and A. Winokur (Pennsylvania, University, Philadelphia, Pa.). In: Thermoregulatory mechanisms and their therapeutic implications; Proceedings of the Fourth International Symposium on the Pharmacology of Thermoregulation, Oxford, England, July 30-August 3, 1979. Basel, S. Karger AG, 1980, p. 195-197. 6 refs.

A80-39279 Implications of changes in temperature perception and temperature regulation in high pressure heliox oxygen environments. M. E. Sheehan and R. W. Brauer (North Carolina, University, Wilmington, N.C.). In: Thermoregulatory mechanisms and their therapeutic implications; Proceedings of the Fourth International Symposium on the Pharmacology of Thermoregulation, Oxford, England, July 30-August 3, 1979. Basel, S. Karger AG, 1980, p. 232-237. 13 refs. Contract No. N00014-75-C-0468.

Experimental data on changes in internal temperature perception and thermal regulation in animals in high-pressure environments is discussed. Results showing the narrowing of the euthermal interval, defined as the temperature region outside of which metabolic rate increases linearly with decreasing temperature or vasodilation is evident, in squirrel monkeys upon exposure to high-pressure heliox environments are presented. Concurrent increases in the responsiveness of the hypothalamus to thermal displacements are interpreted as indicating the presence of differences in euthermal internal temperature distribution at high pressures and low temperature environments and the role of central thermal perception in changes in the euthermal interval. Changes in oxygen consumption indicating increased metabolic rates at low to medium pressures in the mouse, monkey and man are also pointed out as evidence of a direct effect of pressure on metabolic rate. It is suggested that this effect may act through an increased influx of an ion such as sodium, which would lead to a compensatory increase in transport ATP-ase activity. A.L.W.

A80-39280 **Arctic medical research in the Nordic countries.** H. K. Akerblom (Nordic Council for Arctic Medical Research, Oulu, Finland) and J. Hirvonen (Oulu, University, Oulu, Finland). In: Thermoregulatory mechanisms and their therapeutic implications; Proceedings of the Fourth International Symposium on the Pharmacology of Thermoregulation, Oxford, England, July 30-August 3, 1979. Basel, S. Karger AG, 1980, p. 260-270. 66 refs.

Medical research in the Nordic countries dealing with human responses to the cold and otherwise harsh conditions of Arctic and sub-Arctic regions is summarized. Current research areas include hormonal, diuretic and pathological responses to cold and cold acclimatization, and the effects of ethanol in the cold, which can be applied to the improvement of working conditions and capacity. The genetic and cultural adaptations enabling the survival of native populations in harsh conditions, and the nutrition, growth and development, and hereditary diseases of Arctic residents are also under investigation. Epidemiologic studies of some common diseases including coronary heart disease, juvenile diabetes mellitus, chronic otitis media, respiratory tract infections, zoonoses and psychiatric disorders, are also performed in support of efforts in improving health care in the region. A.L.W.

A80-39401 # **Bio-electromagnetic research - Review of some important aspects.** P. Bernardi (Roma, Università, Rome, Italy) and G. D'Ambrosio (Napoli, Università, Naples, Italy). *Alta Frequenza,* vol. 49, Mar.-Apr. 1980, p. 47-54. 65 refs.

Biological effects produced by the interaction of electromagnetic waves with humans are discussed. Attention is given to the cumulative nature of the effects, as well as teratogenic effects resulting from various power levels and exposure durations. The influence of radiation on organisms at the embrionic level, on reproductive organs, and on the lens of the eye is considered. The interaction of electromagnetic energy and biological systems is analyzed as a three-stage process: internal field distribution, local elementary effects, and physiopathological responses. Theoretical and experimental dosimetry is considered, with emphasis on the mutual interactions between sources, environment, and the biological specimen. Also discussed is bioelectromagnetic research in Italy, including such studies as research on whole body exposure and dosimetry techniques, and microwave spectroscopy of biological substances. J.P.B.

A80-39402 # **Quantifying the hazard of field-man interaction in electrically shielded enclosures.** P. Bernardi, G. D'Inzeo, F. Giannini, and R. Sorrentino (Roma, Università, Rome, Italy). *Alta Frequenza,* vol. 49, Mar.-Apr. 1980, p. 55-60. 10 refs. Research supported by the Consiglio Nazionale delle Ricerche.

The average value and the distribution of the specific absorption rate are considered for biological tissue irradiated in an electrically shielded enclosure. Since the exposure-rate concept cannot be used to quantify the hazard, a new method is proposed, which refers the power absorbed by the body to that absorbed in a reference structure. Calculations have been made in the 100 MHz frequency range, in which maximum power absorption occurs for humans. The examples presented stress the dependence of power absorption on the position of the man and of the source within the enclosure. J.P.B.

A80-39403 # **Temperature distribution in simulated living tissues irradiated electromagnetically.** F. Bardati, G. Gerosa, and P. Lampariello (Roma, Università, Rome, Italy). *Alta Frequenza,* vol. 49, Mar.-Apr. 1980, p. 61-67. 11 refs. Research supported by the Consiglio Nazionale delle Ricerche and Università di Roma.

The problem of the temperature distribution in electromagnetically irradiated bodies which simulate living tissues is studied. A suitable model of a living tissue, taking into account metabolic heat generation and thermal convection due to blood flow, is assumed. Methods for the determination of the final and transient temperature distributions are given. The particular cases of a slab and of a cylinder irradiated by a plane wave are considered and some numerical results are presented. (Author)

A80-39405 # **Some problems on evaluation of RF radiation hazards caused by ISM equipment in Poland.** A. Koperski and T. Smialkowski. *Alta Frequenza,* vol. 49, Mar.-Apr. 1980, p. 85-88.

Measurement methods and instruments used in Poland in investigations of hazardous electric and magnetic fields in frequency range from 0.1 to 300 MHz are described. On the basis of comparison of National Regulation with results of field intensity measurements radiated by some kinds of industrial, scientific and medical (ISM) sources, evaluation of radiation hazards is presented. Safety recommendations relating to the ISM equipment operational conditions are also included. (Author)

A80-39406 # **Multimode time-varying enclosures for exposure and dosimetry in bioelectromagnetic experiments.** G. D'Ambrosio, F. Di Meglio, and G. Ferrara (Napoli, Università, Naples, Italy). *Alta Frequenza,* vol. 49, Mar.-Apr. 1980, p. 89-94. 6 refs. Research supported by the Consiglio Nazionale delle Ricerche.

A new, simple and reliable electrical dosimetric technique in field-stirred enclosures is described, and electrical and calorimetric tests are compared. Using the above dosimetric method, field uniformity was carefully checked. It is shown that a frequency modulation stirring is generally less effective than a 'mechanical' one. Three large rotating stirrers gave satisfactory uniformity in cubic enclosures as small as 4 wavelengths. (Author)

A80-39407 # **Physical measurements on dielectric properties of biological substances.** B. Bianco, G. Drago, M. Marchesi, C. Martini, M. Morando, G. Morgavi, S. Ridella (CNR, Laboratorio per i Circuiti Elettronici, Genoa, Italy), and G. S. Mela (Genova, Università, Genoa, Italy). *Alta Frequenza,* vol. 49, Mar.-Apr. 1980, p. 95-100. 20 refs.

The microwave spectroscopy of biological substances is discussed, whereby the complex dielectric constant of a material is measured in a noninvasive way in the 100-2000 MHz frequency range. The method is characterized by great rapidity and the need for only about 0.5 cu cm of the sample to be tested, and measurements on human erythrocytes are considered. To investigate the possible existence of differences in the dielectric properties of hematological samples due to pathologies, human sera was examined. In particular, the equivalent normality, relaxation frequency, and volume percentage of bound water were determined using a modified Hooke-Jeeves procedure as an optimization technique; perceptible differences were found between normal and sick individuals. J.P.B.

A80-39408 # **Electromagnetic control of cell functions.** F. Beltrame, A. Chiabrera, M. Grattarola, P. Guerrini, G. Parodi, D. Ponta, G. Vernazza, and R. Viviani (Genova, Università, Genoa, Italy). *Alta Frequenza,* vol. 49, Mar.-Apr. 1980, p. 101-114. 14 refs. Research supported by the Consiglio Nazionale delle Ricerche.

The biological effects of low-frequency electromagnetic exposure on the electrochemical cell microenvironment are considered, along with the resulting variations in the concentrations of cell macromolecules and ions. Attention is given to studying cell response to EM exposure via the chromatin spatial momenta. Two automated cytometry techniques, automated laser flow microfluorometric and absorption image analyses, are reviewed, which are sensitive enough to measure in situ chromatin conformational changes inside single cells, and to distinguish the effects due to different field waveforms. Experimental results of electromagnetically controlled dedifferentiation of nucleated frog erythrocytes are presented, as well as in vivo results of EM field waveforms used in the osteogenesis field. It is found that EM control of cell functions is feasible. J.P.B.

A80-39410 # **Electromagnetic compatibility /EMC/ to-day - A review /1979-80/.** C. Egidi (Istituto Elettrotecnico Nazionale; CNR, Centro di Studio per la Televisione; Torino, Politecnico, Turin, Italy). *Alta Frequenza,* vol. 49, Mar.-Apr. 1980, p. 124-129.

Various aspects of electromagnetic compatibility are presented and the activities of several international bodies, particularly the Comité International Spécial des Perturbations Radioélectriques, in this field are surveyed. Attention is given to industrial, scientific and medical apparatuses, power lines, ignition noise, radio and television receivers, domestic appliances, data processing equipment and electric office machines with regard to their contribution to the problem of unintentional noise generation. J.P.B.

A80-39589 **The qualifications of flight personnel, a safety factor in air transport (Les aptitudes du personnel navigant, facteur de sécurité dans le transport aérien).** P. Bulté (Direction Générale de l'aviation Civile Paris, France). *Voies-Aviation Civile,* no. 7, Supplement, Spring 1980, p. 43, 44. In French.

The abilities of airline flight personnel are discussed as a factor determining the safety of air transportation. Consideration is given to the training and testing each crew member must undergo before undertaking to fly in complex, high-performance modern aircraft, the knowledge of aircraft systems required, and the selection and training of persons with abilities to deal with emergency situations. The necessity of periodic retraining of flight personnel to deal correctly and instinctively with infrequent emergencies is pointed out. A.L.W.

A80-39598 **The council and commissions for disciplining pilots - Infractions and sanctions (Le conseil et les commissions de discipline du personnel navigant - Infractions et sanctions).** C. Meunier (Direction Générale de l'Aviation Civile, Paris, France). *Voies-Aviation Civile,* no. 7, Supplement, Spring 1980, p. 74, 75. In French.

The activities of the French council for disciplining pilots (Conseil de Discipline du Personnel navigant professionnel) are described. Attention is given to the nature of pilot infractions and to the appropriate sanctions. The various stages of the disciplining process are reviewed. B.J.

A80-39974 **Blunted hypoxic vasoconstriction in lungs from short-term high-altitude rats.** I. F. McMurtry, K. G. Morris, and M. D. Petrun (Colorado, University, Denver, Colo.). *American Journal of Physiology,* vol. 238, June 1980, p. H849-H857. 30 refs. Grant No. NIH-HL-14985.

The effects of a short-term exposure to high altitude on hypoxic pulmonary vasoconstriction are investigated. Perfusion pressures from blood-perfused lungs taken from rats kept at low altitude (1520 m) or exposed for 40 h to a simulated altitude of 4270 m were determined in normoxic and hypoxic environments, and under the influence of perfused KCN, 2,4-dinitrophenol, angiotensin II, KCl, chlorpheniramine, histamine, meclofenamate and 2-deoxy-D-glucose. Smaller pressor responses to both airway and histotoxic hypoxia were observed in high-altitude lungs than in the controls, which were not eliminated by the prevention of hypocapnia in high-altitude rats. The observed blunting of the pressure response is found to be partially duplicated in anorexic rats, and not to be reversed by the blockade of histamine-induced vasodilation, by metabolic inhibitors or by increased calcium. A blunted pressor response to angiotensin II and KCl was also observed in both entire lungs and main pulmonary arteries. Results indicate that the blunted hypoxic pressor response is associated with a nonspecific decrease in the reactivity of the vascular smooth muscle, possibly related to a change in its calcium metabolism. A.L.W.

A80-40070 # **The impact deformation of the human skull /Experimental investigation and some problems of modeling/. I - A technique for the investigation of the biomechanics of the human skull upon impact (Deformatsii cherepa cheloveka pri udare /Eksperimental'noe izuchenie i nekotorye problemy modelirovaniia/. I - Metodika izucheniia biomekhaniki cherepa cheloveka pri udare).** A. S. Barer, Iu. G. Konakhevich, L. N. Sholpo, V. Kh. Petliuk, and N. A. Uglanova. *(Vsesoiuznaia Konferentsiia po Problemam Biomekhaniki, 2nd, Riga, Latvian SSR, Apr. 1979.) Mekhanika Kompozitnykh Materialov,* Mar.-Apr. 1980, p. 319-324. 11 refs. In Russian.

An experimental apparatus for the investigation of the biomechanical properties of the human skull upon impact, for the determination of the characteristics of local deformation produced in the impact region and the relation between impact characteristics and the reaction of the base of the skull and the acquisition of initial data for a computational model of skull response to impact is presented. The apparatus consists of a pendulum device used to impact different regions of a human skull filled with water against various vertical surfaces, while measuring loads on the base of the skull and the region opposite the impact zone. Results of experiments performed on the device using a range of impact momentum parameters corresponding to that of previous model experiments are found to agree with predictions of the semiempirical impact theory derived by Batuyev et al. (1969). A regression equation relating impact parameters to collision velocity is also obtained, which, along with the semiempirical theory, can be used for the evaluation of the effects of calculated impact parameters for such applications as helmet design. A.L.W.

A80-40071 # **A mathematical model of a myogenically active blood vessel (Matematicheskaia model' miogenno aktivnogo krovenosnogo sosuda).** V. T. Begiashvili, V. G. Meladze, and N. P. Mitagvariia (Akademiia Nauk Gruzinskoi SSR, Institut Fiziologii, Tiflis, Georgian SSR). *Mekhanika Kompozitnykh Materialov,* Mar.-Apr. 1980, p. 331-338. 14 refs. In Russian.

A mathematical model of the autoregulatory responses of the blood vessels of the brain to changes in systemic arterial pressure is developed on the basis of experimental data. Analysis of measurements of the local blood flow in the somatosensory cortex of anesthetized cats following sudden changes in systemic arterial pressure reveals five types of response to elevations and decreases, all of which are dependent on the characteristics of the pressure perturbation. In order to explain the results, a model is proposed in which blood vessel reactions are determined by the passive (elastic) and active stresses acting on vessel walls, with active stresses up to a limiting value proportional to blood pressure above a threshold level and vessel walls acting as a viscoelastic body with lumped parameters. The model is observed to describe a pressure-radius hysteresis, in agreement with that observed in living systems, indicating the myogenic, as opposed to neurogenic or metabolic, nature of the response. Analysis of an analog computer simulation of the proposed model equations indicates the correlation of model responses with those observed in living systems. A.L.W.

A80-40340 * # **Analysis of eighty-four commercial aviation incidents - Implications for a resource management approach to crew training.** M. R. Murphy (NASA, Ames Research Center, Moffett Field, Calif.). In: Annual Reliability and Maintainability Symposium, San Francisco, Calif., January 22-24, 1980, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1980, p. 298-306. 9 refs.

A resource management approach to aircrew performance is defined and utilized in structuring an analysis of 84 exemplary incidents from the NASA Aviation Safety Reporting System. The distribution of enabling and associated (evolutionary) and recovery factors between and within five analytic categories suggests that resource management training be concentrated on: (1) interpersonal communications, with air traffic control information of major concern; (2) task management, mainly setting priorities and appropriately allocating tasks under varying workload levels; and (3) planning, coordination, and decisionmaking concerned with preventing and recovering from potentially unsafe situations in certain aircraft maneuvers. (Author)

A80-40376 College Park Colloquium on Chemical Evolution: Limits of Life, 4th, University of Maryland, College Park, Md., October 18-20, 1978, Proceedings. *Origins of Life,* vol. 10, June 1980. 101 p.

Papers are presented concerning the various environmental and fossil constraints on the origin, evolution and adaptive radiation of life on earth. Specific topics include atmospheric constraints on the evolution of metabolism, variations in the solar constant, the possible role of early prokaryote gas vacuoles in motility, the morphologies of present manganese-depositing bacteria, implications of sulfur isotope ratios for the emergence of sulfur-reducing bacteria, the limits to life at low temperatures and water contents, the physical chemistry and evolution of salt tolerance in halobacteria, halophily and halotolerance in cyanophytes, and the properties of malate dehydrogenase from the extreme thermophile Bacillus caldolyticus. A.L.W.

A80-40377 Atmospheric constraints on the evolution of metabolism. J. C. G. Walker (Arecibo Observatory, Arecibo, P.R.). *(College Park Colloquium on Chemical Evolution: Limits of Life, 4th, College Park, Md., Oct. 18-20, 1978.) Origins of Life,* vol. 10, June 1980, p. 93-104. 36 refs.

The effects of early organisms on the composition of the primitive atmosphere are discussed in terms of the interactions of evolving metabolisms with their environment. Biosynthetic pathways in primitive organisms are discussed as arising from the need to supply essential compounds no longer available as a result of abiotic synthesis, and the eventual depletion of energy supplied by abiotic synthesis is seen as the stimulus for the evolution of pathways deriving energy from reactions between atmospheric carbon dioxide and hydrogen, as do modern methane bacteria. Photosynthesis is then considered to have arisen when chemoautotrophs had modified the atmosphere to the extent that a necessary constituent, presumably hydrogen, was in insufficient supply, resulting in the use of the unfermentable waste products of heterotrophs as electron donors in bacterial photosynthesis and thus the first biological cycles. Algal photosynthesis would then have developed as a solution to the further decrease in atmospheric hydrogen, although evidence suggests that a period of 2 billion years was required for oxygen released by algal photosynthesis to produce an aerobic atmosphere, permitting aerobic metabolism. A.L.W.

A80-40379 The gas vacuole - An early organelle of prokaryote motility. J. T. Staley (Washington, University, Seattle, Wash.). *(College Park Colloquium on Chemical Evolution: Limits of Life, 4th, College Park, Md., Oct. 18-20, 1978.) Origins of Life,* vol. 10, June 1980, p. 111-116. 27 refs.

Evidence for the possible role of gas vacuoles as early organelles of prokaryote motility is considered. The simplicity of the organelle, which is comprised of a set of gas vesicles impermeable to water and the presence of which serves to regulate cell buoyancy, is pointed out and its presence in organisms derived from primitive organisms, such as Clostridium, Methanosarcina and Halobacterium bacteria, as well as in some of the photosynthetic green sulfur bacteria, purple sulfur bacteria, cyanobacteria, obligate and facultative anaerobic heterotrophic bacteria and aerobic heterotrophic bacteria is noted. It is suggested that structural and compositional similarities between the gas vacuoles of different species may be due to the need to conserve a necessary structure rather than the rapid plasmid dispersal of a recent structure. Variations in the development of gas vacuoles among species are also presented as evidence for its ancient origin. A.L.W.

A80-40380 Structural features of manganese precipitating bacteria. K. H. Nealson and B. Tebo (California, University, La Jolla, Calif.). *(College Park Colloquium on Chemical Evolution: Limits of Life, 4th, College Park, Md., Oct. 18-20, 1978.) Origins of Life,* vol. 10, June 1980, p. 117-126. 28 refs. NSF Grant No. OCE-78-27383.

Studies of biological communities of the past (and their associated activities) are usually dependent upon preservation of fossil material. With bacteria this rarely occurs because of the absence of sufficient fossilizable cellular material. However, some bacteria deposit metabolic products that can, conditions allowing, be preserved indefinitely. In particular, manganese and iron depositing bacteria have the capacity to form preservable microfossils. In order to better understand these microfossils of the past, we have examined present day morphologies of manganese oxidizing bacteria. These bacteria are highly pleomorphic, depending on the growth medium, the age of the culture, and the extent of manganese oxidation. Transmission electron microscopy indicates that manganese may be deposited either intra- or extra-cellularly. The prognosis of the use of morphological information for the interpretation of ancient and modern manganese deposits is discussed. (Author)

A80-40381 Sulphur isotope ratios in late and early precambrian sediments and their implications regarding early environments and early life. H. G. Thode (McMaster University, Hamilton, Ontario, Canada). *(College Park Colloquium on Chemical Evolution: Limits of Life, 4th, College Park, Md., Oct. 18-20, 1978.) Origins of Life,* vol. 10, June 1980, p. 127-136. 33 refs.

The fractionation of sulfur isotopes by biological processes, specifically the bacterial dissimilatory reduction of sulphate to sulphide, is discussed as an indicator of biological activity in ancient sediments. Simple depletion of the heavy sulfur isotope S-34 by 0 to 50 per mil in the production of hydrogen sulfide in reducing sediments and batch process isotope fractionation in residual sulfate production in restricted basins are considered, and the environment during the formation of Archaen sediments is indicated. Results of studies of the S-34 distribution patterns in the Archean banded iron formations of the Michipicoten and Woman River areas of Ontario are presented which exhibit highly variable sulfur isotope distributions indicating the bacterial reduction of sea water sulphate to H2S in a restricted late Archean basin. Analysis of the sulfur isotope patterns in the early Archean Isua banded iron formations, however, reveals only slight variations and displacements from zero in the S-34 enhancement, indicating the probable absence of bacterial sulfate reducers and their probable origin between 3.7 and 2.7 billion years ago. A.L.W.

A80-40382 Limits to life at low temperatures and at reduced water contents and water activities. P. Mazur (Oak Ridge National Laboratory, Oak Ridge, Tenn.). *(College Park Colloquium on Chemical Evolution: Limits of Life, 4th, College Park, Md., Oct. 18-20, 1978.) Origins of Life,* vol. 10, June 1980, p. 137-159. 64 refs. Contract No. W-7405-eng-26.

Liquid water is generally considered an absolute requisite for functional life; consequently, life is expected to function only over the range of temperatures that permit its existence. These limits, however, do not apply to cell survival. Some cells can survive the closest attainable approach to 0 K, and some can survive the loss of over 99% of their water. (Author)

A80-40383 * Physical chemistry and evolution of salt tolerance in halobacteria. J. K. Lanyi (NASA, Ames Research Center, Moffett Field, Calif.). *(College Park Colloquium on Chemical Evolution: Limits of Life, 4th, College Park, Md., Oct. 18-20, 1978.) Origins of Life,* vol. 10, June 1980, p. 161-167. 35 refs.

The cellular constituents of extremely halophilic bacteria not only tolerate high salt concentration, but in many cases require it for optical functioning. The characteristics affected by salt include enzyme activity, stability, allosteric regulation, conformation and subunit association. The salt effects are of two major kinds: electrostatic shielding of negative charges by cations at low salt concentration, and hydrophobic stabilization by salting-out type salts at high salt concentration. The composition of halobacterial proteins shows an excess of acidic amino acids and a deficiency of nonpolar amino acids, which accounts for these effects. Since the cohesive forces are weaker and the repulsing forces are stronger in these proteins, preventing aggregation in salt, these structures are no longer suited for functioning in the absence of high salt concentrations. Unlike these nonspecific effects, ribosomes in halobacteria show marked preference for potassium over sodium ions. To ensure the proper intracellular ionic composition, powerful ion transport systems have evolved in the halobacteria, resulting in the extrusion of sodium ions and their replacement by potassium. It is likely that such membrane transport system for ionic movements is a necessary requisite for salt tolerance. (Author)

A80-40384 **Halophily and halotolerance in cyanophytes.** S. Golubic (Boston University, Boston, Mass.). *(College Park Colloquium on Chemical Evolution: Limits of Life, 4th, College Park, Md., Oct. 18-20, 1978.) Origins of Life,* vol. 10, June 1980, p. 169-183. 40 refs. NSF Grants No. DEB-76-21542-A01; No. OCE-12999-A02; No. EAR-76-84233-A01.

The survival, growth and distribution of organisms in hypersaline environments is discussed using cyanophytes as examples. Definitions of halophily (salt requiring) and halotolerance are reviewed, and it is proposed that the classical divisions of stenohaline (narrow range) and euryhaline (wide range) types be used together with the salt optima indicators of poly- (high salt), meso- (moderate salt) and oligohalines (lower salt) to better reflect organismal adaptations and the environmental conditions to which they are adapted. The presence of separate and distinct microbial populations in regions of constant salinity such as the open ocean and regions of fluctuating salinity such as marine intertidal zones and seasonal salt works is discussed in terms of the selective advantages offered by halophily and stenohaline specialization and halotolerance and euryhaline specialization. Results of field studies of the hypersaline ponds at Yallahs, south Jamaica and Solar Lake, Sinai demonstrating the existence of three separate groups of cyanophytes at different pond locations are presented. It is concluded that cyanophytes speciate along the salinity gradient and that separate halophilic taxa occupy environments with relatively constant salinities. A.L.W.

A80-40385 **Purification and properties of malate dehydrogenase from the extreme thermophile Bacillus caidolyticus.** H. Kristjansson and C. Ponnamperuma (Maryland, University, College Park, Md.). *(College Park Colloquium on Chemical Evolution: Limits of Life, 4th, College Park, Md., Oct. 18-20, 1978.) Origins of Life,* vol. 10, June 1980, p. 185-192. 5 refs.

The enzyme malate dehydrogenase from an extreme thermophile B. caldolyticus was purified to about 91% homogeneity. The molar mass of the enzyme was determined as 73,000 daltons and it is composed of two subunits, each with a molar mass of 37,000. Initial velocity studies with oxaloacetic acid and NADH as substrates as pH 8.1, over a range of temperatures, indicate that the enzyme operates via a sequential-type mechanism. Van't Hoff plots of the kinetic parameters displayed sharp changes in slope at characteristic temperatures, whereas the Arrhenius plot exhibited no such breaks over the temperature interval investigated. The enzyme was found to be stable at 41 C and lower temperatures. At 51 C and 59 C an almost immediate 20% reduction in activity was obtained, but no further inactivation occurred during the 60 min of incubation. At 59 C the enzyme lost 50% of its initial activity in about 38 s. High concentration of NADH was observed to greatly stabilize the enzyme at that temperature. It is suggested that the slope changes in the Van't Hoff plots and the stability profiles at 51 C and 59 C are representative of a temperature-induced conformational change in the enzyme. (Author)

THE TERRESTRIAL RADIATION ENVIRONMENT AND EVA'S: PREDICTION REQUIREMENTS, MODEL IMPROVEMENTS, AND WARNING SYSTEMS

E. G. Stassinopoulos *In* NASA. Marshall Space Flight Center Solar-Terrest. Predictions Proc., Vol. 2 Dec. 1979 p 119-120

Avail: NTIS HC A99/MF A01 CSCL 05H

The total medical-biological impact of the Earth's space radiation environment on humans is a function of combined EVA and non-EVA exposure. In either case, the correct assessment of the eventual health risk to crew members is crucial to the success and viability of a project or mission. Aside from the medical-biological aspect itself, the validity of any assessment depends entirely on the existence of good and reliable models providing the high quality data that is needed for such evaluations, which should contain time histories of storm and substorm events, their intensities, their frequency of occurrence, and their duration. Prediction requirements, advantageous and desirable model developments and improvements, and systems that need to be designed and tested, which would alert space crews and maintenance personnel about impending radiation danger are outlined. GROWTH AND FORMATION OF THE FORELEG SKELETON IN INBRED MICE AND RATS UNDER CONDITIONS OF HYPO-, NORMO- AND HYPERDYNAMIA

B. I. Kogan and Yu. S. Antipov Jan. 1980 10 p refs Transl. into ENGLISH from Vestn. Zool. (USSR), no. 4, 1976 p 67-71 Transl. by Scientific Translation Service, Santa Barbara, Calif. Original doc. prep. by USSR Acad. of Pedagogical Sci.
(Contract NASw-3198)
(NASA-TM-75977) Avail: NTIS HC A02/MF A01 CSCL 06C

Inbred 1 month old males of C57B 1/6, CBA, CC57Br/Mw interlinear hybrid mice of the first generation and rats of the August and Wistar lines were subjected to conditions of hypo-, normo- and hyperdynamia for 2 months. The statistically reliable dependence is shown between mechanical underloadings and overloadings and macro microscopic changes in the hind limb skeleton of animals. Genetic determination of growth and formation of the forelimb skeleton is established. Hereditary susceptibility and the phenomenon of heterosis are preserved under all motor conditions. Author

PLANTS AND WEIGHTLESSNESS

V. Karminskiy and V. Tarkhanovskiy Jan. 1980 4 p Transl. into ENGLISH from Tekhn. i Nauka (Moscow), no. 11, 1978 p 10 Transl. by Scientific Translation Service, Santa Barbara, Calif.
(Contract NASw-3198)
(NASA-TM-76025) Avail: NTIS HC A02/MF A01 CSCL 06C

The growth of two plants, wall cress and short-day red goosefoot, was traced for their entire lifetime in weightlessness. In the beginning both plants grew normally: the seeds sprouted in the normal periods, and the shoots did not differ in any way from the control plants. It is true that certain roots lost their normal orientation and did not go deeper into the nutrient medium, but rather crept over its surface. But then both the wall cress and the goosefoot slowed down their normal rate of growth, which became noticeable from the rate of formation of new leaves in the wall cress and stem development in the goosefoot. Although no disorders were successfully found in the morphology of the two plants, almost half of the experimental cress and goosefoot plants ceased growth completely, yellowed and died. The other part continued to develop normally and by the end of vegetation, differed from the control plants only in a lower height. Not all were fertile since certain experimental plants, after losing spatial orientation, became twisted and produced sterile flowers. R.E.S.

CHANGE IN RADIO SENSITIVITY OF MICE UNDER EFFECT OF ROTATION

N. I. Arlashchenko, V. M. Seraya, and G. P. Rodina Jan. 1980 12 p refs Transl. into ENGLISH from Radiobiol. (USSR), no. 2, 1979 p 251-256 Transl. by Scientific Translation Service, Santa Barbara, Calif. Original doc. prep. by Inst. of Med. and Biol. Probl. of the USSR Min. of Public Health
(Contract NASw-3198)
(NASA-TM-76026) Avail: NTIS HC A02/MF A01 CSCL 06C

Radiosensitivity of animals placed in slowly rotating chambers was investigated and was found to vary under the influence of the functional load on the vestibular analyzer. An increased radioresistance was registered in populations of the most radiosensitive mice. In populations of more radioresistant animals the gravitational load decreases the radioresistance. R.E.S.

CONTENT OF TOTAL IRON, COPPER AND MANGANESE IN LIVER OF ANIMALS DURING HYPOKINESIA, MUSCLE ACTIVITY AND PROCESS OF RECOVERY

G. M. Potapovich, G. V. Taneyeva, and A. B. Uteshev 30 May 1980 8 p refs Transl. into ENGLISH from Izv. Akad. Nauk Kaz. SSR, Ser. Biol. (USSR), no. 4, Jul. - Aug. 1978 p 63-66 Transl. by Scientific Translation Service, Santa Barbara, Calif. Original doc. prep. by the Kazakh SSR Min. of Public Health, Alma-Ata
(Contract NASw-3198)
(NASA-TM-76130) Avail: NTIS HC A02/MF A01 CSCL 06C

It is shown that the content of total iron, copper and manganese in the liver of animals is altered depending on the intensity and duration of their swimming. Hypodynamia for 7 days does not alter the concentration of iron, but sufficiently increases the content of copper and manganese. The barometric factor effectively influences the maintenance of constancy in the content of microelements accumulated in the liver after intensive muscle activity. Author

A RADIATIVE TRANSFER MODEL FOR REMOTE SENSING OF LASER INDUCED FLUORESCENCE OF PHYTOPLANKTON IN NON-HOMOGENEOUS TURBID WATER Annual Report

D. D. Venable May 1980 57 p refs
(NASA-CR-163155) Avail: NTIS HC A04/MF A01 CSCL 06C

A radiative transfer computer model was developed to characterize the total flux of chlorophyll a fluoresced or backscattered photons when laser radiation is incident on turbid water that contains a non-homogeneous suspension of inorganic sediments and phytoplankton. The radiative transfer model is based on the Monte Carlo technique and assumes that: (1) the aquatic medium can be represented by a stratified concentration profile; and (2) that appropriate optical parameters can be defined for each layer. The model was designed to minimize the required computer resources and run time. Results are presented for an anacystis marinus culture. R.E.S.

PRELIMINARY RESULTS OF FAST NEUTRON TREATMENTS IN CARCINOMA OF THE PANCREAS

Reinhard Gahbauer, Kyee Y. Koh, Antonio Rodriguez-Antunez, Gwynn L. Jelden, Robert F. Turco, John Horton, Ronald Bukowski, Ronald Reimer, James Blue, William Roberts et al 1980 4 p Presented at the National Pancreatic Proj., New Orleans, 18 Apr. 1980 Prepared in cooperation with Cleveland Clinic Foundation, Ohio
(NASA-TM-81516; E-460) Avail: NTIS HC A02/MF A01 CSCL 06E

A group of 30 patients with adenocarcinoma of the pancreas including some patients with very advanced disease, were treated with the so-called mixed beam modality employing photon treatments three times per week and neutron treatments twice a week. Two hundred Rads or equivalent Rads (RBE 3.3) were given in daily fractions aiming at a total dose of 6000 Rads in 6 to 8 weeks. The treatments were well tolerated and significant palliation was achieved in 26 to 30 cases. Twelve months survival was 33 percent with a median survival of 7 months or 210 days. Treatment techniques and localization procedures are discussed. R.E.S.

STUDIES ON OXYGEN TOXICITY IN THE LUNGS Final Technical Report, 1 May 1970 - 29 Feb. 1980
Jack D. Hackney 29 Feb. 1980 51 p refs
(Contract N00014-78-C-0290)
(AD-A082546) Avail: NTIS HC A04/MF A01 CSCL 06/20

Work on two animal species has shown that during the first day of exposure to high concentrations of oxygen (O2), the normal rate of cell division in the lung is decreased. In animals that survive the initial exposure to O2 or in those exposed to a lower concentration, cell division resumes after about five days. In animals exposed to O2, it has been noted that they eat less and lose weight. Air-breathing mice deprived of food had weight loss and depression in DNA synthesis similar to that observed in mice exposed to 95 percent O2. These results indicate that indirect factors are associated with the depression of DNA synthesis observed in mice exposed to high O2. Lack of food or 40 percent O2 did not inhibit type 2 division associated with repair of ozone damaged alveolar epithelium. Oxygen concentrations of 61 percent or higher did inhibit reparative cell division in ozone damaged alveoli of mice. GRA

BIOLOGICAL EFFECTS OF IONIZING RADIATION AT THE MOLECULAR, CELLULAR AND ORGANISMAL LEVELS Annual Progress Report, 15 Oct. 1978 - 14 Oct. 1979
C. S. Lange 1979 13 p refs
(Contract EY-76-S-02-3501)
(COO-3501-13) Avail: NTIS HC A02/MF A01

The Zimm theory of rotor speed dependent DNA sedimentation has been tested quantitatively and found to be correct as predicted by the equation of Zimm and Schumaker. The quantitative validity of the theory means that the size of a DNA sedimenting under speed-dependent conditions is not undefinable but rather can be uniquely obtained by the application of that theory to the data. The viscoelastic recoil or more accurately, the zero shear rate reduced recoil was shown to be a quantitative direct function of the number of intact DNA molecules present in solution. This demonstration made possible the measurement of a direct survival curve for intact DNA molecules after exposure to ionizing radiation. A D37 of 49.5 krads was obtained for the DNA of T4c coliphage irradiated as a solution of phage particles. It is noteworthy that this survival curve measures the number of intact DNA molecules, not the average number of breaks/molecule. DOE

MICROBIAL PROCESSES: PROMISING TECHNOLOGIES FOR DEVELOPING COUNTRIES Final Report
Feb. 1980 215 p refs
(Contract AID/csd-2584)
(PB80-144686; CIR/BOSTID-80/28) Avail: NTIS HC A10/MF A01 CSCL 06K

Ten subpanels selected a number of microbial processes that met either of the following criteria: the process can be beneficially employed in developing countries, or the process has sufficient potential for developing countries to merit research and development for future use. Microbes can be marshaled to aid in solving many important global problems including food storages, resource recovery and reuse, energy shortages, and pollution. Microbiology is particularly suited to make important contributions to human needs in developing countries, yet it has received comparatively little attention. The range of possible applications covers uses by individuals and industries in rural settings, villages and cities. The ten subject areas covered include raw materials for microbial processes, food and animal feed, soil microbes in plant health and nutrition, nitrogen fixation, microbial insect control agents, fuel and energy, waste treatment and utilization, cellulose conversion, antibiotic and vaccines, and pure cultures for microbial processes. The metabolic fund of amino acids of the blood and tissues of rats under hypokinesia was investigated. The content of free amino acids was determined for the liver, kidney, brain, and the skeletal and cardiac muscles after established periods of hypokinesia. It was found that the total content of free amino acids in the experimental animals was, on the average 19 percent lower than in the controls. The results of the quantity of individual compounds indicate that the level of some were reduced while others were increased. It was also found that there was an unequal content of individual amino acids in the different tissues. R.E.S.

(NASA-TM-76082) Avail: NTIS HC A02/MF A01 CSCL 06S

The thermal state of women during the effect of high air temperature and relative humidity with a varying degree of physical loads was studied. Parameters for air temperature, relative humidity, and air movement were established. It was established that in women the thermo-regulatory stress occurs at lower air temperatures and with lower physical loads than in men. The accumulation of heat in women was revealed with lower air temperature than in men. It is concluded that to preserve the normal physiological state of the female organism it is necessary to create more favorable microclimate conditions and decrease the physical loads. R.E.S.

LIGHT FLASH PHENOMENA INDUCED BY HzE PARTICLES Final Report
P. J. McNulty and V. P. Pease 31 Mar. 1980 51 p refs
(Grant NsG-9059; Contract F30602-78-C-0102)
(NASA-CR-163011) Avail: NTIS HC A04/MF A01 CSCL 06P

Astronauts and Apollo and Skylab missions have reported observing a variety of visual phenomena when their eyes are closed and adapted to darkness. These phenomena have been collectively labelled as light flashes. Visual phenomena which are similar in appearance to those observed in space have been demonstrated at the number of accelerator facilities by expressing the eyes of human subjects to beams of various types of radiation. In some laboratory experiments Cerenkov radiation was found to be the basis for the flashes observed while in other experiments Cerenkov radiation could apparently be ruled out. Experiments that differentiate between Cerenkov radiation and other possible mechanisms for inducing visual phenomena was then compared. The phenomena obtained in the presence and absence of Cerenkov radiation were designed and conducted. A new mechanism proposed to explain the visual phenomena observed by Skylab astronauts as they passed through the South Atlantic Anomaly, namely nuclear interactions in and near the sensitive layer of the retina, is covered. Also some studies to search for similar transient effects of space radiation on sensors and microcomputer memories are described. R.E.S.

AN EVALUATION OF HUMAN THERMAL MODELS FOR THE STUDY OF IMMERSION HYPOTHERMIA PROTECTION EQUIPMENT Final Report, 17 Jan. 1978 - 21 Aug. 1979
R. Michael Harnett, IV Baker E. R., and Jeffrey L. Ringuest 12 Oct. 1979 107 p refs
(Contract DOT-CG-72074-A)
(AD-A081100; USCG-D-80-79) Avail: NTIS HC A06/MF A01 CSCL 06/19

This report presents an evaluation of mathematical models of a man in a cold environment. The models are evaluated for their ability to predict the effectiveness of anti-exposure equipment use during cold water immersion. The evaluation is done by comparison of model results to those observed during in vivo cold immersions with a wide range of anti-exposure equipment. The models evaluated are those, available in the literature, which employ a metabolic rate control submodel. Model results obtained with modified and experimental submodels are discussed. GRA

PHYSIOLOGICAL RESPONSES OF MEN AND WOMEN TO HUMID AND DRY HEAT
Yair Shapiro, Kent B. Pandolf, Barbara A. Avellini, Nancy A. Pimental, and Ralph F. Goldman Nov. 1979 30 p refs
(DA Proj. 3E1-62777-A-845)
(AD-A079573) Avail: NTIS HC A03/MF A01 CSCL 06/19

The major objective of this study was to determine whether sex-related differences in thermoregulation exist; and if so, whether there was any method to define these differences. A major methodological problem of the study was the inability to find groups of males and females matched in all their physical characteristics, namely: body weight, skin surface area, percentage of body fat and cardiorespiratory physical fitness. This problem was partially solved by dividing each sex into two subgroups and matching the subgroups as 'small' males vs. 'big' females, or more fit females vs. less fit males. The sex-related differences concluded from this investigation are summarized in Table 4. In comfortable climatic conditions (20 C, 40% rh) men and women reacted in a physiologically similar fashion. Under wet conditions, whether mild or hot, females tolerated the heat better than males. They displayed lower deep body and skin temperatures, and therefore lower heat storage, while demonstrating lower sweat rates and subsequently less dehydration than males. In contrast, under hot-dry conditions, males seemed to be at a physiological advantage. Compared to females, they showed lower deep body and skin temperatures, lower HR, lower heat storage, and similar sweat rates. GRA

HEMATOLOGICAL ASPECTS OF HEAT STRESS IN TRAINED AND UNTRAINED MEN WITH SPECIAL EMPHASIS ON ERYTHROCYTE VOLUME, ACID-BASE BALANCE AND FLUID-ELECTROLYTE SHIFTS Final Report, 1 May 1976 - 31 Aug. 1978
W. vanBeaumont, S. Underkofler, and S. vanBeaumont 15 Jun. 1979 46 p refs
(Contract N00014-76-C-0795)
(AD-A071757) Avail: NTIS HC A03/MF A01 CSCL 06/19

The results of the present study indicate that with 30 min of continuous sub-maximal exercise in a cool environment (24 C) or a warm environment (40 C), the plasma volume rates of decrease and restoration are virtually identical. At all levels of sub-maximal performance, restoration of plasma volume was 80-90% complete in 30 min post-excercise and 100% complete in 60 min. The regression equation for calculating proportional changes in plasma volume, using changes in hematocrit and hemoglobin indicate that the changes in mean erythrocyte volume (MCV) were small. However, based on statistical analyses it is apparent that significant changes in the MCV do occur during sub-maximal exercise. Physical training decreased plasma complexity and increased the size of the human erythrocyte. Proportionally, the shift of plasma water during maximal exercise was similar before and after training. Acclimatization to heat induced increments in MCV which, however, were not statistically significant. In most acclimatized subjects there was a tendency for quicker restoration of plasma volume than in nonheat acclimatized subjects after exercise in the heat. These changes are discussed with reference to concomittant changes in plasma complexity and plasma protein. R.E.S.

RESPIRATORY ADAPTATIONS IN ACID-BASE DISTURBANCES: ROLE OF CEREBRAL FLUIDS
V. Fencl and R. A. Gabel 19 Jun. 1979 14 p refs
(DA Proj. 3A1-61101-A-91C)
(AD-A073202) Avail: NTIS HC A02/MF A01 CSCL 06/16

The respiratory and metabolic components of acid-base homeostasis are defined. A quantitative empirical description of the (incomplete) mutal compensations in steady acid-base disturbances primarily occuring in either of the two components is presented, based upon data compiled from the literature. Respiratory adaptations in steady acid-base disturbances of metabolic origin (hyperventilation with hypocapnia in primary metabolic acidosis, and hypoventilation with hypercapnia in metabolic alkalosis) are analyzed as a function of the acidity of the cerebral fluids (cerebrospinal and cerebral interstitial fluid). R.E.S.

LOW-LEVEL CARBON MONOXIDE EXPOSURE AND WORK CAPACITY AT 1600 METERS
Philip C. Weiser, Gerd J. A. Cropp, Callis G. Morrill, Thomas L. Kurt, and David W. Dickey Sep. 1979 35 p refs
(Contract EPA-68-02-2244)
(PB80-129083; EPA-600/1-79-037) Avail: NTIS HC A03/MF A01 CSCL 06T

At sea level low-level carbon monoxide (CO) exposure impairs exercise performance. To determine if altitude residence at 1600 m augments this CO effect, two studies of graded treadmill work capacity were done. In both studies, maximal cardiopulmonary responses were not different, but submaximal exercise changes were elevated breathing CO. Thus, in healthy young men residing near 1600 m, an increase in low-level CO exposure produced a linear decrement in maximal aerobic performance similar to that reported at sea level. GRA

DECISION-PROBLEM STATE ANALYSIS METHODOLOGY
Duncan L. Dieterly May 1980 21 p refs Prepared in cooperation with AFHRL, Moffett Field, Calif.
(NASA-TM-81194; AFHRL/H/80-102) Avail: NTIS HC A02/MF A01 CSCL 05J

A methodology for analyzing a decision-problem state is presented. The methodology is based on the analysis of an incident in terms of the set of decision-problem conditions encountered. By decomposing the events that preceded an unwanted outcome, such as an accident, into the set of decision-problem conditions that were resolved, a more comprehensive understanding is possible. All human-error accidents are not caused by faulty decision-problem resolutions, but it appears to be one of the major areas of accidents cited in the literature. A three-phase methodology is presented which accommodates a wide spectrum of events. It allows for a systems content analysis of the available data to establish: (1) the resolutions made, (2) alternatives not considered, (3) resolutions missed, and (4) possible conditions not considered. The product is a map of the decision-problem conditions that were encountered as well as a projected, assumed set of conditions that should have been considered. The application of this methodology introduces a systematic approach to decomposing the events that transpired prior to the accident. The initial emphasis is on decision and problem resolution. The technique allows for a standardized method of accident into a scenario which may used for review or the development of a training simulation. R.E.S.

RESEARCH IN INTERACTIVE SCENE ANALYSIS Final Report
Jay M. Tenenbaum 30 May 1980 49 p refs
(Contract NASw-2865)
(NASA-CR-163196) Avail: NTIS HC A03/MF A01 CSCL 05J

The recovery of information about the three dimensional structure and physical characteristics of surfaces depicted in an image was studied focusing on two complementary problems: (1) basic techniques for inferring three dimensional surface shape from two dimensional images and (2) means for integrating the results of different techniques to obtain a globally consistent surface description. A technique was developed for constraining surface orientation along image contours that correspond to surface boundaries. A means for interpolating surface orientation estimates from a variety of sources into smooth surfaces--a major integration problem--was also developed. A computational model, based on these techniques, was proposed for inferring the three dimensional surface structure depicted in a line drawing. R.E.S.

EVALUATION OF UK PQ OXYGEN MASK FOR USE IN CF AIRCRAFT

D. F. Leben Sep. 1979 27 p refs
(AD-A079476; DCIEM-79-R-39) Avail: NTIS
HC A03/MF A01 CSCL 06/11

As part of a project to develop adequate life support equipment for the New Fighter Aircraft (NFA), evaluation of the Royal Air Force (RAF) P/Q oxygen mask by DCIEM indicated that the RAF P/Q mask is the only mask capable of holding the necessary 70-80 mm of pressure of the 'get-me-down' requirement of the life support ensemble. Subsequently, DCIEM was asked to evaluate the suitability of the P/Q mask as a direct replacement for the A13A mask (also known as the MS22001) for general use with the present series of aircrew helmets (i.e., the DH 41-2 jet aircrew helmet). The A13A oxygen mask currently in use in the CAF Air Operations has a number of deficiencies (e.g., slippage under G). Additionally, the A13A is not suited for use in the NFA (i.e., it cannot seal against the requisite positive breathing pressures for high altitude). This report documents the result of this evaluation. The P/Q is superior to all other oxyen masks available in that it is the only mask which can hold the 70-80 mm of pressure deemed necessary for the 'get-me-down' capability of the New Fighter Aircraft. In comparison, the A13A mask with Pate suspension can hold only 30 mm. GRA

A SIMULATOR EVALUATION OF PILOT RESPONSE TO AN AIRCRAFT COCKPIT SPIN INDICATOR SYSTEM M.S. Thesis

James Hunter Aldrich, Jr. Dec. 1979 112 p refs
(AD-A081536) Avail: NTIS HC A06/MF A01 CSCL 01/3

A high-performance aircraft simulator facility employing a two-axis combat maneuvering simulation was used to investigate pilot response to an aircraft cockpit spin indicator system. The time required to correctly respond to departed flight, spin and engine stall indications was measured using F-14 NATOPS procedures. Incorrect and inadequate responses were also recorded. Quantitative and qualitative analysis of sixteen data items was performed for eighteen test subjects during twenty-seven test runs and compiled using eight category classifications. Favorable performance and opinion were obtained. Detailed conclusions and recommendations are presented. GRA

DYNAMICS OF MULTI-BODY SYSTEMS

I. H. Mufti Nov. 1979 31 p refs
(AD-A082436; DME-MK-29; NRC-18017) Avail: NTIS
HC A03/MF A01 CSCL 20/11

The dynamic equations of multi-body systems in the form of open chains are derived by applying the principles of linear and angular momentum to each individual member in the chain. This results in the appearance of constraint forces and torques in the dynamic equations. Using more or less classical approach these unknown forces and torques can be eliminated. Another approach is to approximate these forces by elastic and viscous forces by allowing small violations of the constraints. The well-known elimination procedure leads to a small densely coupled system of equations while the lesser-known procedure of approximating the constraint forces and torques yields a large but less densely coupled system. Both these procedures are first explained in the context of a single rigid body and then applied to a system of rigid bodies in an open chain where each body is coupled directly to at most two neighbors. HC A02/MF A01 CSCL 01/3

The U.S. Navy development of an advanced Minimal Envelope/Weight (MEW) ejection seat under the auspices of AIR-340, Naval Air System Command (NASC), had as one of its design goals the development of a pure rocket motor as the propulsion system. The finalized propulsion unit produced an acceleration onset of 500 G/sec. which exceeded the specification maximum onset rate of 250 G/sec. As a consequence, this study was generated to determine whether the higher onset in combination with ≤ 10 to 12 G acceleration was physiologically acceptable. This report describes the tests conducted in exploration of physiological acceptability of this particular acceleration envelope. The results indicate successful tolerance based on limited exposure of four volunteer subjects. GRA

VARIATIONS IN PHYTOPLANKTON PHYSIOLOGICAL PARAMETERS DURING TRANSIENT NITROGEN ENVIRONMENTS Ph.D. Thesis

John Michael Demanche 1980 121 p
Avail: Univ. Microfilms Order No. 8013666

The relationship among nitrogen uptake, assimilation and phytoplankton growth during changing or transient nitrogen environments was investigated. A new culture system, diffusion culture, was developed to provide realistic low nitrogen environments. Physiological parameters for two species of diatom, Skeletonema costatum and Thalassiosira aestivalis were determined for a variety of nitrogen regimes, progressing from non-nitrogen limited, two nitrogen adapted, and to nitrogen starved cultures. Additions of nitrate, or nitrate and ammonium, were made to each regime; uptake rate, assimilation rate, and changes in cell physiological parameters were measured. Internal pools of nitrate, ammonium, and total free amino acids were measured and related to both conditioning regime and nitrogen perturbation. Two mechanisms for nitrate reduction were found, one that is coupled to nitrate uptake and another independent of uptake. The rate of nitrate reduction was not solely a function of internal concentration. Ammonium inhibited nitrate uptake, but the inhibition could not be explained by changes in intracellular ammonium or free amino acids. A conceptual model of nitrate uptake for transient environments was developed. Dissert. Abstr.

PHYTOPLANKTON PRIMARY PRODUCTION BELOW ARCTIC OCEAN PACK ICE: AN ECOSYSTEMS ANALYSIS Ph.D. Thesis

Clarence Greer Pautzke 1979 191 p
Avail: Univ. Microfilms Order No. 8013580

Chlorophyll, primary production, zooplankton, water temperature, salinity, nutrients, solar radiation, surface melt, air temperature, wind speed, and island movement were observed in the Canada Basin at T-3 from 1969 to 1973 and in the Beaufort Sea at AIDJEX in 1975. Primary production in the Arctic Ocean was then quantitatively related to the physical, chemical and biological components of the ecosystem. Submarine light and primary production were modelled using observed incident radiation, surface conditions, a theoretical photosynthesis-light relation and chlorophyll a distribution. Production was highest in July and August. Annual production was 2 to 6 g C/sq m. Calanus hyperboreus and glacialis, Microcalanus pygmaeus, and Oithona similis dominated the zooplankton. Each developed one brood in summer at AIDJEX. Zooplankton dry weight above 100 m was highest in summer and lowest in spring. Herbivores required 25 to 30% of the primary production in July and August for respiration, brood development, and food storage for overwintering. Dissert. Abstr.

CHANCES OF DETECTING AND DIFFERENTIATING CENTRAL SYSTEM EFFECTS OF DRUGS IN ANIMAL EXPERIMENTS WITH SPECIAL CONSIDERATION OF BEHAVIOURAL PHARMACOLOGICAL METHODS
F. Hoffmeister and W. Wuttke Nov. 1979 44 p refs Transl. into ENGLISH from Arzneim. Forsch. (West Germany), v. 25, no. 7A, 1975 p 1162-1178
(RAE-Lib-Trans-2034; BR73312) Avail: NTIS HC A03/MF A01

Animal experimental methods suitable for the assessment of actions of drugs of the central nervous system are described with special reference to behavioral actions. The value of those methods for the prediction of central nervous actions of drugs in man are discussed. R.C.T.

THE RELATIONSHIP OF EXERCISE PERFORMANCE TO VARIATIONS IN BLOOD ACID-BASE STATUS INDUCED BY CHANGES IN THE INSPIRED OXYGEN FRACTION Ph.D. Thesis
Richard Paul Adams 1979 135 p
Avail: Univ. Microfilms Order No. 8012441

Possible limiting factors in human exercise performance were investigated. Six subjects rode a bicycle ergometer on three different occasions breathing either a 17 percent, 21 percent, or 60 percent oxygen mixture. In addition to rest and recovery periods, each subject worked for 10 minutes at 55 percent of maximal oxygen uptake and then to exhaustion at about 91 percent of maximal oxygen uptake. The values measured included performance time, inspired and expired gas fractions, minute ventilation heart rate, and 'arterialized' venous PO2, PCO2, and pH Oxygen uptake, carbon dioxide output, respiratory exchange ratio, [H (+)], and [HCO3 (-)] were calculated. The results indicated that performance times were longer in hyperoxia than in normoxia or hypoxia. However, contrary to other published literature, oxygen uptake was not different at exhaustion in normoxia as compared to hypoxia (p greater than .1) or hyperoxia (p = .09). Also, during exercise the higher inspired oxygen fractions were generally associated with decreased HLa and increased [H (+)], PCO2, and [HCO3 (-)]. However, at exhaustion [H (+)] was not different under any inspired oxygen fraction (p = .8). Dissert. Abstr.

MEASUREMENT OF THE MECHANICAL IMPEDANCE OF HUMAN SOFT TISSUE IN VIVO Ph.D. Thesis
Hany Mohamed Gamal-Eldin Hussein 1979 111 p
Avail: Univ. Microfilms Order No. 8013122

A test system was developed for the measurement of point impedance of human soft tissue in vivo at various frequencies and static preloads. Impedance data were analyzed utilizing a viscoelastic solid model. Phase angle measurements were utilized to separate the resistive and reactive components of the complex impedance. The tissue was excited by a swept sinusoidal forcing function at a constant RMS velocity. The relative contribution of the energy storage and dissipation functions to the tissue impedance is shown to be frequency dependent. Within the range of preloads employed in this study, it is shown that the dynamic stiffness of the tissue continues to rise with increasing preloads while the viscous damping coefficient increases with increasing preloads only up to an intermediate preload beyond which the damping coefficient is almost independent of preload. Dissert. Abstr.

USING REPRESENTATIVE KNOWLEDGE TO GUIDE DECISION MAKING IN AUTOMATIC DIAGNOSTIC SYSTEMS [EXTENSOES DA REPRESENTACAO DE CONHECIMENTO ATRAVES DE REGRAS DE DECISAO EM SISTEMAS DE DIAGNOSTICO AUTOMATICO]
Alfonso deLigorio Faria and Paulo Ouvera Simoni Mar. 1980 19 p refs In PORTUGUESE; ENGLISH summary Presented at the 6th Congr. Brasileiro de Engenharia Biomedica, 24-27 Oct. 1979 Revised
(INPE-1686-RPE/117-Rev) Avail: NTIS HC A02/MF A01

Many automatic medical diagnostic systems use artificial intelligence techniques for the representation and application of knowledge in order to get an approximation for the medical reasoning in the diagnostic process. It was observed that one limitation of these systems is the lack of flexibility in the representation of knowledge. A new representation for knowledge is proposed in the form of decision rules by conditional fuzzy propositions. Through this method the truth values of an attribute can be represented as well as possibility distributions over the universes. A uniform rule evaluation and evidence combinations are also attained. A set of rules for the diagnostic of the urinary tract infection of children was written, for which the proposed technique was applied. Author

MAMMALIAN TOXICOLOGICAL EVALUATION OF TNT WASTEWATERS. VOLUME 2: ACUTE AND SUBACUTE MAMMALIAN TOXICITY OF TNT AND LAP MIXTURE Final Report, Apr. 1976 - Sep. 1978
James V. Dilley, Charles A. Tyson, and Gordon W. Newell Jun. 1979 519 p refs
(Contract DAMD17-76-C-6050; DA Proj. 3E1-62720-A-835)
(AD-A080957; LSU-5028) Avail: NTIS HC A22/MF A01 CSCL 06/20

The acute toxicity of TNT, RDX, LAP (1.6 TNT/1.0 RDX), and/or LAP(I) (photolyzed LAP: 0.032 TNT/1.0 RDX, 10% undegraded RDX) was determined in mammalian species. In male and female rats, respectively, the acute oral LD50s were: TNT, 1320 and 794 mg/kg; RDX, 71 and about 70 mg/kg; and LAP, 574 and 594 mg/kg or lower, depending on particle size. In male and female mice, respectively, the LD50s were: TNT, 660 mg/kg (both sexes); RDX, 75 and 86 mg/kg; and LAP947 and 1131 mg/kg. LAP(I) was examined in mice only; the acute oral LD50s in males and females were 585 and 684 mg/kg, respectively. LAP and LAP(I) produced conjunctivitis, iritis, and/or corneal opacity in rabbit eyes; the irritation was not totally reversed in unwashed eyes after 7 days and longer. In in vitro microbial assays using microsomal activation (Ames Test), TNT was mutagenic. LAP was also mutagenic, and photolysis increased its mutagenicity. In contrast, in vivo cytogenetics studies on rat bone marrow extracts failed to detect an effect of either TNT or LAP on somatic cells. The effects of repeated oral administration of TNT and of LAP were determined in 90 day studies in dogs, rats, and mice. Observations common to the three species treated with either test material were depressed body weight and/or weight gain and food intake, mild to moderate hemolytic anemia, enlarged spleens and (usually) livers, hemosiderosis of the spleen and colored urine. (SAND-79-7038) Avail: NTIS HC A02/MF A01

Remote analysis of heart rate was investigated and was found to have potential as an effective means of automatic detection of stress in guards. The analysis of the data suggests that a heart rate greater than either CHR (criterion heart rate) + 20% (as established in the exercise test) or 150 beats per minute is the best criterion for initial establishment of alarm criteria. USER'S MANUAL FOR BIOSPHERE AND DOSE SIMULATION PROGRAM (BIODOSE)
John J. Duffy and Gary P. Bogar 4 Jan. 1980 72 p refs
(Contract W-7405-eng-26)
(UCRL-15188) Avail: NTIS HC A04/MF A01

The BIOsphere Transport and DOSE program (BIODOSE) is described. BIODOSE simulates the transport of radionuclides in surface systems and the resulting concentration of nuclides in the food chain. It includes the prediction of human dosage risks for individuals and for populations resulting from release of radionuclides into surface water or well water. The BIODOSE program was designed for easy use, including standard defaults and a flexible input scheme. DOE

INNATE AND GENETIC NATURE OF CIRCADIAN RHYTHMS
Charles F. Ehret 1979 19 p refs Sponsored in part by NATO
(Contract W-31-109-eng-38)
(DOE/TIC-11132) Avail: NTIS HC A02/MF A01

Circadian cybernetics which deal with biological time constants in the temporal range from minutes to days is discussed. The mode rules, the period rules, and the phase rules are examined. The innate and phylogenetically ubiquitous nature of circadian oscillations is comprehended, along with responses to a wide variety of environmental stimuli. DOE

HEAD-UP TRANSITION BEHAVIOR OF PILOTS DURING SIMULATED LOW-VISIBILITY APPROACHES
Richard F. Haines Jun. 1980 35 p refs
(NASA-TP-1618; A-8057) Avail: NTIS HC A03/MF A01 CSCL 05H

Each of 13 commercial pilots from four airlines flew a total of 108 manual flight director approaches in a moving base simulation of a medium-sized turbojet (95,000 lb gross weight) which had a day and night Redifon external scene. Three levels of runway visual range (RVR) (1,600; 2,400; and greater than 8,000 ft), three wind-shear profiles, nine ceiling heights, and continuous and intermittent visibility after initial breakout were tested. The results indicated that: (1) mean decision time ranged from 2 to 4.6 sec for ceilings under 380 ft across the three RVR conditions; (2) mean vertical distance traveled during the visual-cue assessment period was a relatively constant proportion below the existing ceiling; (3) a significant three way interaction in mean decision time between wind shear, day-night, and ceiling RVR variables occurred; (4) mean number of head-up transitions to VFR conditions after breakout ranged from 4.6 to 13.4 and increased as a function of ceiling and severity of wind shear; the typical duration of fixation out the window was 1.5 sec; and (5) subjective pilot ratings of controllability and precision of control as well as amount of skill, attention, or effort required to make the landing were influenced significantly by the wind shear, night conditions, and low breakout ceiling conditions. R.E.S.

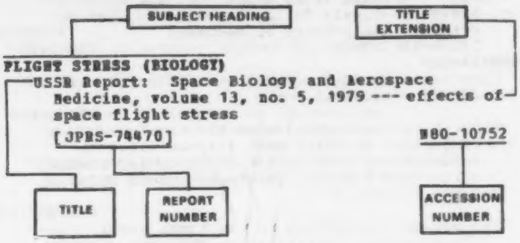
TECHNOLOGY ASSESSMENT: THE IMPACT OF ROBOTS Final Report
Sep. 1979 261 p refs
(Grant NSF ESR-76-00637)
(PB80-142268; EC/2405801-FR-1; NSF/PRA-7600637) Avail: NTIS HC A12/MF A01 CSCL 06D

Intended to provide a data base for the development of policy options regarding the diffusion of robotics, the study is divided into four phases: surveying and forecasting relevant technology for the development of robots through 1990; examining possible application areas for technological feasibility and significance of impact resulting in the selection of major areas of application; investigating potential socio-economic ramifications of each of the selected application areas; and elucidating policy alternatives influencing robotics development. The study concluded that diffusion of robotics in the application areas selected at a rapid rate is highly unlikely. The technical constraints against a vast change in the scope of robotic capabilities is one reason for the slow diffusion rate. GRA

SUBJECT INDEX

AEROSPACE MEDICINE AND BIOLOGY */A Continuing Bibliography (Suppl. 210)* SEPTEMBER 1980

Typical Subject Index Listing



SUBJECT HEADING
TITLE EXTENSION
FLIGHT STRESS (BIOLOGY)
USSR Report: Space Biology and Aerospace Medicine, volume 13, no. 5, 1979 --- effects of space flight stress
[JPRS-74470]
N80-10752
TITLE
REPORT NUMBER
ACCESSION NUMBER

The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of the document content, a title extension is added, separated from the title by three hyphens. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstract in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

End-tidal CO2 response to low levels of inspired CO2 in awake beagle dogs A80-38455

CARBON MONOXIDE
Low-level carbon monoxide exposure and work capacity at 1600 meters [PB80-129083] N80-25001

CARDIOVASCULAR SYSTEM
The dependence of organism responses on physical load doses under conditions of restricted muscular activity --- during and after space flights A80-39145
Cardioleader use in acyclic types of sports [NASA-TM-76085] N80-24991
Various techniques for evaluating cardiodynamic function using chronically instrumented canine models [AD-A071264] N80-26035

CELLS (BIOLOGY)
Electromagnetic control of cell functions A80-39408
The gas vacuole - An early organelle of prokaryote motility A80-40379
Limits to life at low temperatures and at reduced water contents and water activities A80-40382
Studies on oxygen toxicity in the lungs [AD-A082546] N80-24984

CENTRAL NERVOUS SYSTEM
Chances of detecting and differentiating central system effects of drugs in animal experiments with special consideration of behavioural pharmacological methods [RAE-LIB-TRANS-2034] N80-26029

CEREBROSPINAL FLUID
Respiratory adaptations in acid-base disturbances: Role of cerebral fluids [AD-A073202] N80-24998

CHEMICAL EVOLUTION
Nucleotide-amino acid interactions and their relation to the genetic code A80-37515
Synthesis of peptides from amino acids and ATP with lysine-rich proteinoid A80-37516
College Park Colloquium on Chemical Evolution: Limits of Life, 4th, University of Maryland, College Park, Md., October 18-20, 1978, Proceedings A80-40376
Sulphur isotope ratios in late and early precambrian sediments and their implications regarding early environments and early life A80-40381

CHEMICAL REACTIONS
Nucleotide-amino acid interactions and their relation to the genetic code
A80-37515

CHLOROPHYLLS
A radiative transfer model for remote sensing of laser induced fluorescence of phytoplankton in non-homogeneous turbid water
[NASA-CR-163155] N80-24982

CIRCADIAN RHYTHMS
The circadian rhythms of biological processes and their adaptive significance in vertebrate onto- and phylogenesis --- Russian book
A80-38705

Innate and genetic nature of circadian rhythms
[DOE/TIC-11132] N80-26038

CIVIL AVIATION
Possibilities and limitations of the application of psychological tests --- for flight safety improvement
A80-36775

The council and commissions for disciplining pilots - Infractions and sanctions
A80-39598

Analysis of eighty-four commercial aviation incidents - Implications for a resource management approach to crew training
A80-40340

CLINICAL MEDICINE
Thermoregulatory mechanisms and their therapeutic implications; Proceedings of the Fourth International Symposium on the Pharmacology of Thermoregulation, Oxford University, Oxford, England, July 30-August 3, 1979
A80-39272

Human malignant hyperthermia - Treatment with dantrolene sodium
A80-39276

Preliminary results of fast neutron treatments in carcinoma of the pancreas
[NASA-TM-81516] N80-24983

Trend prediction as a basis for optimal therapy: A survey report --- derived from clinical studies
[TH-78-E-86] N80-24999

Using representative knowledge to guide decision making in automatic diagnostic systems
[INPE-1686-RPE/117-REV] N80-26033

COCKPITS
Investigation of Minimum Sized Low-Profile Cockpits (MSLPC) and crew escape system integration
[AD-A081055] N80-25004

A simulator evaluation of pilot response to an aircraft cockpit spin indicator system
[AD-A081536] N80-25006

COLD ACCLIMATIZATION
The effects of cold acclimatization on the activity of acid peptide-hydrolases in lysosome-enriched fractions of rat brain and liver tissues
A80-36375

Arctic medical research in the Nordic countries
A80-39280

COLD TOLERANCE
An evaluation of human thermal models for the study of immersion hypothermia protection equipment
[AD-A081100] N80-24994

COMBUSTION PRODUCTS
Instrumented animal systems for toxic assessment of materials
A80-38468

COMPUTER GRAPHICS
Research in interactive scene analysis
[NASA-CR-163196] N80-25003

COMPUTER PROGRAMS
A radiative transfer model for remote sensing of laser induced fluorescence of phytoplankton in non-homogeneous turbid water
[NASA-CR-163155] N80-24982

COMPUTER TECHNIQUES
Motion control system development for a mobile robot
A80-37457

Pilot reactions to communicating with a talking computer
A80-37698

Trend prediction as a basis for optimal therapy: A survey report --- derived from clinical studies
[TH-78-E-86] N80-24999

COMPUTERIZED SIMULATION
The impact deformation of the human skull /Experimental investigation and some problems of modeling/. I - A technique for the investigation of the biomechanics of the human skull upon impact
A80-40070

User's manual for biosphere and dose simulation program (BIODOSE)
[UCRL-15188] N80-26037

CONFERENCES
Thermoregulatory mechanisms and their therapeutic implications; Proceedings of the Fourth International Symposium on the Pharmacology of Thermoregulation, Oxford University, Oxford, England, July 30-August 3, 1979
A80-39272

College Park Colloquium on Chemical Evolution: Limits of Life, 4th, University of Maryland, College Park, Md., October 18-20, 1978, Proceedings
A80-40376

CONSTRAINTS
Limb flail injuries and the effect of extremity restraints in USAF ejections - 1971-1978
A80-37523

CONTROL
Motion control of biped walking robots
A80-37465

CONTROL SIMULATION
Motion control system development for a mobile robot
A80-37457

CONTROL STICKS
A test of Fitts' law with moving targets
A80-38466

CONTROL THEORY
Separation of motions in the problem of stabilization of bipedal locomotion
A80-38679

CYBERNETICS
Innate and genetic nature of circadian rhythms
[DOE/TIC-11132] N80-26038

CYCLIC LOADS
General characterization of the rheological properties of human soft tissues based on measurements made by the local cyclic loading method and a simple phenomenological model of these properties
A80-39271

D

DECISION MAKING
Decision-problem state analysis methodology
[NASA-TM-81194] N80-25002

Using representative knowledge to guide decision making in automatic diagnostic systems
[INPE-1686-RPE/117-REV] N80-26033

DEOXYRIBONUCLEIC ACID
Biological effects of ultraviolet radiation
[ISS-R-79/5] N80-25000

DEVELOPING NATIONS
Microbial processes: Promising technologies for developing countries
[PB80-144686] N80-24986

DIAGNOSIS
Using representative knowledge to guide decision making in automatic diagnostic systems
[INPE-1686-RPE/117-REV] N80-26033

DIASTOLIC PRESSURE
A mathematical model of a myogenically active blood vessel
A80-40071

DIELECTRIC PROPERTIES
Physical measurements on dielectric properties of biological substances
A80-39407

DISCIPLINING
The council and commissions for disciplining pilots - Infractions and sanctions
A80-39598

DISPLAY DEVICES
The event-related brain potential as an index of display-monitoring workload
A80-38465

DIVING (UNDERWATER)
Monitoring vital signs in the diver
[AD-A071920] N80-24996

DOSIMETERS
Multimode time-varying enclosures for exposure and dosimetry in bioelectromagnetic experiments A80-39406

DYNAMIC PROGRAMMING
Adaptive control algorithms and optimization of robot-manipulator motion A80-37122

E

EARTH (PLANET)
College Park Colloquium on Chemical Evolution: Limits of Life, 4th, University of Maryland, College Park, Md., October 18-20, 1978, Proceedings A80-40376
Sulphur isotope ratios in late and early precambrian sediments and their implications regarding early environments and early life A80-40381

ECOLOGY
Variations in phytoplankton physiological parameters during transient nitrogen environments N80-26027
Phytoplankton primary production below Arctic Ocean pack ice: An ecosystems analysis N80-26028

EJECTION INJURIES
Limb flail injuries and the effect of extremity restraints in USAF ejections - 1971-1978 A80-37523

ELECTROENCEPHALOGRAPHY
Structural difference between stage 1 and REM on sleep EEG A80-37902
Study on the changes of electroencephalogram, heart rate and respiratory rate during all night sleep A80-37904

ELECTROMAGNETIC ABSORPTION
Quantifying the hazard of field-man interaction in electrically shielded enclosures A80-39402

ELECTROMAGNETIC COMPATIBILITY
Electromagnetic compatibility /EMC/ to-day - A review /1979-80/ A80-39410

ELECTROMAGNETIC INTERACTIONS
Bio-electromagnetic research - Review of some important aspects A80-39401
Electromagnetic control of cell functions A80-39408

ELECTROMAGNETIC MEASUREMENT
Physical measurements on dielectric properties of biological substances A80-39407

ELECTROMAGNETIC RADIATION
Temperature distribution in simulated living tissues irradiated electromagnetically A80-39403
Some problems on evaluation of RF radiation hazards caused by ISM equipment in Poland A80-39405
Multimode time-varying enclosures for exposure and dosimetry in bioelectromagnetic experiments A80-39406
Light flash phenomena induced by HzE particles [NASA-CR-163011] N80-24993

ELECTROMAGNETIC SHIELDING
Quantifying the hazard of field-man interaction in electrically shielded enclosures A80-39402

ELECTRONIC EQUIPMENT TESTS
Electromagnetic compatibility /EMC/ to-day - A review /1979-80/ A80-39410

ENCLOSURES
Multimode time-varying enclosures for exposure and dosimetry in bioelectromagnetic experiments A80-39406

ENDOCRINE SECRETIONS
Delineating acute neuroendocrine responses in microwave-exposed rats A80-38451

ENZYME ACTIVITY
The effects of cold acclimatization on the activity of acid peptide-hydrolases in lysosome-enriched fractions of rat brain and liver tissues A80-36375
Purification and properties of malate dehydrogenase from the extreme thermophile Bacillus caldolyticus A80-40385

EQUATIONS OF MOTION
Dynamics of multi-body systems [AD-A082436] N80-25007

ERYTHROCYTES
Physical measurements on dielectric properties of biological substances A80-39407
Electromagnetic control of cell functions A80-39408

ESCAPE SYSTEMS
Investigation of Minimum Sized Low-Profile Cockpits (MSLPC) and crew escape system integration [AD-A081055] N80-25004

ETHYL ALCOHOL
Residual effects of alcohol on aircrew performance A80-37524

EXPOSURE
The terrestrial radiation environment and EVA's: Prediction requirements, model improvements, and warning systems --- radiation hazards to orbital workers and spacecrews N80-24685

EXTRAVEHICULAR ACTIVITY
The terrestrial radiation environment and EVA's: Prediction requirements, model improvements, and warning systems --- radiation hazards to orbital workers and spacecrews N80-24685

EYE MOVEMENTS
Some characteristics of binocular fixation in the discrimination and recognition of objects A80-39143

F

FACTOR ANALYSIS
Structural difference between stage 1 and REM on sleep EEG A80-37902

FEMALES
Effect of production microclimate on female thermal state with increased temperature and air humidity [NASA-TM-76082] N80-24990

FIGHTER AIRCRAFT
Investigation of Minimum Sized Low-Profile Cockpits (MSLPC) and crew escape system integration [AD-A081055] N80-25004
Evaluation of UK PQ oxygen mask for use in CF aircraft [AD-A079476] N80-25005
A simulator evaluation of pilot response to an aircraft cockpit spin indicator system [AD-A081536] N80-25006

FINGERS
The sensation of vibration A80-39144

FLIGHT CREWS
Residual effects of alcohol on aircrew performance A80-37524
Analysis of eighty-four commercial aviation incidents - Implications for a resource management approach to crew training A80-40340

FLIGHT SAFETY
Possibilities and limitations of the application of psychological tests --- for flight safety improvement A80-36775
The qualifications of flight personnel, a safety factor in air transport A80-39589
Analysis of eighty-four commercial aviation incidents - Implications for a resource management approach to crew training A80-40340

FLUORESCENCE
A radiative transfer model for remote sensing of laser induced fluorescence of phytoplankton in non-homogeneous turbid water
[NASA-CR-163155] N80-24982

FLYING EJECTION SEATS
Live subject ejection tower testing to determine human tolerance to an increased onset rate of acceleration
[AD-A082993] N80-25008

FOSSILS
Structural features of manganese precipitating bacteria
A80-40380

G

GAS EXCHANGE
Alteration by hyperoxia of ventilatory dynamics during sinusoidal work
A80-38456

GENETIC CODE
Nucleotide-amino acid interactions and their relation to the genetic code
A80-37515

GENETICS
Innate and genetic nature of circadian rhythms
[DOE/TIC-11132] N60-26038

GRAVITATIONAL EFFECTS
Plants and weightlessness
[NASA-TM-76025] N80-24979

GROWTH
Growth and formation of the fore leg skeleton in inbred mice and rats under conditions of hypo-, normo- and hyperdynamia
[NASA-TM-75977] N80-24978

H

HALOPHILES
Physical chemistry and evolution of salt tolerance in halobacteria
A80-40383

HEART RATE
Study on the changes of electroencephalogram, heart rate and respiratory rate during all night sleep
A80-37904

HEAT TOLERANCE
Physiological responses of men and women to humid and dry heat
[AD-A079573] N80-24995
Hematological aspects of heat stress in trained and untrained men with special emphasis on erythrocyte volume, acid-base balance and fluid-electrolyte shifts
[AD-A071757] N80-24997

HEMATOLOGY
Hematological aspects o[illegible] in trained and untrained men with spe[illegible]phasis on erythrocyte volume, acid-base balance and fluid-electrolyte shifts
[AD-A071757] N80-24997

HEREDITY
Growth and formation of the fore leg skeleton in inbred mice and rats under conditions of hypo-, normo- and hyperdynamia
[NASA-TM-75977] N80-24978

HIBERNATION
Effect of intrahippocampal TRH on body temperature in hibernating and awake ground squirrels
A80-39278

HIGH ALTITUDE
A comparative evaluation of the coagulation properties of lymph and blood at high altitude
A80-36373
Blunted hypoxic vasoconstriction in lungs from short-term high-altitude rats
A80-39974
Low-level carbon monoxide exposure and work capacity at 1600 meters
[PB80-129083] N80-25001

HIGH GRAVITY ENVIRONMENTS
Implications of changes in temperature perception and temperature regulation in high pressure heliox oxygen environments
A80-39279

HIGH PRESSURE OXYGEN
Implications of changes in temperature perception and temperature regulation in high pressure heliox oxygen environments
A80-39279

HIGH TEMPERATURE ENVIRONMENTS
Thermoregulation according to central and peripheral temperatures at high ambient temperatures /Mathematical model investigation/
A80-36374
Marijuana and human thermoregulation in a hot environment
A80-39275

HIPPOCAMPUS
Effect of intrahippocampal TRH on body temperature in hibernating and awake ground squirrels
A80-39278

HORMONES
Effect of intrahippocampal TRH on body temperature in hibernating and awake ground squirrels
A80-39278

HOT WEATHER
Thermoregulation during rest and exercise in different postures in a hot humid environment
A80-38452

HUMAN BODY
General characterization of the rheological properties of human soft tissues based on measurements made by the local cyclic loading method and a simple phenomenological model of these properties
A80-39271
Quantifying the hazard of field-man interaction in electrically shielded enclosures
A80-39402
An evaluation of human thermal models for the study of immersion hypothermia protection equipment
[AD-A081100] N80-24994

HUMAN CENTRIFUGES
Application of LED on-off control system to centrifuge acceleration load
A80-37905

HUMAN FACTORS ENGINEERING
New work force roles resulting from new technology
A80-37696
Pilot reactions to communicating with a talking computer
A80-37698
Effect of production microclimate on female thermal state with increased temperature and air humidity
[NASA-TM-76082] N80-24990
Decision-problem state analysis methodology
[NASA-TM-81194] N80-25002
Evaluation of UK PQ oxygen mask for use in CF aircraft
[AD-A079476] N80-25005
Live subject ejection tower testing to determine human tolerance to an increased onset rate of acceleration
[AD-A082993] N80-25008
Development of an automated stress/duress detection system, phase 1 and phase 2
[SAND-79-7038] N80-26036
Head-up transition behavior of pilots during simulated low-visibility approaches
[NASA-TP-1618] N80-26039
Flight-deck automation: Promises and problems
[NASA-TM-81206] N80-26040

HUMAN FACTORS LABORATORIES
The impact deformation of the human skull /Experimental investigation and some problems of modeling/. I - A technique for the investigation of the biomechanics of the human skull upon impact
A80-40070

HUMAN PATHOLOGY
The ultrastructure of the brain during hypoxia --- Russian book
A80-37100

HUMAN PERFORMANCE
Effects of aircraft noise on an intelligibility task
A80-38464
A test of Fitts' law with moving targets
A80-38466
Low-level carbon monoxide exposure and work capacity at 1600 meters
[PB80-129083] N80-25001

The relationship of exercise performance to variaitons in blood acid-base status induced by changes in the inspired oxygen fraction N80-26030

HUMAN REACTIONS

Thermoregulation according to central and peripheral temperatures at high ambient temperatures /Mathematical model investigation/ A80-36374

Temporal brightness enhancement studied with a large sample of observers - Evidence for individual differences in brightness perception A80-36461

Pilot reactions to communicating with a talking computer A80-37698

Muscular work as thermal behavior in humans A80-38453

The sensation of vibration A80-39144

The dependence of organism responses on physical load doses under conditions of restricted muscular activity --- during and after space flights A80-39145

HUMAN TOLERANCES

Bio-electromagnetic research - Review of some important aspects A80-39401

The impact deformation of the human skull /Experimental investigation and some problems of modeling/. I - A technique for the investigation of the biomechanics of the human skull upon impact A80-40070

An evaluation of human thermal models for the study of immersion hypothermia protection equipment [AD-A081100] N80-24994

HUMIDITY

Thermoregulation during rest and exercise in different postures in a hot humid environment A80-38452

Effect of production microclimate on female thermal state with increased temperature and air humidity [NASA-TM-76082] N80-24990

HYPERCAPNIA

Chemical and nonchemical components of ventilation during hypercapnic exercise in man A80-38454

End-tidal CO2 response to low levels of inspired CO2 in awake beagle dogs A80-38455

HYPEROXIA

Alteration by hyperoxia of ventilatory dynamics during sinusoidal work A80-38456

Studies on oxygen toxicity in the lungs [AD-A082546] N80-24984

HYPERTHERMIA

The role of dopamine in temperature regulation during exercise stress A80-39274

Marijuana and human thermoregulation in a hot environment A80-39275

Human malignant hyperthermia - Treatment with dantrolene sodium A80-39276

HYPODYNAMIA

Growth and formation of the fore leg skeleton in inbred mice and rats under conditions of hypo-, normo- and hyperdynamia [NASA-TM-75977] N80-24978

Hypodynamic and hypokinetic condition of skeletal muscles [NASA-TM-76009] N80-24989

HYPOKINESIA

Content of total iron, copper and manganese in liver of animals during hypokinesia, muscle activity and process of recovery [NASA-TM-76130] N80-24981

Free amino acids of the blood and some organs in hypokinesia [NASA-TM-75945] N80-24988

Hypodynamic and hypokinetic condition of skeletal muscles [NASA-TM-76009] N80-24989

HYPOTHERMIA

Hypothermic responses to neurotensin in vertebrates A80-39277

An evaluation of human thermal models for the study of immersion hypothermia protection equipment [AD-A081100] N80-24994

HYPOXIA

The ultrastructure of the brain during hypoxia --- Russian book A80-37100

Effects of sustained exposure to hypoxic environment on temporal discrimination behaviour in rats A80-37901

Blunted hypoxic vasoconstriction in lungs from short-term high-altitude rats A80-39974

I

IMAGE PROCESSING

Research in interactive scene analysis [NASA-CR-163196] N80-25003

IMPACT LOADS

The impact deformation of the human skull /Experimental investigation and some problems of modeling/. I - A technique for the investigation of the biomechanics of the human skull upon impact A80-40070

IMPEDANCE MEASUREMENTS

Measurement of the mechanical impedance of human soft tissue in vivo N80-26031

INDUSTRIAL WASTES

Mammalian toxicological evaluation of TNT wastewaters. Volume 2: Acute and subacute mammalian toxicity of TNT and LAP mixture [AD-A080957] N80-26034

INJURIES

Limb flail injuries and the effect of extremity restraints in USAF ejections - 1971-1978 A80-37523

INTEGRATED CIRCUITS

Application of LED on-off control system to centrifuge acceleration load A80-37905

INTELLIGIBILITY

Effects of aircraft noise on an intelligibility task A80-38464

INTERNATIONAL COOPERATION

Electromagnetic compatibility /EMC/ to-day - A review /1979-80/ A80-39410

INTOXICATION

Residual effects of alcohol on aircrew performance A80-37524

IONIZING RADIATION

Change in radio sensitivity of mice under effect of rotation [NASA-TM-76026] N80-24980

Biological effects of ionizing radiation at the molecular, cellular and organismal levels [COO-3501-13] N80-24985

J

JET AIRCRAFT

Evaluation of UK PQ oxygen mask for use in CF aircraft [AD-A079476] N80-25005

JOINTS (JUNCTIONS)

Dynamics of multi-body systems [AD-A082436] N80-25007

L

LIFE SCIENCES

College Park Colloquium on Chemical Evolution: Limits of Life, 4th, University of Maryland, College Park, Md., October 18-20, 1978, Proceedings A80-40376

Limits to life at low temperatures and at reduced water contents and water activities A80-40382

Physical chemistry and evolution of salt tolerance in halobacteria A80-40383

LIFE SUPPORT SYSTEMS
Evaluation of UK PQ oxygen mask for use in CF aircraft
[AD-A079476] N80-25005
LIGHT EMITTING DIODES
Application of LED on-off control system to centrifuge acceleration load
A80-37905
LIMBS (ANATOMY)
Limb flail injuries and the effect of extremity restraints in USAF ejections - 1971-1978
A80-37523
LIVER
The effects of cold acclimatization on the activity of acid peptide-hydrolases in lysosome-enriched fractions of rat brain and liver tissues
A80-36375
Content of total iron, copper and manganese in liver of animals during hypokinesia, muscle activity and process of recovery
[NASA-TM-76130] N80-24981
LOCOMOTION
The gas vacuole - An early organelle of prokaryote motility
A80-40379
LOW TEMPERATURE ENVIRONMENTS
Limits to life at low temperatures and at reduced water contents and water activities
A80-40382
LOW VISIBILITY
Head-up transition behavior of pilots during simulated low-visibility approaches
[NASA-TP-1618] N80-26039
LUNGS
Blunted hypoxic vasoconstriction in lungs from short-term high-altitude rats
A80-39974
Studies on oxygen toxicity in the lungs
[AD-A082546] N80-24984
LYMPH
A comparative evaluation of the coagulation properties of lymph and blood at high altitude
A80-36373

M

MAN MACHINE SYSTEMS
Sensors, controls, and man-machine interface for advanced teleoperation
A80-37573
New work force roles resulting from new technology
A80-37696
Pilot reactions to communicating with a talking computer
A80-37698
The event-related brain potential as an index of display-monitoring workload
A80-38465
A test of Fitts' law with moving targets
A80-38466
Investigation of Minimum Sized Low-Profile Cockpits (MSLPC) and crew escape system integration
[AD-A081055] N80-25004
A simulator evaluation of pilot response to an aircraft cockpit spin indicator system
[AD-A081536] N80-25006
Dynamics of multi-body systems
[AD-A082436] N80-25007
Live subject ejection tower testing to determine human tolerance to an increased onset rate of acceleration
[AD-A082993] N80-25008
Head-up transition behavior of pilots during simulated low-visibility approaches
[NASA-TP-1618] N80-26039
Flight-deck automation: Promises and problems
[NASA-TM-81206] N80-26040
MANGANESE
Structural features of manganese precipitating bacteria
A80-40380
MANIPULATORS
Adaptive control algorithms and optimization of robot-manipulator motion
A80-37122
MARIJUANA
Marijuana and human thermoregulation in a hot environment
A80-39275
MARINE BIOLOGY
Variations in phytoplankton physiological parameters during transient nitrogen environments
N80-26027
MATERIALS TESTS
Instrumented animal systems for toxic assessment of materials
A80-38468
MATHEMATICAL MODELS
A mathematical model of a myogenically active blood vessel
A80-40071
A radiative transfer model for remote sensing of laser induced fluorescence of phytoplankton in non-homogeneous turbid water
[NASA-CR-163155] N80-24982
An evaluation of human thermal models for the study of immersion hypothermia protection equipment
[AD-A081100] N80-24994
MECHANICAL IMPEDANCE
Measurement of the mechanical impedance of human soft tissue in vivo
N80-2[illegible]031
METABOLISM
Atmospheric constraints on the evolution of metabolism
A80-40377
Studies on oxygen toxicity in the lungs
[AD-A082546] N80-24984
MICROORGANISMS
Microbial processes: Promising technologies for developing countries
[PB80-144686] N80-24986
MICROWAVE SPECTROMETERS
Physical measurements on dielectric properties of biological substances
A80-39407
MICROWAVES
Delineating acute neuroendocrine responses in microwave-exposed rats
A80-38451
MILITARY AVIATION
Limb flail injuries and the effect of extremity restraints in USAF ejections - 1971-1978
A80-37523
MINERAL METABOLISM
Structural features of manganese precipitating bacteria
A80-40380
Content of total iron, copper and manganese in liver of animals during hypokinesia, muscle activity and process of recovery
[NASA-TM-76130] N80-24981
MONITORS
The event-related brain potential as an index of display-monitoring workload
A80-38465
Instrumented animal systems for toxic assessment of materials
A80-38468
MOTION
Problems of motion control for mobile robots
A80-37463
MOTION PERCEPTION
A test of Fitts' law with moving targets
A80-38466
MOTION STABILITY
Separation of motions in the problem of stabilization of bipedal locomotion
A80-38679
MUSCLES
Hypodynamic and hypokinetic condition of skeletal muscles
[NASA-TM-76009] N80-24989
MUSCULAR FUNCTION
Muscular work as thermal behavior in humans
A80-38453
The dependence of organism responses on physical load doses under conditions of restricted muscular activity --- during and after space flights
A80-39145

MUSCULOSKELETAL SYSTEM
Growth and formation of the fore leg skeleton in inbred mice and rats under conditions of hypo-, normo- and hyperdynamia
[NASA-TM-75977] N80-24978
Hypodynamic and hypokinetic condition of skeletal muscles
[NASA-TM-76009] N80-24989

N

NEUROLOGY
Delineating acute neuroendocrine responses in microwave-exposed rats
A80-38451
NEURONS
Neuron analysis of visual perception
[NASA-CR-163137] N80-24992
NEUROPHYSIOLOGY
The ultrastructure of the brain during hypoxia --- Russian book
A80-37100
Neurotransmitter mapping in central thermoregulation
A80-39273
Neuron analysis of visual perception
[NASA-CR-163137] N80-24992
NEUTRON IRRADIATION
Preliminary results of fast neutron treatments in carcinoma of the pancreas
[NASA-TM-81516] N80-24983
NITROGEN METABOLISM
Variations in phytoplankton physiological parameters during transient nitrogen environments
N80-26027
NOISE REDUCTION
Electromagnetic compatibility /EMC/ to-day - A review /1979-80/
A80-39410
NUCLEOTIDES
Nucleotide-amino acid interactions and their relation to the genetic code
A80-37515
NUMERICAL CONTROL
Problems of motion control for mobile robots
A80-37463
Sensors, controls, and man-machine interface for advanced teleoperation
A80-37573

O

OFF-ON CONTROL
Application of LED on-off control system to centrifuge acceleration load
A80-37905
ONTOGENY
The circadian rhythms of biological processes and their adaptive significance in vertebrate onto- and phylogenesis --- Russian book
A80-38705
OPERATOR PERFORMANCE
New work force roles resulting from new technology
A80-37696
ORBITAL WORKERS
The terrestrial radiation environment and EVA's: Prediction requirements, model improvements, and warning systems --- radiation hazards to orbital workers and spacecrews
N80-24685
OXIDATION
Structural features of manganese precipitating bacteria
A80-40380
OXYGEN CONSUMPTION
The relationship of exercise performance to variaitons in blood acid-base status induced by changes in the inspired oxygen fraction
N80-26030
OXYGEN MASKS
Evaluation of UK PQ oxygen mask for use in CF aircraft
[AD-A079476] N80-25005

P

PANCREAS
Preliminary results of fast neutron treatments in carcinoma of the pancreas
[NASA-TM-81516] N80-24983
PATHOLOGICAL EFFECTS
Arctic medical research in the Nordic countries
A80-39280
PEPTIDES
The effects of cold acclimatization on the activity of acid peptide-hydrolases in lysosome-enriched fractions of rat brain and liver tissues
A80-36375
Synthesis of peptides from amino acids and ATP with lysine-rich proteinoid
A80-37516
Hypothermic responses to neurotensin in vertebrates
A80-39277
PERCEPTUAL TIME CONSTANT
Temporal brightness enhancement studied with a large sample of observers - Evidence for individual differences in brightness perception
A80-36461
PHARMACOLOGY
Thermoregulatory mechanisms and their therapeutic implications; Proceedings of the Fourth International Symposium on the Pharmacology of Thermoregulation, Oxford University, Oxford, England, July 30-August 3, 1979
A80-39272
Human malignant hyperthermia - Treatment with dantrolene sodium
A80-39276
Chances of detecting and differentiating central system effects of drugs in animal experiments with special consideration of behavioural pharmacological methods
[RAE-LIB-TRANS-2034] N80-26029
Various techniques for evaluating cardiodynamic function using chronically instrumented canine models
[AD-A071264] N80-26035
PHENOLOGY
Light flash phenomena induced by HZE particles
[NASA-CR-163011] N80-24993
PHYSICAL CHEMISTRY
Physical chemistry and evolution of salt tolerance in halobacteria
A80-40383
PHYSICAL EXERCISE
Thermoregulation during rest and exercise in different postures in a hot humid environment
A80-38452
Chemical and nonchemical components of ventilation during hypercapnic exercise in man
A80-38454
The dependence of organism responses on physical load doses under conditions of restricted muscular activity --- during and after space flights
A80-39145
The role of dopamine in temperature regulation during exercise stress
A80-39274
Content of total iron, copper and manganese in liver of animals during hypokinesia, muscle activity and process of recovery
[NASA-TM-76130] N80-24981
Cardioleader use in acyclic types of sports
[NASA-TM-76085] N80-24991
Hematological aspects of heat stress in trained and untrained men with special emphasis on erythrocyte volume, acid-base balance and fluid-electrolyte shifts
[AD-A071757] N80-24997
Low-level carbon monoxide exposure and work capacity at 1600 meters
[PB80-129083] N80-25001
The relationship of exercise performance to variaitons in blood acid-base status induced by changes in the inspired oxygen fraction
N80-26030
PHYSICAL FITNESS
Cardioleader use in acyclic types of sports
[NASA-TM-76085] N80-24991
PHYSICAL WORK
Muscular work as thermal behavior in humans
A80-38453
Alteration by hyperoxia of ventilatory dynamics during sinusoidal work
A80-38456

PHYSIOCHEMISTRY
Chemical and nonchemical components of ventilation during hypercapnic exercise in man A80-38454
PHYSIOLOGICAL EFFECTS
Chemical and nonchemical components of ventilation during hypercapnic exercise in man A80-38454
Hypothermic responses to neurotensin in vertebrates A80-39277
Growth and formation of the fore leg skeleton in inbred mice and rats under conditions of hypo-, normo- and hyperdynamia [NASA-TM-75977] N80-24978
Change in radio sensitivity of mice under effect of rotation [NASA-TM-76026] N80-24980
Content of total iron, copper and manganese in liver of animals during hypokinesia, muscle activity and process of recovery [NASA-TM-76130] N80-24981
Studies on oxygen toxicity in the lungs [AD-A082546] N80-24984
Free amino acids of the blood and some organs in hypokinesia [NASA-TM-75945] N80-24988
Hypodynamic and hypokinetic condition of skeletal muscles [NASA-TM-76009] N80-24989
Physiological responses of men and women to humid and dry heat [AD-A079573] N80-24995
Hematological aspects of heat stress in trained and untrained men with special emphasis on erythrocyte volume, acid-base balance and fluid-electrolyte shifts [AD-A071757] N80-24997
Low-level carbon monoxide exposure and work capacity at 1600 meters [PB80-129083] N80-25001
Various techniques for evaluating cardiodynamic function using chronically instrumented canine models [AD-A071264] N80-26035
PHYSIOLOGICAL RESPONSES
The effects of cold acclimatization on the activity of acid peptide-hydrolases in lysosome-enriched fractions of rat brain and liver tissues A80-36375
The ultrastructure of the brain during hypoxia --- Russian book A80-37100
Effects of sustained exposure to hypoxic environment on temporal discrimination behaviour in rats A80-37901
Delineating acute neuroendocrine responses in microwave-exposed rats A80-38451
Muscular work as thermal behavior in humans A80-38453
Instrumented animal systems for toxic assessment of materials A80-38468
Arctic medical research in the Nordic countries A80-39280
Monitoring vital signs in the diver [AD-A071920] N80-24996
PHYSIOLOGICAL TESTS
A comparative evaluation of the coagulation properties of lymph and blood at high altitude A80-36373
End-tidal CO2 response to low levels of inspired CO2 in awake beagle dogs A80-38455
PILOT PERFORMANCE
Possibilities and limitations of the application of psychological tests --- for flight safety improvement A80-36775
Residual effects of alcohol on aircrew performance A80-37524
Pilot reactions to communicating with a talking computer A80-37698
Statistical studies on blood pressure of JASDF pilots - Comparison with Japanese adult males A80-37903
The qualifications of flight personnel, a safety factor in air transport A80-39589
The council and commissions for disciplining pilots - Infractions and sanctions A80-39598
Analysis of eighty-four commercial aviation incidents - Implications for a resource management approach to crew training A80-40340
A simulator evaluation of pilot response to an aircraft cockpit spin indicator system [AD-A081536] N80-25006
Head-up transition behavior of pilots during simulated low-visibility approaches [NASA-TP-1618] N80-26039
PILOT TRAINING
The qualifications of flight personnel, a safety factor in air transport A80-39589
PLANETARY EVOLUTION
College Park Colloquium on Chemical Evolution: Limits of Life, 4th, University of Maryland, College Park, Md., October 18-20, 1978, Proceedings A80-40376
Atmospheric constraints on the evolution of metabolism A80-40377
PLANKTON
A radiative transfer model for remote sensing of laser induced fluorescence of phytoplankton in non-homogeneous turbid water [NASA-CR-163155] N80-24982
Variations in phytoplankton physiological parameters during transient nitrogen environments N80-26027
PLANTS (BOTANY)
Plants and weightlessness [NASA-TM-76025] N80-24979
PONDS
Halophily and halotolerance in cyanophytes A80-40384
POSTURE
Thermoregulation during rest and exercise in different postures in a hot humid environment A80-38452
PRECAMBRIAN PERIOD
Sulphur isotope ratios in late and early precambrian sediments and their implications regarding early environments and early life A80-40381
PREDICTION ANALYSIS TECHNIQUES
Trend prediction as a basis for optimal therapy: A survey report --- derived from clinical studies [TH-78-E-86] N80-24999
PRESSURE CHAMBERS
The dependence of organism responses on physical load doses under conditions of restricted muscular activity --- during and after space flights A80-39145
PRESSURE EFFECTS
Implications of changes in temperature perception and temperature regulation in high pressure heliox oxygen environments A80-39279
PRIMITIVE EARTH ATMOSPHERE
Atmospheric constraints on the evolution of metabolism A80-40377
PROBLEM SOLVING
Decision-problem state analysis methodology [NASA-TM-81194] N80-25002
PRODUCTIVITY
Effect of production microclimate on female thermal state with increased temperature and air humidity [NASA-TM-76082] N80-24990
Phytoplankton primary production below Arctic Ocean pack ice: An ecosystems analysis N80-26028
PROGNOSIS
Trend prediction as a basis for optimal therapy: A survey report --- derived from clinical studies [TH-78-E-86] N80-24999

PROGRAM VERIFICATION (COMPUTERS)
An evaluation of human thermal models for the study of immersion hypothermia protection equipment
[AD-A081100] N80-24994
PROPELLANTS
Mammalian toxicological evaluation of TNT wastewaters. Volume 2: Acute and subacute mammalian toxicity of TNT and LAP mixture
[AD-A080957] N80-26034
PROTEINOIDS
Synthesis of peptides from amino acids and ATP with lysine-rich proteinoid
A80-37516
PSYCHOLOGICAL EFFECTS
Effects of aircraft noise on an intelligibility task
A80-38464
PSYCHOLOGICAL TESTS
Possibilities and limitations of the application of psychological tests --- for flight safety improvement
A80-36775
PURIFICATION
Purification and properties of malate dehydrogenase from the extreme thermophile Bacillus caldolyticus
A80-40385
PYROPHORIC MATERIALS
Instrumented animal systems for toxic assessment of materials
A80-38468

R

RADIATION DOSAGE
Delineating acute neuroendocrine responses in microwave-exposed rats
A80-38451
Multimode time-varying enclosures for exposure and dosimetry in bioelectromagnetic experiments
A80-39406
RADIATION EFFECTS
Bio-electromagnetic research - Review of some important aspects
A80-39401
Electromagnetic control of cell functions
A80-39408
RADIATION HAZARDS
Quantifying the hazard of field-man interaction in electrically shielded enclosures
A80-39402
Some problems on evaluation of RF radiation hazards caused by ISM equipment in Poland
A80-39405
The terrestrial radiation environment and EVA's: Prediction requirements, model improvements, and warning systems --- radiation hazards to orbital workers and spacecrews
N80-24685
RADIATION MEDICINE
Delineating acute neuroendocrine responses in microwave-exposed rats
A80-38451
RADIATION PROTECTION
Some problems on evaluation of RF radiation hazards caused by ISM equipment in Poland
A80-39405
RADIATION THERAPY
Temperature distribution in simulated living tissues irradiated electromagnetically
A80-39403
Preliminary results of fast neutron treatments in carcinoma of the pancreas
[NASA-TM-81516] N80-24983
RADIATION TOLERANCE
Change in radio sensitivity of mice under effect of rotation
[NASA-TM-76026] N80-24980
RADIATIVE TRANSFER
A radiative transfer model for remote sensing of laser induced fluorescence of phytoplankton in non-homogeneous turbid water
[NASA-CR-163155] N80-24982
RADIO EQUIPMENT
Some problems on evaluation of RF radiation hazards caused by ISM equipment in Poland
A80-39405
RADIO WAVES
Some problems on evaluation of RF radiation hazards caused by ISM equipment in Poland
A80-39405
RADIOACTIVE ISOTOPES
User's manual for biosphere and dose simulation program (BIODOSE)
[UCRL-15188] N80-26037
RADIOBIOLOGY
Bio-electromagnetic research - Review of some important aspects
A80-39401
Electromagnetic control of cell functions
A80-39408
RAPID EYE MOVEMENT STATE
Structural difference between stage 1 and REM on sleep EEG
A80-37902
RATS
Effects of sustained exposure to hypoxic environment on temporal discrimination behaviour in rats
A80-37901
RDX
Mammalian toxicological evaluation of TNT wastewaters. Volume 2: Acute and subacute mammalian toxicity of TNT and LAP mixture
[AD-A080957] N80-26034
REMOTE CONTROL
Sensors, controls, and man-machine interface for advanced teleoperation
A80-37573
REMOTE SENSORS
Sensors, controls, and man-machine interface for advanced teleoperation
A80-37573
RESOURCES MANAGEMENT
Analysis of eighty-four commercial aviation incidents - Implications for a resource management approach to crew training
A80-40340
RESPIRATION
End-tidal CO2 response to low levels of inspired CO2 in awake beagle dogs
A80-38455
RESPIRATORY PHYSIOLOGY
Alteration by hyperoxia of ventilatory dynamics during sinusoidal work
A80-38456
Respiratory adaptations in acid-base disturbances: Role of cerebral fluids
[AD-A073202] N80-24998
RESPIRATORY RATE
Study on the changes of electroencephalogram, heart rate and respiratory rate during all night sleep
A80-37904
REST
Thermoregulation during rest and exercise in different postures in a hot humid environment
A80-38452
RHEOLOGY
General characterization of the rheological properties of human soft tissues based on measurements made by the local cyclic loading method and a simple phenomenological model of these properties
A80-39271
RIGID STRUCTURES
Dynamics of multi-body systems
[AD-A082436] N80-25007
ROBOTS
Adaptive control algorithms and optimization of robot-manipulator motion
A80-37122
Motion control system development for a mobile robot
A80-37457
Problems of motion control for mobile robots
A80-37463
Motion control of biped walking robots
A80-37465
Technology assessment: The impact of robots
[PB80-142268] N80-26041
ROTATING ENVIRONMENTS
Change in radio sensitivity of mice under effect of rotation
[NASA-TM-76026] N80-24980

S

SAFETY FACTORS
Residual effects of alcohol on aircrew performance A80-37524
Some problems on evaluation of RF radiation hazards caused by ISM equipment in Poland A80-39405

SALINITY
Halophily and halotolerance in cyanophytes A80-40384

SALTS
Physical chemistry and evolution of salt tolerance in halobacteria A80-40383

SCENE ANALYSIS
Research in interactive scene analysis [NASA-CR-163196] N80-25003

SEA WATER
Halophily and halotolerance in cyanophytes A80-40384

SEDIMENTS
Sulphur isotope ratios in late and early precambrian sediments and their implications regarding early environments and early life A80-40381

SENSORY PERCEPTION
The sensation of vibration A80-39144

SKIN (ANATOMY)
The sensation of vibration A80-39144

SKULL
The impact deformation of the human skull /Experimental investigation and some problems of modeling/. I - A technique for the investigation of the biomechanics of the human skull upon impact A80-40070

SLEEP
Structural difference between stage 1 and REM on sleep EEG A80-37902
Study on the changes of electroencephalogram, heart rate and respiratory rate during all night sleep A80-37904

SPACECREWS
The terrestrial radiation environment and EVA's: Prediction requirements, model improvements, and warning systems --- radiation hazards to orbital workers and spacecrews N80-24685

STRESS (PHYSIOLOGY)
The dependence of organism responses on physical load doses under conditions of restricted muscular activity --- during and after space flights A80-39145
The role of dopamine in temperature regulation during exercise stress A80-39274
Growth and formation of the fore leg skeleton in inbred mice and rats under conditions of hypo-, normo- and hyperdynamia [NASA-TM-75977] N80-24978
Free amino acids of the blood and some organs in hypokinesia [NASA-TM-75945] N80-24988
Hypodynamic and hypokinetic condition of skeletal muscles [NASA-TM-76009] N80-24989
Effect of production microclimate on female thermal state with increased temperature and air humidity [NASA-TM-76082] N80-24990
Physiological responses of men and women to humid and dry heat [AD-A079573] N80-24995
Hematological aspects of heat stress in trained and untrained men with special emphasis on erythrocyte volume, acid-base balance and fluid-electrolyte shifts [AD-A071757] N80-24997
Respiratory adaptations in acid-base disturbances: Role of cerebral fluids [AD-A073202] N80-24998
The relationship of exercise performance to variaitons in blood acid-base status induced by changes in the inspired oxygen fraction N80-26030
Development of an automated stress/duress detection system, phase 1 and phase 2 [SAND-79-7038] N80-26036

STRESS (PSYCHOLOGY)
Development of an automated stress/duress detection system, phase 1 and phase 2 [SAND-79-7038] N80-26036

SUBARCTIC REGIONS
Arctic medical research in the Nordic countries A80-39280

SULFUR ISOTOPES
Sulphur isotope ratios in late and early precambrian sediments and their implications regarding early environments and early life A80-40381

SYSTEMS ANALYSIS
Problems of motion control for mobile robots A80-37463

T

TALKING
Pilot reactions to communicating with a talking computer A80-37698

TARGET ACQUISITION
A test of Fitts' law with moving targets A80-38466

TARGET RECOGNITION
Some characteristics of binocular fixation in the discrimination and recognition of objects A80-39143

TASK COMPLEXITY
The event-related brain potential as an index of display-monitoring workload A80-38465

TECHNOLOGICAL FORECASTING
Technology assessment: The impact of robots [PB80-142268] N80-26041

TECHNOLOGY ASSESSMENT
Technology assessment: The impact of robots [PB80-142268] N80-26041

TELEMETRY
Development of an automated stress/duress detection system, phase 1 and phase 2 [SAND-79-7038] N80-26036

TELEOPERATORS
Sensors, controls, and man-machine interface for advanced teleoperation A80-37573

TEMPERATURE DISTRIBUTION
Temperature distribution in simulated living tissues irradiated electromagnetically A80-39403

THERAPY
Thermoregulatory mechanisms and their therapeutic implications; Proceedings of the Fourth International Symposium on the Pharmacology of Thermoregulation, Oxford University, Oxford, England, July 30-August 3, 1979 A80-39272
Trend prediction as a basis for optimal therapy: A survey report --- derived from clinical studies [IR-78-E-86] N80-24999

THERMAL COMFORT
Muscular work as thermal behavior in humans A80-38453

THERMOPHILES
Purification and properties of malate dehydrogenase from the extreme thermophile Bacillus caldolyticus A80-40385

THERMOREGULATION
Thermoregulation according to central and peripheral temperatures at high ambient temperatutes /Mathematical model investigation/ A80-36374
Thermoregulation during rest and exercise in different postures in a hot humid environment A80-38452

Thermoregulatory mechanisms and their therapeutic implications; Proceedings of the Fourth International Symposium on the Pharmacology of Thermoregulation, Oxford University, Oxford, England, July 30-August 3, 1979 A80-39272
Neurotransmitter mapping in central thermoregulation A80-39273
The role of dopamine in temperature regulation during exercise stress A80-39274
Marijuana and human thermoregulation in a hot environment A80-39275
Hypothermic responses to neurotensin in vertebrates A80-39277
Implications of changes in temperature perception and temperature regulation in high pressure heliox oxygen environments A80-39279
Physiological responses of men and women to humid and dry heat [AD-A079573] N80-24995

THYROID GLAND
Effect of intrahippocampal TRH on body temperature in hibernating and awake ground squirrels A80-39278

TIME DEPENDENCE
Blunted hypoxic vasoconstriction in lungs from short-term high-altitude rats A80-39974

TISSUES (BIOLOGY)
General characterization of the rheological properties of human soft tissues based on measurements made by the local cyclic loading method and a simple phenomenological model of these properties A80-39271
Quantifying the hazard of field-man interaction in electrically shielded enclosures A80-39402
Temperature distribution in simulated living tissues irradiated electromagnetically A80-39403
Free amino acids of the blood and some organs in hypokinesia [NASA-TM-75945] N80-24988
Measurement of the mechanical impedance of human soft tissue in vivo N80-26031

TOUCH
The gas vacuole - An early organelle of prokaryote motility A80-40379

TOXICITY
Instrumented animal systems for toxic assessment of materials A80-38468
Mammalian toxicological evaluation of TNT wastewaters. Volume 2: Acute and subacute mammalian toxicity of TNT and LAP mixture [AD-A080957] N80-26034

TOXICOLOGY
Various techniques for evaluating cardiodynamic function using chronically instrumented canine models [AD-A071264] N80-26035

TRACKING (POSITION)
A test of Fitts' law with moving targets A80-38466

TRAJECTORY OPTIMIZATION
Adaptive control algorithms and optimization of robot-manipulator motion A80-37122

TRANSPORT PROPERTIES
User's manual for biosphere and dose simulation program (BIODOSE) [UCRL-15188] N80-26037

TRINITROTOLUENE
Mammalian toxicological evaluation of TNT wastewaters. Volume 2: Acute and subacute mammalian toxicity of TNT and LAP mixture [AD-A080957] N80-26034

U

ULTRASONIC RADIATION
The sensation of vibration A80-39144

ULTRAVIOLET RADIATION
Biological effects of ultraviolet radiation [ISS-R-79/5] N80-25000

V

VASOCONSTRICTION
Blunted hypoxic vasoconstriction in lungs from short-term high-altitude rats A80-39974

VEGETATION GROWTH
Plants and weightlessness [NASA-TM-76025] N80-24979

VERBAL COMMUNICATION
Pilot reactions to communicating with a talking computer A80-37698

VERTEBRATES
The circadian rhythms of biological processes and their adaptive significance in vertebrate onto- and phylogenesis --- Russian book A80-38705
Hypothermic responses to neurotensin in vertebrates A80-39277

VIBRATION EFFECTS
The sensation of vibration A80-39144

VISUAL DISCRIMINATION
Some characteristics of binocular fixation in the discrimination and recognition of objects A80-39143

VISUAL PERCEPTION
Effects of aircraft noise on an intelligibility task A80-38464
Neuron analysis of visual perception [NASA-CR-163137] N80-24992
Light flash phenomena induced by HzE particles [NASA-CR-163011] N80-24993
Head-up transition behavior of pilots during simulated low-visibility approaches [NASA-TP-1618] N80-26039

W

WAKEFULNESS
End-tidal CO2 response to low levels of inspired CO2 in awake beagle dogs A80-38455

WALKING
Motion control of biped walking robots A80-37465

WALKING MACHINES
Motion control system development for a mobile robot A80-37457
Separation of motions in the problem of stabilization of bipedal locomotion A80-38679

WARNING SYSTEMS
The terrestrial radiation environment and EVA's: Prediction requirements, model improvements, and warning systems --- radiation hazards to orbital workers and spacecrews N80-24685

WATER
Limits to life at low temperatures and at reduced water contents and water activities A80-40382

WEIGHTLESSNESS
Plants and weightlessness [NASA-TM-76025] N80-24979

WORK CAPACITY
Low-level carbon monoxide exposure and work capacity at 1600 meters [PB80-129083] N80-25001

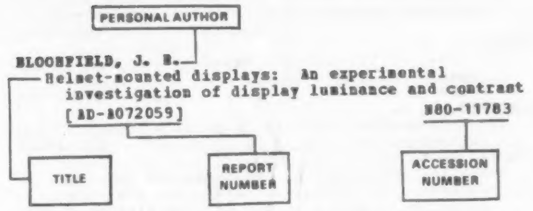
WORKLOADS (PSYCHOPHYSIOLOGY)
Possibilities and limitations of the application of psychological tests --- for flight safety improvement A80-36775
The event-related brain potential as an index of display-monitoring workload A80-38465

blank page

PERSONAL AUTHOR INDEX

AEROSPACE MEDICINE AND BIOLOGY / *A Continuing Bibliography (Suppl. 210)* SEPTEMBER 1980

Typical Personal Author Index Listing



PERSONAL AUTHOR
BLOOMFIELD, J. R.
Helmet-mounted displays: An experimental investigation of display luminance and contrast
[AD-A072059]
N80-11783
TITLE
REPORT NUMBER
ACCESSION NUMBER

The title of the document is used to provide the user with a brief description of the subject matter. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstract in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

A

ADAMS, R. P.
The relationship of exercise performance to variaitons in blood acid-base status induced by changes in the inspired oxygen fraction
N80-26030

AKERBLOM, H. K.
Arctic medical research in the Nordic countries
A80-39280

ALDRICH, J. H., JR.
A simulator evaluation of pilot response to an aircraft cockpit spin indicator system
[AD-A081536] N80-25006

ANTIPOV, Y. S.
Growth and formation of the fore leg skeleton in inbred mice and rats under conditions of hypo-, normo- and hyperdynamia
[NASA-TM-75977] N80-24978

ARLASHCHENKO, N. I.
Change in radio sensitivity of mice under effect of rotation
[NASA-TM-76026] N80-24980

ARNOULT, M. D.
Effects of aircraft noise on an intelligibility task
A80-38464

AVELLINI, B. A.
Physiological responses of men and women to humid and dry heat
[AD-A079573] N80-24995

B

BACK, K. C.
Various techniques for evaluating cardiodynamic function using chronically instrumented canine models
[AD-A071264] N80-26035

BAKER E. M., I.
An evaluation of human thermal models for the study of immersion hypothermia protection equipment
[AD-A081100] N80-24994

BARDATI, F.
Temperature distribution in simulated living tissues irradiated electromagnetically
A80-39403

BARER, A. S.
The impact deformation of the human skull /Experimental investigation and some problems of modeling/. I - A technique for the investigation of the biomechanics of the human skull upon impact
A80-40070

BEATTIE, M.
The role of dopamine in temperature regulation during exercise stress
A80-39274

BEAVER, W. L.
Alteration by hyperoxia of ventilatory dynamics during sinusoidal work
A80-38456

BECKMAN, A. L.
Effect of intrahippocampal TRH on body temperature in hibernating and awake ground squirrels
A80-39278

BEGIASHVILI, V. T.
A mathematical model of a myogenically active blood vessel
A80-40071

BEJCZY, A. K.
Sensors, controls, and man-machine interface for advanced teleoperation

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

CALIFORNIA
University of California, Berkeley
COLORADO
University of Colorado, Boulder
DISTRICT OF COLUMBIA
Library of Congress
GEORGIA
Georgia Institute of Technology, Atlanta

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols "#" and "*", from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

AEROSPACE MEDICINE AND BIOLOGY

A CONTINUING BIBLIOGRAPHY WITH INDEXES

(Supplement 211)

A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in September 1980 in

- *Scientific and Technical Aerospace Reports (STAR)*
- *International Aerospace Abstracts (IAA).*

NASA Scientific and Technical Information Branch
National Aeronautics and Space Administration
Washington, DC
1980

NASA SP-7011 and its supplements are available from the National Technical Information Service (NTIS). Questions on the availability of the predecessor publications, Aerospace Medicine and Biology (Volumes I - XI) should be directed to NTIS.

This supplement is available as NTISUB/123/093 from the National Technical Information Service (NTIS), Springfield, Virginia 22161 at the price of $7.00 domestic; $14.00 foreign.

INTRODUCTION

This Supplement to *Aerospace Medicine and Biology* (NASA SP-7011) lists 212 reports, articles and other documents announced during September 1980 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*. The first issue of the bibliography was published in July 1964; since that time, monthly supplements have been issued.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the earth's atmosphere or in interplanetary space. References describing similar effects of biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis is placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion.

Each entry in the bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged in two major sections: *IAA Entries* and *STAR Entries*, in that order. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR*, including the original accession numbers from the respective announcement journals. This procedure, which saves time and money, accounts for the slight variation in citation appearances.

Two indexes -- subject and personal author -- are included.

An annual index will be prepared at the end of the calendar year covering all documents listed in the 1980 Supplements.

AVAILABILITY OF CITED PUBLICATIONS

IAA ENTRIES (A80-10000 Series)

All publications abstracted in this Section are available from the Technical Information Service, American Institute of Aeronautics and Astronautics, Inc. (AIAA), as follows: Paper copies of accessions are available at $7.00 per document up to a maximum of 40 pages. The charge for each additional page is $0.25. Microfiche(1) of documents announced in *IAA* are available at the rate of $3.00 per microfiche on demand, and at the rate of $1.25 per microfiche for standing orders for all *IAA* microfiche. The price for the *IAA* microfiche by category is available at the rate of $1.50 per microfiche plus a $1.00 service charge per category per issue. Microfiche of all the current AIAA Meeting Papers are available on a standing order basis at the rate of $1.50 per microfiche.

Minimum air-mail postage to foreign countries is $1.00 and all foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to AIAA Technical Information Service. Please refer to the accession number when requesting publications.

STAR ENTRIES (N80-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code followed by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page vii.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard $3.50 price, for those documents identified by a # symbol.)

---

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size, containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction).

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Documents Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free.

Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

SUBSCRIPTION AVAILABILITY

This publication is available on subscription from the National Technical Information Service (NTIS). The annual subscription rate for the monthly supplements, excluding the annual cumulative index, is $50.00 domestic; $100.00 foreign. All questions relating to the subscriptions should be referred to NTIS.

Two electrochemical depolarized carbon dioxide concentrator subsystems were evaluated against baseline lithium hydroxide for (1) the baseline orbiter when expanded to accommodate a crew of seven (mission option one), (2) an extended duration orbiter with a power extension package to reduce fuel cell expendables (mission option two), and (3) an extended duration orbiter with a full capability power module to eliminate fuel cell expendables (mission option three). The electrochemical depolarized carbon dioxide concentrator was also compared to the solid amine regenerable carbon dioxide removal concept. Water recovery is not required for Mission Option One since sufficient water is generated by the fuel cells. The vapor compression distillation subsystem was evaluated for mission option two and three only. Weight savings attainable using the vapor compression distillation subsystem for water recovery versus on-board water storage were determined. Combined carbon dioxide removal and water recovery was evaluated to determine the effect on regenerable carbon dioxide removal subsystem selection. R.E.S.

A80-12230 * **Soil stabilization by a prokaryotic desert crust - Implications for Precambrian land biota.** S. E. Campbell (Boston University, Boston, Mass.), *Origins of Life,* vol. 9, Sept. 1979, p. 335-348. 24 refs. NSF Grants No. GA-43391; No. EAR-76-84233; No. EAR-76-84233-A01; Grant No. NsG-7588.

The ecology of the cyanophyte-dominated stromatolitic mat forming the ground cover over desert areas of Utah and Colorado is investigated and implications for the formation of mature Precambrian soils are discussed. The activation of the growth of the two species of filamentous cyanophyte identified and the mobility of their multiple trichromes upon wetting are observed, accompanied by the production and deposition of a sheath capable of accreting and stabilizing sand and clay particles. The formation of calcium carbonate precipitates upon the repeated wetting and drying of desert crust is noted, and it is suggested that the desert crust community may appear in fossil calcrete deposits as lithified microscopic tubes and cellular remains of algal trichromes. The invasion of dry land by both marine and freshwater algae on the model of the desert crust is proposed to be responsible for the accumulation, stabilization and biogenic modification of mature Precambrian soils. A.L.W.

AEROSPACE MEDICINE AND BIOLOGY *A Continuing Bibliography (Suppl. 211)*

OCTOBER 1980

IAA ENTRIES

A80-40546 **Electrocardiographic exercise testing and ambulatory monitoring to identify patients with ischemic heart disease at high risk of sudden death.** L. A. Ivanova, N. A. Mazur, T. M. Smirnova, A. B. Sumarokov, V. A. Nazarenko, and E. A. Svet (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *American Journal of Cardiology*, vol. 45, June 1980, p. 1132-1138. 22 refs.

The prognostic significance of electrocardiographic exercise testing and ambulatory monitoring in the identification of high risks of sudden death in ischemic heart disease patients is investigated. Holter monitoring and exercise stress testing were performed within a five-day interval on 144 men with established heart disease three months or longer after a definite or probable myocardial infarction. Within a follow-up period of two years following the electrocardiographic testing, 10 sudden deaths among the patients were reported, and it is found that these deaths were associated with reduced maximal exercise heart rate, exercise-induced frequent ventricular arrhythmias and complex ventricular arrhythmias on 24-hr recordings, with the presence of bivariate and trivariate factors leading to an up to 20-fold increase in the incidence of sudden death. The use of inclusive disjunction techniques for the analysis of test parameters is found to allow for the identification of high-risk subgroups. It is also noted that combinations of exercise variables identified patients at very high risk, while bivariates and trivariates were preferable for determining very low risk subgroups. A.L.W.

A80-40547 **Diagnosis of coronary artery disease with exercise radionuclide imaging - State of the art.** L. C. Becker (Johns Hopkins Medical Institutions, Baltimore, Md.). *American Journal of Cardiology*, vol. 45, June 1980, p. 1301-1304. 29 refs.

The ability of techniques of exercise radionuclide perfusion imaging at its present state of development to aid in the diagnosis of coronary artery disease is assessed. The sensitivity and specificity of exercise scintigraphy by both thallium-201 tracing and radionuclide ventrilography reported by published studies is shown to depend on the criteria used in defining an abnormal test, patient selection, the extent of disease and patient responses to exercise, and the tendency of stress thallium imaging to underestimate the extent of disease is pointed out. The two currently practiced methods of exercise scintigraphy are compared, noting the lack of conclusive evidence for the superiority of either one and the technical difficulties of exercise ventriculography. In light of the capabilities, expense and radiation exposure of the techniques, it is recommended that in most cases exercise scintigraphy should not be used as an initial screening examination, but be reserved for those patients whose diagnosis is still in doubt after standard multistage exercise testing, as well as in certain other clinical situations. The expected future improvement of exercise scintigraphy is also noted. A.L.W.

A80-40625 * **Scale effects in the musculoskeletal system, viscera and skin of small terrestrial mammals.** N. Pace, D. F. Rahlmann, and A. H. Smith (California, University, Berkeley and Davis, Calif.). *Physiologist*, vol. 22, no. 6, 1979, p. S-51, S-52. 7 refs. Grant No. NsG-7336.

A80-40846 **Imitation of locomotion under conditions of weightlessness.** V. V. Beletskii and N. S. Konikova. *(Akademiia Nauk SSSR, Izvestiia, Mekhanika Tverdogo Tela,* Sept.-Oct. 1979, p. 48-53.) *Mechanics of Solids*, vol. 14, no. 5, 1979, p. 41-45. Translation.

The analysis deals with the plane motions of a dynamic biped walking machine consisting of 5 inertial elements: a balancer-body and two identical two-link legs. It is shown that simulation of biped walking under zero-g conditions requires appreciably smaller control moments than in the presence of a gravitational field. V.P.

A80-40898 * **Dynamic decisions and work load in multitask supervisory control.** M. K. Tulga (Commercial Information Corp., Woburn, Mass.) and T. B. Sheridan (MIT, Cambridge, Mass.). *IEEE Transactions on Systems, Man, and Cybernetics*, vol. SMC-10, May 1980, p. 217-232. 38 refs. Grant No. NsG-2118.

A paradigm is developed for the problem of allocating in time a single resource to multiple simultaneous task demands which appear randomly, last for various periods, and offer varying rewards for service. Based upon a dynamic optimizing algorithm plus an estimator, and including response time and future discounting constraints, a model of the human decisionmaker is compared to experimental results for human subjects performing such a task at a computer-graphics terminal. Results indicate a reasonable fit, under various model parameters and task conditions, and suggest interesting hypotheses about the nature of human 'planning ahead' and mental work load. (Author)

A80-40899 * **Optimal control model predictions of system performance and attention allocation and their experimental validation in a display design study.** G. Johannsen and T. Govindaraj (Purdue University, Lafayette, Ind.). *IEEE Transactions on Systems, Man, and Cybernetics*, vol. SMC-10, May 1980, p. 249-261. 25 refs. Grant No. NsG-2119.

The influence of different types of predictor displays in a longitudinal vertical takeoff and landing (VTOL) hover task is analyzed in a theoretical study. Several cases with differing amounts of predictive and rate information are compared. The optimal control model of the human operator is used to estimate human and system performance in terms of root-mean-square (rms) values and to compute optimized attention allocation. The only part of the model which is varied to predict these data is the observation matrix. Typical cases are selected for a subsequent experimental validation. The rms values as well as eye-movement data are recorded. The results agree favorably with those of the theoretical study in terms of relative differences. Better matching is achieved by revised model input data. (Author)

A80-40978 **Air traffic control stress and its effects - An investigation at Manchester airport.** V. B. Maxwell and J. H. Crump (University of Manchester Institute of Science and Technology, Manchester, England). *The Controller*, vol. 19, June 1980, p. 31-33.

Air traffic control (ATC) stress research is surveyed along with the effects of the work itself, shift work, environment, interpersonal relationships and individual characteristics. The most consistent predictor of ATC stress has been found to be the number of aircraft controlled, and findings reveal that cardiovascular and psychiatric disorders are the two most prevalent medical disorders among air traffic controllers and that both exceed general population norms.

Attention is also given to a study of Manchester controllers regarding psychological screening for stress and an improved and more sophisticated medical screening which takes account of coronary heart disease risk indicators. J.P.B.

A80-41002 **Comets - A matter of life and death /Milne Lecture/.** F. Hoyle. *Vistas in Astronomy*, vol. 24, pt. 2, 1980, p. 123-139.

It is argued that comets originating during the formation of the planets Uranus and Neptune were responsible for the origin of life on earth and continue to bring new viruses and bacteria. Evidence for the existence of organic molecules within interstellar gas clouds is presented, and difficulties with the currently accepted theory of the emergence of organic compounds from inorganics in the primitive earth environment are pointed out. It is then proposed that interstellar organic compounds could have been swept up by planetesimals in the formation of Uranus and Neptune long after the earth had formed, with the gravitational generation of a halo of bodies surrounding the forming planets, inside which favorable conditions for chemical evolution would be present. Such planetesimals could then be deflected into cometary earth-crossing orbits and release evolved forms of life into the terrestrial atmosphere, where they would have evolved the capacity for photosynthesis. Evidence of the continued arrival of life forms in the form of rapidly spread and patchily distributed viral and bacterial diseases is presented, and it is contended that terrestrial organisms have not evolved an absolute immunity to all virus infections due to the fact that these viruses, most likely of cometary origin, are the source of genetic variability. A.L.W.

A80-41051 # **An analytical evaluation method of manual control system utilizing human pilot model.** K. Tanaka (National Aerospace Laboratory, Chofu, Tokyo, Japan). *Japan Society for Aeronautical and Space Sciences, Transactions*, vol. 23, May 1980, p. 35-50. 16 refs.

The paper examines an analytical evaluation method of a manual control system which consists of an aircraft and a human pilot. The method is based on the assumptions that the control mission determines the critical frequency observed in the pilot, and that the degree of closed-loop stability and human compensation necessary to attain stability determine the human subjective evaluation of the system. A simple evaluation chart is presented based on experimental data on human compensatory dynamics which can explain almost all of the experimental results. The method has advantages of simplicity in the sense of requiring only two typical controlled element parameters to be evaluated, applicability to unstable controlled elements, predictability of controllability limits of manual control, and the possibility of estimating human compensatory dynamics. A.T.

A80-41139 **Brightness exponent as a function of retinal eccentricity in the peripheral visual field - Effects of dark and light adaptation.** N. Osaka (Ottemon Gakuin University, Ibaraki, Osaka, Japan). *Perception and Psychophysics*, vol. 27, no. 6, June 1980, p. 519-523. 28 refs.

Using a method of direct magnitude estimation, the exponent of the brightness power function was determined under dark and light adaptation at luminance levels well above threshold. The exponent was estimated for functions describing the brightness of stimuli presented at the fovea and the following peripheral retinal loci: 10, 20, 30, 40, and 50 deg nasally eccentric to the fovea along the horizontal meridian of the right eye. The exponent for a 1-sec flash was found to be approximately .33 at the fovea and increased slightly with increasing retinal eccentricity. The effect of adaptation on the brightness exponent was not so large when the target luminance was set well above threshold. (Author)

A80-41250 * **The intracellular Na/+/ and K/+/ composition of the moderately halophilic bacterium, Paracoccus halodenitrificans.** M. Sadler, M. McAninch, L. I. Hochstein (NASA, Ames Research Center, Extraterrestrial Research Div., Moffett Field, Calif.), and R. Alico. *Canadian Journal of Microbiology*, vol. 26, no. 4, 1980, p. 496-502. 24 refs.

A80-41318 # **Review - The role of pulse oscillations of intravascular pressure in the regulation of blood circulation (Obzor - Rol' pul'sovykh kolebanii vnutrisosudistogo davleniia v reguliatsii krovoobrashcheniia).** L. I. Osadchii and A. P. Pugovkin (Akademiia Nauk SSSR, Institut Fiziologii, Leningrad, USSR). *Fiziologicheskii Zhurnal SSSR*, vol. 66, May 1980, p. 617-628. 80 refs. In Russian.

Current understandings of the role of blood pressure oscillations due to the pulsed operation of the circulatory system in the regulation of blood circulation are reviewed. Attention is given to experimental results concerning systemic and organ-level hemodynamic reactions to the alternation of pulsating and nonpulsating perfusate blood flows, and variations in tissue metabolism during pulsating and nonpulsating perfusion, and it is pointed out on the basis of these results that whereas any method of artificial blood circulation causes the destruction of microcirculation as well as tissue hypoxia and metabolic acidosis, nonpulsating perfusion in general leads to more serious damage to capillary transport. Mechanisms for the influence of pulse oscillations on vascular tension are then examined, and areas requiring further investigation are indicated. A.L.W.

A80-41319 # **The organization of the sleep-wakefulness cycle according to data obtained by the continuous daily monitoring of heart rhythm and motor activity (Ob organizatsii tsikla 'bodrstvovanie-son', po dannym sutochnoi nepreryvnoi registratsii serdechnogoritma i dvigatel'noi aktivnosti).** A. I. Belich (Akademiia Nauk SSSR, Institut Evoliutsionnoi Fiziologii i Biokhimii, Leningrad, USSR). *Fiziologicheskii Zhurnal SSSR*, vol. 66, May 1980, p. 642-649. 22 refs. In Russian.

The daily variations in wakefulness and rest periods in the pond turtle Emys orbicularis are investigated by the contactless monitoring of heart rhythm and motor activity in order to determine the temporal structure of the sleep-wakefulness cycle. Results indicate a pronounced slowing of heart rate upon the transition from a state of wakefulness to various levels of sleep, in agreement with the universally observed slowing with increasing depth of sleep-like rest periods. A five-stage characteristic sleep-wakefulness cycle consisting of periods of active and passive waking, daytime rest (cataleptic motionlessness), nighttime rest (catatonic) and rest with relaxed skeletal muscles (intermediate sleep) is determined, with phased autonomic and motor phenomena noted during the stage of intermediate sleep. A.L.W.

F. Pastukhov (Akademiia Nauk SSSR, Institut Biologicheskikh Problem Severa. Magadan, USSR). *Fiziologicheskii Zhurnal SSSR*, vol. 66, May 1980, p. 739-745. 16 refs. In Russian.

A80-41645 **A technique for estimating the contribution of photomechanical responses to visual adaptation.** M. V. Srinivasan and G. D. Bernard (Yale University, New Haven, Conn.). *Vision*

Research, vol. 20, no. 6, 1980, p. 511-521. 29 refs. Research supported by the Connecticut Lions Eye Research Foundation; Grants No. NIH-EY-01140; No. NIH-EY-00785.

This paper presents a technique for isolating and quantifying the contribution of photomechanical responses to visual adaptation. The technique is developed in the context of the pupillary mechanism that is active in the primary visual cells of the insect eye. Using a feedback-control model to represent the combination of retinular cell and pupil, it is shown that the effect of pupillary movements on retinal illumination can be inferred by analysing an intensity response function of the pupil. When the technique is applied to the pupils of the butterfly and the fly, the results indicate that in each case, the pupil decreases retinal illumination by approximately 0.7 log units when the ambient light level is increased from pupillary threshold to a level 2.5 log units higher. The validity of the technique is examined by applying it to the human pupil. The results predict changes of retinal illumination which are in close agreement with those expected on the basis of changes in iris diameter, including the Stiles-Crawford effect. The procedure presented here is simple and can, in principle, be applied to many forms of photomechanical adaptation. (Author)

A80-41646 **Target position and velocity - The stimuli for smooth pursuit eye movements.** J. Pola and H. J. Wyatt (New York, State University, New York, N.Y.). *Vision Research*, vol. 20, no. 6, 1980, p. 523-534. 29 refs. Research supported by the State University of New York Research Foundation and New York Foundation; Grant No. NIH-EY-02878.

Smooth pursuit eye movements are usually thought to be guided only by target velocity. We studied the effectiveness of target velocity and target position (offset from the fovea) as stimuli for pursuit movements. Under open-loop conditions, we used induced (apparent) sinusoidal motion as a 'velocity-only' stimulus, and square-wave motion as a 'position-only' stimulus. Over a range of frequencies, position stimuli tended to give larger responses, and response velocity increased linearly with target offset. When open-loop sinusoidal target motion was synthesized using appropriate position-only and velocity-only 'components', the response was about the same as for real sinusoidal motion, suggesting a dominant role for target position in both cases. Using non-periodic step-ramp stimuli as devised by Rashbass, but in the open-loop, we have commonly observed position-directed pursuit movements. (Author)

A80-41661 * **Na+ and Ca2+ ingestion - Plasma volume-electrolyte distribution at rest and exercise.** J. E. Greenleaf and P. J. Brock (NASA, Ames Research Center, Biomedical Research Div., Moffett Field, Calif.). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 48, May 1980, p. 838-847. 24 refs.

The effects of hypernatremia and hypercalcemia on plasma volume and electrolyte distribution during rest, exercise and recovery in cool and hot environments are investigated. Plasma volume, protein and electrolytes were measured in two groups of five men in the supine position during rest, exercise at 40-47% maximal oxygen consumption and recovery in 26.5 C and 39.4 C environments, after ingestion in the rest period of 16-17 ml/kg hypertonic NaCl, isotonic NaCl or hypertonic calcium gluconate solutions. During the rest period, it is found that the hypertonic Ca drink prevents any rise in plasma volume in both cool and hot environments, while hypertonic Na retarded hypervolemia only in the cool environment and consumption of both isotonic and hypertonic Na in the heat resulted in a hypervolemic response twice as great as that in the cool environment. During exercise and recovery, plasma volume is found to be greatest after drinking hypertonic Na in the heat, while the normal hypervolemic responses during exercise were not influenced by drink composition. Results suggest that hypertonic drinks may be better for maintaining plasma volumes during exercise in the heat. A.L.W.

A80-41690 **Predicting the effects of vertical vibration frequency, combinations of frequencies and viewing distance on the reading of numeric displays.** C. H. Lewis and M. J. Griffin (Southampton, University, Southampton, England). *Journal of Sound and Vibration*, vol. 70, June 8, 1980, p. 355-377. 16 refs. Research supported by the Ministry of Defence (Procurement Executive).

The effects of vertical vibration frequency, viewing distance and multifrequency vibrations on the performance of a numerical reading task are investigated in order to derive frequency weighting functions for the establishment of vibration standards for vehicle design. Subjects were required to read white numerals printed on black cards when subjected to five levels of sinusoidal vibration at ten frequencies between 2.8 and 63 Hz, five levels of sinusoidal vibration at frequencies of 3.15 and 16 Hz with viewing distances from 0.75 to 3.0 m, and twelve combinations of three vibrations at various levels. Contours of vibration levels required to produce mean equal reading errors indicate the visual task to be most sensitive to vibration in the frequency range 8 to 16 Hz, with the sensitivities of individual subjects exhibiting similar trends. Increases in viewing distance from 0.75 to 1.5 m are found to result in increased relative sensitivities to higher frequencies, although the overall effect of vibration is decreased. Finally, the effects of complex vibration on performance are observed to be most accurately predicted from the most severe weighted spectral component alone. A.L.W.

A80-41750 **Space victualling.** N. W. Pirie. *Endeavour*, vol. 4, no. 2, 1980, p. 74-77. 8 refs.

The supplying of space crews with water, food and oxygen is discussed with emphasis on recycling strategies which may be used in a closed environment. The possible sources of energy in a space environment (solar, chemical, nuclear) are indicated, and the recovery and management of water is considered briefly. The photosynthetic recycling of CO2 is then discussed, with attention given to optimal environmental conditions in plant growth chambers, the relative merits of higher plants, algae and photosynthetic bacteria as CO2 sinks and food and oxygen sources and facilities for generating O2 and removing CO2 during periods of darkness such as the lunar night. The relative contributions of biological and electrical forms of material recycling in a closed environment are considered, and the possibility that edible substances may be found on a planet orbiting a star is pointed out. A.L.W.

A80-41757 # **The Shuttle's remote manipulator system - Status and operation.** C. M. Hinds (Spar Aerospace, Ltd., Toronto, Canada). *Deutsche Gesellschaft für Luft- und Raumfahrt and American Astronautical Society, Symposium on Shuttle/Spacelab - The New Transportation System and its Utilization, 3rd, Hanover, West Germany, Apr. 28-30, 1980, DGLR Paper 80-075.* 14 p.

The design and operation of the Shuttle remote manipulator system (RMS) is described, and its uses in conjunction with Spacelab experiments are reviewed along with free flying payloads. Attention is given to modes of control and RMS performance. Special facilities including system testing and simulation are outlined, and current status is discussed. V.T.

A80-41761 # **Manned maneuvering unit.** S. J. Ducsai (Martin Marietta Aerospace, Denver, Colo.). *Deutsche Gesellschaft für Luft- und Raumfahrt and American Astronautical Society, Symposium on Shuttle/Spacelab - The New Transportation System and its Utilization, 3rd, Hanover, West Germany, Apr. 28-30, 1980, DGLR Paper 80-081.* 16 p.

The development and characteristics of the Shuttle manned maneuvering unit (MMU) are described. Three generations of MMU mockups are presented. Consideration is given to MMU structure, configurations, control arm details, control electronics, and propulsion scheme. Different usages of the MMU are discussed. V.T.

A80-41876 **Performance effects of alcohol intoxication and hangover at ground level and at simulated altitude.** W. E. Collins (FAA, Civil Aeromedical Institute, Oklahoma City, Okla.). *Aviation, Space, and Environmental Medicine,* vol. 51, Apr. 1980, p. 327-335. 29 refs.

Eight private pilots, four men and four women, were trained to perform on a two-dimensional tracking task (joystick control of a localizer/glideslope instrument) and to respond as quickly as possible to the onset of a red pinlight, eppended to the tracking instrument, by depressing a button on the joystick. Tracking and reaction time scores were obtained under both static (stationary) and dynamic conditions (during angular acceleration), at ground level and at a simulated altitude of 3658 m. Subjects performed in the evening after a monitored dinner, drank prepared beverages from 2100 to midnight, and were tested again. Subjects slept 4-5 h, were awaken around 0645, were fed, and performed the tasks again, beginning about 0730. At midnight following alcohol ingestion (3.25 ml of 100-proof alcohol/kg body weight), peak breath alcohol levels averaged 91 mg%. Impairment in tracking performance and in visual reaction time occurred during midnight sessions following alcohol ingestion. While ratings of hangover and other questionnaire data indicate awareness of hangover symptoms, no hangover-related performance impairment was recorded during morning sessions. In addition, no significant altitude/alcohol interactions on performance were obtained during either acute intoxication or hangover periods. These results thus offer no evidence contrary to the 8-hour rule. (Author)

A80-41877 **Electroencephalographic recordings during parachute jump sessions.** P. Gauthier, L. Jouffray, M. Rodi, and C. Gottesmann (Nice, Université, Nice, France). *Aviation, Space, and Environmental Medicine,* vol. 51, Apr. 1980, p. 336-338. 10 refs.

Electroencephalographic (EEG) recordings of experienced parachutists were done by means of telemetry before, during, and after jumps of up to 3500m. During free-fall and after stabilization, alpha rhythm was recorded from several alpha reactive subjects when they closed their eyes. No pathological EEG recordings were obtained during the different phases of the jump. (Author)

A80-41879 **Psychomotor performance during ozone exposure - Spectral and discriminant function analysis of EEG.** J. A. Gliner, S. M. Horvath, R. A. Sorich (California, University, Santa Barbara, Calif.), and J. Hanley (California, University, Santa Barbara and Los Angeles, Calif.). *Aviation, Space, and Environmental Medicine,* vol. 51, Apr. 1980, p. 344-351. 17 refs. Research supported by the California State Air Resources Board.

Two experiments were conducted to evaluate the effects of ozone on the electroencephalogram during psychomotor performance. The first experiment consisted of a 2-h visual sustained attention task in room air and 0.75 parts per million (ppm) ozone. The second experiment was a divided attention study which combined a visual choice reaction time situation with an auditory sustained attention task. Ozone levels in this experiment were 0.0 ppm, 0.3 ppm, and 0.75 ppm. Spectral and discriminant function analyses were performed on the EEG collected during these studies. Attempts were made to categorize the EEG between different ozone levels, at rest, during each task performance, and between task and no-task performance within each ambient air condition. Discriminations between conditions for individuals were quite good, but discriminations for the combined subjects were disappointing with the exception of those between task and no-task conditions, which were moderately good. (Author)

A80-41880 **Rhesus brain gas tension and learned task performance responses to normoxic and hyperoxic breathing.** A. A. Karl, S. L. Ward, M. E. Souder, A. T. Kissen, and G. L. Causer (USAF, Aerospace Medical Research Laboratory, Wright-Patterson AFB; Systems Research Laboratories, Inc., Dayton, Ohio). *(Aerospace Medical Association, Annual Meeting, 50th, Washington, D.C., May 14-17, 1979.) Aviation, Space, and Environmental Medicine,* vol. 51, Apr. 1980, p. 352-355. 21 refs. Contract No. F33615-76-C-5001. (AMRL-TR-105)

The impact of extended exposure to 21 and 100% O2 breathing mixtures on brain tissue oxygenation and performance of a learned task was studied in seven rhesus monkeys. Trained in the Sidman Avoidance Task, the animals were exposed to either breathing mixture for a period of 3.5 h in which brain tissue partial pressures of O2, CO2 and N2 were observed. With 100% O2, O2 and CO2 tensions rose significantly (less than 0.01 and less than 0.05, respectively) above control levels while N2 tension fell significantly (less than 0.01) below its baseline value. With 100% O2 no statistically significant difference in gas tension values was shown for performance vs. nonperformance conditions. There was no difference in the number of shocks received with either breathing mixture. Lever press response frequency decreased throughout the experiment for both groups. During the last performance session, response frequency for the 100% O2 group leveled off, whereas for the 21% O2 group it continued to decrease. (Author)

A80-41881 **Effect of induced cyclic changes of deep body temperature on performance in a flight simulator.** T. M. Gibson, J. R. Allan, C. J. Lawson, and R. G. Green (RAF, Institute of Aviation Medicine, Farnborough, Hants., England). *Aviation, Space, and Environmental Medicine,* vol. 51, Apr. 1980, p. 356-360. 17 refs.

Previous studies have shown that performance of a simple motor task may be degraded by heating the skin when the body temperature is above a critical level of 37.6 C. The experiment reported here confirms these findings for performance in a simple flight simulator. The significance of the results is discussed with reference to flight in high-performance aircraft. (Author)

A80-41882 **Visual search performance during simulated radar observation with and without a sweepline.** R. I. Thackray and M. Touchstone (FAA, Civil Aeromedical Institute, Oklahoma City, Okla.). *Aviation, Space, and Environmental Medicine,* vol. 51, Apr. 1980, p. 361-366. 17 refs.

A complex vigilance task was used to study the effect of a radar sweepline on attentional processes. The visual display was designed to approximate an automated air traffic control radar display. There were 28 men and women, half assigned to the sweep and half to the no-sweep condition, tested over a 20h session. Although the no-sweep appeared to be generally superior to the sweep condition in all measures of detection efficiency, none of the differences was significant. Measures of eye fixation paralleled the patterns of change in performance during the task session. However, as with performance, mean fixation durations for the sweep and no-sweep conditions did not differ, nor were individual differences in scanning activity related to performance. Possible reasons for the lack of relationship between scanning activity and performance are discussed. (Author)

A80-41883 **The thermal properties of a survival bag incorporating metallised plastic sheeting.** I. M. Light and J. N. Norman (Aberdeen, University, Aberdeen, Scotland). *Aviation, Space, and Environmental Medicine,* vol. 51, Apr. 1980, p. 367-370. 23 refs.

Five male subjects were exposed to a cooling environment equivalent to 1082 W/sq m. The subjects wore a clothing assembly with insulation properties of 1.55 clo. A casualty bag incorporating metallized plastic sheeting was provided for additional insulation. Deep body temperature fell 1.2 C and mean skin temperature 2.6 C over the 2-h period. Metallized plastic sheeting did not prevent heat loss through the clothing assembly, as indicated by the falls in body and skin temperature and an increase in metabolic heat production. From measurements made during the exposure, the calculated insulation value of the complete assembly of 2.93 clo was close to the predicted value of 2.80 clo calculated from the thermal resistance of the assembly layers. It is concluded that the metallized plastic sheeting in this casualty bag did not provide significant additional thermal insulation. (Author)

A80-41884 **Effect of an altered rest-activity or feeding schedule on the shift of motor activity rhythm of mice.** H. Murakami and Y. Murakami (Kobe University, Kobe, Japan). *Aviation, Space, and Environmental Medicine,* vol. 51, Apr. 1980, p. 371-374. 11 refs.

Preflight acclimatization to the rhythm of destination and postflight daytime activity are assumed to be effective countermeasures against the jet lag syndrome. Regarding this idea, resynchronization of motor activity rhythm was investigated in mice subjected to daytime exercises on a driven belt before or after the reversal of lighting regimen. In addition, the effect of prior daytime feeding was studied. No evidence was manifested that the forced exercises or feeding schedule would hasten synchronization. This result indicates that the central control system of motor activity rhythm could not be manipulated favorably by such method in mice. On the basis of the result obtained, the applicability of countermeasures to human beings was discussed. (Author)

A80-41885 **Cardiovascular responses of man exposed to plus Gz accelerations in a centrifuge.** B. Vettes, H. Vieillefond, and R. Auffret (Centre d'Essais en Vol, Laboratoire de Médecine Aérospatiale, Brétigny-sur-Orge, Essonne, France). *Aviation, Space, and Environmental Medicine,* vol. 51, Apr. 1980, p. 375-378. 13 refs. Translation.

Cardiovascular investigations were conducted in male volunteer subjects exposed to plus Gz accelerations. Electrocardiogram, blood pressure, heart rate, stroke volume, and cardiac output were recorded. Accelerations ranging from plus 1.5 Gz to plus 6 Gz were applied during periods of from 30 s to 20 min. Acceleration was achieved in 10-90 s. Heart rate markedly increased as a function of acceleration intensity, reaching 160 beats/s. Decreases in cardiac output (30-40 percent) and stroke volume were also observed. Protection by an anti-G suit reduces tachycardia. Accelerations induce various electrocardiographic disorders lasting several minutes after the stress has been stopped. These are sometimes the first symptons of functional cardiovascular failure. The centrifuge turns out to be an excellent screening tool. However, when used for testing various aircrew equipment, strict monitoring of the subjects is required. (Author)

A80-41886 **Evaluation of an acute mountain sickness questionnaire - Effects of intermediate-altitude staging upon subjective symptomatology.** D. A. Stamper, R. T. Sterner, and S. M. Robinson (U.S. Army, Letterman Army Institute of Research, San Francisco, Calif.; U.S. Army, Institute of Environmental Medicine, Natick, Mass.). *Aviation, Space, and Environmental Medicine,* vol. 51, Apr. 1980, p. 379-387. 17 refs.

A80-41887 **Identification of the minimum noise level capable of producing an asymptotic temporary threshold shift.** M. R. Stephenson, C. W. Nixon, and D. L. Johnson (USAF, Aerospace Medical Research Laboratory, Wright-Patterson AFB, Ohio). *Aviation, Space, and Environmental Medicine,* vol. 51, Apr. 1980, p. 391-396. 9 refs. Research sponsored by the U.S. Environmental Protection Agency and U.S. Air Force. (AMRL-TR-79-106)

The present study was designed to identify the minimum noise level capable of producing an asymptotic temporary threshold shift (ATTS). It was estimated that at some level below 85 dBA, probably 70-80 dBA, there existed an exposure level at which no ATTS would occur. This level would then define an exposure condition below which personnel could be exposed for indefinite periods of time without adverse auditory effects. Subjects were exposed to continuous pink noise for 24 h at levels of 65, 70, 75, 80, and 85 dBA. TTS growth and recovery was measured at specific intervals throughout each condition. Results demonstrate that at the most sensitive frequency (4000 Hz), an ATTS threshold level would be predicted in the region of 75-80 dBA. (Author)

A80-41888 * **Is the weight loss of hyperbaric habitation a disorder of osmoregulation.** L. W. Raymond, N. S. Raymond, V. P. Frattiali, J. Sode, C. S. Leach, and W. H. Spaur (NASA, Johnson Space Center, Houston, Tex.; National Naval Medical Center, Bethesda, Md.; U.S. Navy, Experimental Diving Unit, Panama City, Fla.). *Aviation, Space, and Environmental Medicine,* vol. 51, Apr. 1980, p. 397-401. 18 refs.

To examine the weight loss of hyperbaric helium-oxygen habitation, the exchange of liquids and calories was measured in six men who lived in this atmosphere for 32 d. The maximum pressure was 49.5 ATA. The men lost 3.7-10.1 kg, in spite of warm ambient (31-32 C) temperatures and adequate calories (2,737 kcal/d) provided for the sedentary ways of chamber living. Weight loss and a calculated fluid deficit were accompanied by significant hemoconcentration, shown by increases in serum proteins. These changes were followed by a rise in urinary aldosterone and vasopressin, but not thirst. Weight loss in hyperbaric atmospheres is probably multifactorial, but the data suggests an uncoupling of normal osmoregulation may have occured in the present set of subjects. This may have been due to altered lung mechanics, increased catecholamines, or effects of high pressure on cellular responses to vasopressin. (Author)

A80-41890 **Minimizing the psychological effects of a wartime disaster on an individual.** D. K. Kentsmith (U.S. Veterans Administration Hospital; Creighton University, Omaha; Nebraska, University, Lincoln, Neb.). *Aviation, Space, and Environmental Medicine,* vol. 51, Apr. 1980, p. 409-413. 23 refs.

In this paper, the psychological reactions of individuals and groups to a wartime disaster, such as nuclear explosion, are presented. The psychological literature on disasters is discussed. The presentation attempts to emphasize viewing the victims of a disaster as individuals responding in a normal way to an overwhelming experience rather than labeling them as psychiatric patients. The various phases of a disaster are discussed with particular emphases on the preventive measures and leadership roles which may be taken by the physician. The development and treatment of situational psychoses, as well as neurotic reactions, are examined and the dynamics especially of long-lasting neurotic problems explored. The paper concludes by making specific recommendations regarding the establishment of disaster plans and training programs at each military facility. It is suggested that the use of such plans may help minimize the psychological effects of a wartime disaster on the individual. (Author)

A80-41977 **Absolute and relative work capacity in women at 758, 586, and 523 torr barometric pressure.** D. S. Miles, J. A. Wagner, S. M. Horvath, and J. A. Reyburn (California, University, Santa Barbara, Calif.). *Aviation, Space, and Environmental Medicine,* vol. 51, May 1980, p. 439-444. 25 refs. Grants No. AF-AFOSR-78-3534; No. NIH-AG-00021.

The present study evaluated cardiorespiratory responses to exercise in six young women (22-34 yr) in relationship to maximal oxygen uptake at sea level and moderate altitudes. Pulmonary ventilation was consistently 10-15% higher at altitudes when expressed as a percent of maximal oxygen uptake, primarily due to an increase in respiratory rate. At altitudes down to a barometric pressure of 523 torr, the control of heart rate responses and decrements in maximal oxygen uptake in women were similar to those in males, but ventilatory control mechanisms differed. S.D.

A80-41978 **Effect of direction and rate of change of deep body and skin temperatures on performance of a rotary pursuit task.** T. M. Gibson, P. J. Redman, and J. R. Allan (RAF, Institute of Aviation Medicine, Farnborough, Hants., England). *Aviation, Space, and Environmental Medicine,* vol. 51, May 1980, p. 445-447. 5 refs.

Performance at a pursuit rotor task has been studied during the overshoot of core temperature caused by sudden cooling after heating, and the undershoot caused by sudden heating after cooling. Conditions were chosen so that effects of the absolute levels of core and skin temperature could be discounted. The results showed that the direction of change of core and skin temperature, rates of change of core temperature between -0.07 and +0.06 C/min, and rates of change of skin temperature between -1.0 and +1.0 C/min did not affect performance; particular circumstances of this experiment, especially the short duration of the changes in direction studied, make this conclusion tentative. Comparison with earlier studies indicates that the major determinants of performance at elevated body temperatures are absolute levels of mean skin temperature, with the absolute level of core temperature having a less significant role. (Author)

A80-41979 Respiratory gas exchange during positive pressure breathing and rapid decompression to simulated altitudes of 18.3 and 24.4 km. D. E. Holness, J. A. G. Porlier, K. N. Ackles, and G. R. Wright (Defence and Civil Institute of Environmental Medicine, Downsview, Ontario, Canada). *Aviation, Space, and Environmental Medicine*, vol. 51, May 1980, p. 454-458.

Respiratory gas exchange was studied, using the technique of mass spectrometry, during events of slow and rapid decompression of human subjects to simulated altitudes of 60,000 and 80,000 ft (18.3 and 24.4 km, respectively). Positive breathing pressures and G-suit counterpressures were employed in three series of decompression experiment. Low levels of inspired carbon dioxide and nitrogen reflected the rebreathing of gases throughout the experiments. Application of a positive breathing pressure of 70 torr, accompanied by a jerkin pressure equal to breathing pressure and a G-suit counterpressure of four times the breathing pressure on the trunk and limbs, respectively, maintained alveolar oxygen at physiologically safe levels during decompression to 60,000 ft (18.3 km) altitude. Similarly, 80 torr positive breathing pressure, in combination with four times the breathing pressure in the G suit, adequately satisfied the requirements for oxygen during rapid decompression to 80,000 ft (24.4 km) simulated altitude. (Author)

A80-41980 Combined effect of hypoxia and cold on the phospholipid composition of lung surfactant in rats. R. Kumar, K. S. Hegde, B. Krishna, and R. S. Sharma (Defence Institute of Physiology and Allied Sciences, Delhi, India). *Aviation, Space, and Environmental Medicine*, vol. 51, May 1980, p. 459-462. 18 refs.

The phospholipid composition of lung tissue and lung lavage in rats exposed to acute hypoxia, chronic hypoxia, and acute and chronic hypoxia associated with cold has been estimated and compared with controls. Different fractions of phospholipids were separated by thin layer chromatography. Results showed that acute hypoxia lowered phospholipids in lung lavage but superimposition of cold lowered phospholipids both in lung tissue and lavage. In chronic hypoxia, phospholipid contents of lung tissue and lavage decreased while the addition of cold showed no further reduction in lung tissue phospholipids; on the contrary phosphatidyl choline fraction of lung lavage increased. It is concluded that the effect of hypoxia alone in lowering surfactant is related to the duration of exposure. Cold with hypoxia lowers phospholipids in the acute stage; in the chronic stage; it does not further reduce phospholipids. (Author)

A80-41981 Pickup of visual information by the pilot during a ground control approach in a fighter aircraft simulator. J. P. Papin, P. Naureils, and G. Santucci (Centre d'Etudes et de Recherches de Médecine Aérospatiale, Paris, France). *Aviation, Space, and Environmental Medicine*, vol. 51, May 1980, p. 463-469. 18 refs.

Before providing the new single-seat fighter aircraft with selective visual information display systems, it is necessary to conduct new studies of the visual behavior of pilots flying these aircraft in order to determine the nature of information to be displayed. The authors describe a modified NAC Eye Mark recorder which can be used in tight spaces without any interfering light source and give an example of its use in an experiment conducted in a Mirage III R training simulator. The reported experiment was designed to analyse the visual behavior of 12 pilots of four different qualification levels who flew a ground control approach (GCA) test each day for five consecutive days. The results show that the pilot's visual behavior is stable, both on an intra- and inter-individual basis. In addition, it is possible to classify the control panel instruments as a function of the number of times and length of time they are checked. (Author)

A80-41982 Comparison of reactive hyperemia in warm and cool human forearms over a range of ischemic periods. I. Shakir, B. A. Gooden, and I. C. MacDonald (Queen's Medical Centre, Nottingham, England). *Aviation, Space, and Environmental Medicine*, vol. 51, May 1980, p. 470-472. 11 refs.

The characteristics of reactive hyperemia in the warm human forearm are well documented but comparable data at lower temperatures are sparse. The present study was designed to examine reactive hyperemia in the forearms of 8 subjects using a range of ischemic periods of 0.5, 1, 2, 4, and 8 min at plethysmograph temperatures of 34 and 14 C. The peak flow rates and hyperemic volumes following all of the durations of ischemia were significantly lower at 14 C. There was a proportional relationship between the hyperemic volume and the duration of ischemia at both temperatures. The differences noted in the magnitude of the responses at the two temperatures may be explained by a reduction in the rate of metabolism in the forearm at the lower temperature, but reduced vascular distensibility cannot be excluded. (Author)

A80-41983 * Effects of chronic centrifugation on skeletal muscle fibers in young developing rats. W. D. Martin (Albert B. Chandler Medical Center, Lexington, Ky.). *Aviation, Space, and Environmental Medicine*, vol. 51, May 1980, p. 473-479. 22 refs. Grant No. NsG-2187.

Three groups of 30-d old male and female rats were centrifuged for 2, 4, 8, and 16 weeks, after which their soleus and plantaris muscles were analysed for changes in proportions of muscle fiber types. The groups were: earth control, maintained at earth gravity without rotation; rotation control, subjected to a gravitational force of 1.05 G and 28 rpm; and rotation experimental, subjected to a gravitational force of 2 G and 28 rpm. Muscle fibers were classified into four fiber types on the basis of actomyosin ATPase activity as slow oxidative, fast oxidative glycolytic and either fast glycolytic (plantaris) or intermediate (soleus). Hypergravity resulted in an increase in slow oxidative fibers in soleus relative to the earth control, but not of females treated similarly. The relationship of body weight to the changes in proportion of slow oxidative fibers is discussed. (Author)

A80-41984 Rocket plume burn hazard. A. M. Stoll, J. R. Piergallini, and M. A. Chianta (U.S. Naval Material Command, Naval Air Development Center, Warminster, Pa.). *Aviation, Space, and Environmental Medicine*, vol. 51, May 1980, p. 480-484. 10 refs.

By use of miniature rocket engines, the burn hazard posed by exposure to ejection seat rocket plume flames was determined in the anaesthetized rat. A reference chart is provided for predicting equivalent effects in human skin based on extrapolation of earlier direct measurements of heat input for rat and human burns. The chart is intended to be used in conjunction with thermocouple temperature measurements of the plume environment for design and modification of escape seat system to avoid thermal injury on ejection from multiplace aircraft. (Author)

A80-41985 Acceleration effects on pulmonary blood flow distribution using perfusion scintigraphy. J. E. Whinnery (USAF, School of Aerospace Medicine, Brooks AFB, Tex.). *Aviation, Space, and Environmental Medicine*, vol. 51, May 1980, p. 485-491. 11 refs.

The effects of increased acceleration (Gz stress) on the distribution of pulmonary blood flow in the miniature swine were measured with a gamma scintillation camera using Technecium 99-m labeled human macro-aggregated albumin and human albumin microspheres. Multiple studies with Gz levels from -4 Gz to +8 Gz were obtained in the same animals, thus allowing an accurate comparison of the effects of acceleration stress on the distribution of pulmonary blood flow. The animals were fitted with abdominal anti-G suits and instinctively performed straining maneuvers, thus simulating the environment and actions of advanced fighter aircraft pilots during the increased acceleration stress of aerial combat maneuvering. Marked shifts in pulmonary flow were observed with both +Gz and -Gz acceleration. The greatest magnitude of change during +Gz was observed up to +4 Gz; however, changes in the distribution of flow did occur even up to +8 Gz. Large changes in blood flow distribution also occurred in going to -4 Gz. The changes in perfusion distribution in the lungs are a major determinant of the blood oxygen desaturation that occurs during +Gz acceleration. A decreased arterial blood saturation can affect overall performance and reduce effectiveness during sustained high +Gz. (Author)

A80-41986 **Aerobic power and body fat of men and women during army basic training.** J. F. Patton, W. L. Daniels, and J. A. Vogel (U.S. Army, Research Institute of Environmental Medicine, Natick, Mass.). *Aviation, Space, and Environmental Medicine,* vol. 51, May 1980, p. 492-496. 22 refs.

A80-41987 * **Interactions between surface cooling and LBNP-induced central hypovolemia.** P. B. Raven (Moss Heart Center, Dallas; Texas College of Osteopathic Medicine, Fort Worth, Tex.), M. Saito, F. A. Gaffney, J. S[illegible]hutte, and C. G. Blomqvist (Moss Heart Center, Dallas, Tex.). *Aviation, Space, and Environmental Medicine,* vol. 51, May 1980, p. 497-503. 30 refs. Research supported by the Moss Heart Foundation; Grant No. NsG-9026.

The paper describes a study carried out to determine the extent to which whole body surface cooling (WBSC) modifies the effects of the central hypovolemia produced by lower body negative pressure (LBNP) at normal skin temperatures. It is shown that WBSC produces a central displacement of cutaneous venous volume resulting in an increase in stroke volume. V.T.

A80-41988 **Development, test, and evaluation of an advanced anti-G valve for the F-15.** R. R. Burton, R. M. Shaffstall, and J. L. Jaggars (USAF, School of Aerospace Medicine, Brooks AFB, Tex.). *Aviation, Space, and Environmental Medicine,* vol. 51, May 1980, p. 504-509. 5 refs.

A Hi Flow Ready Pressure (HFRP) anti-G valve increasing the rate of G-suit pressurization threefold is described. The valve was tested on eight F-15 pilots. It had better valve response, reduced valve error scores, and allowed the pilots to tolerate high-G exposures with less effort. V.T.

A80-41989 **Prevalence of coronary heart disease risk factors in a young military population.** J. F. Patton and J. A. Vogel (U.S. Army, Research Institute of Environmental Medicine, Natick, Mass.). *Aviation, Space, and Environmental Medicine,* vol. 51, May 1980, p. 510-514. 38 refs.

This study was undertaken to determine the extent to which coronary heart disease risk factors are manifest in a young (17-35 years old) male military population. Approximately 360 individuals underwent medical and physical determination of body composition, blood cholesterol analysis, blood pressure measurement, history of smoking, and a maximal exercise stress test to assess maximal oxygen uptake (VO_2 max) and the incidence of electrocardiographic abnormalities. Obesity (over 20% body fat), elevated blood cholesterol (over 200 mg/dl), and cigarette smoking (over 10 cigarettes/d) were the most predominant risk factors with incidences of 29, 32, and 36%, respectively. Only 2.4% of the sample had a positive stress test as indicated by an ST-segment depression of 1 mm or greater. An inverse relationship between maximal oxgen uptake and percent body fat was the only significant finding between level of aerobic power and risk factor prevalence. These data provide information on the prevalence of cardiovascular disease risk factors in an age group for which there has been only limited information. (Author)

A80-41990 **Agricultural aviation medicine in the Soviet Union.** S. R. Mohler (Wright State University, Dayton, Ohio). *Aviation, Space, and Environmental Medicine,* vol. 51, May 1980, p. 515-517. 6 refs.

The paper examines agricultural aviation medicine in the Soviet Union. The program gives specific attention to aerial application operations and includes special preflight pilot medical examinations, aircraft with specialized protective airflow systems for pilots, minimum flight altitude spraying limit of 5 m, and the use of a 'chemical logbook' by each pilot in addition to the flight logbook. The Soviet workhorse aircraft, the Antonov AN-2, can serve multipurpose roles since it can be converted to executive, courier, cargo, air taxi, or ambulance use. A new single-engine turbojet biplane, the Polish M-15, is being evaluated in the Soviet Union as a replacement for the AN-2. A.T.

A80-41991 **Disorders of the menstrual cycle in airline stewardesses.** R. Iglesias, A. Terrés, and A. Chavarria (Compañia Mexicana de Aviación, S.A., Mexico City, Mexico). *Aviation, Space, and Environmental Medicine,* vol. 51, May 1980, p. 518-520. 8 refs.

Of 200 airline stewardesses, 39 percent underwent unfavorable changes in the menstrual cycle after commencing aeronautical activities while 11 percent who had previous disorders healed soon after joining the company. Although 48 percent of the stewardesses underwent changes in menstruation during flight, in about half of these the menstrual flow increased and in the other half it decreased or disappeared, only to reappear with greater intensity after the flight; 38 percent of the stewardesses manifested suffering from pelvic discomfort after long flights. Sufficient research in this field has not been done. Therefore, it is difficult to trace the exact origin and mechanism of these changes in the menstrual cycle. Stress and internal desynchronization due to disruption of circadian rhythm may intervene in generating these disorders. (Author)

A80-41992 **Relation of breathing oxygen-argon gas mixtures to altitude decompression sickness.** J. P. Cooke, K. G. Ikels, J. D. Adams, and R. L. Miller (USAF, School of Aerospace Medicine, Brooks AFB, Tex.). *Aviation, Space, and Environmental Medicine,* vol. 51, June 1980, p. 537-541. 32 refs.

A 95% oxygen-5% argon breathing mixture produced by a molecular sieve generator was shown to be similar to a 95% O_2-5% N_2 mixture for breathing during 1-h exposures at 7,620 m or 10,972 m, as determined by the detection of proportionate numbers of intravascular bubbles in the pulmonary arteries of dogs. Comparable results were obtained with 95% O_2-5% He or 100% O_2. The partial pressures of a 5% mixture at 7,620 and 10,972 m were 14.1 and 8.6 Torr, respectively, and were apparently low enough so that the nonmetabolizable gases did not result in differences in the incidence of intravascular bubble formation or decompression sickness. Argon at the 10% level showed a nonsignificant trend to produce more bubbles. Individual susceptibility or resistance to bubble formation was observed with the different gases. Denitrogenation with either 5

no subject complaints were attributable to cold air inhalation. Recent studies in the literature suggest that cold air is not fully warmed in the upper respiratory passages; however, the present study observed only slight changes in measured physiological responses to rest and exercise with cold air breathing. (Author)

A80-41993 **Ambiguous response of lung lamellar bodies to sauna-like heat stress in two age groups of adult male rats.** M. E. Heino (Helsinki, University, Helsinki, Finland). *Aviation, Space, and Environmental Medicine,* vol. 51, June 1980, p. 542, 543. 10 refs. Research supported by the Finnish Sauna Society.

A80-41994 **Active muscle torques about long-bone axes of major human joints.** A. E. Engin (Ohio State University, Columbus, Ohio) and I. Kaleps (USAF, Aerospace Medical Research Laboratory, Wright-Patterson AFB, Ohio). *Aviation, Space, and Environmental Medicine*, vol. 51, June 1980, p. 551-555. USAF-supported research.

Incorporation of the active muscle torques into the multi-segmented total-human-body models can be considered the next major improvement of these models. The first step toward achievement of this goal is to obtain active muscle torque data about long-bone axes of major human joints. This paper presents results of research conducted to collect such data at the shoulder, hip, elbow, knee, and ankle joints. Active muscle torques were determined about the long-bone axes of the upper arm, upper leg, lower arm, and lower leg, which are the body segments associated with the major joints mentioned. Numerical results are presented for three male subjects for a specific number of body segment orientations with respect to the joints. It was concluded that, although there are intra- and inter-subject variations for the maximum values of the active muscle torques about long-bone axes, there are some trends one can establish for the behavior of the magnitudes of these torques. (Author)

A80-41995 * **Retinal changes in rats flown on Cosmos 936 - A cosmic ray experiment.** D. E. Philpott, R. Corbett, C. Turnbill, S. Black, D. Dayhoff, J. McGourty, R. Lee, G. Harrison (NASA, Ames Research Center, Ultrastructural Research Laboratory and Biomedical Research Div., Moffett Field, Calif.), and L. Savik (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *Aviation, Space, and Environmental Medicine*, vol. 51, June 1980, p. 556-562. 27 refs.

Ten rats, five centrifuged during flight to simulate gravity and five stationary in flight and experiencing hypogravity, orbited the Earth. No differences were noted between flight-stationary and flight-centrifuged animals, but changes were seen between these two groups and ground controls. Morphological alterations were observed comparable to those in the experiment flown on Cosmos 782 and to the retinal cells exposed to high-energy particles at Berkeley. Affected cells in the outer nuclear layer showed swelling, clearing of cytoplasm, and disruption of the membranes. Tissue channels were again found, similar to those seen on 782. After space flight, preliminary data indicated an increase in cell size in montages of the nuclear layer of both groups of flight animals. This experiment shows that weightlessness and environmental conditions other than cosmic radiation do not contribute to the observed damage of retinal cells. (Author)

A80-41996 **On-line analysis of eye movements using a digital computer.** R. W. Baloh, L. Langhofer, V. Honrubia, and R. D. Yee (California, University, Los Angeles, Calif.). *Aviation, Space, and Environmental Medicine*, vol. 51, June 1980, p. 563-567. 10 refs. Grant No. NIH-NS-09823.

We describe a microcomputer system for on-line analysis of eye movement recordings. Quantitative data from the patient and statistical comparison with normative data is available within seconds of test completion. Three types of eye movements are analyzed - voluntary saccades, smooth pursuit, and nystagmus. The first two are induced by a computer-controlled laser dot projected onto a screen and the third by a computer-controlled optokinetic drum, caloric infusion, and rotary chair. The computer algorithm differentiates the eye position signal to yield an instantaneous eye velocity record. Saccades are identified based on their characteristic velocity profile. For pursuit and nystagmus, the velocity record is modified by linearly interpolating across segments in which saccades occurred. The gain (output eye velocity/input eye velocity) is calculated after Fourier analysis of the data. (Author)

A80-41997 * **Piracetam and fish orientation during parabolic aircraft flight.** R. B. Hoffman, G. A. Salinas, and J. L. Homick (NASA, Johnson Space Center, Neurophysiology Laboratory, Houston, Tex.). *Aviation, Space, and Environmental Medicine*, vol. 51, June 1980, p. 568-576. 40 refs.

Goldfish were flown in parabolic Keplerian trajectories in a KC-135 aircraft to assay both the effectiveness of piracetam as an antimotion sickness drug and the effectiveness of state-dependent training during periods of oscillating gravity levels. Single-frame analyses of infrared films were performed for two classes of responses - role rates in hypogravity or hypogravity orienting responses (LGR) and climbing responses in hypergravity or hypergravity orienting responses (HGR). In Experiment I, preflight training with the vestibular stressor facilitated suppression of LGR by the 10th parabola. An inverse correlation was found between the magnitudes of LGR and HGR. Piracetam was not effective in a state-dependent design, but the drug did significantly increase HGR when injected into trained fish shortly before flight. In Experiment II, injections of saline, piracetam, and modifiers of gamma-aminobutyric acid - aminooxyacetic acid (AOAA) and isonicotinic acid did not modify LGR. AOAA did significantly increase HGR. Thus, the preflight training has a beneficial effect in reducing disorientation in the fish in weightlessness, but the drugs employed were ineffective. (Author)

A80-41998 **Red blood cell count /RCC/ and volume /MCV/ of three subjects in a hypobaric chamber.** L. S. Sewchand, R. E. Lovlin, G. Kinnear, and S. Rowlands (Calgary, University, Calgary, Alberta, Canada). *Aviation, Space, and Environmental Medicine*, vol. 51, June 1980, p. 577, 578. 12 refs. Research supported by the Medical Research Council of Canada.

Measurements of red blood cell count (RCC) and mean corpuscular volume (MCV) were made on three subjects during a 42-h continuous exposure to low barometric pressure. RCC varied insignificantly in two subjects, but increased steadily with time in the third. MCV decreased appreciably (12-14%) in all three subjects 5 h after exposure to the low pressure but returned close to baseline values after 40 h. It is concluded that 1) short exposures to low barometric pressures result in a reduction in red cell size; 2) increased red cell production in response to low oxygen levels shows individual variations. (Author)

A80-41999 **The effect of sustained +Gz acceleration on extravascular lung water content in domestic fowl.** W. J. Weidner and L. F. Hoffman (California, University, Davis, Calif.). *Aviation, Space, and Environmental Medicine*, vol. 51, June 1980, p. 579-582. 19 refs. Research supported by the California Lung Association and California Heart Association.

A80-42000 **An attempted validation study of the birthdate-based biorhythm /BBB/ hypothesis.** C. E. Englund and P. Naitoh (U.S. Navy, Naval Health Research Center, San Diego, Calif.). *Aviation, Space, and Environmental Medicine*, vol. 51, June 1980, p. 583-590. 37 refs. Navy-supported research.

The birthdate-based biorhythm (BBB) hypothesis was examined for utility as a predictor of human performance. Data from quizzes of 26 students taken periodically throughout a semester, and measures over 1 month of landing performance by seven pilots were analyzed by multiple regression/correlation methods. Regression equations were developed to test the correspondence between performance and cycle phases. A second analysis used a nonorthogonal least-square spectrum method to determine if the data contained any systematic rhythms in the infradian range. No significant results were obtained which would support the BBB hypothesis as a predictor of human performance. Also, no evidence was found to substantiate the existence of the three proposed BBB cycles. (Author)

A80-42001 **Physiological effects of cold air inhalation during exercise.** G. H. Hartung, L. G. Myhre, and S. A. Nunneley (USAF, School of Aerospace Medicine, Brooks AFB, Tex.). *Aviation, Space, and Environmental Medicine*, vol. 51, June 1980, p. 591-594. 17 refs.

Selected physiological responses of six normal subjects were observed, during rest and exercise, while they breathed either ambient or cold (-35 C) air. All experiments were 10 min in duration, and the exercise experiments consisted of pedalling a bicycle ergometer at loads requiring approximately 60% and 75% of each subject's maximum oxygen consumption. Heart rates and minute ventilations during the most strenuous exercise averaged approximately 170 bpm and 70 l, respectively. Diastolic blood pressure was significantly higher, and expired air temperature was significantly lower, during cold air inhalation. Oxygen uptake, respiration rate, and rectal temperature were not affected by cold air breathing and no subject complaints were attributable to cold air inhalation. Recent studies in the literature suggest that cold air is not fully warmed in the upper respiratory passages; however, the present study observed only slight changes in measured physiological responses to rest and exercise with cold air breathing. (Author)

A80-42002 * **Energy status and oxidation reduction status in rat liver at high altitude /3.8 km/.** R. D. Reed and N. Pace (California, University, Berkeley, Calif.). *Aviation, Space, and Environmental Medicine,* vol. 51, June 1980, p. 595-602. 31 refs. Grant No. NsG-7262.

Adult male rats were exposed to 3.8-km altitude for intervals ranging from 1 h-60 d. Liver samples were taken under light ether anesthesia and were examined by enzymatic analyses. Within 1-6 h of hypoxic exposure, ATP levels decreased while ADP and AMP levels increased, producing a fall in calculated ATP/ADP and adenylate charge ratios. Concurrently, lactate/pyruvate and alpha-glycerophosphate/dihydroxyacetone phosphate ratios increased markedly. Direct measurements of cellular pyridine nucleotides indicated increased NADH/NAD and NADPH/NADP ratios. Levels of total adenosine phosphates and pyridine nucleotides decreased in a significant accompanying response. Many metabolite levels and calculated ratios returned to near-normal values within 1 week of exposure, indicating secondary intracellular adjustments to hypoxic stress; however, persistence of that stress is reflected in lactate concentrations and both substrate redox ratios. Results support and explore concepts that increased oxidation-reduction status and decreased energy status are primary events during hypoxia. (Author)

A80-42003 * **Thresholds for detection of constant rotary acceleration during vibratory rotary acceleration.** B. Clark, J. D. Stewart, and N. H. Phillips (NASA, Ames Research Center, Moffett Field; San Jose State University, San Jose, Calif.). *Aviation, Space, and Environmental Medicine,* vol. 51, June 1980, p. 603-606. 19 refs. Grant No. NCC2-35.

The effects of vibratory angular acceleration on detection thresholds for constant angular acceleration in a dynamic flight simulator are reported in three experiments. Detection thresholds were determined for 10 pilots and four nonpilots using a random, double-staircase procedure while the subjects sat erect in a device which rotated about an earth-vertical axis. Constant angular acceleration were presented for 0.5 and 1.0 s with concurrent, vibratory angular acceleration at 1 and 5 Hz, and thresholds with no vibratory angular acceleration were established. The thresholds were obtained while the subjects observed a visual reference in the enclosed cockpit in two experiments and in total darkness in a third. The results confirmed earlier experiments showing an inverse relationship between the duration of constant angular acceleration and detection threshold and showed that the detection thresholds in darkness were higher than with a visual reference present. Two analyses of variance revealed no significant differences in thresholds across the three vibration conditions. These results indicate that vibratory angular acceleration of fairly high levels can be present in a dynamic flight simulator without masking the pilot's ability to detect either maneuver or disturbance motions. A80-42004 **Psychomotor deterioration during exposure to heat.** Y. Epstein, G. Keren, J. Moisseiev, O. Gasko, and S. Yachin (Ministry of Defence, Medical Corps - Physiological Research Unit, Tel Aviv; Chaim Sheba Medical Centre, Samat-Gan, Israel). *Aviation, Space, and Environmental Medicine,* vol. 51, June 1980, p. 607-610. 14 refs.

The effect of different heat loads on vigilance and complex cognitive tasks involved in a mission of different intensities were examined. Nine healthy volunteers were randomly exposed for 2 h to three climatic conditions: comfort (21 C), moderate heat load (30 C) and severe heat load (35 C). The subjects were assigned to missions of shooting at targets of three different sizes. Physiological parameters (heart rate, rectal temperature, and sweat rate) and psychomotor ability were monitored. Exposure to 35 C gave rise to elevated heart rate, rectal temperature, and dehydration of 2.5%, while exposure to 21 C and 30 C caused no physiological burden. Speed of performance were significantly higher when the subjects were exposed to moderate heat load than to either comfort or severe heat load. Percentage of errors, however, rose gradually with the rise in heat load. The results indicate: (1) the effect of the intensity of the task and heat load on deteriorating performance are synergistic; (2) psychomotor performance deteriorates even before physiological parameters are impaired, possibly because of feelings of discomfort; and (3) even highly motivated subjects are effected by heat load, especially when assigned to complex missions which require a high state of vigilance, cooperation, and coordination. (Author)

A80-42005 **Human tolerance to aerial combat maneuvers.** R. R. Burton and R. M. Shaffstall (USAF, School of Aerospace Medicine, Brooks AFB, Tex.). *Aviation, Space, and Environmental Medicine,* vol. 51, July 1980, p. 641-648. 15 refs.

An acceleration profile was developed on the USAF School of Aerospace Medicine's 6.1-m radius centrifuge to measure human tolerance to the Aerial Combat Maneuver (ACM). The ACM profile is a continuous repetitive, 4.5 G for 15 s to 7 G for 15 s, cyclic G exposure which is terminated by the subject at his fatigue endpoint. ACM tolerances using this type of G profile were determined for seven subjects at four different seatback angles; i.e. 13, 30, 55, and 65 deg from the vertical. Group (mean + or - S.E.) tolerances for the ACM were 170 + or - 17 s at 13 deg and 541 + or - 48 s at 65 deg. These tolerances were not usually correlated with relaxed gradual onset G tolerances. The subjective fatigue endpoint was physiologically verified using heart rate, heart rhythm, and performance criteria at the four seatback angles. The potential value of the ACM profile is considered as a measure of the effectiveness of anti-G equipment and methods in the aerial combat environment. (Author)

A80-42006 **Frank orthogonal vectorcardiograms in humans during and after exposure to +Gz acceleration stress.** M. H. Laughlin, J. E. Whinnery, J. A. Strom, D. J. Cosgrove, E. L. Fitzpatrick, H. N. Keiser, and R. N. Whittaker, Jr. (USAF, School of Aerospace Medicine, Brooks AFB, Tex.). *Aviation, Space, and Environmental Medicine,* vol. 51, July 1980, p. 653-660. 25 refs.

Frank orthogonal vectorcardiograms (VCGs) were recorded from 10 subjects prior to, during, and for 15 min after exposures to +3 Gz, +5 Gz and +7 Gz. The order of acceleration exposure was randomized, with the individual exposures separated by at least 1 week. Standard USAF anti-G suits were worn by all subjects. Detailed analysis of the scalar lead electrocardiograms revealed no abnormalities. There were no consistent signs of conduction disturbances or ischemic ST-T segment changes. The QRS axis of the VCG demonstrated posterior rotation in the sagittal plane and counterclockwise rotation in the transverse plane during +Gz stress. The changes in the VCGs recorded during +Gz stress appeared to be related to rotational changes of the heart due to mechanical stress or 10% mixtures of the inert gases was quite effective, as shown by a reduction in the number of intravascular bubbles detected. (Author)

A80-42007 **Catecholamine excretion in A-10 pilots.** G. S. Krahenbuhl, S. H. Constable, P. W. Darst, J. R. Marett, G. B. Reid, and L. C. Reuther (Arizona State University, Tempe, Ariz.). *Aviation, Space, and Environmental Medicine,* vol. 51, July 1980, p. 661-664. 16 refs. Contract No. F33615-78-C-0053.

Catecholamine excretion was determined for 15 USAF pilots during surface attack training in the A-10 aircraft. Timed urine samples were used to determine excretion rates of epinephrine and norepinephrine during basal conditions, during five sorties performed in high-realism simulators, and during six actual flights. Catecholamine excretion was significantly elevated (p less than 0.05) over basal rates during all 11 training sorties; therefore, it was concluded that A-10 conversion and surface attack training results in a significant stress response in the subjects. The stress response experienced in the simulator diminished across trials; the stress response from aircraft flights remained steady through all sorties monitored. The relative proportions of epinephrine and norepinephrine remained similar across all but the final sorties in both the simulator and the aircraft. These occasions were typified by increased norepinephrine and decreased epinephrine excretion rates. (Author)

A80-42008 **Molecular sieve generation of aviator's oxygen - Performance of a prototype system under simulated flight conditions.** R. L. Miller, K. G. Ikels (USAF, School of Aerospace Medicine, Brooks AFB, Tex.), M. J. Lamb, E. J. Buscola (U.S. Naval Material Command, Naval Air Development Center, Warminster, Pa.), and R. H. Ferguson (U.S. Naval Air Systems Command, Washington, D.C.). *Aviation, Space, and Environmental Medicine*, vol. 51, July 1980, p. 665-673. 9 refs.

The molecular sieve method of generating an enriched-oxygen breathing gas is one of several candidate onboard oxygen generation (OBOG) systems under joint Army-Navy-Air Force development for application in tactical aircraft. The performance of a nominal two-man-capacity molecular sieve oxygen generation system was characterized under simulated flight conditions. Data are given on the composition of the molecular sieve-generated breathing gas (oxygen, nitrogen, carbon dioxide, and argon) as a function of inlet air pressure, altitude, breathing gas flow rate, and ambient temperature. The maximum oxygen concentration observed was 95%, with the balance argon. At low demand flow rates and certain conditions of pressure and altitude, the argon enrichment factor exceeded that of oxygen giving a maximum argon concentration of 6.6% with the balance oxygen. The structural integrity of the unit was verified by vibration and centrifuge testing. The performance of the molecular sieve unit is discussed in the context of aircraft operating envelopes using both diluter-demand and 100% delivery subsystems. (Author)

A80-42010 **Device for measuring the precision of eye-hand coordination while tracking changing size.** D. Regan and K. I. Beverley (Dalhousie University, Halifax, Canada). *Aviation, Space, and Environmental Medicine*, vol. 51, July 1980, p. 688-693. 14 refs. National Research Council of Canada Grant No. A-0323; Grant No. AF-AFOSR-78-3711.

Psychophysical evidence supports the idea that the human visual pathway computes an object's rate of change of angular size rather independently of other visual parameters, including contrast and intensity. This independence could provide a basis for accurately judging the component of an object's velocity along a line through the eye in the working visual environment where many visual parameters vary simultaneously. We describe a procedure for quantifying a subject's ability to track changing size, and illustrate the procedure with preliminary experimental data. The subject's R.M.S. tracking errors are displayed in three frequency bands. Our device also measures the perturbing effect of sideways motion upon the subject's ability to track changing size. Such data may go some way to predict a subject's performance in tasks of eye-limb coordination, especially where visual information is largely restricted to the changing-size channel. (Author)

A80-42011 **Toward the development of a new aptitude selection test battery for air traffic control specialists.** J. O. Boone (FAA, Civil Aeromedical Institute, Oklahoma City, Okla.). *Aviation, Space, and Environmental Medicine*, vol. 51, July 1980, p. 694-699. 14 refs.

In an effort to update and refine the selection battery for air traffic controllers, five experimental tests measuring aptitudes and skills considered important in air traffic work were administered to 1,828 newly selected air traffic control specialist (ATCS) trainees on their first day of training at the FAA Academy in Oklahoma City. The five experimental tests and the five tests presently used by the Office of Personnel Management (OPM) for selecting ATCS trainees were employed in an iterative stepwise regression (stepdown procedure). The tests that made a significant contribution in predicting Academy scores were then used to form a composite and the old test battery and the new battery were compared. The new composite demonstrated a statistically significant increase in the multiple correlation over the old test battery. Use of the new test battery could result in a savings to the FAA in terms of Academy attrition due to failures. It could also aid in upgrading the quality of ATCS selectees and aid in minimizing human error in air traffic control work. (Author)

A80-42012 **Alveolar macrophages and pulmonary surfactant of altitude-raised rats.** K. S. Hegde, R. Kumar, B. Krishna, and H. S. Nayar (Defence Institute of Physiology and Allied Sciences, Delhi, India). *Aviation, Space, and Environmental Medicine*, vol. 51, July 1980, p. 700-703. 17 refs.

Alveolar macrophages and pulmonary surfactant were estimated in rats raised at high altitude (3500 m) and compared with control rats. Macrophages were obtained by washing the lungs with isotonic saline and counted in a haemocytometer to obtain the total number present. Proportions of two types of macrophages (precursor and mature) have been evaluated. Different fractions of phospholipids in lung lavage and lung tissue were separated by thin layer chromatography and estimated colorimetrically. The results showed a reduction in the number of macrophages/g of lung with a corresponding decrease in surfactant. The percentage of immature (precursor) macrophages was lower in high-altitude-raised rats. These changes observed in alveolar macrophages and lung surfactant could be due to an altered metabolism at high altitude. (Author)

A80-42013 * **The architecture of the avian retina following exposure to chronic 2 G.** R. G. Orlando and J. A. Negulesco (Ohio State University, Columbus, Ohio). *Aviation, Space, and Environmental Medicine*, vol. 51, July 1980, p. 704-708. 18 refs. Research supported by the Ohio State University; Contract No. NAS2-6634.

Rhode Island Red female chicks at 2 weeks posthatch were subjected, for 7 d, to either earth gravity of 1 G or a 2-G hypergravity environment by chronic whole-body centrifugation. Animals were sacrificed at 3 weeks posthatch and the eyes were enucleated, fixed in 10% BNF, doubly embedded, sectioned at 7-8 microns and routinely processed with H & E for histological examination. Compared to normogravity controls, animal exposure for 1 week to the chronic effects of 2-G resulted in a significantly decreased mean width of the photoreceptor, inner nuclear, and inner plexiform retinal layers. The outer nuclear, outer plexiform, and ganglion cell layers of the retina appeared minimally affected by the hypergravity state since the mean width of these layers showed no noticeable differences from earth gravity control animals. The present anatomic findings suggest a reduction in the detection of motion or rapid changes in illumination by the avian retina when the animal is exposed at a 2-G environment. (Author)

A80-42014 **Aeromedical transportation of psychiatric patients - Historical review and present management.** D. R. Jones (USAF, School of Aerospace Medicine, Brooks AFB, Tex.). *Aviation, Space, and Environmental Medicine*, vol. 51, July 1980, p. 709-716. 32 refs.

A80-42015 **Air transport of the man who needs everything.** P. J. Hansen (USAF, Scott AFB, Ill.). *Aviation, Space, and Environmental Medicine*, vol. 51, July 1980, p. 725-728. 6 refs.

General considerations for the multiple-trauma victim should include a secure airway, a patent intravenous line, elevation of the head and chest over 10 deg, wounds dresses, use of nasogastric tube, urinary drainage catheter, stabilization and splinting of fractures, adequate orders to facilitate patient management during transport, and a comprehensive summary of patient problems. A clinical assessment - preflight, inflight and postflight - preferably by the same person is ideal. The paper focuses on discussing the priorities followed in the clinical assessment: airway and breathing; bleeding (circulation and shock); digestive organs (rupture or injury); excretory organs (rupture or injury); fractures (splints, casts, and back supports); hide (burns and wounds); and good management plan. S.D.

A80-42051 # **The effect of the acute ischemia of the brain on the permeability of the hemato-ophthalmic barrier (Vliianie ostroi ishemii golovnogo mozga na pronitsaemost' gemato-oftal'micheskogo bar'era).** T. V. Birich and S. A. Eremenko (Minskii Meditsinskii Institut, Minsk, Belorussian SSR). *Akademiia Nauk BSSR, Doklady,* vol. 24, no. 6, 1980, p. 568-571. 12 refs. In Russian.

A80-42098 **Use of the multivariate approach to enhance the diagnostic accuracy of the treadmill stress test.** P. S. Greenberg, B. Cangiano, L. Leamy, and M. H. Ellestad (Memorial Hospital Medical Center, Long Beach, Calif.). *Journal of Electrocardiology,* vol. 13, no. 3, 1980, p. 227-236. 39 refs. Research supported by the Memorial Hospital Medical Foundation Funds.

The use of a computerized multivariate analysis to enhance the sensitivity, specificity and predictive value of the treadmill stress test is investigated. Twenty-one selected variables were analyzed for 142 male and 57 female patients who had undergone a stress test and cardiac catheterization with selective coronary angiography. A univariate analysis of variance reveals ten of the variables in males and 14 of the variables in women to exhibit significant differences between normal and diseased (greater than 70% stenosis in one or more coronary arteries) groups. A multivariate discriminant analysis of the variables then shows only three variables in men (test duration, infarct by ECG, ST depression in the recovery period) and five variables in women (infarct history, anginal pain during test, ST resting changes, infarct by ECG, age) to be significant discriminators. Sensitivities of 84%, 85% and 85%; specificities of 80%, 94% and 86%; and predictive values of 89%, 90% and 89% are obtained for the males, females and the entire group, respectively; and it is concluded that multivariate discriminant analysis is a reliable means of determining the probability of coronary artery disease in a highly select group of patients. A.L.W.

A80-42341 # **Investigation of the operation of eye-telescope systems (Issledovanie funktsionirovaniia sistemy glaz-teleskop).** E. V. Khrunov, V. M. Kazachkov, V. I. Metlik, and E. N. Khludeev. *Kibernetika i Vychislitel'naia Tekhnika,* no. 46, 1979, p. 8-16. 5 refs. In Russian.

Experimental results are presented on the operation of eye-telescope systems under conditions of space flight; such operations may be necessary when automatic remote viewing equipment aboard a manned spacecraft fails and its operation must be replaced by visual observation. The tests consisted of continuous operator observation of an operative field of view with the aim of detecting and recognizing test objects. Results of ten-day studies show that operators who were subjected to simulated weightlessness performed slightly less well than those who were not subjected to weightlessness. B.J.

A80-42344 # **Exemplary model of an eye-telescope system for the detection of manned spacecraft on a background of stars (Primernaia model' sistemy glaz-telescop pri obnaruzhenii pilotiruemykh kosmicheskikh korablei na fone zvezd).** E. V. Khrunov, V. M. Kazachkov, and E. N. Khludeev. *Kibernetika i Vychislitel'naia Tekhnika,* no. 46, 1979, p. 27-30. In Russian.

A theoretical investigation of a model for the detection of manned spacecraft on a background of stars is presented. The stars and the spacecraft are considered to be point sources discretely and arbitrarily situated in the field of view; the search for the spacecraft model is carried out in the field of view of a telescope immobile with respect to the background. A formula is presented for the determination of the time of detection as a function of the relative contrast of stars with the background, the number of point sources in the telescope field of view, and the angular velocity of the observer. B.J.

A80-42345 # **The effect of psychic self-regulation /autogenous training/ on the maintenance of the professional skill of pilots (Vliianie psikhicheskoi samoreguliatsii /autogennoi trenirovki/ na sokhranenie professional'nogo navyka u letchikov).** Iu. F. Isaulov. *Kibernetika i Vychislitel'naia Tekhnika,* no. 46, 1979, p. 30-36. In Russian.

Experimental data are presented which show that methods of psychic self-regulation, particularly autogenous training, can be used to maintain the professional skills of pilots for long periods of time. A classification of the various stages of the development and maintenance of professional skills is presented, and the application of the methods discussed to specific flight situations is examined. B.J.

A80-42346 # **Some problems in pattern detection (Nekotorye voprosy obnaruzheniia zakonomernostei).** Iu. P. Ponomarev and L. A. Rastrigin (Rizhskoe Vysshee Voennoe Aviatsionnoe Inzhenernoe Uchilischche, Riga, Latvian SSR). *Kibernetika i Vychislitel'naia Tekhnika,* no. 46, 1979, p. 36-41. In Russian.

It is shown that multidimensional extrapolation can be used to estimate the parameters of a system in a new situation on the basis of limited a priori information on the parameters of the same system in known situations. Such algorithms can be used to develop highly efficient systems for the study of new processes on the basis of the rational combination of artificial and natural intelligences. It is emphasized that personal qualities have a great influence on the search for new patterns. B.J.

A80-42347 # **The ergatic intellect of electrical energy systems (Ergaticheskii intellekt elektroenergeticheskikh sistem).** Iu. V. Shcherbina and D. B. Banin (Kievskii Politekhnicheskii Institut, Kiev, Ukrainian SSR). *Kibernetika i Vychislitel'naia Tekhnika,* no. 46, 1979, p. 46-52. In Russian.

The ergatic intellect is defined as the combined intellect of a multipurpose polyergatic system composed of the 'creative' possibilities of system personnel and of the formalized possibilities of acquisition, transmission, storage, processing, and application of information. The ergatic intellect should be based on machine memory, machine operations of data search, and the 'creative' activities of personnel. The concept of ergatic intellect is applied to the organization of a complex electrical energy system. A general algorithm for the activity of the human operator of such a system is presented. B.J.

A80-42349 # **Mathematical model for evaluating human operator activity in solving the problem of limiting controllability in an ergatic control and monitoring system (Matematicheskaia model' otsenki deiatel'nosti cheloveka-operatora pri reshenii zadachi predel'noi upravliaemosti v ergaticheskoi sisteme upravleniia i kontrolia).** V. A. Kas'ianov and L. N. Degtiarenko (Kievskii Institut Inzhenerov Grazhdanskoi Aviatsii, Kiev, Ukrainian SSR). *Kibernetika i Vychislitel'naia Tekhnika,* no. 46, 1979, p. 77-82. In Russian.

A80-42846 **Overview of human engineering considerations for electro-optical displays.** J. M. Booth and R. J. Farrell (Boeing Aerospace Co., Seattle, Wash.). In: Advances in display technology; Proceedings of the Seminar, San Diego, Calif., August 29, 30, 1979. Bellingham, Wash., Society of Photo-Optical Instrumentation Engineers, 1979, p. 78-108. 126 refs.

Many parameters must be considered to obtain a display that is maximally useful to the human operator. Direct observation of a candidate display by the designer and survival in the marketplace provide some guidance, but whenever possible design decisions should be based on relevant test data. This paper summarizes the more critical design parameters, describes some of the available test data, and illustrates some of the characteristics of the test situation that determine whether a set of test results are relevant to a particular design problem. This discussion of test characteristics applies both to the evaluation of available test results and to the design of new test programs aimed at providing data relevant to display component subsystem or system design. (Author)

A80-42847 **Two-dimensional spatial frequency content and confusions among dot matrix characters.** M. E. Maddox (Virginia Polytechnic Institute and State University, Blacksburg, Va.). In: Advances in display technology; Proceedings of the Seminar, San Diego, Calif., August 29, 30, 1979. Bellingham, Wash., Society of Photo-Optical Instrumentation Engineers, 1979, p. 109-116. 5 refs. Grant No. DAAG29-77-G-0067.

A two-phase study was conducted which related the confusions among dot matrix characters to the two-dimensional spatial frequency similarity of these characters. During the first phase of the study, subjects were shown single alphanumeric characters from four different dot matrix fonts and five matrix size/character subtense combinations. Data from this phase of the research were analyzed in terms of both correctness and character confusion frequencies. The second phase of the study consisted of digitizing and analyzing all characters from two of the fonts used in the first phase. The fonts chosen represent the most and least confusable of the four, based on the performance data obtained. In addition to the spatial frequency similarity measure, a simple digital Phi coefficient was calculated for each character pair. The final analysis performed in this study was the correlation of observed performance (confusions) with objective similarity measures (2-D spectra and Phi coefficients). (Author)

A80-42849 **Two-channel model of image processing in the human retina.** D. Granrath and B. R. Hunt (Arizona, University, Tucson, Ariz.). In: Advances in display technology; Proceedings of the Seminar, San Diego, Calif., August 29, 30, 1979.

Bellingham, Wash., Society of Photo-Optical Instrumentation Engineers, 1979, p. 126-133. 13 refs. Grant No. AF-AFOSR-76-3024-C.

A model describing the decomposition of imagery in the human retina is developed based on the retina's cellular structure. Two types of retinal cells, horizontals and amacrines, perform spatial averaging across the retina to form a low-pass image channel. This low spatial frequency information is fed back to the retina's receptor cells to form a difference channel of high-passed spatial frequencies. Such a model is suggested by electrophysiological as well as psychophysical evidence. Analysis of the model characterizes the low-pass channel as a contrast channel and the difference channel as an edge detection channel. Application of the model to image quality assessment suggests a two factor approach involving metrics in the model's eye domain. (Author)

A80-42935 # **Myocardial dystrophy in athletes (Distrofiia miokarda u sportsmenov).** L. A. Butchenko, M. S. Kushakovskii, and N. B. Zhuravleva. Moscow, Izdatel'stvo Meditsina, 1980. 224 p. 82 refs. In Russian.

The book discusses experimental investigations of changes in the myocardia of athletes, with particular emphasis on the state of the heart and hemodynamics in athletes with myocardial dystrophy brought on by overstressing. The physiological and pathological bases of myocardial dystrophy in athletes and in the general population are examined, with attention given to the biochemical and cytological disturbances of the myocardium caused by the elevated influence of the sympathetic nervous system during physical exertion, and the influence of myocardial dystrophy on heart function, hemodynamics, and respiration. Mechanisms for the disruption of myocardial repolarization observed in electrocardiograms indicating myocardial dystrophy are discussed, and a classification of the types of myocardial dystrophy encountered in athletes on the basis of electrocardiogram changes is presented. Finally, the treatment and prophylaxis of myocardial dystrophy in athletes are examined. A.L.W.

A80-43011 **Postflight studies on fungal phenotypes irradiated in space.** P. A. Volz (Eastern Michigan University, Ypsilanti, Mich.). *(Kosmicheskie Issledovaniia*, vol. 17, Nov.-Dec. 1979, p. 920-926.) *Cosmic Research*, vol. 17, no. 6, May 1980, p. 762-769. 22 refs.

A80-43151 **Physiological responses of men and women to humid and dry heat.** Y. Shapiro, K. B. Pandolf, B. A. Avellini, N. A. Pimental, and R. F. Goldman (U.S. Army, Research Institute of Environmental Medicine, Natick, Mass.). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 49, July 1980, p. 1-8. 32 refs.

Sex differences in the physiological responses of men and women to hot, wet and hot, dry environments are investigated. Nine female and 10 male subjects were acclimated to walking on a treadmill for two 50-min periods preceded and separated by 10-min rest periods and then exposed to six environments ranging from a control at 20 C, 40% relative humidity to hot-wet climates at 35 and 37 C and 90% and 80% relative humidity and hot-dry climates at 49 and 54 C and 20% and 10% relative humidity, during which the treadmill exercise was performed. During the hot-dry exposures, heart rates and rectal temperatures are found to be significantly lower in men, with no significant differences in sweat rates, while during hot-wet exposures, both mean final rectal temperature and sweating rates were lower in the females. These differences are not found to be correlated with differences in maximal O2 uptake, body weight, skin surface area or percentage of body fat, and are found to be negatively related to body surface area to mass ratio. It is suggested that the higher body surface area to mass ratio, better peripheral feedback from skin wettedness and higher thermoregulatory set point in females may explain their greater tolerance to hot-wet environments and lower tolerance to hot-dry environments. A.L.W.

A80-43152 **Interaction of dopamine and haloperidol with O2 and CO2 chemoreception in carotid body.** S. Lahiri, T. Nishino, A. Mokashi, and E. Mulligan (Pennsylvania, University, Philadelphia, Pa.). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 49, July 1980, p. 45-51. 21 refs. Grants No. NIH-HL-19737-03; No. NIH-HL-08899-15.

Effects of dopamine and of a dopaminergic blocker, haloperidol, on the responses of carotid body chemoreceptors to hypoxia and hypercapnia were investigated in 16 anesthetized cats. Intravenous infusion of dopamine (10-20 microgram/min) decreased carotid body chemoreceptor responses to hypoxia and hypercapnia. The effect was greater at higher levels of arterial oxygen and carbon dioxide tension stimulus. Thus, the magnitude of the dopamine effect depended on the degree of both oxygen tension- and carbon dioxide tension-medicated excitation of the receptors. Haloperidol potentiated responses to both hypoxia and hypercapnia but apparently did not stimulate the receptors in the absence of these stimuli. Potentiation by haloperidol and inhibition by dopamine of excitatory effects due to arterial oxygen tension decrease and arterial carbon dioxide tension increase are complementary. The data suggest that chemoreception of dopamine, O2, and CO2 converges at some site in the carotid body. Persistence of hypoxic and hypercapnic responses, following dopamine-blocking doses of haloperidol, does not support the theory that regulation of dopamine release is responsible for O2 and CO2 chemoreception in the carotid body of the cat. (Author)

A80-43153 **Changes in pulmonary PV characteristics of human subjects at an altitude of 5,366 m.** A. Mansell (Hospital for Sick Children, Toronto, Canada), A. Powles (McMaster University, Hamilton, Ontario, Canada), and J. Sutton (Arctic Institute of North America, Yukon, Canada). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 49, July 1980, p. 79-83. 30 refs. Research sponsored by the Arctic Institute of North America; Grant No. NIH-HL-14102-05.

Changes in pulmonary pressure-volume (PV) characteristics were measured in seven young adult human subjects following 9-30 days of acclimatization at an altitude of 5366 m. Increases in peak expiratory flow and decreases in total pulmonary resistance were found to be consistent with the reduced gas density at high altitude, however forced expiratory volume in 1 sec decreased in four of the subjects, suggesting an increase in the resistance of small airways or a decrease in lung recoil. Helium dilution measurements indicated increases in total lung capacity in all the subjects, and leftward shifts in the static expiratory pressure-volume curves were obtained with abnormally low lung recoil at 60% total lung capacity. The lung volume increases and PV curve shifts obtained were observed to be indistinguishable from those obtained during exercise-induced asthma and acute isocapnic hypoxia. A.L.W.

A80-43184 * # **A Portable Oxygen Subsystem - Description and preliminary thermal performance prediction.** F. Sribnik (United Technologies Corp., Hamilton Standard Div., Windsor Locks, Conn.). *American Society of Mechanical Engineers, Intersociety Environmental Systems Conference, San Diego, Calif., July 14-17, 1980, Paper 80-ENAs-7.* 9 p. 8 refs. Members, $1.50; nonmembers, $3.00. Contract No. NAS9-15246.

This paper describes the use, operation, and preliminary thermal modeling of a Portable Oxygen Subsystem (POS). The POS is a partial rebreather which is being developed for Shuttle Orbiter support. Normally used as a pre-breather for denitrogenization prior to EVA, this semi-closed, breath powered breathing system can also be used for emergencies in the event of a contaminated or oxygen-deficient cabin atmosphere, to support an emergency transfer between vehicles, or as a clean oxygen supply in the event of a contaminated ambient atmosphere in the vicinity of the Orbiter after landing. (Author)

A80-43192 * # **Water recovery by catalytic treatment of urine vapor.** P. Budininkas (Gard, Inc., Niles, Ill.), P. D. Quattrone, and M. I. Leban (NASA, Ames Research Center, Moffett Field, Calif.). *American Society of Mechanical Engineers, Intersociety Environmental Systems Conference, San Diego, Calif., July 14-17, 1980, Paper 80-ENAs-16.* 6 p. Members, $1.50; nonmembers, $3.00. Contracts No. NAS2-9715; No. NAS2-10237.

The objective of this investigation was to demonstrate the feasibility of water recovery on a man-rated scale by the catalytic processing of untreated urine vapor. For this purpose, two catalytic systems, one capable of processing an air stream containing low urine vapor concentrations and another to process streams with high urine vapor concentrations, were designed, constructed, and tested to establish the quality of the recovered water. A80-43195 # **Environmental control of a pressurized equipment container for Shuttle flights - The Spacelab Igloo.** K. Beckmann (ERNO Raumfahrttechnik GmbH, Bremen, West Germany). *American Society of Mechanical Engineers, Intersociety Environmental Systems Conference, San Diego, Calif., July 14-17, 1980, Paper 80-ENAs-19.* 6 p. Members, $1.50; nonmembers, $3.00.

One of the standard payloads of the new Shuttle Space Transportation System will be the European Spacelab. The modular concept of Spacelab provides eight basic flight configurations, three of which require the use of a pressurized equipment container - the so-called Igloo. The equipment installed in Igloo - various electronic boxes providing experiment support functions - has to be protected during all mission phases against a multitude of environmental loads. The environmental control system discussed herein has to provide working conditions for the electronic equipment consistent with their operating temperature, pressure and humidity requirements. The control of these parameters is achieved by the use of a Freon 21 fluid loop and external multilayer thermal insulation, a pressure relief valve and burst disk, and desiccators, respectively. This environmental control system has been developed and fabricated by ERNO. (Author)

A80-43205 # **A history of the Naval Research Laboratory contributions to submarine life support systems.** H. W. Carhart and J. E. Johnson (U.S. Navy, Naval Research Laboratory, Washington, D.C.). *American Society of Mechanical Engineers, Intersociety Environmental Systems Conference, San Diego, Calif., July 14-17, 1980, Paper 80-ENAs-29.* 8 p. 12 refs. Members, $1.50; nonmembers, $3.00.

Research on submarine life support systems culminated in the use of LiOH for CO2 removal, KO2 for rebreathers, chlorate candles as a source of O2 and catalytic removal of H2. With the advent of nuclear power, it became evident that the limitation of submergence time of a submarine would now be man himself and his need for a respirable atmosphere, rather than availability of stored power. Therefore, NRL intensified its efforts in the 1950's in atmosphere sampling and analysis, atmosphere control, sources of oxygen, CO2 removal, catalytic burning, adsorbent carbon beds, electrostatic precipitators and automatic monitoring and control. (Author)

A80-43206 # **Atmospheric monitoring in submersibles.** J. J. DeCorpo, J. R. Wyatt, and F. E. Saalfeld (U.S. Navy, Naval Research Laboratory, Washington, D.C.). *American Society of Mechanical Engineers, Intersociety Environmental Systems Conference, San Diego, Calif., July 14-17, 1980, Paper 80-ENAs-31.* 6 p. 9 refs. Members, $1.50; nonmembers, $3.00.

CAMS Mark I is a combination mass spectrometer-infrared atmosphere monitor that provides the fleet with a reliable, service approved analyzer with the ability to monitor continuously the atmosphere in various submarine locations. A second generation of the CAMS, CAMS Mark II, is currently under development which will expand the flexibility of CAMS Mark I while maintaining its high level of reliability. A description of CAMS Mark I will be presented with examples of operational accomplishments. A technical description of the CAMS Mark II development program will also be presented along with the system approach for integrating the life support equipment. (Author)

A80-43207 # **Carbon dioxide effects on submarines.** M. L. Shea, A. A. Messier, and K. R. Bondi. *American Society of Mechanical Engineers, Intersociety Environmental Systems Conference, San Diego, Calif., July 14-17, 1980, Paper 80-ENAs-32.* 2 p. 9 refs. Members, $1.50; nonmembers, $3.00.

Results of laboratory experiments and health studies of submarine personnel carried out in order to estimate the effects of prolonged exposure to elevated levels of CO2 are briefly summarized. The effects of CO2 on lungs, kidneys, and bones have been studied in animals. In contrast to experiments with 1% CO2, guinea pigs exposed to 0.5% showed no lung ultrastructural changes, although kidney calcification was observed after 8 weeks of exposure. Plasma calcium was elevated, and bone calcium showed a small decrease. An animal experiment involving CO2 concentrations from ambient (0.03%) to 0.5%, is being conducted now in order to determine at what CO2 levels all effects on target organs disappear. This is important, as improved scrubber design makes it possible to approach threshold CO2 levels in submarines. V.L.

A80-43208 # **Atmospheric monitoring for submarine applications.** J. E. Rice and B. A. Pilon (Bendix Corp., Communications Div., Ann Arbor, Mich.). *American Society of Mechanical Engineers, Intersociety Environmental Systems Conference, San Diego, Calif., July 14-17, 1980, Paper 80-ENAs-33.* 6 p. Members, $1.50; nonmembers, $3.00.

The Central Atmospheric Monitoring Systems (CAMS-Mark II) are described, noting that they will have the capability to provide data on all non-reactive gases in the range of 2 to 300 amu in concentrations, at the parts per million (ppm) or fractional ppm level. The discussion reviews the following items: (1) the development of atmospheric monitoring instrumentation, (2) the requirements of the new CAMS-II system, (3) the effect of these requirements on design options, and (4) a general description of the trade-off and selection of a mass spectrometer. M.E.P.

A80-43209 * # **NASA-Ames Life Sciences Flight Experiments program - 1980 status report.** W. E. Berry, C. C. Dant, G. MacLeod

(GE Management and Technical Services Co., Moffett Field, Calif.), and B. A. Williams (NASA, Ames Research Center, Moffett Field, Calif.). *American Society of Mechanical Engineers, Intersociety Environmental Systems Conference, San Diego, Calif., July 14-17, 1980, Paper 80-ENAs-34.* 3 p. Members, $1.50; nonmembers, $3.00.

The paper deals with the ESA's Spacelab LSFE (Life Sciences Flight Experiments) program which, once operational, will provide new and unique opportunities to conduct research into the effects of spaceflight and weightlessness on living organisms under conditions approximating ground-based laboratories. Spacelab missions, launched at 18-month intervals, will enable scientists to test hypotheses from such disciplines as vestibular physiology, developmental biology, biochemistry, cell biology, plant physiology, and similar life sciences. V.P.

A80-43210 # **A monitor for atmospheric composition and contaminants in closed environments.** R. M. Cason and M. E. Koslin (Perkin-Elmer Corp., Pomona, Calif.). *American Society of Mechanical Engineers, Intersociety Environmental Systems Conference, San Diego, Calif., July 14-17, 1980, Paper 80-ENAs-35.* 5 p. Members, $1.50; nonmembers, $3.00. Contract No. N00024-79-C-5689.

Exploration of the sea necessitates research on the long-term effects of a closed controlled atmosphere on man. Submarine atmosphere analyzers have been developed, including the Central Atmospheric Monitoring System (CAMS I). CAMS I represents an accurate and reliable monitoring system, but lacks flexibility. CAMS II is a flexible system with a minimum of operator interface. (Author)

A80-43211 * # **Life sciences experiments on Spacelab 1.** M. C. Buderer and G. A. Salinas (NASA, Johnson Space Center; GE Management and Technical Services Co., Houston, Tex.). *American Society of Mechanical Engineers, Intersociety Environmental Systems Conference, San Diego, Calif., July 14-17, 1980, Paper 80-ENAs-36.* 4 p. Members, $1.50; nonmembers, $3.00.

The objectives and procedures regarding various biological experiments to be conducted on Spacelab 1 are reviewed. These include the mapping of the HZE cosmic ray particle flux within the Spacelab module, investigating the effects of nullgravity on circadian cycles in the slime mold, Neurospora crassa, and measuring nutations of the dwarf sunflower, Helianthus annus. Emphasis is placed on research regarding possible changes in vestibulocular reflexes, vestibulospinal pathways, cortical functions involving perception of motion and spatial susceptibility. Also discussed are experiments regarding erythrokinetics in man and the effects of prolonged weightlessness of the humoral immune response in humans. J.P.B.

A80-43212 * # **Evaluation of biological models using Spacelab.** D. Tollinger (GE Management and Technical Services Co., Moffett Field, Calif.) and B. A. Williams (NASA, Ames Research Center, Moffett Field, Calif.). *American Society of Mechanical Engineers, Intersociety Environmental Systems Conference, San Diego, Calif., July 14-17, 1980, Paper 80-ENAs-38.* 7 p. 30 refs. Members, $1.50; nonmembers, $3.00. Contract No. NAS9-15850.

Biological models of hypogravity effects are described, including the cardiovascular-fluid shift, musculoskeletal, embryological and space sickness models. These models predict such effects as loss of extracellular fluid and electrolytes, decrease in red blood cell mass, and the loss of muscle and bone mass in weight-bearing portions of the body. Experimentation in Spacelab by the use of implanted electromagnetic flow probes, by fertilizing frog eggs in hypogravity and fixing the eggs at various stages of early development and by assessing the role of the vestibulocular reflex arc in space sickness is suggested. It is concluded that the use of small animals eliminates the uncertainties caused by corrective or preventive measures employed with human subjects. J.P.B.

A80-43213 * # **The development of a Space Shuttle Research Animal Holding Facility.** R. B. Jagow (Lockheed Missiles and Space Co., Inc., Sunnyvale, Calif.). *American Society of Mechanical Engineers, Intersociety Environmental Systems Conference, San Diego, Calif., July 14-17, 1980, Paper 80-ENAs-39.* 6 p. Members, $1.50; nonmembers, $3.00. Contract No. NAS2-10128.

The ability to maintain the well being of experiment animals is of primary importance to the successful attainment of life sciences flight experiment goals. To assist scientists in the conduct of life sciences flight experiments, a highly versatile Research Animal Holding Facility (RAHF) is being developed for use on Space Shuttle/Spacelab missions. This paper describes the design of the RAHF system, which in addition to providing general housing for various animal species, approximating the environment found in ground based facilities, is designed to minimize disturbances of the specimens by vehicle and mission operations. Life-sustaining capabilities such as metabolic support and environmental control are provided. RAHF is reusable and is a modular concept to accommodate animals of different sizes. The basic RAHF system will accommodate a combination of 24 500-g rats or 144 mice or a mixed number of rats and mice. An alternative design accommodates four squirrel monkeys. The entire RAHF system is housed in a single ESA rack. The animal cages are in drawers which are removable for easy access to the animals. Each cage contains a waste management system, a feeding system and a watering system all of which will operate in zero or one gravity. (Author)

A80-43214 * # **Experiment operations in Spacelab.** J. A. Giannovario (GE Management and Technical Services Co., Moffett Field, Calif.). *American Society of Mechanical Engineers, Intersociety Environmental Systems Conference, San Diego, Calif., July 14-17, 1980, Paper 80-ENAs-40.* 6 p. 8 refs. Members, $1.50; nonmembers, $3.00. Contract No. NAS9-15850.

A review is presented of laboratory procedures which are expected to be used in Life Sciences experiments on Spacelab. The impact of hypogravity on these procedures is discussed. Specimen treatments with solutions, 'snap' freezing, and micro-mass measurements are explored in detail. Potential solutions for these operational problems are offered. (Author)

A80-43215 # **O2 sensing for environmental control and monitoring systems.** J. D. Fuller and F. P. Rudek (General Electric Co., Space Div., Philadelphia, Pa.). *American Society of Mechanical Engineers, Intersociety Environmental Systems Conference, San Diego, Calif., July 14-17, 1980, Paper 80-ENAs-41.* 5 p. Members, $1.50; nonmembers, $3.00.

The General Electric oxygen (O2) partial pressure sensor has an operational record including thousands of hours of flight time accumulated during the NASA Skylab and Apollo-Soyuz missions. It was selected for use on the joint Soviet-American Apollo-Soyuz flight as well as the upcoming Shuttle and European Spacelab programs. In Shuttle and Spacelab, the sensor will perform the same function as the Skylab application which was to provide the control signal for maintaining proper O2 levels in the two gas (O2/N2) cabin atmosphere. The sensor is a self-contained, self-powered electrochemical cell which generates a millivolt signal as a function of the O2 partial pressure in the environment being monitored. The millivolt signal generated is automatically compensated for temperature and, if required, further conditioned to be compatible with end item telemetry and instrumentation systems. The General Electric O2 sensor has evolved into a device suitable wherever continuous real-time monitoring of O2 is critical and has been successfully adapted to a wide range of man-rated environmental control systems in addition to that of the spacecraft cabin O2 monitor described above. (Author)

A80-43216 # **Maintainable maintenance disconnect valve /MMDV/ for on-orbit component replacement.** T. E. Burr, C. K. Boynton, and A. O. Brouillet (United Technologies Corp., Hamilton Standard Div., Windsor Locks, Conn.). *American Society of Mechanical Engineers, Intersociety Environmental Systems Conference, San Diego, Calif., July 14-17, 1980, Paper 80-ENAs-42.* 5 p. Members, $1.50; nonmembers, $3.00.

Future long duration space missions will require maintenance disconnect valves to support on-orbit removal and replacement of fluid line components. The Maintainable Maintenance Disconnect Valve (MMDV), a lightweight disconnect valve developed specifically to simplify EVA and IVA zero 'g' fluid component replacement is described. A probe version of the MMDV is examined which simplifies the replacement of small components, such as instruments, in liquid lines. The MMDV is a rugged, compact, positive isolation valve that permits component attachment to fixed plumbing and provides component replacement without liquid spillage or air inclusion. Thus, servicing operations on liquid loops on-orbit can be accomplished without the need for evacuation and backfilling. Applications described include the 25 Kw power system, space operations center, orbital transfer vehicle, and permanent space-based vehicle liquid loops. (Author)

A80-43217 # **Anti-exposure suits in the VP community.** B. F. Withers (U.S. Navy, Pacific Fleet, San Diego, Calif.). *American Society of Mechanical Engineers, Intersociety Environmental Systems Conference, San Diego, Calif., July 14-17, 1980, Paper 80-ENAs-43.* 3 p. Members, $1.50; nonmembers, $3.00.

The paper considers engineering/operational interface involved in the design as regards human factors engineering, production, and maintenance of an appropriate quick-donning anti-exposure suit for the patrol community. Requirements are significantly different from those of the tactical air community. The patrol community flies longer missions into areas where rescue often cannot be effected for several hours. The longer missions make a constant wear garment totally impractical, but increased rescue time mandates that the garment be capable of sustaining life for many hours in water temperature less than 40 F. Drawing board systems are often impractical in the fleet situation. Systems often sacrifice maintainability for sophistication of function which must be viewed very critically; all of the above factors must be integrated to produce a reliable, effective anti-exposure suit for the patrol community. (Author)

A80-43218 # **The classification of spinal column deformities resulting from aircraft ejection forces.** L. E. Kazarian (USAF, Aerospace Medical Research Laboratories, Wright-Patterson AFB, Ohio). *American Society of Mechanical Engineers, Intersociety Environmental Systems Conference, San Diego, Calif., July 14-17, 1980, Paper 80-ENAs-44.* 8 p. 10 refs. Members, $1.50; nonmembers, $3.00. AF Project 7231-11-01. (AMRL-TR-80-38)

Fractures, dislocations and fracture dislocations of the spinal column occur, with relative frequency, as the result of emergency escape from high performance USAF tactical aircraft. For purposes of vertebral column research, current methods for classifying operational injuries are inadequate. Injury identification and classification techniques vary to such a degree, comparison between injury types and mechanisms are invalid. The purpose of this paper is to formulate a consistent classification of spinal column injuries categorized according to engineering assessment and interpretation of roentgenographic changes in spinal column elements and regions. Spinal injury modes are classified according to direction of applied load with the resulting skeletal deformities. (Author)

A80-43219 * # **The factors influencing the formation of Li2CO3 from LiOH and CO2.** S. H. Davis, Jr. (Rice University, Houston, Tex.) and L. D. Kissinger (NASA, Johnson Space Center, Houston, Tex.). *American Society of Mechanical Engineers, Intersociety Environmental Systems Conference, San Diego, Calif., July 14-17, 1980, Paper 80-ENAs-45.* 6 p. Members, $1.50; nonmembers, $3.00.

LiOH is used to remove CO2 from the atmosphere in three environmental control systems of the Shuttle program, and the investigation of the performance dependent parameters for the CO2 reaction with LiOH is reported. Emphasis is placed on LiOH quality acceptance criteria and on identifiying the relationships between the reaction rate and the following independent parameters: temperature, CO2 partial pressure (PP), H2O concentration in the solid, amount of remaining LiOH and the porosity of the LiOH pellets. Results showed that the reaction rate is proportional to the CO2 PP for PP at least as high as 40 mm Hg (5330 N/sq m). It is also noted that a significant difference in the reactivity of wet and dry LiOH was not detected. J.P.B.

A80-43220 * # **Development of a preprototype thermoelectric integrated membrane evaporation subsystem for water recovery.** H. E. Winkler (NASA, Johnson Space Center, Houston, Tex.) and G. J. Roebelen, Jr. (United Technologies Corp., Hamilton Standard Div., Windsor Locks, Conn.). *American Society of Mechanical Engineers, Intersociety Environmental Systems Conference, San Diego, Calif., July 14-17, 1980, Paper 80-ENAs-46.* 8 p. Members, $1.50; nonmembers, $3.00.

A three-man urine water recovery preprototype subsystem using a new concept to provide efficient potable water recovery from waste fluids on extended duration space flights has been designed, fabricated, and tested. Low power, compactness, and gravity insensitive operation are featured in this vacuum distillation subsystem that combines a hollow fiber polysulfone membrane evaporator with a thermoelectric heat pump. Application and integration of these key elements have solved problems inherent in previous reclamation subsystem designs. The hollow fiber elements provide positive liquid/gas phase control with no moving parts other than a waste liquid recirculation pump and a product water withdrawal pump. Tubular membranes provide structural integrity, improving on previous flat sheet membrane designs. A thermoelectric heat pump provides latent energy recovery. (Author)

Method and automated apparatus are disclosed for determining the time of detection of metabolically produced hydrogen by coliform bacteria cultured in an electroanalytical cell from the time the cell is inoculated with the bacteria. The detection time data provides bacteria concentration values. The apparatus is sequenced and controlled by a digital computer to discharge a spent sample, clean and sterilize the culture cell, provide a bacteria nutrient into the cell, control the temperature of the nutrient, inoculate the nutrient with a bacteria sample, measures the electrical potential difference produced by the cell, and measures the time of detection from inoculation.

CHANGE IN RADIOSENSITIVITY OF RATS DURING HYPOKINETIC STRESS

I. P. Chernov Jan. 1980 11 p refs Transl. into ENGLISH from Radiobiologiya (USSR), no. 4, 1978 p 574-578 Transl. by Scientific Translation Service, Santa Barbara, Calif.
(Contract NASw-3198)
(NASA-TM-75968) Avail: NTIS HC A02/MF A01 CSCL 06C

The laws governing stress modification of radiation sickness in relation to hypokinetic stress were investigated. It was found that gamma irradiation (800 rad) of rats on the third day of exposure to hypokinesia increased the radiosensitivity of the animals which was determined by the survival rate and the dynamics of body weight and the weight of some internal organs. The same radiation dose was given on the 20th day of hypokinesia and on the third day of recovery from the 20 day hypokinesia decreased the radiosensitivity of rats. It is concluded that the variations in the radiosensitivity observed may be due to a stress effect of hypokinesia. R.E.S.

COUNTERCURRENT DISTRIBUTION OF BIOLOGICAL CELLS Final Report, 1 Jan. 1978 - 31 Mar. 1979

D. E. Brooks Mar. 1979 46 p refs
(Contract NAS8-32817)
(NASA-CR-161487) Avail: NTIS HC A03/MF A01 CSCL 06C

A neutral polymer phase system consisting of 7.5 percent dextran 40/4.5 percent PEG 6, 0 11 M Na phosphate, 5 percent fetal bovine serum (FBS), pH 7.5, was developed which has a high phase droplet electrophoretic mobility and retains cell viability over many hours. In this and related systems, the drop mobility was a linear function of drop size, at least in the range 4-30 micron diameter. Applications of and electric field of 4.5 v/cm to a system containing 10 percent v/v bottom phase cleared the system more than two orders of magnitude faster than in the absence of the field. At higher bottom phase concentrations a secondary phenomenon intervened in the field driven separations which resulted in an increase in turbidity after clearing had commenced. The increase was associated with a dilution of the phase system in the chamber. The effect depended on the presence of the electric field. It may be due to electroosmotic flow of buffer through the Amicon membranes into the sample chamber and flow of phase system out into the rinse stream. Strategies to eliminate this problem are proposed. R.E.S.

EFFECT OF SHARPLY LOWERED MUSCULAR ACTIVITY ON THE THYROID GLAND OF THE WHITE RAT

K. Bekishev Apr. 1980 9 p refs Transl. into ENGLISH from Izv. Akad. Kaz. Khim. SSR, (USSR) no. 2, Mar. - Apr. 1978 p 75-78 Transl. by Kanner (Leo) Associates, Redwood, Calif.
(Contract NASw-3199)
(NASA-TM-76114) Avail: NTIS HC A02/MF A01 CSCL 06C

The effect of hypokinesia on the thyroid gland of 200 white rats was studied. The rats were kept in 16x6x6 cm cages for 90 days. The functional activity of the thyroids increased after 24 hrs of partial immobilization and peaked after 15 days. After 30 days of immobilization, the functional activity returned to normal in one third of the test animals and after 60 days in all animals. After 15 days of immobilization, the test animals began to lose weight (in comparison to the controls) and remained underweight for the rest of the test period (up to 90 days). When returned to normal conditions, they caught up with and even overtook in weight the control animals after about 1 month. All changes produced by hypokinesia were reversible after 1 month. Author

THE EFFECT PRODUCED BY PHENOBARBITAL, SEX HORMONE AND BY CASTRATION ON THE DEVELOPMENT OF GASTRIC MUCOSA DESTRUCTION DUE TO ELECTRIZATION OF IMMOBILIZED RATS

P. S. Botsolin May 1980 7 p refs Transl. into ENGLISH from Farmakol. Toksikol. (USSR), v. 31, no. 2, 1968 p 197-199 Transl. by Kanner (Leo) Associates, Redwood City, Calif.
(NASA-TM-76156) Avail: NTIS HC/ A02/MF A01 CSCL 06C

The action of phenobarbital on the development of gastric mucosa destruction in rats, brought on through three hours of electrization of immobilized animals, was studied. The evidence showed that phenobarbital exerts a preventive action on the development of destructive lesions affecting the gastric mucosa in non-castrated rats of both sexes, in non-castrated males receiving testosterone propionate, as well as in castrated males and non-castrated females receiving diethylstilbestrol propionate. In castrated female rats, however, phenobarbital proved to be of little effect. Author

A myocardial transducer for simultaneously measuring force and displacement within a very small area of myocardium is disclosed. The transducer comprised of an elongated body forked at one end to form an inverted Y shaped beam with each branch of the beam constituting a low compliant tine for penetrating the myocardium to a predetermined depth. Bonded to one of the low compliance tines is a small piezoresistive element for converting a force acting on the beam into an electrical signal. A third high compliant tine of the transducer, which measures displacement of the myocardium in a direction in line with the two low compliant tines, is of a length that just pierces the surface membrane. A small piezoresistive element is bonded to the third tine at its upper end where its bending is greatest. Displacement of the myocardium causes a deformation in curvature of the third tine, and the second small piezoresistive element bonded to the surface of its curved end converts its deformation into an electrical signal.

ERROR ANALYSIS AND CORRECTIONS TO PUPIL DIAMETER MEASUREMENTS WITH LANGLEY RESEARCH CENTER'S OCULOMETER

C. L. Fulton (Purdue Univ.) and R. L. Harris, Jr. May 1980 17 p refs

(NASA-TM-81806) Avail: NTIS HC A02/MF A01 CSCL 06B

Factors that can affect oculometer measurements of pupil diameter are: horizontal (azimuth) and vertical (elevation) viewing angle of the pilot; refraction of the eye and cornea; changes in distance of eye to camera; illumination intensity of light on the eye; and counting sensitivity of scan lines used to measure diameter, and output voltage. To estimate the accuracy of the measurements, an artificial eye was designed and a series of runs performed with the oculometer system. When refraction effects are included, results show that pupil diameter is a parabolic function of the azimuth angle similar to the cosine function predicted by theory: this error can be accounted for by using a correction equation, reducing the error from 6% to 1.5% of the actual diameter. Elevation angle and illumination effects were found to be negligible. The effects of counting sensitivity and output voltage can be calculated directly from system documentation. The overall accuracy of the unmodified system is about 6%. After correcting for the azimuth angle errors, the overall accuracy is approximately 2%. Author

SOME PROBLEMS OF HUMAN ADAPTATION AND ECOLOGY UNDER THE ASPECT OF GENERAL PATHOLOGY

V. P. Kaznacheyev Jul. 1980 15 p refs Transl. into ENGLISH from Vestn. Akad. Med. Nauk SSSR (USSR), no. 11, Nov. 1979 p 51-57 Transl. by Kanner (Leo) Associates, Redwood City, Calif.

(NASA-TM-76095) Avail: NTIS HC A02/MF A01 CSCL 06S

The main problems of human adaptation at the level of the body and the population in connection with the features of current morbidity of the population and certain demographic processes are analyzed. The concepts of health and adaptation of the individual and human populations are determined. The importance of the anthropo-ecological approach to the investigation of the adaptation process of human populations is demonstrated. Certain features of the etiopathogenesis of diseases are considered in connection with the population-ecological regularities of human adaptation. The importance of research on general pathology aspects of adaptation and the ecology of man for planning, and organization of public health protection is discussed. Author

THE USE OF ANTIGRAVITY SUITS IN THE TREATMENT OF IDIOPATHIC ORTHOSTATIC HYPOTENSION

K. Landmark and S. Kravik Apr. 1980 8 p refs Transl. into ENGLISH from Tidsskr. Norske Laegeforen. (Norway), v. 99, no. 30, 1979 p 1530-1531 Transl. by Kanner (Leo) Associates, Redwood City, Calif.

(Contract NASw-3199)

(NASA-TM-75804) Avail: NTIS HC A02/MF A01 CSCL 06E

Idiopathic orthostatic hypotension is an uncommon disease characterized by a drop in blood pressure when going from a recumbent to a standing position. Treatment by medication generally produces poor results. Three patients at the Royal Hospital in Oslo were treated with antigravity suits and all were able to maintain adequate blood pressures in the standing position. One patient improved dramatically and was able to take short walks while wearing the suit. The two other patients, however, felt that wearing the suits eventually became uncomfortable. This treatment represents a useful treatment alternative for intractable cases. Author

THE EFFECT OF HYPODYNAMIA ON MINERAL AND PROTEIN METABOLISM IN CALCIFIED TISSUES OF THE MAXILLODENTAL SYSTEM (EXPERIMENTAL RADIOISOTOPE STUDY)

A. A. Prokhonchukov, Ye. A. Kovalenko, A. G. Kolesnik, Yu. I. Kondratyev, and N. A. Ilyushko Jul 1980 15 p refs Transl. into ENGLISH from Stomatologiya (USSR), v. 49, no. 4, 1970 p 1-6 Transl. by Kanner (Leo) Associates, Redwood City, Calif. Original doc. prepared by Central Dental Research Inst., Moscow

(Contract NASw-3199)

(NASA-TM-75998) Avail: NTIS HC A02/MF A01 CSCL 06P

Mineral and protein metabolism was studied in experiments on 60 white rats, using P-32 and Ca-45 uptake in the mineral fractions, 2C-14-glycine in the protein fractions, and P-32 in both fractions of calcified tissues as indices over a 100 day period of experimental hypodynamia. Combined alterations in mineral and protein metabolism occurred in the calcified tissues of the experimental animals. The most pronounced changes were found in P-32 and 2C-14-glycine metabolism. In the incisors and femoral bones, these alterations occurred in two phases: P-32 and 2C-14-glycine uptake first increased, then decreased. Changes in Ca-45 metabolism were less pronounced, particularly in the initial period of the experiment. A marked reduction in P-32, Ca-45, and 2C-14-glycine uptake was found in various fractions of the calcified tissues on the 100th day of experimental hypodynamia. Author

THE BEHAVIOR OF FATTY ACIDS IN THE BLOOD PLASMA OF MONKEYS FOLLOWING EXPOSURE TO SHORT TERM STRESSES

M. L. Michailov, U. Gnuechtel, S. Nitschkoff, R. Baumann, and G. Gnauck May 1980 [illegible] p refs Transl. into ENGLISH from Acta Biol. Med. Ger. (East Germany), v. 32, 1974 p 675-680 Transl. by Kanner (Leo) Associates, Redwood City, Calif. Original doc. prepared by East German Acad. of Sci.

(NASA-TM-76151) Avail: NTIS HC A02/MF A01 CSCL 06P

Monkeys exposed to short term stresses (immobilization, jealousy) were found to develop hyperlipacidemia with a rise in concentration of unsaturated fatty acids in blood plasma, especially of oleic acid, and a relative decrease of saturated free fatty acids, chiefly of palmitinic acid. This finding was more pronounced under immobilization stress than in the jealousy situation. Meanwhile, the composition of triglycerides did not change essentially under the conditions used. Author

HUMAN RESPONSE TO HYPOXIA-MOTION SICKNESS STRESS AS A PREDICTOR OF THE SPACE SICKNESS SYNDROME

Aaron V. Barson, Jr. Oct. 1979 6 p refs Presented at Intern. Aerospace Federation, Manila, 8-12 Oct. 1979 Sponsored by AE

(AF Proj. 7231)

(AD-A080306; AMRL-TR-79-86) Avail: NTIS HC A02/MF A01 CSCL 06/19

The change observed during the hypoxia runs supports the hypothesis that hypoxic states lower human tolerance to vestibular stimuli. The frequency of occurrence of symptoms in this study is encouraging since little change in presentation was found between the normoxia and hypoxia runs. Large variations in the symptom presentations would have indicated that hypoxia symptoms were being misread as motion sickness symptoms, thereby skewing the results. From these results it is obvious that a significant research effort is needed to futher delineate and verify the various aspects of this theory. Additional human investigations in one-g and zero-g are needed to verify that the proposed hemodynamic changes and oxygenation parameters potentiates or causes space sickness. Animal studies will be needed to quantify the type and amount of circulatory disruption and hypoxia caused by zero-g exposure. If hypoxia proves to be implicated in the space sickness syndrome, it may be possible to use this hypoxia-motion sickness stress response as an indicator (in earth gravity) of a person's susceptibility to zero-g space sickness. PRIMARY PRODUCTIVITY, HETEROTROPHY, METABOLIC INDICATORS OF STRESS AND INTERACTIONS IN ALGAL-BACTERIAL MAT COMMUNITIES AFFECTED BY A FLUCTUATING THERMAL REGIME Ph.D. Thesis

David Lawrence Tison 1980 44 p refs

(Contract EY-76-C-09-0001)

(DP-MS-80-14) Avail: NTIS HC A03/MF A01

Thermal habitats in effluent cooling waters from production nuclear reactors at the Savannah River Plant are unlike natural to ambient temperatures for unpredictable lengths of time. Rates of primary production, glucose heterotrophy, and the composition of algal-bacterial mat communities growing along a thermal gradient from about 50 to 35 C during periods of reactor operation were studied. Cyanobacteria were the only photoautotrophs in mat communities above 40 C while cyanobacteria and eucaryotic algae comprised the photoautotrophic component of mat communities below 40 C. The heterotrophic component of these communities above 40 C was made up to stenothermic and eurythermic thermophilic bacteria while both eurythermic thermophiles and mesophilic bacteria were found in communities below 40 C. Results of temperature shift experiments indicated that the short-term response of the photoautotrophic component of these communities to thermal stress was an increase in the percentage of photosynthate released extracellularly. THE EFFECT OF HEARING PROTECTORS ON THE PERCEPTION OF WARNING AND INDICATOR SOUNDS: A GENERAL REVIEW
P. A. Wilkins and A. M. Martin Aug. 1978 217 p refs
Sponsored by UK Health and Safety Executive
(ISVR-TR-98) Avail: NTIS HC A10/MF A01

The literature on the auditory effects of wearing hearing protectors was reviewed. A conceptual model of the perception process suggests that the three components, audibility, attention demand and recognition are of importance. Several suggested methods of predicting the audibility of complex sounds in noise are compared and their limitations highlighted. Although a number of studies consider the attention demand of warning sounds, it is concluded that they do not allow any firm conclusions on the effect of inattention to be drawn. Inconsistent use of hearing protectors could, via a temporary shift in the threshold of hearing, result in signals being inaudible when subsequently wearing hearing protectors. It is hypothesized that by reducing the loudness and changing the spectral character of sounds, hearing protectors may impair their attention demand value and their recognition by the wearer. An evaluation of the situation of workers who suffer from an existing noise-induced hearing loss suggests that when wearing hearing protection their perception of sounds in noise may be governed by their doubly elevated absolute thresholds rather than the masker threshold criteria relevant to those with normal hearing. AN EVALUATION OF MICROWAVE EMISSIONS FROM SENSORMATIC ELECTRONIC SECURITY SYSTEMS Final Report
Howard I. Bassen Feb. 1980 8 p refs
(PB80-155385; DHEW/PUB-FDA-80-8106) Avail: NTIS HC A02/MF A01 CSCL 13L

The concern over potential microwave radiation hazards associated with models of the Sensormatic Electronic Security System has recently been expressed by various groups in the public health, labor, and industrial sectors. Because of this concern, a reevaluation of these specific devices was initiated to confirm Bureau of Radiological Health measurements taken on early models of this device in 1971. The findings of both the early survey, and this more recent one, confirm the BRH's position that emissions from the Sensormatic devices fall well below current U. S. guidelines for permissible exposure of humans to microwave radiation. GRA

ADAPTIVE DELTA MODULATION FOR TELEPHONE BIOTELEMETRY OF ECG (ELECTROCARDIOGRAPH) Final Report
Surachai Suthasinekul Jun. 1979 57 p refs
(PB80-160773; LHNCBC-79-21) Avail: NTIS HC A04/MF A01 CSCL 06B

Signal processing techniques and their applications in biomedical communications were investigated. Emphasis was on the application of digital coding techniques in telephone biotelemetry of electrocardiograph (EEG) signals. Existing techniques for telephone biotelemetry are briefly reviewed, their shortcomings are identified, and some possible solutions to the problems are discussed. One particular approach is the application of adaptive delta modulation (ADM) for digital encoding of ECG. The design and implementation of such an ADM system in the laboratory indicates that three ADM-encoded ECGs can be time-division multiplexed and transmitted through one telephone channel. GRA

APPLIED BEHAVIOR ANALYSIS IN FLYING RESEARCH Interim Report, Jun. - Aug. 1978

Jon S. Bailey (Florida State Univ., Tallahassee) and Ronald G. Hughes Jan. 1980 17 p refs
(AF Proj. 1123)
(AD-A081750; AFHRL-TR-79-38) Avail: NTIS HC A02/MF A01 CSCL 05/9

Research developments in learning theory over the past 50 years have led to principles of behavior which have been shown in innumerable applied settings to be valuable in analyzing and modifying human behavior. When applied to flying training using simulators, these principles suggest that a significant contribution could be made in improving the way in which instructor pilots teach new students via more effective use of simulator functions. In addition, flying skills could probably be acquired more readily if tasks were presented in a more systematic manner, taking the principles of learning into account. When the simulator is conceptualized as merely an inferior copy of an aircraft, its potential as a teaching device (perhaps superior to the actual plane, in this regard) is likely to be overlooked. Thus, a behavioral analysis of optimal conditions of learning would make a major contribution to both the design and use of current and future flight simulators. In this report, an attempt is made to elucidate the basic principles of behavior and to relate them to the task of improving flying training. GRA

THE INFLUENCE OF THE FLIGHT ALTITUDE AND THE LIMITATION OF THE FIELD OF VIEW ON THE VISIBILITY OF TARGETS ON THE GROUND AND THE MAXIMUM VISIBILITY FLIGHT ALTITUDE

Hans-Eberhard Hoffmann Sep. 1979 44 p refs In GERMAN; ENGLISH summary Report will also be announced as translation (ESA-TT-654)
(DFVLR-FB-79-35; ESA-TT-654) Avail: NTIS HC A03/MF A01; DFVLR, Cologne DM 8,60

The visibility of targets on the ground for observers in an aircraft was studied. The maximum flight altitudes at which detection, recognition, or identification of ground targets is still possible were calculated under the assumption that the visibility distance is a logarithmic function of the altitude. The constants of this function were determined experimentally. Author (ESA)

TRANSIENT DIFFUSION IN MULTI-LAYER BIOLOGICAL TISSUE Ph.D. Thesis

Joseph Rasson 1979 126 p
Avail: Univ. Microfilms Order No. 8014852

The oxygen tension profile in the human cornea while a soft contact lens is in situ was investigated to answer some of the questions concerning the clinical application of soft contact lenses. A mathematical model of the cornea contact lens system was developed to predict the transient response of a Clark-type oxygen sensor pressed into the lens. Due to the lack of data on human corneal diffusion parameters, an analysis of the effect of different parameters on the oxygen tension profile was performed. The results indicate that the diffusion properties of corneal epithelium, specifically, its oxygen up-take rate and thickness, have dominant effects on oxygen tension under the lens. These findings could prove useful in determining which individuals can and cannot wear soft contact lenses. The diffusion property of the contact lens, its oxygen transmissibility, also has a significant effect on the oxygen tension under the lens. The agreement between the experimental results and the mathematical model indicates that the diffusion properties of the human cornea which exist in the literature are a reasonable estimation of actual normal diffusion parameters. Dissert. Abstr.

N80-27980 California Univ., Berkeley.

INSTRUMENTATION FOR THE MEASUREMENT OF VISCOSITY AND FLOW OF BIOLOGICAL FLUIDS Ph.D. Thesis

Lawrence Eugene Crooks 1979 223 p
Avail: Univ. Microfilms Order No. 8014642

Several ways to use nuclear magnetic resonance (NMR) to measure properties of fluids were investigated with emphasis on the measurement of fluid flow velocity. The technique also provided a measure of molecular self diffusion which was converted to the fluid's viscosity. The flow characteristic measured was a velocity distribution function which relates the fraction of fluid flowing to the fluid velocity. It is shown that a multiple pulse NMR sequence can be used to determine the velocity distribution. A self diffusion measurement gives the diffusion coefficient of a whole sample, whether it is stationary or flowing. It is also shown that varying the experiment timing, restricted diffusion can be observed and the size of biological miscelles can be estimated. The results of a study of diffusion in cervical mucus are presented. Results indicate that NMR relaxation time can also be used to determine the hemaglobin concentration in whole blood. Results of this type of measurement on leukemic whole blood and various blood fractions are presented. Dissert. Abstr.

EXPERIMENTAL GASTRIC ULCERS INDUCED BY IMMOBILIZATION AND ELECTRIC SHOCK OF RATS AND THEIR PHARMACOTHERAPY

O. N. Zabrodin May 1980 7 p refs Transl. into ENGLISH from Farmakol. Toksikol. (USSR), v. 28, no. 6, 1965 p 717-719 Transl. by Kanner (Leo) Associates, Redwood City, Calif.
(Contract NASw-3199)
(NASA-TM-76157) Avail: NTIS HC A02/MF A01 CSCL 06C

The mechanism of development of experimental gastric ulcers, induced in rats by combined immobilization and electric shock, was analyzed pharmacologically with peripheral neurotropic agents. It is concluded that: (1) The most marked preventive effect in the development of the experimentally induced gastric ulcers was displayed by agents capable of blocking the ascending activation system of the reticular formation. (2) Sympathetic fibers, which disrupt the trophism of the gastric wall, form the efferent portion of the reflex arc. (3) Gastric secretion does not appear to be the primary cause of ulceration. R.E.S.

EFFECT OF CENTRAL NEUROTROPIC SUBSTANCES ON THE HYPOPHYSISADRENAL CORTEX SYSTEM DURING IMMOBILIZATION OF ANIMALS

V. Ye. Ryzhenkov May 1980 9 p refs Transl. into ENGLISH from Farmakol. Toksikol. (USSR), v. 31, no. 5, 1968 p 545-548 Transl. by Kanner (Leo) Associates, Redwood City, Calif.
(Contract NASw-3199)
(NASA-TM-76158) Avail: NTIS HC A02/MF A01 CSCL 06C

The immobilization of guinea pigs for 5, 12, 24 and 48 hours, by securing to a slab, results in a persistent rise of the blood plasma 17-oxycorticosteroid concentration. Repeated administration of phenobarbital (50 mg/kg) and of the sodium salt of gamma-oxybutyric acid (500 mg/kg), as well as the combined administration of central m- and n-cholinolytics with small doses of phenobarbital tends to inhibit activation of the adrenal cortex during 48 hour immobilization of the animals. Repeated administration of aminazine (20 mg/kg) tends to decrease activation of the adrenal cortex. The administration of reserpine (0.1-5 mg/kg) 12-18 hours before immobilization of guinea pigs increases the response of the hypophysis-adrenal cortex system. Author

N80-27983*# National Aeronautics and Space Administration, Washington, D. C.

OXYGEN CONSUMPTION OF ANIMALS UNDER CONDITIONS OF HYPOKINESIA

Ye. N. Loginova, A. I. Volozhin, I. G. Krasnyku, and Ye. A. Stroganova May 1980 11 p refs Transl. into ENGLISH from Patol. Fiziol. Eksp. Ter. (USSR), no. 4, Jul.-Aug. 1975 p 32-36 Transl. by Scientific Translation Service, Santa Barbara, Calif. Original Doc. prepared by Med. Stomatological Inst., Moscow

(Contract NASw-3198)
(NASA-TM-76167) Avail: NTIS HC A02/MF A01 CSCL 06C

The influence of hypokinesia on the oxygen consumption of rats, dog, and squirrels was investigated. Three periods of gaseous exchange were revealed in rats under conditions of a limited motor activity. During the first 10-15 days O2 consumption displayed a sharp elevation; on the 20th-30th day, it became stabilized at a higher level (in comparison with control) and it sharply rose again on the 40th-100th day. In dogs, hypokinesia produced a reduction of O2 consumption and then a tendency to its elevation was seen. A short period of physical exercises in squirrels after hypokinesia led to increased oxygen consumption at rest. R.E.S.

N80-27987*# National Aeronautics and Space Administration, Washington, D. C.

EFFECT OF IMMOBILIZATION ON THE EEG OF THE BABOON. COMPARISON WITH TELEMETRY RESULTS FROM UNRESTRICTED ANIMALS

J. Bert and H. Collomb Apr. 1980 5 p refs Transl. into ENGLISH from Compt. Rend. Soc. Biol. (France) v. 159, no. 5, 1965 p 1202-1204 Transl. by Kanner (Leo) Associates, Redwood City, Calif.
(NASA-TM-76137) Avail: NTIS HC A02/MF A01 CSCL 06C

The EEG of the baboon was studied under two very different sets of conditions: 37 were totally immobolized while 12 were studied in their free movements with 4 channel telemetry. For the immobilized, 3 stages were described: (1) activation, record desynchronized; (2) rest with 13-15 cm/sec rhythm, like the human alpha rhythm stage but with eyes open or closed; (3) relaxation with a decrease in 13-15 rhythm and the appearance of 5-7 cm/sec theta waves, eyelids closed, animal apparently sleeping. For the free animals the rest stage appeared when the animal's attention was not directed anywhere and there was no relaxation stage. It is concluded that the EEG pattern of the immobilized animal that was described as the 'relaxation' stage really represents a special functional state which one must distinguish clearly from the physiological stages of sleep. R.E.S.

N80-27988*# National Aeronautics and Space Administration, Washington, D. C.

CALORIGENIC EFFECT OF ADRENALINE IN RATS UNDER CONDITIONS OF RESTRICTED MOTOR ACTIVITY

L. Tomaszewska, H. Kaciuba-Uscilko, and S. Kozlowski Jun. 1980 8 p refs Transl. into ENGLISH from Artif. Satell. (Poland), 1/2, 1973 p 75-80 Presented at Symp. on Cosmic Biol. and Med., Warsaw, 12-17 Jun. 1972 Translation was announced as A74-20558 Transl. by Scientific Translation Service, Santa Barbara, Calif
(Contract NASw-3198)
(NASA-TM-76192) Avail: NTIS HC A02/MF A01 CSCL 06C

In previous studies, it was demonstrated that long term restricted motor activity in rats induces a decrease in body weight, an increase in release of adrenaline, and a decrease in the release of noradrenaline with the urine, as well as a reduction in activity of the thymus gland and level of thyroxin in the blood. At the same time, a decrease was found in the internal body temperature that was accompanied by an increase in the rate of metabolism in the state of rest. An investigation is presented which attempts to clarify whether the calorigenic effect of adrenaline under conditions of increased metabolism in the period of immobility is exposed to changes. DISPLACEMENT OF PLASMA PROTEIN AND CONDUCTION VELOCITY IN RATS UNDER ACTION OF ACCELERATION FORCES AND HYPOKINESIA

S. Baranski, Z. Edelwejn, and M. Wojtkowiak Jun. 1980 10 p refs Transl. into ENGLISH from Postepy Astronautyki (Poland), v. 5, no. 2, 1972 p 61-70 Original language document annouced as A73-17769 Transl. by Kanner (Leo) Associates, Redwood City, Calif. Original doc. prep. by Military Academy of Aviation Medicine, Warsaw
(NASA-TM-76195) Avail: NTIS HC A02/MF A01 CSCL 06C

The permeability of capillary vessels was investigated in order to determine if acceleration alone or following prolonged hypokinesia would induce changes in the vascular wall leading to the penetration by I-albumins and/or proteins with larger molecules. In rats undergoing action of +5 Gz accelerations, no increase in vascular permeability, as tested with the use of (Cr-5k)-globulin, was demostrated. In rats immobilized for 4 weeks before centrifugation, rather weak migration of (Cr-51)-globulin from the vessels was observed. Immobilization resulted also in lowering of conduction velocity in the sciatic nerve. R.E.S.

EXPERIMENTAL CORONARY SCLEROSIS INDUCED BY IMMOBILIZATION OF RABBITS: A NEW MODEL OF ARTERIOSCLEROSIS

V. V. Tyavokin and W. W. Tjawokin Jun. 1980 19 p refs Transl. into ENGLISH from Virchows Arch., A. (West Germany), v. 346, 1969 p 29-45 Transl. by Kanner (Leo) Associates, Redwood City, Calif.
(Contract NASw-3198)
(NASA-TM-76196) Avail: NTIS HC A02/MF A01 CSCL 06C

A new method for producing arteriosclerosis with coronary insufficiency in rabbits by means of immobilization is described and discussed. The experimentally induced atherosclerosis develops due to hypodynamics imposed by the reduced muscular activity without overloading with exogenous cholesterol. The atherosclerosis and coronary insufficiency are associated. With variations in the duration and extent of immobilization, coronary insufficiency alone or with atherosclerosis can be produced. R.E.S.

EFFECTS OF HYPODYNAMIA ON THE HEMOCOAGULATIVE PROPERTIES OF THE VASCULAR WALL AND MYOCARDIUM

V. I. Inchina Jun. 1980 9 p refs Transl. into ENGLISH from Kardiologiya (USSR),v. 18, no. 3, Mar 1978, p 126-129 Transl. by Kanner (Leo) Associates, Redwood City, Calif.
(NASA-TM-76199) Avail: NTIS HC A02/MF A01 CSCL 06C

The hemocoagulative properties of the aorta (laminar), myocardium, hollow veins, and fibrinolytic capacity of tissues were studied in 14 rabbits subjected to 7 days of restricted mobility and compared to those of 10 control animals. Two tables of results show that, as a result of hypodynamia, the thromboplastic activity of the inner and middle layers of the aorta together with the destruction of endothelium increases the hemocoagulative potential and creates the threat of thrombogenesis. There is also an increase in fibrin-stabilizing activity for all tissues. Author

EFFECTS OF IMMOBILIZATION ON SPERMIOGENESIS

E. R. Meitner 30 Jul. 1980 14 p refs Transl. into ENGLISH from Acta Anat. (Switzerland), no. 95, 1976 p 300-308 Transl. by Kanner (Leo) Associates, Redwood City, Calif. Original doc. prep. by Comenius Univ. of Bratislava, Czecholovakia
(Contract NASw-3199)
(NASA-TM-76282) Avail: NTIS HC A02/MF A01 CSCL 06C

The influence of immobilization stress on spermiogenesis in rats was investigated. After 96 hour immobilization, histological changes began to manifest themselves in the form of practically complete disappearance of cell population of the wall of seminiferous tubule as well as a markedly increased number of cells with pathologic mitoses. Enzymological investigations showed various changes of activity (of acid and alkaline phosphatase and nonspecific esterase) in the 24, 48, and 96 hour immobilization groups. R.E.S.

RESULTS OF STUDIES OF PULSED BLOOD FLOW AND REGIONAL VASCULAR TONUS DURING FLIGHTS IN THE FIRST AND SECOND EXPEDITIONS ABOARD THE SALYUT-6 - SOYUZ ORBITAL COMPLEX

V. F. Turchaninova and M. V. Domracheva *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 14, No. 3, 1980 (JPRS-75956) 27 Jun. 1980 p 13-18 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 14, no. 3, 1980 p 11-14

Avail: NTIS HC A08/MF A01

The dynamics of pulse blood filling and regional vascular tone was studied in the crewmembers of 96 and 140 day flights aboard the station Salyut-6 - Soyuz. Measurements were taken before, during and after flights, using a specially designed tetrapolar rheography. Rheograms of the torso, forearms, legs, and rheoencephalograms of the right and left hemispheres in the frontal-mastoidal lead were recorded. The results show that in zero-g the cosmonauts developed typical hemodynamic changes indicative of cephalad blood shifts. Author

CIRCULATION IN EXERCISING CREW MEMBERS OF THE FIRST MAIN EXPEDITION ABOARD SALYUT-6

V. S. Georgiyevskiy, N. A. Lapshina, L. Ya. Andriyako, L. C. Umnova, V. G. Doroshev, I. V. Alferova, V. N. Ragozin, and Ye. A. Kobzev *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 14, No. 3, 1980 (JPRS-75956) 27 Jun. 1980 p 19-23 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 14, no. 3, 1980 p 15-18

Avail: NTIS HC A08/MF A01

During the 96 day flight aboard the Salyut-6 station the crewmembers showed a satisfactory response to bicycle ergometry of moderate load. However, cardiovascular regulation during exercise declined, particularly by the end of the first and the begining of the second month. This was mainly associated with deconditioning due to an inadequate work load. Its increase helped to restore an initial level of circulation during exercise by the end of the mission. Author

EFFECT OF WEIGHTLESSNESS AND ARTIFICIAL GRAVITY ON ION-REGULATING FUNCTION OF RAT KIDNEYS

Ye. A. Ilin, Yu. V. Natochin, N. A. Ilyushko, Yu. I. Kondratyev, V. T. Bakhteyeva, Ye. M. Gazhala, O. A. Gomcharevskaya, Ye. A. Lavroua, and Ye. I. Shakhmatova *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 14, No. 3, 1980 (JPRS-75956) 27 Jun. 1980 p 29-34 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 14, no. 3, 1980 p 21-25

Avail: NTIS HC A08/MF A01

Weightless rats showed greater changes in the fluid-electrolyte metabolism and ion regulatory function of the kidneys than centrifuged rats. During water loads they exhibited an increased sodium excretion. During potassium loads they displayed a higher potassium excretion. The study of electrolyte composition of different kidney segments demonstrated a reduced potassium content in the wet cortical and medullary matter due to elevated tissue hydration. Kidney microdissection did not reveal any structural differences in nephrons of the weightless and centrifuged rats. Author

ACTIVITY OF SOME HEPATIC ENZYMES AND LIPOGENETIC PROCESSES IN RAT AIPOSE TISSUE AFTER SPACE FLIGHT

L. Makho, Sh. Nemet, M. Palkovich, V. Shtrbak, and R. A. Tigranyan *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 14, No. 3, 1980 (JPRS-75956) 27 Jun. 1980 p 35-40 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 14, no. 3, 1980 p 26-29

Avail: NTIS HC A08/MF A01

The rats flown aboard Cosmos-782 showed a significant increase in the activity of tyrosine aminotransferase and tryptophan pyrolase, i.e., the enzymes whose activity depends on the corticosterone level. The synchronous rats displayed a small increase in the enzyme activity. The flight and synchronous animals exhibited a slight increase in the activity of gluconeogenetic enzymes and a decrease in the activity of glucose-6-phosphatase. Immediately after flight and, to a lesser extent, after the synchronous experiment the activity of lipogenetic enzymes decreased. On the R+25 day the enzyme activity remained unchanged. The study of lipogenesis in the epididymal fat, using C14-glucose incorporation into lipids, did not reveal any differences in the flight and synchronous rats. The findings demonstrated that changes in the enzyme activity induced by the flight and synchronous experiments returned to the normal during readaptation. Author

STATE OF RAT THYROID C CELLS FOLLOWING FLIGHTS ON THE COSMOS TYPE OF BIOSATELLITES (ACCORDING TO RESULTS OF A MORPHOLOGICAL STUDY)

G. I. Plakhuta-Plakutina *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 14, No. 3, 1980 (JPRS-75956) 27 Jun. 1980 p 41-46 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 14, no. 3, 1980 p 29-33

Avail: NTIS HC A08/MF A01

Calcitonin-secreting cells (C-cells) of the thyroid glands from 51 SPF Wistar rats flown for 18.5 to 22 days aboard biosatellites Cosmos-605, 782 and 936 and sacrificed 4.5-13 hours, 1-2 and 25-27 days after recovery were examined histologically and karyometrically. Vivarium (57) and synchronous (58) rats were used as controls. Variations in the nuclear volume of C-cells and their density were shown to depend on the experimental conditions and time interval elapsed after recovery. Morphological changes in C-cells were assumed to be associated with alterations in calcium metabolism during an exposure of rats to weightlessness, artificial gravity, and Earth gravity. Author

HUMAN COLOR DISCRIMINATING FUNCTION WITH MUSCULAR TENSION DURING EXPOSURE TO VESTIBULAR STIMULI

Zh. M. Kudryashova and A. A. Shipov *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 14, No. 3, 1980 (JPRS-75956) 27 Jun. 1980 p 60-64 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 14, no. 3, 1980 p 41-44

Avail: NTIS HC A08/MF A01

Human studies have demonstrated that arbitrary tension of muscle (back and legs) during repeated vestibular exposures not only delays the development of motion sickness but also contributes to the maintenance of color discriminative stability of the visual function. Author

N80-28005# Joint Publications Research Service, Arlington, Va.

EFFECT OF TRANSVERSE ACCELERATIONS ON INNERVATION OF THE GUINEA PIG'S CRURAL SKELETAL MUSCLES

V. Ya. Osaulenko *In its* USSR Rept.: Sapce Biol. and Aerospace Med., Vol. 14, No. 3, 1980 (JPRS-75956) 27 Jun. 1980 p 65-71 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 14, no. 3, 1980 p 44-48

Avail: NTIS HC A08/MF A01

Guinea pigs were exposed to chest-to-back acceleration of 8 G for an hour. This exposure brought about significant morphological changes of a primary-reactive pattern in nerve elements of skeletal leg muscles. With time they enhanced: 6 hours and then 3 days after the experiment a small portion (1-1.5%) of nerve fibers underwent fragmentation and degradation. Motor nerve endings showed the highest resistance. The first signs of restitution of changes in the peripheral nervous system were seen 6 days after the exposure. Nerve fibers did not return to the normal 9 days after the beginning of the experiment. Author

STUDIES OF PROGNOSTIC SIGNIFICANCE OF ANTIORTHOSTATIC POSITION

Kh. Kh. Yarullin, V. A. Gornago, T. D. Vasilyeva, and M. Ye. Gugushvili *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 14, No. 3, 1980 (JPRS-75956) 27 Jun. 1980 p 72-80 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 14, no. 3, 1980 p 48-54

Avail: NTIS HC A08/MF A01

The prognostic significance of head-down tilt at -15 deg and -30 deg for 6 min at each step was assessed in 40 normal men, aged 22 to 39. The study of mean values of the maximal amplitude, relative duration of the anacrotic phase, dicrotic, and diastolic indices of hemispheric and bimastoidal rheoencephalography as well as of health condition helped to determine cerebral circulation in test subjects with good and moderate tolerance to head-down tilt and to define the criteria of tilt tolerance. The test subjects who showed good tolerance to head-down tilt displayed a simultaneous compensatory increase of the tone of large caliber arteries and arterioles that was accompanied by a noticeable increase in cerebral pulse blood filling at -15 deg and a moderate increase at -30 deg as well as the feeling of a slight blood rush to the head. The test subjects who displayed moderate tolerance to heat-down tilt showed only an increase in the tone of large caliber vessels; they also exhibited a marked decrease in the tone of arterioles, venules, and veins (especially at -30 deg) which was combined with a significant increase in the cerebral pulse blood filing and an appearance of marked venous waves on rheoencephalograms. METHOD FOR ASSESSING HEMODYNAMICS AND DETECTING LATENT INSUFFICIENCY OF CEREBRAL CIRCULATION IN COSMONAUT CANDIDATES

D. A. Alekseyev *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 14, No. 3, 1980 (JPRS-75956) 27 Jun. 1980 p 110-116 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 14, no. 3, 1980 p 71-74

Avail: NTIS HC A08/MF A01

Experience in screening cosmonaut candidates shows that many of them present osteochondrosis of the cervical spine. In some of the selected individuals, the signs of intervertebral osteochondrosis are progressing. Osteophytes in this region sometimes cause ischemic circulatory disturbances in the vertebrobasilar system as a result of reflex angiospasm of vertebral arteries and mechanical compression of the latter. For this reason, it is very important to assess blood flow in the systems of the vertebral arteries (basilar and internal carotid) and determine the functional capabilities of collaterals and latent circulatory disturbances in the corresponding vascular reservoirs. A functional test used for this purpose, involving rotation of the head and throwing it back to an angle of 45 deg is described. J.M.S.

RESPIRATION AND GAS EXCHANGE UNDER HYPERBARIC CONDITIONS

L. A. Bryantseva, I. S. Breslav, and A. G. Dianov *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 14, No. 2, 1980 (JPRS-75654) 8 May 1980 p 1-14 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (USSR), v. 14, no. 2, Mar./Apr. 1980 p 3-10

Avail: NTIS HC A08/MF A01

The effects of hyperbaric environments on respiratory function are discussed. Respiratory mechanics, pulmonary ventilation, and oxygen and carbon dioxide transport are included. Particular attention is given to the respiratory system as a limiting factor for human performance in a hyperbaric environment. Optimization of gas mixtures used in undersea dives is discussed. J.M.S.

CIRCULATION AT REST IN CREW MEMBERS OF THE FIRST MAIN EXPEDITION ABOARD SALYUT 6

V. A. Degtyarev, V. G. Doroshev, V. M. Mikhaylov, V. S. Georgiyevskiy, S. A. Kobzev, Z. A. Kirillova, N. A. Lapshina, V. G. Savelyeva, and L. V. Umnova *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 14, No. 2, 1980 (JPRS-75654) 8 May 1980 p 15-19 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (USSR), v. 14, no. 2, Mar./Apr. 1980 p 11-14

Avail: NTIS HC A08/MF A01

Results of in-depth medical examinations of crew members who participated in the first expedition involving a 96 day space flight aboard the Salyut-6 orbital station are presented. Distinct variations of certain cardiovascular parameters exhibited an early stage, later returned to the normal. These changes are characteristics of individual processes of human adapatation to weightlessness. J.M.S.

STATE OF HUMAN BONE TISSUE PROTEIN FRACTION AFTER SPACE FLIGHTS

A. A. Prokhonchukov, V. K. Leontyev, N. A. Zhizhina, R. A. Tigranyan, A. G. Kolesnik, and N. A. Komissarova *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 14, No. 2, 1980 (JRPS-75654) 8 May 1980 p 20-26 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (USSR), v. 14, no. 2, Mar./Apr. 1980 p 14-18

Avail: NTIS HC A08/MF A01

Amino acid composition and bone mineralization were studied qualitatively and qualititatively on autopsy of the three crewmembers after their 28 day space flight aboard the orbital station Salyut 1. Sixteen amino acids were detected in the bone protein fraction: cystine and cysteine, lysine histidine, arginine, aspartic acid, serine, glycine, glutamic acid, threonine, alanine, proline, valine, phenylalanine, leucine and isoleucine, oxyproline. No abnormalities in the amino acid composition or the bone organic content were found in the postflight analysis. The role of protein matrices of calcified tissues in mechanisms of bone resistance and adaptation to space flight effects is discussed. J.M.S.

PRINCIPAL RESULTS OF PHYSIOLOGICAL EXPERIMENTS WITH MAMMALS ABOARD THE COSMOS-936 BIOSATELLITE

O. G. Gazenko, Ye. A. Ilin, A. M. Genin, A. R. Kotovskaya, V. I. Korolkov, R. A. Tigranyan, and V. V. Portugalov *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 14, No. 2, 1980 (JPRS-75654) 8 May 1980 p 33-37 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (USSR), v. 14, no. 2, Mar./Apr. 1980 p 22-25

Avail: NTIS HC A08/MF A01

The program of the 18.5 day flight of the biosatellite Cosmos-936 included studies of physiological effects of prolonged weightlessness (20 rats) and artificial gravity (10 rats). The latter produced a normalizing effect on the function of the myocardium, musculo-skeletal system, and excretory system. Simultaneously, artificial gravity exerted an adverse effect on the functions dependent on several sensors, primarily optic, vestibular, and motor sensors. It is postulated that the adverse effects are associated with a relatively high rate of rotation and a short arm of the centrifuge. Author

SEMICIRCULAR CANAL FUNCTION IN RATS AFTER FLIGHT ABOARD THE COSMOS-936 BIOSATELLITE

A. A. Shipov and V. G. Ovechkin *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 14, No. 2, 1980 (JPRS-75654) 8 May 1980 p 38-44 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (USSR), v. 14, no. 2, Mar./Apr. 1980 p 25-30

Avail: NTIS HC A08/MF A01

The nystagmic reflex, latent period, total and mean number of events, and their duration were measured in the rats flown for 18.5 days aboard the biosatellite Cosmos-936 under the conditions of weightlessness and artificial gravity. It is demonstrated that prolonged weightlessness did not influence the receptor formations and centers of semicircular canals. A long exposure to artificial gravity brought about a decrease in reactivity and sensitivity of semicircular canals. The mechanisms of these phenomena are discussed. J.M.S.

ROLE OF DYNAMIC SPACE FLIGHT FACTORS IN THE PATHOGENESIS OF INVOLUTION OF LYMPHATIC ORGANS (EXPERIMENTAL MORPHOLOGICAL STUDY)

A. S. Kaplanskiy and G. N. Durnova *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 14, No. 2, 1980 (JPRS-75654) 8 May 1980 p 45-52 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (USSR), v. 14, no. 2, Mar./Apr. 1980 p 30-35

Avail: NTIS HC A02/MF A01

The role of the dynamic factors in accidental involution of lymph organs was investigated in a ground based study simulating a 20 day space flight. It is inferred from the study that lymph organ involution observed in rats exposed to prolonged space flights is caused by chronic and acute stresses. Chronic stress is associated with weightlessness and leads to hypoplasia of lymphs organs; acute stress is connected with the transition from weightlessness to normal gravity (gravity stress), thus enhancing chronic stress induced lymph tissue hypoplasia. Spleens of both weightless and hypokinetic rats slow inhibition of erythropoiesis and accumulation of hemosiderine due to accelerated erythrocyte degradation caused by diminished motor activity. J.M.S.

FUNCTIONAL STATE OF THE CARDIOVASCULAR SYSTEM UNDER THE COMBINED EFFECT OF 28 DAY IMMERSION, ROTATION ON A SHORT-ARM CENTRIFUGE AND EXERCISE ON A BICYCLE ERGOMETER

I. F. Vil-Vilyams and Ye. B. Shulzhenko *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 14, No. 2, 1980 (JPRS-75654) 8 May 1980 p 63-68 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (USSR), v. 14, no. 2, Mar./Apr. 1980 p 42-45

Avail: NTIS HC A08/MF A01

The cardiovascular function of four test subjects exposed to 28 day dry immersion was examined before and after 6 day cycles of rotation in a short-arm centrifuge to provide 1 to 2 Gz, bicycle ergometer exercise, and their combination. An exposure to acceleration of 3 Gz in a 7.25 m arm centrifuge was used as a provocative test. The above countermeasures reduced but not eliminated entirely immersion-induced cardiovascular deconditioning. A combined use of acceleration of 1 to 2 Gz in a short-arm centrifuge and bicycle ergometer exercise can be recommended as a countermeasure against cardiovascular deconditioning in weightlessness. J.M.S.

PHARMACOLOGICAL ANALYSIS OF PHYSIOLOGICAL MECHANISMS OF ORTHOSTATIC HEMODYNAMIC STABILITY

L. I. Osadchiy *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 14, No. 2, 1980 (JPRS-75654) 8 May 1980 p 69-74 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (USSR), v. 14, no. 2, Mar./Apr. 1980 p 45-49

Avail: NTIS HC A08/MF A01

In urethane anesthesized cats, securinine brought about a distinct increase in compensatory reactions of arterial pressure and cardiac output during an upright tilt at 45 deg. The experiments also showed a substantial increase in compensatory recovery of the volume velocity of circulation in the posterior vena cava. Myorelaxant induced arrest of contractile function of skeletal muscles prior to securinine administration reversed compensatory reactions of arterial pressure and cardiac output during tilt test.

BIOELECTRIC ACTIVITY OF THE HUMAN BRAIN DURING AND AFTER 182-DAY ANITORTHOSATIC HYPOKINESIA

T. N. Krupina, Kh. Kh. Yarullin, and D. A. Alekseyev *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 14, No. 2, 1980 (JPRS-75654) 8 May 1980 p 75-83 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (USSR), v. 14, no. 2, Mar./Apr. 1980 p 49-54

Avail: NTIS HC A08/MF A01

Cerebral bioelectric activity of 18 healthy test subjects, aged 31 to 40, was examined during and after their 182 day head-down tilting. The test subjects were divided into a group that performed countermeasures (exercise, muscle stimulation) against hypokinesia-induced disorders and a control group. During the study EEG changes were most pronounced in the controls: alpha-rhythm amplitude, frequency, and index decreased; slow wave frequency reduced; index of zonal differences and amplitude beta and slow waves increased. Phasic changes in the central nervous system excitability in response to a flickering light of 6 to 25 cps were found. Typical changes in spontaneous EEG during a 3 min pulmonary hyperventilation test were enhanced. The study gives evidence that the dynamics of spontaneous EEG as well as cerebral bioelectric activity in response to flickering light and pulmonary hyperventilation are important indicators of the cerebral function, especially of the cortical activity decrease.

MORPHOMETRIC ANALYSIS OF GLOMERULES AND JUXTAGLOMERULA SYSTEM OF THE RAT KIDNEY IN THE COURSE OF EXPERIMENTAL HYPOKINESIA

I. P. Chernov and A. G. Gaffarov *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 14, No. 2, 1980 (JPRS-75654) 8 May 1980 p 84-89 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (USSR), v. 14, no. 2 Mar./Apr. 1980 p 54-47

Avail: NTIS HC A08/MF A01

A certain correlation between variations in the means of the volume of cortical and juxtamedullary glomerules and the function of the juxtaglomerular apparatus was established. It is hypothesized that at early hypokinesia renal vascular changes are nonspecific. The phenomenon of renal excretion of fluids and electrolytes is explained in terms of a simultaneous increase in the reninangiotensin activity and 11-hydroxycorticosteroid content in plasma.

EFFECT OF HYPOKINESIA ON CHANGES IN CARBOHYDRATE AND LIPID METABOLISM IN THE HEART AND LIVER

Yu. P. Rylnikov *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 14, No. 2, 1980 (JPRS-75654) 8 May 1980 p 90-96 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (USSR), v. 14, no. 2 Mar./Apr. 1980 p 57-62

Avail: NTIS HC A08/MF A01

The rate of assimilation of carbohydrates via glycolysis and the pentose-phosphate pathway, as well as changes in B bile in hypokinetic rabbits were studied. Results indicate that rigid immobilization of rabbits is accompanied by a reduction of glycolysis rate in the liver and, particularly, in the heart, and a simultaneous increase of the fraction of carbohydrate utilization in the pentose phosphate pathway. It is also followed by cholesterol accumulation in the blood and tissues in spite of an accelerated bile excretion of cholesterol and its derivatives, biles acids.
J.M.S.

N80-28030# Joint Publications Research Service, Arlington, Va.

EFFECT OF CONDITIONING FOR HYPOXIA ON FERTILITY OF WHITE MICE

V. B. Malkin and Ye. A. Stroganora *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 14, No. 2, 1980 (JPRS-75654) 8 May 1980 p 97-102 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (USSR), v. 14, no. 2, Mar./Apr. 1980 p 62-66

Avail: NTIS HC A08/MF A01

A prolonged effect of hypoxia on the reproductive function and development of pups of white mice was investigated. Beginning with the age of 2 months the animals were exposed to an altitude of 5500 m for 6 hours a day during 9 months: The mice that were so adapted to and mated in hypoxia did not deliver any offspring. The animals that were adapted to hypoxia during intrauterine and postnatal development and mated at 5500 m delivered normal although much smaller litters.

STUDY OF COMPATILIBITY OF CERTAIN HIGHER PLANTS AND CHLORELLA AS RELATED TO A BIOREGENERATIVE HUMAN LIFE SUPPORT SYSTEM

Yu. I. Shaydorov, B. N. Shebalin, and G. I. Meleshko *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 14, No. 2, 1980 (JPRS-75654) 8 May 1980 p 116-122 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (USSR), v. 14, no. 2, Mar./Apr. 1980 p 74-78

Avail: NTIS HC A08/MF A01

Mutual effects of Chlorella and higher plants cultivated together in a closed atmosphere are discussed. It can be inferred that gaseous products of Chlorella did not exert a significant effect on the carbon dioxide consumption by wheat and radish plants or on their biomass increment. In turn, gaseous products of higher plants did not or influence Chlorella growth. It can, therefore, be concluded that Chlorella and the above higher plants, when cultivated in a common atmosphere, do not inhibit each other and can be regarded as biologically compatible constituents of the photoautotrophic component of future bioregenerative life support systems.

NONLINEARITIES IN AUDITORY-NERVE FIBER RESPONSES TO BANDLIMITED NOISE: AN EXPERIMENTAL STUDY AND A MODEL Ph.D. Thesis

Thomas Barton Schalk 1980 222 p
Avail: Univ. Microfilms Order No. 8014270

Discharge rate was measured as a function of spectral level for noise bursts of one bandwidth and center frequency. Such rate level functions were measured for a number of bandwidths; either the low or high cutoff frequencies were set at fiber characteristic frequency (CF). Rate level functions were also measured, simultaneously, for single tones at CF. Dynamic range is defined as the range, in dB, over which rate increases from 10 percent to 80 percent of the maximum driven rate to CF tones. When pooling data across CF in single cats, dynamic range is an increasing function of fiber threshold for CF tones and noise stimuli. Narrow bands of noise produce rate-level functions that are similar to those for CF tones. For noise bands centered above CF, rate-level functions became less steep as bandwidth is increased, and are always monotonic. For wide bands of noise centered below CF, rate-level functions can be nonmonotonic or appear to plateau at rates less than the saturation rate to CF tones. Thus, wide bands of noise centered above or below CF can produce lower discharge rates than do narrowbands at the same spectral level. Dissert. Abstr.

MEASUREMENT OF LUNG FUNCTION USING MAGNETOMETERS. 1: PRINCIPLES AND MATHEMATICAL MODELING Progress Report

Donald L. Vawter Nov. 1979 54 p refs
(AD-A083910; MNRI-79-78; Rept-2) Avail: NTIS HC A04/MF A01 CSCL 06/16

The use of magnetometer systems to predict pulmonary air volumes was studied. The sensitivity of the system to angular rotations was found to be small because magnetometers are normally mounted to the subject. Seven mathematical models for predicing volume were investigated, with the finding that two parameter models are adequate for quiet breathing. For complicated maneuvers, a three-parameter model is necessary, and for predictive usefulness, the model must be calibrated using a complex maneuver. Results of studies of the dimensional changes, and the correlation between the dimensional changes, that occur during normal breathing are presented. Author

EFFECT OF HYPOKINESIA ON INVERTASE ACTIVITY OF THE MUCOSA OF THE SMALL INTESTINE

A. Abdusattarov Jun. 1980 5 p refs Transl. into ENGLISH from Uzb. Biol. Zh. (USSR), no. 1, 1978 p 61-62 Transl. by Kanner (Leo) Associates, Redwood City, Calif. Original doc. prepared by Academy of Sciences (USSR)
(NASA-TM-76191) Avail: NTIS HC A02/MF A01 CSCL 06P

The effect of prolonged hypokinesia on the enzyme activity of the middle portion of the small intestine was investigated. Eighty-four mongrel white male rats weighing 170-180 g were divided into two equal groups. The experimental group were maintained in single cages under 30 days of hypokinetic conditions and the control animals were maintained under ordinary laboratory conditions. It is concluded that rates of invertase formation and its inclusion in the composition if the cellular membrane, if judged by the enzyme activity studied in sections of the small intestine, are subject to phase changes in the course of prolonged hypokinesia. MORPHOFUNCTIONAL CORRELATIONS IN THE EXPERIMENTAL STUDY OF MYOCARDIOPATHIES UNDER THE STRESS OF FORCED RESTRAINT. NOTE 2: THE INFLUENCE OF ADRENAL IMBALANCE

M. Dinu, S. Dolinescu, and A. Sneer May 1980 12 p refs Transl. into ENGLISH from Rev. Med.-Chir. (Iasi) (Romania), no. 1, 1978 p 87-91 Transl. by Kanner (Leo) Associates, Redwood City, Calif. Orginal doc. prepared by Inst. of Med. and Pharmacy
(Contract NASw-3199)
(NASA-TM-76138) Avail: NTIS HC A02/MF A01 CSCL 06S

Tests were performed with 70 rats to determine the effects of restraint on the functions and structure of the myocardium under varying conditions of adrenal inbalance. Results showed that in rats with adrenal imbalance, fasting and restraint produced the same biochemical alterations as in the controls. The morphologic alteractions, as well as their electric expression, were more varied and evident in the animals with adrenal imbalance. Persistence of the microscopic and electrocardiographic alterations after 72 hours restraint in the animals subjected to unilateral adrenalectomy suggests chronic evolution of the myocardial lesions. This proves the necessity of intact adrenals for a good adaptability to stress. L.F.M.

(Contract NASw-3199)
(NASA-TM-76166) Avail: NTIS HC A02/MF A01 CSCL 06S

Prolonged hypokinesis (100-170 days) studied in 2000 rats kept in cages limiting their mobility provoked considerable changes in the gaseous and energetic metabolism: an elevation of the total gaseous metabolism and of the rate of O2 requirement by the muscles (in the late periods of hypokinesis) and a change in the intensity of tissue respiration of the liver and myocardium. There also proved to be a reduction in the level of phosphorylation and separation of oxidative phosphorylation in the myocardium, liver, and partially in the skeletal muscle. Prolonged hypokinesia led to changes in tissue metabolism: a disturbance of development of the animals, a marked delay and an increase in the weight of the organism and the muscular system, and disturbances of the mineral and protein metabolism. Prolonged hypokinesis also lead to exhaustion of the hypothalamus-hypophysis-adrenal cortex system. R.E.S.

THE RELATION BETWEEN TILT TABLE AND ACCELERATION-TOLERANCE AND THEIR DEPENDENCE ON STATURE AND PHYSICAL FITNESS

K. E. Klein, F. Backhausen, H. Bruner, J Eichhorn, D. Jovy, J. Schotte, L Vogt, and H. M. Wegman Apr. 1980 30 p refs Transl. into ENGLISH from Intern. A. Angew. Physiol. (West Germany), v. 26, 1968 p 205-226 Original language document announced as A69-21304 Transl. by Kanner (Leo) Associates, Redwood City, Calif.
(Contract NASw-3199)
(NASA-TM-75796) Avail: NTIS HC A03/MF A01 CSCL 06S

A group of 12 highly trained athletes and a group of 12 untrained students were subjected to passive changes of position on a tilt table and positive accelerations in a centrifuge. During a 20 min tilt, including two additional respiratory maneuvers, the number of faints and average cardiovascular responses did not differ significantly between the groups. During linear increase of acceleration, the average blackout level was almost identical in both groups. Statistically significant coefficients of product-moment correlation for various relations were obtained. The coefficient of multiple determination computed for the dependence of acceleration tolerance on heart-eye distance and systolic blood pressure at rest allows the explanation of almost 50% of the variation of acceleration tolerance. The maximum oxygen uptake showed the expected significant correlation to the heart rate at rest, but not the acceleration tolerance, or to the cardiovascular responses to tilting. L.F.M.

THE CONTENT OF CATECHOLAMINES IN THE ADRENAL GLANDS AND SECTIONS OF THE BRAIN UNDER HYPOKINESIA AND INJECTION OF SOME NEUROTROPIC AGENTS

B. E. Melnik and E. S. Paladiy Mar. 1980 10 p refs Transl. into ENGLISH from Biol. Nauki (USSR), v. 15, no. 11, 1972 p 45-49 Transl. by Kanner (Leo) Associates, Redwood City, Calif. Original doc. prep. by V. I. Lenin Kishinev State Univ. USSR
(Contract NASw-3199)
(NASA-TM-76010) Avail: NTIS HC A02/MF A01 CSCL 06S

The dynamics of catecholamine content were studied in the adrenal glands and in various region of the brain of white rats under hypokinesia and injections of neurotropic agents. Profound changes in body catecholamine balance occured as a result of prolonged acute restriction of motor activity. Adrenalin retention increased and noradrenanalin retention decreased in the adrenal glands, hypothalamus, cerebral hemispheres, cerebellum and medulla oblongata. Observed alterations in catecholamine retention varied depending upon the type of neurotropic substance utilized. Mellipramine increased catecholamine retention in the tissues under observation while spasmolytin brought about an increase in adrenalin concentration in the adrenals and a decrease in the brain. MECHANISM OF SELECTIVE LESION OF THE CARDIOVASCULAR SYSTEM IN PSYCHO-EMOTIONAL STRESS

Yu. M. Repin and V. G. Startsev Apr. 1979 14 p refs Transl. into ENGLISH from Vestn. Akad. Nauk SSSR (USSR), v. 8, 1975 p 71-76 Translation was announced as N76-12713 Transl. by Kanner (Leo) Associates, Redwood City, Calif. Original doc. prep. by USSR Acad. of Med. Sci. Inst. for Pathology and Therapy
(Contract NASw-3199)
(NASA-TM-76035) Avail: NTIS HC A02/MF A01 CSCL 06S

A species predisposition to hypertensive and ischemic heart disease occurs in mammals only at the level of primates, and is associated with social regulation of biological reactions. The specific physiological mechanism giving rise to psychonerogenic pathology may be an inhibition of the motor component of the agressive-defensive response. Repeated combination of pursuit with subsequenct immobilization resulted in four out of five experimental baboons developing serious arterial hypertension and ischemic lesion of the heart which lasted many years. RESULTS OF THE INVESTIGATION OF THE OTOLITH FUNCTION IN MANNED SPACE FLIGHTS

L. N. Kornilova, G. D. Syrykh, I. K. Tarasov, and I. Ya. Yakovleva Jun. 1980 9 p refs Transl. into ENGLISH from Vestn. Otorino-Laringol. (USSR), no. 6, 1979 p 21-24 Transl. by Scientific Translation Service, Santa Barbara, Calif. Original doc. prep. by USSR Ministry of Health, Moscow
(Contract NASw-3198)
(NASA-TM-76103) Avail: NTIS HC A02/MF A01 CSCL 06P

The effects of conditions of long term and short term space flights on the otolith function of cosmonauts were investigated via pre and post examinations. The results show that after long term flight, the intensity of the otolith reflex increased and asymmetry occurred in the indicators of the otolith function. Large changes in terms of expression and duration in the indicators of the otolith function after long term flight as compared with short term flight were also noted. R.E.S.

CHARACTERISTICS OF ENZYMATIC INDUCTION PROVOKED BY CHLORDANE

A. Denys, E. Guilbert-Ber, and Jeanne Levy Jun. 1980 18 p refs Transl. into ENGLISH from Therapie (France), v. 30, 1975 p 277-288 Transl. by Scientific Translation Service, Santa Barbara, Calif. Original doc. prep. by Inst. of Pharmacology, Paris
(Contract NASw-3198)
(NASA-TM-76194) Avail: NTIS HC A02/MF A01 CSCL 06P

The effects of various stresses, such as restraint and lowering or raising of environmental temperature, in mice pretreated with chlordane were investigated. (Chlordane is an inhibitor of protein synthesis.) It was found that restraint or exposure to a cold environment for three hours mobilized the chlordane stored in the adipose tissue of mice. R.E.S.

CARDIOVASCULAR AND RESPIRATORY PHYSIOPATHOLOGICAL ASPECTS OF HYPOKINESIA

A. Dagianti Jun. 1980 26 p refs Transl. into ENGLISH from Recenti Progr. Med. (Italy), v. 52, no. 4, 1972 p 323-344 Transl. by Scientific Translation Service, Santa Barbara, Calif.
(Contract NASw-3198)
(NASA-TM-76198) Avail: NTIS HC A03/MF A01 CSCL 06S

The many effects of hypokinesia on the human organism are described. The differences in normally mobile subjects and hypokinetic subjects as relates to heart rate, average humeral pressure, cardiac capacity, cardia index, systolic range, and large cycle resistances are discussed. It is concluded that further studies must be carried out in seven specific areas of cardiocirculatory damage due to hypokinesia. R.E.S.

EFFECTS OF OZONE ON EXERCISING AND SEDENTARY ADULT MEN AND WOMEN REPRESENTATIVE OF THE FLIGHT ATTENDANT POPULATION

E. A. Higgins, M. T. Lategola, J. M. McKenzie, C. E. Melton, and J. A. Vaughan Oct. 1979 106 p refs
(AD-A080045; FAA-AM-79-20) Avail: NTIS HC A06/MF A01 CSCL 06/16

Three studies at two ozone concentrations have been carried out in an attempt to define the effect level for ozone under simulated flight conditions. All experiments were carried out in an altitude chamber held at 6,000 feet MSL; relative humidity was kept at 10-12 percent and temperature at 68 - 74 F. Subjects paid were nonsmoking men and women in their third decade who had the anthropomorphic characteristics of airline flight attendants. All subjects were exposed to ozone in one experiment and to air only in another. Order of presentation of the experiments was balanced, and sessions were separated by 1 week. Study 1 consisted of exposure of 15 men and 12 women to 0.20 parts per million by volume (ppmv) ozone for 4 h with treadmill exercise for the last 10 min of each hour. In the second study 14 men and 14 women were exposed to 0.30 ppmv ozone for 3 h with 10 min exercise at the end of each hour. The third study consisted of exposure of 14 men and 14 women to 0.30 ppmv without exercise. Cardiopulmonary, performance, visual, and symptoms assessments were made. GRA

RESPONSE TIME, OPERATOR PRODUCTIVITY AND JOB SATISFACTION Ph.D. Thesis

Raymond Earle Barber 1979 117 p
Avail: Univ. Microfilms Order No. 8014200

The impact is examined of on-line system response time on operator productivity and job satisfaction. A user organization in Cincinnati, Ohio and its five on-line systems provided the environment for the study. The impact of response time on productivity suggests that all or nearly all (e.g., 98%) transactions should be completed in 12 seconds or less. Beyond this level, the user organization suffers severe penalties in lost productivity. When response times are less than six seconds, productivity is relatively flat. That is, the impact of response time on productivity is not as great when average response time is less than six seconds as it is when average response time is greater than six seconds. It is concluded that the normal operating range of the systems studied should be in the four to six second range. It was predicted, prior to the study, that all categories of job satisfaction would be adversely affected by longer response times. The results, however, indicate that response time has a mixed impact on job satisfaction. Some categories showed decreased satisfaction as predicted. Others, however, demonstrated an improvement in job satisfaction as response time increased. These were mainly categories dealing with interpersonal relationships. Based upon the results the implications of response time on system operation and system design are discussed. A method is suggested that would allow the response time models to be applied to other online systems. Desirable directions for future research are discussed in depth. Dissert. Abstr.

A CONCEPT FOR DEVELOPING HUMAN PERFORMANCE SPECIFICATIONS Final Report

Jonathan D. Kaplan and William H. Crooks Aberdeen Proving Ground, Md. Human Eng. Labs. Apr. 1980 47 p refs
(Contract DAAK11-79-C-0115)
(AD-A084617; PTR-2020-80-3; HEL-TM-7-80) Avail: NTIS HC A03/MF A01 CSCL 15/5

OMB Circular A-109 emphasizes the front end of systems acquisition with the intent of (1) expressing needs and program objectives in 'mission' terms rather than 'equipment' terms, and (2) allowing competitive exploration of alternative methods of meeting those needs. For human factors specialists to comply with these requirements, it will be necessary for them to produce explicit specifications for the critical human performance which is required for system performance. This paper presents a concept for producing these required human performance specifications prior to the initial design of a system. It also presents an example of a detailed human performance specification as well as Appendices containing material used to produce human performance specifications for various kinds of systems. GRA

A MATHEMATICAL MODEL FOR USE IN EVALUATING AND DEVELOPING IMPACT TEST METHODS FOR PROTECTIVE HEADGEAR

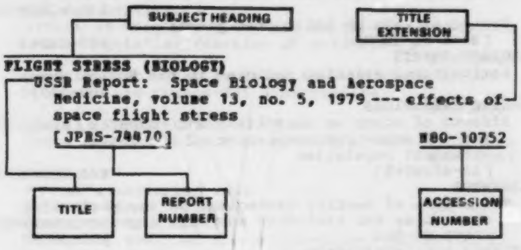
Robert E. Berger Oct. 1979 79 p
(PB80-164957; NBSIR-80-1987) Avail: NTIS HC A05/MF A01 CSCL 06Q

A lumped parameter mathematical model was developed to connect injury parameters in real life head impact environments to output parameters of test methods for evaluating protective headgear. Analytical/experimental schemes were developed for mathematically representing the parameters that characterize each of the three distinct elements of the model: the head or headform, the impact surface, and the helmet. The model was shown to be useful in determining test method pass/fail criteria which corresponds to the threshold of injury in the real life situation. GRA

SUBJECT INDEX

AEROSPACE MEDICINE AND BIOLOGY / *A Continuing Bibliography (Suppl. 211)* OCTOBER 1980

Typical Subject Index Listing



The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of the document content, a title extension is added, separated from the title by three hyphens. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstract in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

A

A-10 AIRCRAFT
Catecholamine excretion in A-10 pilots
A80-42007

ABSORBENTS
Molecular sieve generation of aviator's oxygen - Performance of a prototype system under simulated flight conditions
A80-42008

ACCELERATION STRESSES (PHYSIOLOGY)
Cardiovascular responses of man exposed to plus Gz accelerations in a centrifuge
A80-41885
Acceleration effects on pulmonary blood flow distribution using perfusion scintigraphy

BIRTH
An attempted validation study of the birthdate-based biorhythm /BBB/ hypothesis A80-42000

BLOOD CIRCULATION
Circulation in exercising crew members of the first main expedition aboard Salyut-6 N80-27997
Hemodynamics and phase structure of the cardiac cycle in members of the first crew of Salyut-5 at rest --- effects of hypokinesia and weightlessness N80-27998
Effect of prolonged +Gz accelerations on human performance N80-28003
Studies of prognostic significance of antiorthostatic position N80-28006
Regional redistribution of rat blood after 7 and 30 days of hypokinesia N80-28009
Method for assessing hemodynamics and detecting latent insufficiency of cerebral circulation in cosmonaut candidates N80-28012
Circulation at rest in crew members of the first main expedition aboard Salyut 6 N80-28017

BLOOD COAGULATION
Effects of hypodynamia on the hemocoagulative properties of the vascular wall and myocardium [NASA-TM-76199] N80-27992

BLOOD FLOW
Review - The role of pulse oscillations of intravascular pressure in the regulation of blood circulation A80-41318
Comparison of reactive hyperemia in warm and cool human forearms over a range of ischemic periods A80-41982
Results of studies of pulsed blood flow and regional vascular tonus during flights in the first and second expeditions aboard the Salyut-6-Soyuz orbital complex --- effects of weightlessness N80-27996

BLOOD PLASMA
Na+ and Ca2+ ingestion - Plasma volume-electrolyte distribution at rest and exercise A80-41661
The behavior of fatty acids in the blood plasma of monkeys following exposure to short term stresses [NASA-TM-76151] N80-27079

BLOOD PRESSURE
Review - The role of pulse oscillations of intravascular pressure in the regulation of blood circulation A80-41318

BLOOD VESSELS
Displacement of plasma protein and conduction velocity in rats under action of acceleration forces and hypokinesia [NASA-TM-76195] N80-27989
Effects of hypodynamia on the hemocoagulative properties of the vascular wall and myocardium [NASA-TM-76199] N80-27992

BLOOD VOLUME
Red blood cell count /RCC/ and volume /MCV/ of three subjects in a hypobaric chamber A80-41998
Regional redistribution of rat blood after 7 and 30 days of hypokinesia N80-28009

BODY FLUIDS
Is the weight loss of hyperbaric habitation a disorder of osmoregulation A80-41888
The effect of sustained +Gz acceleration on extravascular lung water content in domestic fowl A80-41999
Instrumentation for the measurement of viscosity and flow of biological fluids --- neuclear magnetic resonance N80-27980
Mechanisms of water-salt metabolism disturbances in dogs subjected to six month hypokinesia [NASA-TM-76170] N80-27984

BODY KINEMATICS
Imitation of locomotion under conditions of weightlessness A80-40846
The stress reaction to hypokinesia and its effect on general resistance N80-28008

BODY MEASUREMENT (BIOLOGY)
The growth of birdwings [NASA-TM-75821] N80-27986

BODY TEMPERATURE
Changes in the adrenergic regulation of thermogenesis during the long-term adaptation of rats to the cold A80-41321
Effect of induced cyclic changes of deep body temperature on performance in a flight simulator A80-41881
Effect of direction and rate of change of deep body and skin temperatures on performance of a rotary pursuit task A80-41978

BODY WEIGHT
Is the weight loss of hyperbaric habitation a disorder of osmoregulation A80-41888

BONE MINERAL CONTENT
State of human bone tissue protein fraction after space flights N80-28018

BONES
Active muscle torques about long-bone axes of major human joints A80-41994

BRAIN
Rhesus brain gas tension and learned task performance responses to normoxic and hyperoxic breathing [AMRL-TR-105] A80-41880
Studies of prognostic significance of antiorthostatic position N80-28006

BRAIN CIRCULATION
Respiration and oxidative phosphorylation in the mitochondria of brain and heart tissues during circulatory brain hypoxia and in the post-hypoxic period A80-41320
The effect of the acute ischemia of the brain on the permeability of the hemato-ophthalmic barrier A80-42051
Method for assessing hemodynamics and detecting latent insufficiency of cerebral circulation in cosmonaut candidates N80-28012

BURNS (INJURIES)
Rocket plume burn hazard A80-41984

C

C-135 AIRCRAFT
Piracetam and fish orientation during parabolic aircraft flight A80-41997

CADMIUM TELLURIDES
CdTe ambulatory ventricular function monitor [CONF-791037-26] N80-27083

CALCIFICATION
The effect of hypodynamia on mineral and protein metabolism in calcified tissues of the maxillodental system (experimental radioisotope study) [NASA-TM-75998] N80-27078

CALCIUM
- Na+ and Ca2+ ingestion - Plasma volume-electrolyte distribution at rest and exercise A80-41661

CALCIUM METABOLISM
- State of rat thyroid C cells following flights on the Cosmos type of biosatellites (according to results of a morphological study) --- effects of weightlessness N80-28001

CALIBRATING
- Development of a method for the traceable calibration of defibrillator energy meters [NPL-DES-55] N80-27085

CALORIMETERS
- Development of a method for the traceable calibration of defibrillator energy meters [NPL-DES-55] N80-27085

CARBOHYDRATE METABOLISM
- Effect of hypokinesia on changes in carbohydrate and lipid metabolism in the heart and liver N80-28029

CARBON DIOXIDE
- The factors influencing the formation of Li2CO3 from LiOH and CO2 [ASME PAPER 80-ENAS-45] A80-43219

CARBON DIOXIDE CONCENTRATION
- Carbon dioxide effects on submarines [ASME PAPER 80-ENAS-32] A80-43207

CARDIOLOGY
- Absolute and relative work capacity in women at 758, 586, and 523 torr barometric pressure A80-41977

CARDIOVASCULAR SYSTEM
- Cardiovascular responses of man exposed to plus Gz accelerations in a centrifuge A80-41885
- Interactions between surface cooling and LBNP-induced central hypovolemia --- Lower Body Negative Pressure A80-41987
- Circulation at rest in crew members of the first main expedition aboard Salyut 6 N80-28017
- Functional state of the cardiovascular system under the combined effect of 28 day immersion, rotation on a short-arm centrifuge and exercise on a bicycle ergometer N80-28025
- Cardiovascular and respiratory physiopathological aspects of hypokinesia [NASA-TM-76198] N80-28048

CAROTID SINUS BODY
- Interaction of dopamine and haloperidol with O2 and CO2 chemoreception in carotid body A80-43152

CATALYSIS
- Water recovery by catalytic treatment of urine vapor [ASME PAPER 80-ENAS-16] A80-43192

CATECHOLAMINE
- Changes in the adrenergic regulation of thermogenesis during the long-term adaptation of rats to the cold A80-41321
- Catecholamine excretion in A-10 pilots A80-42007
- Interaction of dopamine and haloperidol with O2 and CO2 chemoreception in carotid body A80-43152
- The content of catecholamines in the adrenal glands and sections of the brain under hypokinesia and injection of some neurotropic agents [NASA-TM-76010] N80-28044

CELLS (BIOLOGY)
- Postflight studies on fungal phenotypes irradiated in space A80-43011
- Countercurrent distribution of biological cells [NASA-CR-161487] N80-27069

CENTRAL NERVOUS SYSTEM
- Bioelectric activity of the human brain during and after 182-day anitorthosatic hypokinesia N80-28027

CENTRAL NERVOUS SYSTEM DEPRESSANTS
- Effect of central neurotropic substances on the hypophysisadrenal cortex system during immobilization of animals [NASA-TM-76158] N80-27982

CENTRIFUGING STRESS
- Effects of chronic centrifugation on skeletal muscle fibers in young developing rats A80-41983
- Functional state of the cardiovascular system under the combined effect of 28 day immersion, rotation on a short-arm centrifuge and exercise on a bicycle ergometer N80-28025

CHEMICAL REACTIONS
- The factors influencing the formation of Li2CO3 from LiOH and CO2 [ASME PAPER 80-ENAS-45] A80-43219

CHEMORECEPTORS
- Interaction of dopamine and haloperidol with O2 and CO2 chemoreception in carotid body A80-43152

CHLORELLA
- Study of compatilibity of certain higher plants and chlorella as related to a bioregenerative human life support system N80-28033

CHRONIC CONDITIONS
- Effects of chronic centrifugation on skeletal muscle fibers in young developing rats A80-41983

CIRCADIAN RHYTHMS
- Effect of an altered rest-activity or feeding schedule on the shift of motor activity rhythm of mice A80-41884

CIRCULATORY SYSTEM
- Review - The role of pulse oscillations of intravascular pressure in the regulation of blood circulation A80-41318
- Circulation at rest in crew members of the first main expedition aboard Salyut 6 N80-28017

CIVIL AVIATION
- Agricultural aviation medicine in the Soviet Union A80-41990
- Disorders of the menstrual cycle in airline stewardesses A80-41991

CLINICAL MEDICINE
- Review - The role of pulse oscillations of intravascular pressure in the regulation of blood circulation A80-41318
- Evaluation of an acute mountain sickness questionnaire - Effects of intermediate-altitude staging upon subjective symptomatology A80-41886
- Minimizing the psychological effects of a wartime disaster on an individual A80-41890
- Red blood cell count /RCC/ and volume /MCV/ of three subjects in a hypobaric chamber A80-41998
- Frank orthogonal vectorcardiograms in humans during and after exposure to +Gz acceleration stress A80-42006
- Aeromedical transportation of psychiatric patients - Historical review and present management A80-42014
- Air transport of the man who needs everything A80-42015
- The use of antigravity suits in the treatment of idiopathic orthostatic hypotension [NASA-TM-75804] N80-27077
- Modified conjugate counting technique for quantitative measurement of radioactivity in vivo [CONF-790782-1] N80-27084
- Vertebral pain in helicopter pilots [NASA-TM-75792] N80-28043

CLOSED ECOLOGICAL SYSTEMS
- Postflight studies on fungal phenotypes irradiated in space A80-43011
- Study of compatilibity of certain higher plants and chlorella as related to a bioregenerative human life support system N80-28033

COCKPIT SIMULATORS
Pickup of visual information by the pilot during a ground control approach in a fighter aircraft simulator
A80-41981
COLD ACCLIMATIZATION
Changes in the adrenergic regulation of thermogenesis during the long-term adaptation of rats to the cold
A80-41321
COLD TOLERANCE
Combined effect of hypoxia and cold on the phospholipid composition of lung surfactant in rats
A80-41980
COLD WEATHER
Physiological effects of cold air inhalation during exercise
A80-42001
COLOR VISION
Human color discriminating function with muscular tension during exposure to vestibular stimuli
N80-28004
COMBAT
Human tolerance to aerial combat maneuvers
A80-42005
COMETS
Comets - A matter of life and death /Milne Lecture/
A80-41002
COMPLEX SYSTEMS
The ergatic intellect of electrical energy systems
A80-42347
COMPUTER GRAPHICS
Dynamic decisions and work load in multitask supervisory control
A80-40898
CONTACT LENSES
Transient diffusion in multi-layer biological tissue
N80-27979
CONTROL STABILITY
An analytical evaluation method of manual control system utilizing human pilot model
A80-41051
CONTROL STICKS
Performance effects of alcohol intoxication and hangover at ground level and at simulated altitude
A80-41876
CONTROL THEORY
Mathematical model for evaluating human operator activity in solving the problem of limiting controllability in an ergatic control and monitoring system
A80-42349
CONTROL VALVES
Maintainable maintenance disconnect valve /MMDV/ for on-orbit component replacement
[ASME PAPER 80-ENAS-42] A80-43216
CONTROLLABILITY
Mathematical model for evaluating human operator activity in solving the problem of limiting controllability in an ergatic control and monitoring system
A80-42349
CONTROLLED ATMOSPHERES
A history of the Naval Research Laboratory contributions to submarine life support systems
[ASME PAPER 80-ENAS-29] A80-43205
Atmospheric monitoring in submersibles
[ASME PAPER 80-ENAS-31] A80-43206
Atmospheric monitoring for submarine applications
[ASME PAPER 80-ENAS-33] A80-43208
A monitor for atmospheric composition and contaminants in closed environments
[ASME PAPER 80-ENAS-35] A80-43210
O2 sensing for environmental control and monitoring systems
[ASME PAPER 80-ENAS-41] A80-43215
COOLING
Effect of direction and rate of change of deep body and skin temperatures on performance of a rotary pursuit task
A80-41978
COORDINATION
Device for measuring the precision of eye-hand coordination while tracking changing size
A80-42010
CORONARY ARTERY DISEASE
Diagnosis of coronary artery disease with exercise radionuclide imaging - State of the art
A80-40547
Use of the multivariate approach to enhance the diagnostic accuracy of the treadmill stress test
A80-42098
Experimental coronary sclerosis induced by immobilization of rabbits: A new model of arteriosclerosis
[NASA-TM-76196] N80-27990
Morphofunctional correlations in the experimental study of myocardiopathies under the stress of forced restraint. Note 2: The influence of adrenal imbalance
[NASA-TM-76138] N80-28040
Mechanism of selective lesion of the cardiovascular system in psycho-emotional stress
[NASA-TM-76035] N80-28045
COSMIC RAYS
Retinal changes in rats flown on Cosmos 936 - A cosmic ray experiment
A80-41995
COSMONAUTS
Method for assessing hemodynamics and detecting latent insufficiency of cerebral circulation in cosmonaut candidates
N80-28012
COSMOS SATELLITES
Retinal changes in rats flown on Cosmos 936 - A cosmic ray experiment
A80-41995
CREATIVITY
Some problems in pattern detection --- human creativity
A80-42346
CREWS
The morale climate of the crew (from observations of a submarine doctor)
[NASA-TM-76094] N80-27092
CYTOLOGY
Energy status and oxidation reduction status in rat liver at high altitude /3.8 km/
A80-42002

D

DARK ADAPTATION
Brightness exponent as a function of retinal eccentricity in the peripheral visual field - Effects of dark and light adaptation
A80-41139
DATA PROCESSING
On-line analysis of eye movements using a digital computer
A80-41996
DECISION MAKING
Dynamic decisions and work load in multitask supervisory control
A80-40898
DECOMPRESSION SICKNESS
Relation of breathing oxygen-argon gas mixtures to altitude decompression sickness
A80-41992
DECONDITIONING
Dynamics of human external respiration and blood gases under the combined effect of hypercapnia and hypoxia
N80-28024
DEHYDRATED FOOD
The question of using dehydrated foods during long-term space flights
N80-28031
DELTA MODULATION
Adaptive delta modulation for telephone biotelemetry of ECG (electrocardiograph)
[PB80-160773] N80-27089
DIAGNOSIS
Diagnosis of coronary artery disease with exercise radionuclide imaging - State of the art
A80-40547
DIETS
The question of using dehydrated foods during long-term space flights
N80-28031
DIGITAL TECHNIQUES
On-line analysis of eye movements using a digital computer
A80-41996

DISCONNECT DEVICES
Maintainable maintenance disconnect valve /MMDV/ for on-orbit component replacement
[ASME PAPER 80-ENAS-42] A80-43216

DISPLACEMENT MEASUREMENT
Simultaneous muscle force and displacement transducer
[NASA-CASE-NPO-14212-1] N80-27072

DISPLAY DEVICES
Optimal control model predictions of system performance and attention allocation and their experimental validation in a display design study
A80-40899
Pickup of visual information by the pilot during a ground control approach in a fighter aircraft simulator
A80-41981
Overview of human engineering considerations for electro-optical displays
A80-42846

DIURNAL VARIATIONS
The organization of the sleep-wakefulness cycle according to data obtained by the continuous daily monitoring of heart rhythm and motor activity
A80-41319

DIVING (UNDERWATER)
Respiration and gas exchange under hyperbaric conditions
N80-28016

DRINKING
Na^+ and Ca^{2+} ingestion - Plasma volume-electrolyte distribution at rest and exercise
A80-41661

DRUGS
Effect of psychotropic drugs on gastric ulcers induced by immobilization: Increased protective effect of amitriptyline caused by chlordiazepoxide
[NASA-TM-76197] N80-27991

DRY HEAT
Physiological responses of men and women to humid and dry heat
A80-43151

DYNAMIC CONTROL
Imitation of locomotion under conditions of weightlessness
A80-40846

E

EAR PROTECTORS
The effect of hearing protectors on the perception of warning and indicator sounds: A general review
[ISVR-TR-98] N80-27087

EARTH (PLANET)
Comets - A matter of life and death /Milne Lecture/
A80-41002

ECOLOGY
Some problems of human adaptation and ecology under the aspect of general pathology
[NASA-TM-76095] N80-27076
Primary productivity, heterotrophy, metabolic indicators of stress and interactions in algal-bacterial mat communities affected by a fluctuating thermal regime
[DP-MS-80-14] N80-27082
The growth of birdwings
[NASA-TM-75821] N80-27986

EFFERENT NERVOUS SYSTEMS
The organization of the sleep-wakefulness cycle according to data obtained by the continuous daily monitoring of heart rhythm and motor activity
A80-41319

EJECTION INJURIES
The classification of spinal column deformities resulting from aircraft ejection forces
[ASME PAPER 80-ENAS-44] A80-43218

EJECTION SEATS
Rocket plume burn hazard
A80-41984

ELECTRIC POWER SUPPLIES
The ergatic intellect of electrical energy systems
A80-42347

ELECTRO-OPTICS
Overview of human engineering considerations for electro-optical displays
A80-42846

ELECTROCARDIOGRAPHY
Electrocardiographic exercise testing and ambulatory monitoring to identify patients with ischemic heart disease at high risk of sudden death
A80-40546
CdTe ambulatory ventricular function monitor
[CONF-791037-26] N80-27083

ELECTROENCEPHALOGRAPHY
Electroencephalographic recordings during parachute jump sessions
A80-41877
Psychomotor performance during ozone exposure - Spectral and discriminant function analysis of EEG
A80-41879

ELECTROLYTE METABOLISM
Na^+ and Ca^{2+} ingestion - Plasma volume-electrolyte distribution at rest and exercise
A80-41661
Effect of weightlessness and artificial gravity on ion-regulating function of rat kidneys
N80-27999
Morphometric analysis of glomerules and juxtaglomerula system of the rat kidney in the course of experimental hypokinesia
N80-28028

ELECTRONIC EQUIPMENT
Environmental control of a pressurized equipment container for Shuttle flights - The Spacelab Igloo
[ASME PAPER 80-ENAS-19] A80-43195
An evaluation of microwave emissions from sensormatic electronic security systems
[PB80-155385] N80-27088

ELECTRONYSTAGMOGRAPHY
On-line analysis of eye movements using a digital computer
A80-41996
Generalized nystagmometric characteristics for diagnostic purposes
N80-28034

ELECTROPHORESIS
Countercurrent distribution of biological cells
[NASA-CR-161487] N80-27069

ELECTROPHYSIOLOGY
Effect of immobilization on the EEG of the baboon. Comparison with telemetry results from unrestricted animals
[NASA-TM-76137] N80-27987

EMERGENCY LIFE SUSTAINING SYSTEMS
A Portable Oxygen Subsystem - Description and preliminary thermal performance prediction
[ASME PAPER 80-ENAS-7] A80-43184
Anti-exposure suits in the VP community --- for fixed wing patrol aircraft
[ASME PAPER 80-ENAS-43] A80-43217

ENCLOSURES
The development of a Space Shuttle Research Animal Holding Facility
[ASME PAPER 80-ENAS-39] A80-43213

ENDOCRINOLOGY
Effect of sharply lowered muscular activity on the thyroid gland of the white rat
[NASA-TM-76114] N80-27070

ENVIRONMENT EFFECTS
Primary productivity, heterotrophy, metabolic indicators of stress and interactions in algal-bacterial mat communities affected by a fluctuating thermal regime
[DP-MS-80-14] N80-27082

ENVIRONMENTAL CONTROL
Environmental control of a pressurized equipment container for Shuttle flights - The Spacelab Igloo
[ASME PAPER 80-ENAS-19] A80-43195
O_2 sensing for environmental control and monitoring systems
[ASME PAPER 80-ENAS-41] A80-43215
The factors influencing the formation of Li_2CO_3 from LiOH and CO_2
[ASME PAPER 80-ENAS-45] A80-43219
Research hardware and habitat of animals used in experiment aboard Cosmos-936 biosatellite
N80-28019
Principal results of physiological experiments with mammals aboard the Cosmos-936 biosatellite
N80-28020
Semicircular canal function in rats after flight aboard the Cosmos-936 biosatellite
N80-28021

ENVIRONMENTAL MONITORING
Atmospheric monitoring in submersibles [ASME PAPER 80-ENAS-31] A80-43206
Atmospheric monitoring for submarine applications [ASME PAPER 80-ENAS-33] A80-43208
A monitor for atmospheric composition and contaminants in closed environments [ASME PAPER 80-ENAS-35] A80-43210
O2 sensing for environmental control and monitoring systems [ASME PAPER 80-ENAS-41] A80-43215

ENZYME ACTIVITY
Activity of some hepatic enzymes and lipogenetic processes in rat aipose tissue after space flight --- effects of weightlessness N80-28000
Secretion, incretion and resecretion of pancreatic lipase during prolonged restriction of motor activity N80-28010
Effect of hypokinesia on invertase activity of the mucosa of the small intestine [NASA-TM-76191] N80-28039
Characteristics of enzymatic induction provoked by chlordane [NASA-TM-76194] N80-28047

ENZYMOLOGY
Energy status and oxidation reduction status in rat liver at high altitude /3.8 km/ A80-42002

EPINEPHRINE
Calorigenic effect of adrenaline in rats under conditions of restricted motor activity [NASA-TM-76192] N80-27988

ERYTHROCYTES
Red blood cell count /RCC/ and volume /MCV/ of three subjects in a hypobaric chamber A80-41998

ETHYL ALCOHOL
Performance effects of alcohol intoxication and hangover at ground level and at simulated altitude A80-41876

EUROPEAN SPACE PROGRAMS
Life sciences experiments on Spacelab 1 [ASME PAPER 80-ENAS-36] A80-43211

EXOBIOLOGY
USSR Report: Space Biology and Aerospace Medicine, volume 14, no. 3, 1980 [JPRS-75956] N80-27994
USSR Report. Space Biology and Aerospace medicine, volume 14, no. 2, 1980 [JPRS-75654] N80-28015

EXPOSURE
Magnetic field on humans: Epidemiological study design, part 2 [LBL-9357-PT-2] N80-27081

EXTRAVEHICULAR ACTIVITY
Manned maneuvering unit [DGLR PAPER 80-081] A80-41761

EXTRAVEHICULAR MOBILITY UNITS
Manned maneuvering unit [DGLR PAPER 80-081] A80-41761

EYE (ANATOMY)
The effect of the acute ischemia of the brain on the permeability of the hemato-ophthalmic barrier A80-42051
Transient diffusion in multi-layer biological tissue N80-27979

EYE MOVEMENTS
Target position and velocity - The stimuli for smooth pursuit eye movements A80-41646
Visual search performance during simulated radar observation with and without a sweepline A80-41882
Device for measuring the precision of eye-hand coordination while tracking changing size A80-42010
Generalized nystagmometric characteristics for diagnostic purposes N80-28034

F

F-15 AIRCRAFT
Development, test, and evaluation of an advanced anti-G valve for the F-15 A80-41988

FATTY ACIDS
The behavior of fatty acids in the blood plasma of monkeys following exposure to short term stresses [NASA-TM-76151] N80-27079

FEEDBACK CONTROL
An analytical evaluation method of manual control system utilizing human pilot model A80-41051

FEMALES
Absolute and relative work capacity in women at 758, 586, and 523 torr barometric pressure A80-41977
Aerobic power and body fat of men and women during army basic training A80-41986
Disorders of the menstrual cycle in airline stewardesses A80-41991
Physiological responses of men and women to humid and dry heat A80-43151

FIGHTER AIRCRAFT
Pickup of visual information by the pilot during a ground control approach in a fighter aircraft simulator A80-41981
Human tolerance to aerial combat maneuvers A80-42005
Molecular sieve generation of aviator's oxygen - Performance of a prototype system under simulated flight conditions A80-42008

FLIGHT CONDITIONS
Human color discriminating function with muscular tension during exposure to vestibular stimuli N80-28004

FLIGHT CREWS
Effect of induced cyclic changes of deep body temperature on performance in a flight simulator A80-41881
Disorders of the menstrual cycle in airline stewardesses A80-41991

FLIGHT HAZARDS
Rocket plume burn hazard A80-41984

FLIGHT MECHANICS
Biological and aerodynamic problems with the flight of animals [NASA-TM-75337] N80-27985

FLIGHT SIMULATORS
Effect of induced cyclic changes of deep body temperature on performance in a flight simulator A80-41881
Thresholds for detection of constant rotary acceleration during vibratory rotary acceleration A80-42003

FLIGHT STRESS (BIOLOGY)
Acceleration effects on pulmonary blood flow distribution using perfusion scintigraphy A80-41985
Disorders of the menstrual cycle in airline stewardesses A80-41991
Catecholamine excretion in A-10 pilots A80-42007

FLIGHT TRAINING
The effect of psychic self-regulation /autogenous training/ on the maintenance of the professional skill of pilots A80-42345
Applied behavior analysis in flying research [AD-A081750] N80-27094

FLUID FLOW
Instrumentation for the measurement of viscosity and flow of biological fluids --- neuclear magnetic resonance N80-27980

FLYING PERSONNEL
Identification of the minimum noise level capable of producing an asymptotic temporary threshold shift [AMRL-TR-79-106] A80-41887

FOREARM
Comparison of reactive hyperemia in warm and cool human forearms over a range of ischemic periods A80-41982

FUNGI
Postflight studies on fungal phenotypes irradiated in space
A80-43011

G

GAS CHROMATOGRAPHY
Isolation and gas chromatographic demonstration of volatile organic substances in thin-layer biological samples
N80-28014

GAS COMPOSITION
Atmospheric monitoring for submarine applications
[ASME PAPER 80-ENAS-33] A80-43208

GAS EVOLUTION
Ultrasonic method of recording gas bubbles in animal venous blood in a rarefied atmosphere
N80-28013

GAS EXCHANGE
Respiratory gas exchange during positive pressure breathing and rapid decompression to simulated altitudes of 18.3 and 24.4 km
A80-41979

GAS MIXTURES
Relation of breathing oxygen-argon gas mixtures to altitude decompression sickness
A80-41992

GAS PRESSURE
O2 sensing for environmental control and monitoring systems
[ASME PAPER 80-ENAS-41] A80-43215

GAS TRANSPORT
Theoretical analysis of the effect of state of pulmonary circulation on distribution of ventilation-perfusion relations and gas exchange in the lungs
N80-28011

Respiration and gas exchange under hyperbaric conditions
N80-28016

GAS VALVES
Development, test, and evaluation of an advanced anti-G valve for the F-15
A80-41908

GASTROINTESTINAL SYSTEM
The effect produced by phenobarbital, sex hormone and by castration on the development of gastric mucosa destruction due to electrization of immobilized rats
[NASA-TM-76156] N80-27071

Experimental gastric ulcers induced by immobilization and electric shock of rats and their pharmacotherapy
[NASA-TM-76157] N80-27981

GENERAL AVIATION AIRCRAFT
NASA TLA workload analysis support. Volume 2: Metering and spacing studies validation data
[NASA-CR-3239] N80-27091

GLANDS (ANATOMY)
Role of dynamic space flight factors in the pathogenesis of involution of lymphatic organs (experimental morphological study)
N80-28023

GRAVITATIONAL EFFECTS
Scale effects in the musculoskeletal system, viscera and skin of small terrestrial mammals
A80-40625

The architecture of the avian retina following exposure to chronic 2 G
A80-42013

Evaluation of biological models using Spacelab
[ASME PAPER 80-ENAS-38] A80-43212

Experiment operations in Spacelab --- for life study in space environment
[ASME PAPER 80-ENAS-40] A80-43214

The relation between tilt table and acceleration-tolerance and their dependence on stature and physical fitness
[NASA-TM-75796] N80-28042

GROUP DYNAMICS
Minimizing the psychological effects of a wartime disaster on an individual
A80-41890

The morale climate of the crew (from observations of a submarine doctor)
[NASA-TM-76094] N80-27092

GROWTH
The growth of birdwings
[NASA-TM-75821] N80-27986

H

HABITATS
Primary productivity, heterotrophy, metabolic indicators of stress and interactions in algal-bacterial mat communities affected by a fluctuating thermal regime
[DP-MS-80-14] N80-27082

HAND (ANATOMY)
Device for measuring the precision of eye-hand coordination while tracking changing size
A80-42010

HEALTH PHYSICS
Modified conjugate counting technique for quantitative measurement of radioactivity in vivo
[CONF-790782-1] N80-27084

HEARING
The effect of hearing protectors on the perception of warning and indicator sounds: A general review
[ISVR-TR-98] N80-27087

HEART
Effect of hypokinesia on changes in carbohydrate and lipid metabolism in the heart and liver
N80-28029

HEART DISEASES
Electrocardiographic exercise testing and ambulatory monitoring to identify patients with ischemic heart disease at high risk of sudden death
A80-40546

Prevalence of coronary heart disease risk factors in a young military population
A80-41989

Myocardial dystrophy in athletes --- Russian book
A80-42935

HEART FUNCTION
Respiration and oxidative phosphorylation in the mitochondria of brain and heart tissues during circulatory brain hypoxia and in the post-hypoxic period
A80-41320

CdTe ambulatory ventricular function monitor
[CONF-791037-26] N80-27083

HEART RATE
The organization of the sleep-wakefulness cycle according to data obtained by the continuous daily monitoring of heart rhythm and motor activity
A80-41319

Heart rate variability, pilot workload, task difficulty, tracking
[DFVLR-FB-79-33] N80-27086

HEAT TOLERANCE
Interactions between surface cooling and LBNP-induced central hypovolemia --- Lower Body Negative Pressure
A80-41987

Physiological responses of men and women to humid and dry heat
A80-43151

HELICOPTERS
Vertebral pain in helicopter pilots
[NASA-TM-75792] N80-28043

HELIUM-OXYGEN ATMOSPHERES
Is the weight loss of hyperbaric habitation a disorder of osmoregulation
A80-41888

HELMETS
A mathematical model for use in evaluating and developing impact test methods for protective headgear
[PB80-164957] N80-28055

HEMODYNAMIC RESPONSES
Myocardial dystrophy in athletes --- Russian book
A80-42935

Human response to hypoxia-motion sickness stress as a predictor of the space sickness syndrome
[AD-A080306] N80-27080

Results of studies of pulsed blood flow and regional vascular tonus during flights in the first and second expeditions aboard the Salyut-6-Soyuz orbital complex --- effects of weightlessness
N80-27996

Circulation in exercising crew members of the first main expedition aboard Salyut-6
N80-27997
Hemodynamics and phase structure of the cardiac cycle in members of the first crew of Salyut-5 at rest --- effects of hypokinesia and weightlessness
N80-27998
Studies of prognostic significance of antiorthostatic position
N80-28006
Regional redistribution of rat blood after 7 and 30 days of hypokinesia
N80-28009
Pharmacological analysis of physiological mechanisms of orthostatic hemodynamic stability
N80-28026

HEMODYNAMICS
Acceleration effects on pulmonary blood flow distribution using perfusion scintigraphy
A80-41985
Method for assessing hemodynamics and detecting latent insufficiency of cerebral circulation in cosmonaut candidates
N80-28012

HIGH ALTITUDE
Alveolar macrophages and pulmonary surfactant of altitude-raised rats
A80-42012
Effect of conditioning for hypoxia on fertility of white mice
N80-28030

HIGH ALTITUDE BREATHING
Respiratory gas exchange during positive pressure breathing and rapid decompression to simulated altitudes of 18.3 and 24.4 km
A80-41979
Relation of breathing oxygen-argon gas mixtures to altitude decompression sickness
A80-41992

HIGH ALTITUDE ENVIRONMENTS
Energy status and oxidation reduction status in rat liver at high altitude /3.8 km/
A80-42002
Changes in pulmonary PV characteristics of human subjects at an altitude of 5,366 m
A80-43153

HIGH PRESSURE
Ultrasonic method of recording gas bubbles in animal venous blood in a rarefied atmosphere
N80-28013
Respiration and gas exchange under hyperbaric conditions
N80-28016

HIGH TEMPERATURE
Effect of high ambient temperature on human performance
N80-28023

HIGH TEMPERATURE ENVIRONMENTS
Ambiguous response of lung lamellar bodies to sauna-like heat stress in two age groups of adult male rats
A80-41993

HISTOLOGY
The architecture of the avian retina following exposure to chronic 2 G
A80-42013

HORMONE METABOLISMS
The content of catecholamines in the adrenal glands and sections of the brain under hypokinesia and injection of some neurotropic agents
[NASA-TM-76010] N80-28044

HORMONES
The effect produced by phenobarbital, sex hormone and by castration on the development of gastric mucosa destruction due to electrization of immobilized rats
[NASA-TM-76156] N80-27071

HUMAN BEHAVIOR
Applied behavior analysis in flying research
[AD-A081750] N80-27094

HUMAN BODY
Comparison of reactive hyperemia in warm and cool human forearms over a range of ischemic periods
A80-41982
Interactions between surface cooling and LBNP-induced central hypovolemia --- Lower Body Negative Pressure
A80-41987
Active muscle torques about long-bone axes of major human joints
A80-41994

HUMAN CENTRIFUGES
Cardiovascular responses of man exposed to plus Gz accelerations in a centrifuge
A80-41885

HUMAN FACTORS ENGINEERING
Dynamic decisions and work load in multitask supervisory control
A80-40898
Optimal control model predictions of system performance and attention allocation and their experimental validation in a display design study
A80-40899
Overview of human engineering considerations for electro-optical displays
A80-42846
Anti-exposure suits in the VP community --- for fixed wing patrol aircraft
[ASME PAPER 80-ENAS-43] A80-43217
Heart rate variability, pilot workload, task difficulty, tracking
[DFVLR-FB-79-33] N80-27086
Applied behavior analysis in flying research
[AD-A081750] N80-27094
The influence of the flight altitude and the limitation of the field of view on the visibility of targets on the ground and the maximum visibility flight altitude
[DFVLR-FB-79-35] N80-27095
Some aspects of application of the systemic approach to aviation engineering psychology
N80-28002

HUMAN PATHOLOGY
Use of the multivariate approach to enhance the diagnostic accuracy of the treadmill stress test
A80-42098
Myocardial dystrophy in athletes --- Russian book
A80-42935
Carbon dioxide effects on submarines
[ASME PAPER 80-ENAS-32] A80-43207

HUMAN PERFORMANCE
Visual search performance during simulated radar observation with and without a sweepline
A80-41882
An attempted validation study of the birthdate-based biorhythm /BBB/ hypothesis
A80-42000
Psychomotor deterioration during exposure to heat
A80-42004
Effect of high ambient temperature on human performance
N80-28023
A concept for developing human performance specifications
[AD-A084617] N80-28054

HUMAN REACTIONS
Psychomotor performance during ozone exposure - Spectral and discriminant function analysis of EEG
A80-41879
Minimizing the psychological effects of a wartime disaster on an individual
A80-41890
Frank orthogonal vectorcardiograms in humans during and after exposure to +Gz acceleration stress
A80-42006
Some problems in pattern detection --- human creativity
A80-42346
Changes in pulmonary PV characteristics of human subjects at an altitude of 5,366 m
A80-43153
Life sciences experiments on Spacelab 1
[ASME PAPER 80-ENAS-36] A80-43211
Human response to hypoxia-motion sickness stress as a predictor of the space sickness syndrome
[AD-A080306] N80-27080
Community reactions to aircraft noise in the vicinity of airport: A comparative study of the social surveys using interview method
[NASA-TM-75439] N80-27090

HUMAN TOLERANCES

Human tolerance to aerial combat maneuvers A80-42005

HUMAN WASTES

Development of a preprototype thermoelectric integrated membrane evaporation subsystem for water recovery [ASME PAPER 80-ENAS-46] A80-43220

HUMIDITY

Physiological responses of men and women to humid and dry heat A80-43151

HYDROGEN

Method and automated apparatus for detecting coliform organisms [NASA-CASE-MSC-16777-1] N80-27067

HYPERBARIC CHAMBERS

Is the weight loss of hyperbaric habitation a disorder of osmoregulation A80-41888

HYPERCAPNIA

Interaction of dopamine and haloperidol with O2 and CO2 chemoreception in carotid body A80-43152

Dynamics of human external respiration and blood gases under the combined effect of hypercapnia and hypoxia N80-28024

HYPEROXIA

Rhesus brain gas tension and learned task performance responses to normoxic and hyperoxic breathing [AMRL-TR-105] A80-41880

HYPERTENSION

Mechanism of selective lesion of the cardiovascular system in psycho-emotional stress [NASA-TM-76035] N80-28045

HYPOBARIC ATMOSPHERES

Red blood cell count /RCC/ and volume /MCV/ of three subjects in a hypobaric chamber A80-41998

HYPODYNAMIA

The effect of hypodynamia on mineral and protein metabolism in calcified tissues of the maxillodental system (experimental radioisotope study) [NASA-TM-75998] N80-27078

Effect of psychotropic drugs on gastric ulcers induced by immobilization: Increased protective effect of amitriptyline caused by chlordiazepoxide [NASA-TM-76197] N80-27991

Effects of hypodynamia on the hemocoagulative properties of the vascular wall and myocardium [NASA-TM-76199] N80-27992

Pharmacological analysis of physiological mechanisms of orthostatic hemodynamic stability N80-28026

Morphofunctional correlations in the experimental study of myocardiopathies under the stress of forced restraint. Note 2: The influence of adrenal imbalance [NASA-TM-76138] N80-28040

Mechanism of selective lesion of the cardiovascular system in psycho-emotional stress [NASA-TM-76035] N80-28045

HYPOKINESIA

Change in radiosensitivity of rats during hypokinetic stress [NASA-TM-75968] N80-27068

Effect of sharply lowered muscular activity on the thyroid gland of the white rat [NASA-TM-76114] N80-27070

Changes in leukocyte stability in hypodynamia [NASA-TM-75944] N80-27074

Oxygen consumption of animals under conditions of hypokinesia [NASA-TM-76167] N80-27983

Mechanisms of water-salt metabolism disturbances in dogs subjected to six month hypokinesia [NASA-TM-76170] N80-27984

Calorigenic effect of adrenaline in rats under conditions of restricted motor activity [NASA-TM-76192] N80-27988

Displacement of plasma protein and conduction velocity in rats under action of acceleration forces and hypokinesia [NASA-TM-76195] N80-27989

Effects of immobilization on spermiogenesis [NASA-TM-76282] N80-27993

Biochemical bases of pathogenesis of hypokinesia N80-27995

Circulation in exercising crew members of the first main expedition aboard Salyut-6 N80-27997

Hemodynamics and phase structure of the cardiac cycle in members of the first crew of Salyut-5 at rest --- effects of hypokinesia and weightlessness N80-27998

Evaluation of efficacy of the set of preventive measures referable to the human neuromuscular system under hypokinetic conditions N80-28007

The stress reaction to hypokinesia and its effect on general resistance N80-28008

Regional redistribution of rat blood after 7 and 30 days of hypokinesia N80-28009

Secretion, incretion and resecretion of pancreatic lipase during prolonged restriction of motor activity N80-28010

Isolation and gas chromatographic demonstration of volatile organic substances in thin-layer biological samples N80-28014

Role of dynamic space flight factors in the pathogenesis of involution of lymphatic organs (experimental morphological study) N80-28022

Bioelectric activity of the human brain during and after 182-day anitorthosatic hypokinesia N80-28027

Morphometric analysis of glomerules and juxtaglomerula system of the rat kidney in the course of experimental hypokinesia N80-28028

Effect of hypokinesia on changes in carbohydrate and lipid metabolism in the heart and liver N80-28029

Effect of hypokinesia on invertase activity of the mucosa of the small intestine [NASA-TM-76191] N80-28039

Changes of the body functions during long-term hypokinesia [NASA-TM-76166] N80-28041

The content of catecholamines in the adrenal glands and sections of the brain under hypokinesia and injection of some neurotropic agents [NASA-TM-76010] N80-28044

Cardiovascular and respiratory physiopathological aspects of hypokinesia [NASA-TM-76198] N80-28048

HYPOTENSION

The use of antigravity suits in the treatment of idiopathic orthostatic hypotension [NASA-TM-75804] N80-27077

HYPOTHERMIA

The thermal properties of a survival bag incorporating metallised plastic sheeting A80-41883

HYPOVOLEMIA

Interactions between surface cooling and LBNP-induced central hypovolemia --- Lower Body Negative Pressure A80-41987

HYPOXIA

Respiration and oxidative phosphorylation in the mitochondria of brain and heart tissues during circulatory brain hypoxia and in the post-hypoxic period A80-41320

Combined effect of hypoxia and cold on the phospholipid composition of lung surfactant in rats A80-41980

Energy status and oxidation reduction status in rat liver at high altitude /3.8 km/ A80-42002

Interaction of dopamine and haloperidol with O2 and CO2 chemoreception in carotid body A80-43152

Human response to hypoxia-motion sickness stress as a predictor of the space sickness syndrome [AD-A080306] N80-27080

Dynamics of human external respiration and blood gases under the combined effect of hypercapnia and hypoxia
N80-28024
Effect of conditioning for hypoxia on fertility of white mice
N80-28030
Altitude hypoxia. Citations from the NTIS data base
[PB80-807696] N80-28052

I

IMAGE PROCESSING
Two-channel model of image processing in the human retina
A80-42849
IMAGE RESOLUTION
Two-dimensional spatial frequency content and confusions among dot matrix characters
A80-42847
IMAGING TECHNIQUES
Diagnosis of coronary artery disease with exercise radionuclide imaging - State of the art
A80-40547
IMMOBILIZATION
Experimental gastric ulcers induced by immobilization and electric shock of rats and their pharmacotherapy
[NASA-TM-76157] N80-27981
Effect of central neurotropic substances on the hypophysisadrenal cortex system during immobilization of animals
[NASA-TM-76158] N80-27982
Effect of immobilization on the EEG of the baboon. Comparison with telemetry results from unrestricted animals
[NASA-TM-76137] N80-27987
Experimental coronary sclerosis induced by immobilization of rabbits: A new model of arteriosclerosis
[NASA-TM-76196] N80-27990
Effects of immobilization on spermiogenesis
[NASA-TM-76282] N80-27993
IMPACT TESTS
A mathematical model for use in evaluating and developing impact test methods for protective headgear
[PB80-164957] N80-28055
IMPLANTED ELECTRODES (BIOLOGY)
An implantable electrical device
[NASA-CASE-GSC-12560-1] N80-27073
INTESTINES
Effect of hypokinesia on invertase activity of the mucosa of the small intestine
[NASA-TM-76191] N80-28039
INTOXICATION
Performance effects of alcohol intoxication and hangover at ground level and at simulated altitude
A80-41876
INTRAVASCULAR SYSTEM
Review - The role of pulse oscillations of intravascular pressure in the regulation of blood circulation
A80-41318
Ultrasonic method of recording gas bubbles in animal venous blood in a rarefied atmosphere
N80-28013
INVESTIGATION
Morphofunctional correlations in the experimental study of myocardiopathies under the stress of forced restraint. Note 2: The influence of adrenal imbalance
[NASA-TM-76138] N80-28040
Mechanism of selective lesion of the cardiovascular system in psycho-emotional stress
[NASA-TM-76035] N80-28045
ION CONCENTRATION
The intracellular Na/+/ and K/+/ composition of the moderately halophilic bacterium, Paracoccus halodenitrificans
A80-41250
ISCHEMIA
Electrocardiographic exercise testing and ambulatory monitoring to identify patients with ischemic heart disease at high risk of sudden death
A80-40546
Comparison of reactive hyperemia in warm and cool human forearms over a range of ischemic periods
A80-41982
The effect of the acute ischemia of the brain on the permeability of the hemato-ophthalmic barrier
A80-42051
Mechanism of selective lesion of the cardiovascular system in psycho-emotional stress
[NASA-TM-76035] N80-28045

J

JET LAG
Effect of an altered rest-activity or feeding schedule on the shift of motor activity rhythm of mice
A80-41884
JOINTS (ANATOMY)
Active muscle torques about long-bone axes of major human joints
A80-41994

K

KIDNEYS
Effect of weightlessness and artificial gravity on ion-regulating function of rat kidneys
N80-27959
Morphometric analysis of glomerules and juxtaglomerula system of the rat kidney in the course of experimental hypokinesia
N80-28028

L

LABORATORY EQUIPMENT
The development of a Space Shuttle Research Animal Holding Facility
[ASME PAPER 80-ENAS-39] A80-43213
LAMELLA
Ambiguous response of lung lamellar bodies to sauna-like heat stress in two age groups of adult male rats
A80-41993
LEARNING THEORY
Applied behavior analysis in flying research
[AD-A081750] N80-27094
LEUKOCYTES
Changes in leukocyte stability in hypodynamia
[NASA-TM-75944] N80-27074
LIFE SCIENCES
Comets - A matter of life and death /Milne Lecture/
A80-41002
The intracellular Na/+/ and K/+/ composition of the moderately halophilic bacterium, Paracoccus halodenitrificans
A80-41250
NASA-Ames Life Sciences Flight Experiments program - 1980 status report
[ASME PAPER 80-ENAS-34] A80-43209
Life sciences experiments on Spacelab 1
[ASME PAPER 80-ENAS-36] A80-43211
LIFE SUPPORT SYSTEMS
A history of the Naval Research Laboratory contributions to submarine life support systems
[ASME PAPER 80-ENAS-29] A80-43205
Atmospheric monitoring in submersibles
[ASME PAPER 80-ENAS-31] A80-43206
Study of compatilibity of certain higher plants and chlorella as related to a bioregenerative human life support system
N80-28033
LIGHT ADAPTATION
Brightness exponent as a function of retinal eccentricity in the peripheral visual field - Effects of dark and light adaptation
A80-41139
LIPID METABOLISM
Activity of some hepatic enzymes and lipogenetic processes in rat aipose tissue after space flight --- effects of weightlessness
N80-28000
Secretion, incretion and resecretion of pancreatic lipase during prolonged restriction of motor activity
N80-28010
Effect of hypokinesia on changes in carbohydrate and lipid metabolism in the heart and liver
N80-28029

LIPIDS
Combined effect of hypoxia and cold on the phospholipid composition of lung surfactant in rats
A80-41980
LIQUID WASTES
Development of a preprototype thermoelectric integrated membrane evaporation subsystem for water recovery
[ASME PAPER 80-ENAS-46] A80-43220
LITHIUM HYDROXIDES
The factors influencing the formation of Li2CO3 from LiOH and CO2
[ASME PAPER 80-ENAS-45] A80-43219
LIVER
Energy status and oxidation reduction status in rat liver at high altitude /3.8 km/
A80-42002
Activity of some hepatic enzymes and lipogenetic processes in rat aipose tissue after space flight --- effects of weightlessness
N80-28000
Effect of hypokinesia on changes in carbohydrate and lipid metabolism in the heart and liver
N80-28029
LONG DURATION SPACE FLIGHT
Maintainable maintenance disconnect valve /MMDV/ for on-orbit component replacement
[ASME PAPER 80-ENAS-42] A80-43216
LONG TERM EFFECTS
Changes in the adrenergic regulation of thermogenesis during the long-term adaptation of rats to the cold
A80-41321
USSR Report: Space Biology and Aerospace Medicine, volume 14, no. 3, 1980
[JPRS-75956] N80-27994
LOW PRESSURE
Red blood cell count /RCC/ and volume /MCV/ of three subjects in a hypobaric chamber
A80-41998
LOW TEMPERATURE ENVIRONMENTS
Physiological effects of cold air inhalation during exercise
A80-42001
LUMINANCE
Brightness exponent as a function of retinal eccentricity in the peripheral visual field - Effects of dark and light adaptation
A80-41139
LUMINOUS INTENSITY
A technique for estimating the contribution of photomechanical responses to visual adaptation
A80-41645
LUNAR ENVIRONMENT
Postflight studies on fungal phenotypes irradiated in space
A80-43011
LUNG MORPHOLOGY
Combined effect of hypoxia and cold on the phospholipid composition of lung surfactant in rats
A80-41980
Ambiguous response of lung lamellar bodies to sauna-like heat stress in two age groups of adult male rats
A80-41993
LUNGS
The effect of sustained +Gz acceleration on extravascular lung water content in domestic fowl
A80-41999
Changes in pulmonary PV characteristics of human subjects at an altitude of 5,366 m
A80-43153
Theoretical analysis of the effect of state of pulmonary circulation on distribution of ventilation-perfusion relations and gas exchange in the lungs
N80-28011
Measurement of lung function using magnetometers. 1: Principles and mathematical modeling
[AD-A083910] N80-28038
LYMPH
Role of dynamic space flight factors in the pathogenesis of involution of lymphatic organs (experimental morphological study)
N80-28022

M

MACROPHAGES
Alveolar macrophages and pulmonary surfactant of altitude-raised rats
A80-42012
MAGNETIC FIELDS
Magnetic field on humans: Epidemiological study design, part 2
[LBL-9357-PT-2] N80-27081
MAGNETOMETERS
Measurement of lung function using magnetometers. 1: Principles and mathematical modeling
[AD-A083910] N80-28038
MALES
Cardiovascular responses of man exposed to plus Gz accelerations in a centrifuge
A80-41885
Aerobic power and body fat of men and women during army basic training
A80-41986
Prevalence of coronary heart disease risk factors in a young military population
A80-41989
Physiological responses of men and women to humid and dry heat
A80-43151
MAN ENVIRONMENT INTERACTIONS
Some problems of human adaptation and ecology under the aspect of general pathology
[NASA-TM-76095] N80-27076
MAN MACHINE SYSTEMS
An analytical evaluation method of manual control system utilizing human pilot model
A80-41051
Predicting the effects of vertical vibration frequency, combinations of frequencies and viewing distance on the reading of numeric displays
A80-41690
The Shuttle's remote manipulator system - Status and operation
[DGLR PAPER 80-075] A80-41757
Exemplary model of an eye-telescope system for the detection of manned spacecraft on a background of stars
A80-42344
The ergatic intellect of electrical energy systems
A80-42347
Heart rate variability, pilot workload, task difficulty, tracking
[DFVLR-FB-79-33] N80-27086
NASA TLA workload analysis support. Volume 2: Metering and spacing studies validation data
[NASA-CR-3239] N80-27091
NASA TLA workload analysis support. Volume 3: FFD autopilot scenario validation data
[NASA-CR-3240] N80-27093
Some aspects of application of the systemic approach to aviation engineering psychology
N80-28002
MANNED SPACE FLIGHT
Manned maneuvering unit
[DGLR PAPER 80-081] A80-41761
Results of the investigation of the otolith function in manned space flights
[NASA-TM-76103] N80-28046
MANNED SPACECRAFT
Exemplary model of an eye-telescope system for the detection of manned spacecraft on a background of stars
A80-42344
MANUAL CONTROL
Dynamic decisions and work load in multitask supervisory control
A80-40898
Optimal control model predictions of system performance and attention allocation and their experimental validation in a display design study
A80-40899
An analytical evaluation method of manual control system utilizing human pilot model
A80-41051
MATHEMATICAL MODELS
Measurement of lung function using magnetometers. 1: Principles and mathematical modeling
[AD-A083910] N80-28038

A mathematical model for use in evaluating and developing impact test methods for protective headgear
[PB80-164957] N80-28055

MEASURING INSTRUMENTS
Method and automated apparatus for detecting coliform organisms
[NASA-CASE-MSC-16777-1] N80-27067

MEDICAL EQUIPMENT
Development of a method for the traceable calibration of defibrillator energy meters
[NPL-DES-55] N80-27085

MEDICAL SERVICES
Air transport of the man who needs everything
A80-42015

MEMBRANE STRUCTURES
Upgrading efficacy of membrane techniques for regenerating water from urine
N80-28035

MENSTRUATION
Disorders of the menstrual cycle in airline stewardesses
A80-41991

MENTAL PERFORMANCE
An attempted validation study of the birthdate-based biorhythm /BBB/ hypothesis
A80-42000

METABOLIC WASTES
Method and automated apparatus for detecting coliform organisms
[NASA-CASE-MSC-16777-1] N80-27067

METABOLISM
The behavior of fatty acids in the blood plasma of monkeys following exposure to short term stresses
[NASA-TM-76151] N80-27079
Calorigenic effect of adrenaline in rats under conditions of restricted motor activity
[NASA-TM-76192] N80-27988
Changes of the body functions during long-term hypokinesia
[NASA-TM-76166] N80-28041

METALLIZING
The thermal properties of a survival bag incorporating metallised plastic sheeting
A80-41883

MICROBIOLOGY
Postflight studies on fungal phenotypes irradiated in space
A80-43011

MICROCOMPUTERS
On-line analysis of eye movements using a digital computer
A80-41996

MICROORGANISMS
Postflight studies on fungal phenotypes irradiated in space
A80-43011

MICROWAVE EMISSION
An evaluation of microwave emissions from sensormatic electronic security systems
[PB80-155385] N80-27088

MICROWAVES
Biological effects of microwaves. Citations from the NTIS data base
[PB80-808256] N80-28050

MINERAL METABOLISM
The effect of hypodynamia on mineral and protein metabolism in calcified tissues of the maxillodental system (experimental radioisotope study)
[NASA-TM-75998] N80-27078

MISSION PLANNING
NASA-Ames Life Sciences Flight Experiments program - 1980 status report
[ASME PAPER 80-ENAS-34] A80-43209
A concept for developing human performance specifications
[AD-A084617] N80-28054

MITOCHONDRIA
Respiration and oxidative phosphorylation in the mitochondria of brain and heart tissues during circulatory brain hypoxia and in the post-hypoxic period
A80-41320

MODELS
Nonlinearities in auditory-nerve fiber responses to bandlimited noise: An experimental study and a model
N80-28037

MOTION SICKNESS
Human response to hypoxia-motion sickness stress as a predictor of the space sickness syndrome
[AD-A080306] N80-27080

MOTION SICKNESS DRUGS
Piracetam and fish orientation during parabolic aircraft flight
A80-41997

MULTIVARIATE STATISTICAL ANALYSIS
Use of the multivariate approach to enhance the diagnostic accuracy of the treadmill stress test
A80-42098

MUSCULAR FUNCTION
Active muscle torques about long-bone axes of major human joints
A80-41994
Simultaneous muscle force and displacement transducer
[NASA-CASE-NPO-14212-1] N80-27072

MUSCULAR TONUS
Effects of chronic centrifugation on skeletal muscle fibers in young developing rats
A80-41983

MUSCULOSKELETAL SYSTEM
Scale effects in the musculoskeletal system, viscera and skin of small terrestrial mammals
A80-40625
Effects of chronic centrifugation on skeletal muscle fibers in young developing rats
A80-41983
Mechanisms of water-salt metabolism disturbances in dogs subjected to six month hypokinesia
[NASA-TM-76170] N80-27984
Effect of transverse accelerations on innervation of the guinea pig's crural skeletal muscles
N80-28005
Evaluation of efficacy of the set of preventive measures referable to the human neuromuscular system under hypokinetic conditions
N80-28007

MYOCARDIUM
Myocardial dystrophy in athletes --- Russian book
A80-42935
Simultaneous muscle force and displacement transducer
[NASA-CASE-NPO-14212-1] N80-27072

N

NASA PROGRAMS
NASA-Ames Life Sciences Flight Experiments program - 1980 status report
[ASME PAPER 80-ENAS-34] A80-43209
Life sciences experiments on Spacelab 1
[ASME PAPER 80-ENAS-36] A80-43211

NEUROLOGY
An implantable electrical device
[NASA-CASE-GSC-12560-1] N80-27073

NEUROMUSCULAR TRANSMISSION
Effect of transverse accelerations on innervation of the guinea pig's crural skeletal muscles
N80-28005
Evaluation of efficacy of the set of preventive measures referable to the human neuromuscular system under hypokinetic conditions
N80-28007

NEUROTROPISM
Experimental gastric ulcers induced by immobilization and electric shock of rats and their pharmacotherapy
[NASA-TM-76157] N80-27981
Effect of central neurotropic substances on the hypophysisadrenal cortex system during immobilization of animals
[NASA-TM-76158] N80-27982
The content of catecholamines in the adrenal glands and sections of the brain under hypokinesia and injection of some neurotropic agents
[NASA-TM-76010] N80-28044

NOISE (SOUND)
Nonlinearities in auditory-nerve fiber responses to bandlimited noise: An experimental study and a model
N80-28037

NOISE INTENSITY
Identification of the minimum noise level capable of producing an asymptotic temporary threshold shift
[AMRL-TR-79-106] A80-41887

NOISE POLLUTION
Community reactions to aircraft noise in the vicinity of airport: A comparative study of the social surveys using interview method
[NASA-TM-75439] N80-27090

NOISE THRESHOLD
Identification of the minimum noise level capable of producing an asymptotic temporary threshold shift
[AMRL-TR-79-106] A80-41887

NONLINEARITY
Nonlinearities in auditory-nerve fiber responses to bandlimited noise: An experimental study and a model
N80-28037

NUCLEAR MAGNETIC RESONANCE
Instrumentation for the measurement of viscosity and flow of biological fluids --- neuclear magnetic resonance
N80-27980

NUCLEAR WARFARE
Minimizing the psychological effects of a wartime disaster on an individual
A80-41890

NUTRITIONAL REQUIREMENTS
The question of using dehydrated foods during long-term space flights
N80-28031

NYSTAGMUS
On-line analysis of eye movements using a digital computer
A80-41996
Generalized nystagmometric characteristics for diagnostic purposes
N80-28034

O

OBESITY
Aerobic power and body fat of men and women during army basic training
A80-41986

OCULOMETERS
Error analysis and corrections to pupil diameter measurements with Langley Research Center's oculometer
[NASA-TM-81806] N80-27075

ONBOARD EQUIPMENT
Environmental control of a pressurized equipment container for Shuttle flights - The Spacelab Igloo
[ASME PAPER 80-ENAS-19] A80-43195

OPERATOR PERFORMANCE
The Shuttle's remote manipulator system - Status and operation
[DGLR PAPER 80-075] A80-41757
Investigation of the operation of eye-telescope systems
A80-42341
Mathematical model for evaluating human operator activity in solving the problem of limiting controllability in an ergatic control and monitoring system
A80-42349
Response time, operator productivity and job satisfaction
N80-28053

OPTICAL TRACKING
Device for measuring the precision of eye-hand coordination while tracking changing size
A80-42010

OPTIMAL CONTROL
Optimal control model predictions of system performance and attention allocation and their experimental validation in a display design study
A80-40899

ORGANIC COMPOUNDS
Comets - A matter of life and death /Milne Lecture/
A80-41002
Isolation and gas chromatographic demonstration of volatile organic substances in thin-layer biological samples
N80-28014

ORGANS
Regional redistribution of rat blood after 7 and 30 days of hypokinesia
N80-28009

ORTHOSTATIC TOLERANCE
Studies of prognostic significance of antiorthostatic position
N80-28006
Pharmacological analysis of physiological mechanisms of orthostatic hemodynamic stability
N80-28026
Bioelectric activity of the human brain during and after 182-day anitorthosatic hypokinesia
N80-28027

OSMOSIS
Is the weight loss of hyperbaric habitation a disorder of osmoregulation
A80-41888

OTOLITH ORGANS
Results of the investigation of the otolith function in manned space flights
[NASA-TM-76103] N80-28046

OXIDATION-REDUCTION REACTIONS
Energy status and oxidation reduction status in rat liver at high altitude /3.8 km/
A80-42002

OXYGEN ANALYZERS
O2 sensing for environmental control and monitoring systems
[ASME PAPER 80-ENAS-41] A80-43215

OXYGEN BREATHING
Rhesus brain gas tension and learned task performance responses to normoxic and hyperoxic breathing
[AMRL-TR-105] A80-41880
Relation of breathing oxygen-argon gas mixtures to altitude decompression sickness
A80-41992

OXYGEN CONSUMPTION
Changes in the adrenergic regulation of thermogenesis during the long-term adaptation of rats to the cold
A80-41321
Aerobic power and body fat of men and women during army basic training
A80-41986
Oxygen consumption of animals under conditions of hypokinesia
[NASA-TM-76167] N80-27983

OXYGEN PRODUCTION
Relation of breathing oxygen-argon gas mixtures to altitude decompression sickness
A80-41992
Molecular sieve generation of aviator's oxygen - Performance of a prototype system under simulated flight conditions
A80-42008

OXYGEN SUPPLY EQUIPMENT
A Portable Oxygen Subsystem - Description and preliminary thermal performance prediction
[ASME PAPER 80-ENAS-7] A80-43184

OXYGEN TENSION
Transient diffusion in multi-layer biological tissue
N80-27979

OZONE
Psychomotor performance during ozone exposure - Spectral and discriminant function analysis of EEG
A80-41879
Effects of ozone on exercising and sedentary adult men and women representative of the flight attendant population
[AD-A080045] N80-28049

P

P-3 AIRCRAFT
Anti-exposure suits in the VP community --- for fixed wing patrol aircraft
[ASME PAPER 80-ENAS-43] A80-43217

PANCREAS
Secretion, incretion and resecretion of pancreatic lipase during prolonged restriction of motor activity
N80-28010

PARABOLIC FLIGHT
Piracetam and fish orientation during parabolic aircraft flight
A80-41997

PARACHUTE DESCENT
Electroencephalographic recordings during parachute jump sessions
A80-41877
PARTIAL PRESSURE
Rhesus brain gas tension and learned task performance responses to normoxic and hyperoxic breathing
[AMRL-TR-105] A80-41880
PATHOGENESIS
Biochemical bases of pathogenesis of hypokinesia
N80-27995
Role of dynamic space flight factors in the pathogenesis of involution of lymphatic organs (experimental morphological study)
N80-28022
PATHOLOGICAL EFFECTS
The effect of the acute ischemia of the brain on the permeability of the hemato-ophthalmic barrier
A80-42051
Cardiovascular and respiratory physiopathological aspects of hypokinesia
[NASA-TM-76198] N80-28048
PATHOLOGY
Some problems of human adaptation and ecology under the aspect of general pathology
[NASA-TM-76095] N80-27076
Vertebral pain in helicopter pilots
[NASA-TM-75792] N80-28043
PATIENTS
Aeromedical transportation of psychiatric patients - Historical review and present management
A80-42014
Air transport of the man who needs everything
A80-42015
PATTERN RECOGNITION
Some problems in pattern detection --- human creativity
A80-42346
PERFORMANCE PREDICTION
Optimal control model predictions of system performance and attention allocation and their experimental validation in a display design study
A80-40899
An attempted validation study of the birthdate-based biorhythm /BBB/ hypothesis
A80-42000
PERFORMANCE TESTS
Molecular sieve generation of aviator's oxygen - Performance of a prototype system under simulated flight conditions
A80-42008
PERIODIC VARIATIONS
Effect of induced cyclic changes of deep body temperature on performance in a flight simulator
A80-41881
PERIPHERAL VISION
Brightness exponent as a function of retinal eccentricity in the peripheral visual field - Effects of dark and light adaptation
A80-41139
PERMEABILITY
Displacement of plasma protein and conduction velocity in rats under action of acceleration forces and hypokinesia
[NASA-TM-76195] N80-27989
PERSONNEL MANAGEMENT
Response time, operator productivity and job satisfaction
N80-28053
PERSONNEL SELECTION
Toward the development of a new aptitude selection test battery for air traffic control specialists
A80-42011
PESTICIDES
Characteristics of enzymatic induction provoked by chlordane
[NASA-TM-76194] N80-28047
PHARMACOLOGY
Experimental gastric ulcers induced by immobilization and electric shock of rats and their pharmacotherapy
[NASA-TM-76157] N80-27981
Effect of central neurotropic substances on the hypophysisadrenal cortex system during immobilization of animals
[NASA-TM-76158] N80-27982
PHENOBARBITAL
The effect produced by phenobarbital, sex hormone and by castration on the development of gastric mucosa destruction due to electrization of immobilized rats
[NASA-TM-76156] N80-27071
PHOSPHORYLATION
Respiration and oxidative phosphorylation in the mitochondria of brain and heart tissues during circulatory brain hypoxia and in the post-hypoxic period
A80-41320
PHOTOMECHANICAL EFFECT
A technique for estimating the contribution of photomechanical responses to visual adaptation
A80-41645
PHOTOMETRY
Two-dimensional spatial frequency content and confusions among dot matrix characters
A80-42847
PHYSICAL EXAMINATIONS
Agricultural aviation medicine in the Soviet Union
A80-41930
PHYSICAL EXERCISE
Electrocardiographic exercise testing and ambulatory monitoring to identify patients with ischemic heart disease at high risk of sudden death
A80-40546
Na+ and Ca2+ ingestion - Plasma volume-electrolyte distribution at rest and exercise
A80-41661
Absolute and relative work capacity in women at 758, 586, and 523 torr barometric pressure
A80-41977
Physiological effects of cold air inhalation during exercise
A80-42001
Circulation in exercising crew members of the first main expedition aboard Salyut-6
N80-27997
Evaluation of efficacy of the set of preventive measures referable to the human neuromuscular system under hypokinetic conditions
N80-28007
Effects of ozone on exercising and sedentary adult men and women representative of the flight attendant population
[AD-A080045] N80-28049
PHYSICAL FITNESS
Aerobic power and body fat of men and women during army basic training
A80-41986
Prevalence of coronary heart disease risk factors in a young military population
A80-41989
The relation between tilt table and acceleration-tolerance and their dependence on stature and physical fitness
[NASA-TM-75796] N80-28042
PHYSIOLOGICAL EFFECTS
Physiological effects of cold air inhalation during exercise
A80-42001
The architecture of the avian retina following exposure to chronic 2 G
A80-42013
Change in radiosensitivity of rats during hypokinetic stress
[NASA-TM-75968] N80-27068
Effect of sharply lowered muscular activity on the thyroid gland of the white rat
[NASA-TM-76114] N80-27070
The effect produced by phenobarbital, sex hormone and by castration on the development of gastric mucosa destruction due to electrization of immobilized rats
[NASA-TM-76156] N80-27071
Changes in leukocyte stability in hypodynamia
[NASA-TM-75944] N80-27074
The behavior of fatty acids in the blood plasma of monkeys following exposure to short term stresses
[NASA-TM-76151] N80-27079
Experimental gastric ulcers induced by immobilization and electric shock of rats and their pharmacotherapy
[NASA-TM-76157] N80-27981

Effect of central neurotropic substances on the hypophysisadrenal cortex system during immobilization of animals
[NASA-TM-76158] N80-27982
Oxygen consumption of animals under conditions of hypokinesia
[NASA-TM-76167] N80-27983
Mechanisms of water-salt metabolism disturbances in dogs subjected to six month hypokinesia
[NASA-TM-76170] N80-27984
Effect of immobilization on the EEG of the baboon. Comparison with telemetry results from unrestricted animals
[NASA-TM-76137] N80-27987
Calorigenic effect of adrenaline in rats under conditions of restricted motor activity
[NASA-TM-76192] N80-27988
Displacement of plasma protein and conduction velocity in rats under action of acceleration forces and hypokinesia
[NASA-TM-76195] N80-27989
Experimental coronary sclerosis induced by immobilization of rabbits: A new model of arteriosclerosis
[NASA-TM-76196] N80-27990
Effects of immobilization on spermiogenesis
[NASA-TM-76282] N80-27993
USSR Report: Space Biology and Aerospace Medicine, volume 14, no. 3, 1980
[JPRS-75956] N80-27994
USSR Report. Space Biology and Aerospace medicine, volume 14, no. 2, 1980
[JPRS-75654] N80-28015
Principal results of physiological experiments with mammals aboard the Cosmos-936 biosatellite
N80-28020
Effect of hypokinesia on invertase activity of the mucosa of the small intestine
[NASA-TM-76191] N80-28039
Changes of the body functions during long-term hypokinesia
[NASA-TM-76166] N80-28041
The content of catecholamines in the adrenal glands and sections of the brain under hypokinesia and injection of some neurotropic agents
[NASA-TM-76010] N80-28044
Characteristics of enzymatic induction provoked by chlordane
[NASA-TM-76194] N80-28047
Cardiovascular and respiratory physiopathological aspects of hypokinesia
[NASA-TM-76198] N80-28048
Effects of ozone on exercising and sedentary adult men and women representative of the flight attendant population
[AD-A080045] N80-28049
Altitude hypoxia. Citations from the NTIS data base
[PB80-807696] N80-28052

PHYSIOLOGICAL RESPONSES
Cardiovascular responses of man exposed to plus Gz accelerations in a centrifuge
A80-41885
Interactions between surface cooling and LBNP-induced central hypovolemia --- Lower Body Negative Pressure
A80-41987
Retinal changes in rats flown on Cosmos 936 - A cosmic ray experiment
A80-41995
Physiological responses of men and women to humid and dry heat
A80-43151

PHYSIOLOGICAL TESTS
Electrocardiographic exercise testing and ambulatory monitoring to identify patients with ischemic heart disease at high risk of sudden death
A80-40546
Prevalence of coronary heart disease risk factors in a young military population
A80-41989
Psychomotor deterioration during exposure to heat
A80-42004
Interaction of dopamine and haloperidol with O2 and CO2 chemoreception in carotid body
A80-43152

Method for assessing hemodynamics and detecting latent insufficiency of cerebral circulation in cosmonaut candidates
N80-28012
Ultrasonic method of recording gas bubbles in animal venous blood in a rarefied atmosphere
N80-28013
The relation between tilt table and acceleration-tolerance and their dependence on stature and physical fitness
[NASA-TM-75796] N80-28042

PILOT PERFORMANCE
An analytical evaluation method of manual control system utilizing human pilot model
A80-41051
Predicting the effects of vertical vibration frequency, combinations of frequencies and viewing distance on the reading of numeric displays
A80-41690
Performance effects of alcohol intoxication and hangover at ground level and at simulated altitude
A80-41876
Effect of induced cyclic changes of deep body temperature on performance in a flight simulator
A80-41881
Pickup of visual information by the pilot during a ground control approach in a fighter aircraft simulator
A80-41981
The effect of psychic self-regulation /autogenous training/ on the maintenance of the professional skill of pilots
A80-42345
Mathematical model for evaluating human operator activity in solving the problem of limiting controllability in an ergatic control and monitoring system
A80-42349
Heart rate variability, pilot workload, task difficulty, tracking
[DFVLR-FB-79-33] N80-27086
Effect of prolonged +Gz accelerations on human performance
N80-28003

PILOT SELECTION
Method for assessing hemodynamics and detecting latent insufficiency of cerebral circulation in cosmonaut candidates
N80-28012

PILOT TRAINING
Catecholamine excretion in A-10 pilots
A80-42007

PLANTS (BOTANY)
Primary productivity, heterotrophy, metabolic indicators of stress and interactions in algal-bacterial mat communities affected by a fluctuating thermal regime
[DP-MS-80-14] N80-27082
Study of compatilibity of certain higher plants and chlorella as related to a bioregenerative human life support system
N80-28033

PLASTICS
The thermal properties of a survival bag incorporating metallised plastic sheeting
A80-41883

POLYVINYL CHLORIDE
Toxicity of vinyl chloride. Citations from the NTIS data base
[PB80-807662] N80-28051

PORTABLE EQUIPMENT
A Portable Oxygen Subsystem - Description and preliminary thermal performance prediction
[ASME PAPER 80-ENAS-7] A80-43184

POSITION (LOCATION)
Target position and velocity - The stimuli for smooth pursuit eye movements
A80-41646

POSITIVE IONS
The intracellular Na/+/ and K/+/ composition of the moderately halophilic bacterium, Paracoccus halodenitrificans
A80-41250

POTASSIUM
The intracellular Na/+/ and K/+/ composition of the moderately halophilic bacterium, Paracoccus halodenitrificans
A80-41250

PRESSURE BREATHING
Respiratory gas exchange during positive pressure breathing and rapid decompression to simulated altitudes of 18.3 and 24.4 km
A80-41979
Respiration and gas exchange under hyperbaric conditions
N80-28016

PRESSURE CHAMBERS
Red blood cell count /RCC/ and volume /MCV/ of three subjects in a hypobaric chamber
A80-41998

PRESSURE REGULATORS
Development, test, and evaluation of an advanced anti-G valve for the F-15
A80-41988

PRESSURE SUITS
Development, test, and evaluation of an advanced anti-G valve for the F-15
A80-41988
The use of antigravity suits in the treatment of idiopathic orthostatic hypotension
[NASA-TM-75804] N80-27077

PRESSURIZED CABINS
Environmental control of a pressurized equipment container for Shuttle flights - The Spacelab Igloo
[ASME PAPER 80-ENAS-19] A80-43195

PROBLEM SOLVING
Mathematical model for evaluating human operator activity in solving the problem of limiting controllability in an ergatic control and monitoring system
A80-42349

PRODUCTION ENGINEERING
Response time, operator productivity and job satisfaction
N80-28053

PROPULSIVE EFFICIENCY
Biological and aerodynamic problems with the flight of animals
[NASA-TM-75337] N80-27985

PROTECTIVE CLOTHING
The thermal properties of a survival bag incorporating metallised plastic sheeting
A80-41883
Anti-exposure suits in the VP community --- for fixed wing patrol aircraft
[ASME PAPER 80-ENAS-43] A80-43217

PROTEIN METABOLISM
The effect of hypodynamia on mineral and protein metabolism in calcified tissues of the maxillodental system (experimental radioisotope study)
[NASA-TM-75998] N80-27078
Characteristics of enzymatic induction provoked by chlordane
[NASA-TM-76194] N80-28047

PHOTOBIOLOGY
Comets - A matter of life and death /Milne Lecture/
A80-41002

PROTOTYPES
Molecular sieve generation of aviator's oxygen - Performance of a prototype system under simulated flight conditions
A80-42008

PSYCHIATRY
Aeromedical transportation of psychiatric patients - Historical review and present management
A80-42014

PSYCHOACOUSTICS
The effect of hearing protectors on the perception of warning and indicator sounds: A general review
[ISVR-TR-98] N80-27087

PSYCHOLOGICAL EFFECTS
Air traffic control stress and its effects - An investigation at Manchester airport
A80-40978
Minimizing the psychological effects of a wartime disaster on an individual
A80-41890

PSYCHOLOGICAL FACTORS
The effect of psychic self-regulation /autogenous training/ on the maintenance of the professional skill of pilots
A80-42345

PSYCHOLOGY
Applied behavior analysis in flying research
[AD-A081750] N80-27094

PSYCHOMOTOR PERFORMANCE
Psychomotor performance during ozone exposure - Spectral and discriminant function analysis of EEG
A80-41879
Rhesus brain gas tension and learned task performance responses to normoxic and hyperoxic breathing
[AMRL-TR-105] A80-41880
Psychomotor deterioration during exposure to heat
A80-42004
Device for measuring the precision of eye-hand coordination while tracking changing size
A80-42010

PSYCHOPHYSICS
Device for measuring the precision of eye-hand coordination while tracking changing size
A80-42010

PSYCHOPHYSIOLOGY
Two-channel model of image processing in the human retina
A80-42849
Effect of psychotropic drugs on gastric ulcers induced by immobilization: Increased protective effect of amitriptyline caused by chlordiazepoxide
[NASA-TM-76197] N80-27991

PUBLIC HEALTH
Air transport of the man who needs everything
A80-42015

PULMONARY CIRCULATION
Acceleration effects on pulmonary blood flow distribution using perfusion scintigraphy
A80-41985
The effect of sustained +Gz acceleration on extravascular lung water content in domestic fowl
A80-41999
Theoretical analysis of the effect of state of pulmonary circulation on distribution of ventilation-perfusion relations and gas exchange in the lungs
N80-28011

PULMONARY FUNCTIONS
Alveolar macrophages and pulmonary surfactant of altitude-raised rats
A80-42012
Changes in pulmonary PV characteristics of human subjects at an altitude of 5,366 m
A80-43153
Measurement of lung function using magnetometers. 1: Principles and mathematical modeling
[AD-A083910] N80-28038

PUPIL SIZE
Error analysis and corrections to pupil diameter measurements with Langley Research Center's oculometer
[NASA-TM-81806] N80-27075

PUPILLOMETRY
Error analysis and corrections to pupil diameter measurements with Langley Research Center's oculometer
[NASA-TM-81806] N80-27075

PUPILS
A technique for estimating the contribution of photomechanical responses to visual adaptation
A80-41645

PURSUIT TRACKING
Target position and velocity - The stimuli for smooth pursuit eye movements
A80-41646
Effect of direction and rate of change of deep body and skin temperatures on performance of a rotary pursuit task
A80-41978

Q

QUANTITATIVE ANALYSIS
Modified conjugate counting technique for quantitative measurement of radioactivity in vivo
[CONF-790782-1] N80-27084

QUEUEING THEORY
Dynamic decisions and work load in multitask supervisory control
A80-40898

R

RADAR TRACKING
Visual search performance during simulated radar observation with and without a sweepline
A80-41882

RADIATION EFFECTS
Retinal changes in rats flown on Cosmos 936 - A cosmic ray experiment
A80-41995

RADIATION HAZARDS
An evaluation of microwave emissions from sensormatic electronic security systems
[PB80-155385] N80-27088

RADIATION MEASUREMENT
Modified conjugate counting technique for quantitative measurement of radioactivity in vivo
[CONF-790782-1] N80-27084

RADIATION SICKNESS
Change in radiosensitivity of rats during hypokinetic stress
[NASA-TM-75968] N80-27068

RADIOBIOLOGY
Change in radiosensitivity of rats during hypokinetic stress
[NASA-TM-75968] N80-27068
Modified conjugate counting technique for quantitative measurement of radioactivity in vivo
[CONF-790782-1] N80-27084

REACTION KINETICS
The factors influencing the formation of Li2CO3 from LiOH and CO2
[ASME PAPER 80-ENAS-45] A80-43219

READING
Predicting the effects of vertical vibration frequency, combinations of frequencies and viewing distance on the reading of numeric displays
A80-41690

REBREATHING
A Portable Oxygen Subsystem - Description and preliminary thermal performance prediction
[ASME PAPER 80-ENAS-7] A80-43184

REGENERATION (PHYSIOLOGY)
An implantable electrical device
[NASA-CASE-GSC-12560-1] N80-27073

REGRESSION ANALYSIS
An attempted validation study of the birthdate-based biorhythm /BBB/ hypothesis
A80-42000

RELIABILITY ENGINEERING
A monitor for atmospheric composition and contaminants in closed environments
[ASME PAPER 80-ENAS-35] A80-43210

REMOTE MANIPULATOR SYSTEM
The Shuttle's remote manipulator system - Status and operation
[DGLR PAPER 80-075] A80-41757

RENAL FUNCTION
Effect of weightlessness and artificial gravity on ion-regulating function of rat kidneys
N80-27999
Morphometric analysis of glomerules and juxtaglomerula system of the rat kidney in the course of experimental hypokinesia
N80-28028

REPRODUCTION (BIOLOGY)
Effect of conditioning for hypoxia on fertility of white mice
N80-28030

RESEARCH AND DEVELOPMENT
Toward the development of a new aptitude selection test battery for air traffic control specialists
A80-42011

RESPIRATION
Respiration and oxidative phosphorylation in the mitochondria of brain and heart tissues during circulatory brain hypoxia and in the post-hypoxic period
A80-41320
Physiological effects of cold air inhalation during exercise
A80-42001

RESPIRATORY PHYSIOLOGY
Dynamics of human external respiration and blood gases under the combined effect of hypercapnia and hypoxia
N80-28024

RESPIRATORY RATE
Respiratory gas exchange during positive pressure breathing and rapid decompression to simulated altitudes of 18.3 and 24.4 km
A80-41979

RESPIRATORY SYSTEM
Respiration and gas exchange under hyperbaric conditions
N80-28016
Cardiovascular and respiratory physiopathological aspects of hypokinesia
[NASA-TM-76198] N80-28048

RETINA
Brightness exponent as a function of retinal eccentricity in the peripheral visual field - Effects of dark and light adaptation
A80-41139
Retinal changes in rats flown on Cosmos 936 - A cosmic ray experiment
A80-41995
The architecture of the avian retina following exposure to chronic 2 G
A80-42013

RETINAL IMAGES
Two-channel model of image processing in the human retina
A80-42849

REVERSE OSMOSIS
Upgrading efficacy of membrane techniques for regenerating water from urine
N80-28035

RHYTHM (BIOLOGY)
An attempted validation study of the birthdate-based biorhythm /BBB/ hypothesis
A80-42000

RISK
Prevalence of coronary heart disease risk factors in a young military population
A80-41989

ROBOTS
Imitation of locomotion under conditions of weightlessness
A80-40846

ROCKET EXHAUST
Rocket plume burn hazard
A80-41984

ROTATION
Thresholds for detection of constant rotary acceleration during vibratory rotary acceleration
A80-42003

S

SACCADIC EYE MOVEMENTS
On-line analysis of eye movements using a digital computer
A80-41996

SALINITY
Mechanisms of water-salt metabolism disturbances in dogs subjected to six month hypokinesia
[NASA-TM-76170] N80-27984

SCALE EFFECT
Scale effects in the musculoskeletal system, viscera and skin of small terrestrial mammals
A80-40625

SECURITY
An evaluation of microwave emissions from sensormatic electronic security systems
[PB80-155385] N80-27088

SEMICIRCULAR CANALS
Semicircular canal function in rats after flight aboard the Cosmos-936 biosatellite
N80-28021

SIGNAL PROCESSING
Adaptive delta modulation for telephone biotelemetry of ECG (electrocardiograph)
[PB80-160773] N80-27089

SKIN (ANATOMY)
Scale effects in the musculoskeletal system, viscera and skin of small terrestrial mammals
A80-40625

SKIN TEMPERATURE (BIOLOGY)
Effect of direction and rate of change of deep body and skin temperatures on performance of a rotary pursuit task
A80-41978

Interactions between surface cooling and LBNP-induced central hypovolemia --- Lower Body Negative Pressure
A80-41987

SLEEP
The organization of the sleep-wakefulness cycle according to data obtained by the continuous daily monitoring of heart rhythm and motor activity
A80-41319

SOCIAL PSYCHIATRY
The morale climate of the crew (from observations of a submarine doctor)
[NASA-TM-76094] N80-27092

SODIUM
The intracellular Na/+/ and K/+/ composition of the moderately halophilic bacterium, Paracoccus halodenitrificans
A80-41250
Na+ and Ca2+ ingestion - Plasma volume-electrolyte distribution at rest and exercise
A80-41661

SPACE FLIGHT
Human response to hypoxia-motion sickness stress as a predictor of the space sickness syndrome
[AD-A080306] N80-27080

SPACE FLIGHT FEEDING
Space victualling
A80-41750
The question of using dehydrated foods during long-term space flights
N80-28031

SPACE FLIGHT STRESS
Investigation of the operation of eye-telescope systems
A80-42341
USSR Report: Space Biology and Aerospace Medicine, volume 14, no. 3, 1980
[JPRS-75956] N80-27994
USSR Report. Space Biology and Aerospace medicine, volume 14, no. 2, 1980
[JPRS-75654] N80-28015
Role of dynamic space flight factors in the pathogenesis of involution of lymphatic organs (experimental morphological study)
N80-28022

SPACE MAINTENANCE
Maintainable maintenance disconnect valve /MMDV/ for on-orbit component replacement
[ASME PAPER 80-ENAS-42] A80-43216

SPACE MISSIONS
O2 sensing for environmental control and monitoring systems
[ASME PAPER 80-ENAS-41] A80-43215

SPACE OBSERVATIONS (FROM EARTH)
Exemplary model of an eye-telescope system for the detection of manned spacecraft on a background of stars
A80-42344

SPACE SHUTTLE PAYLOADS
The Shuttle's remote manipulator system - Status and operation
[DGLR PAPER 80-075] A80-41757
Manned maneuvering unit
[DGLR PAPER 80-081] A80-41761

SPACE SUITS
Manned maneuvering unit
[DGLR PAPER 80-081] A80-41761

SPACEBORNE EXPERIMENTS
Postflight studies on fungal phenotypes irradiated in space
A80-43011
NASA-Ames Life Sciences Flight Experiments program - 1980 status report
[ASME PAPER 80-ENAS-34] A80-43209
Life sciences experiments on Spacelab 1
[ASME PAPER 80-ENAS-36] A80-43211
The development of a Space Shuttle Research Animal Holding Facility
[ASME PAPER 80-ENAS-39] A80-43213
Experiment operations in Spacelab --- for life study in space environment
[ASME PAPER 80-ENAS-40] A80-43214
Effect of weightlessness and artificial gravity on ion-regulating function of rat kidneys
N80-27999
Activity of some hepatic enzymes and lipogenetic processes in rat aipose tissue after space flight --- effects of weightlessness
N80-28000
State of rat thyroid C cells following flights on the Cosmos type of biosatellites (according to results of a morphological study) --- effects of weightlessness
N80-28001
Research hardware and habitat of animals used in experiment aboard Cosmos-936 biosatellite
N80-28019
Principal results of physiological experiments with mammals aboard the Cosmos-936 biosatellite
N80-28020
Semicircular canal function in rats after flight aboard the Cosmos-936 biosatellite
N80-28021

SPACEBORNE TELESCOPES
Investigation of the operation of eye-telescope systems
A80-42341

SPACECRAFT COMPONENTS
Maintainable maintenance disconnect valve /MMDV/ for on-orbit component replacement
[ASME PAPER 80-ENAS-42] A80-43216

SPACECRAFT TRACKING
Exemplary model of an eye-telescope system for the detection of manned spacecraft on a background of stars
A80-42344

SPACECREWS
Space victualling
A80-41750

SPACELAB
Life sciences experiments on Spacelab 1
[ASME PAPER 80-ENAS-36] A80-43211
Evaluation of biological models using Spacelab
[ASME PAPER 80-ENAS-38] A80-43212

SPACELAB PAYLOADS
The Shuttle's remote manipulator system - Status and operation
[DGLR PAPER 80-075] A80-41757
Environmental control of a pressurized equipment container for Shuttle flights - The Spacelab Igloo
[ASME PAPER 80-ENAS-19] A80-43195
NASA-Ames Life Sciences Flight Experiments program - 1980 status report
[ASME PAPER 80-ENAS-34] A80-43209
The development of a Space Shuttle Research Animal Holding Facility
[ASME PAPER 80-ENAS-39] A80-43213
Experiment operations in Spacelab --- for life study in space environment
[ASME PAPER 80-ENAS-40] A80-43214

SPATIAL DISTRIBUTION
Two-dimensional spatial frequency content and confusions among dot matrix characters
A80-42847

SPERMATOGENESIS
Effects of immobilization on spermiogenesis
[NASA-TM-76282] N80-27993

STRESS (PHYSIOLOGY)
Ambiguous response of lung lamellar bodies to sauna-like heat stress in two age groups of adult male rats
A80-41993
Use of the multivariate approach to enhance the diagnostic accuracy of the treadmill stress test
A80-42098
Myocardial dystrophy in athletes --- Russian book
A80-42935
Change in radiosensitivity of rats during hypokinetic stress
[NASA-TM-75968] N80-27068
Effect of sharply lowered muscular activity on the thyroid gland of the white rat
[NASA-TM-76114] N80-27070
The effect produced by phenobarbital, sex hormone and by castration on the development of gastric mucosa destruction due to electrization of immobilized rats
[NASA-TM-76156] N80-27071
Changes in leukocyte stability in hypodynamia
[NASA-TM- 5944] N80-27074
The behavior of fatty acids in the blood plasma of monkeys following exposure to short term stresses
[NASA-TM-76151] N80-27079

- Human response to hypoxia-motion sickness stress as a predictor of the space sickness syndrome [AD-A080306] N80-27080
- Experimental gastric ulcers induced by immobilization and electric shock of rats and their pharmacotherapy [NASA-TM-76157] N80-27981
- Effect of central neurotropic substances on the hypophysisadrenal cortex system during immobilization of animals [NASA-TM-76158] N80-27982
- Oxygen consumption of animals under conditions of hypokinesia [NASA-TM-76167] N80-27983
- Mechanisms of water-salt metabolism disturbances in dogs subjected to six month hypokinesia [NASA-TM-76170] N80-27984
- Effect of immobilization on the EEG of the baboon. Comparison with telemetry results from unrestricted animals [NASA-TM-76137] N80-27987
- Calorigenic effect of adrenaline in rats under conditions of restricted motor activity [NASA-TM-76192] N80-27988
- Displacement of plasma protein and conduction velocity in rats under action of acceleration forces and hypokinesia [NASA-TM-76195] N80-27989
- Experimental coronary sclerosis induced by immobilization of rabbits: A new model of arteriosclerosis [NASA-TM-76196] N80-27990
- Effects of immobilization on spermiogenesis [NASA-TM-76282] N80-27993
- The stress reaction to hypokinesia and its effect on general resistance N80-28008
- Effect of hypokinesia on invertase activity of the mucosa of the small intestine [NASA-TM-76191] N80-28039
- Morphofunctional correlations in the experimental study of myocardiopathies under the stress of forced restraint. Note 2: The influence of adrenal imbalance [NASA-TM-76138] N80-28040
- Changes of the body functions during long-term hypokinesia [NASA-TM-76166] N80-28041
- The content of catecholamines in the adrenal glands and sections of the brain under hypokinesia and injection of some neurotropic agents [NASA-TM-76010] N80-28044
- Mechanism of selective lesion of the cardiovascular system in psycho-emotional stress [NASA-TM-76035] N80-28045
- Characteristics of enzymatic induction provoked by chlordane [NASA-TM-76194] N80-28047
- Cardiovascular and respiratory physiopathological aspects of hypokinesia [NASA-TM-76198] N80-28048

STRESS (PSYCHOLOGY)
- Air traffic control stress and its effects - An investigation at Manchester airport A80-40978
- The behavior of fatty acids in the blood plasma of monkeys following exposure to short term stresses [NASA-TM-76151] N80-27079

SUBMARINES
- A history of the Naval Research Laboratory contributions to submarine life support systems [ASME PAPER 80-ENAS-29] A80-43205
- Atmospheric monitoring in submersibles [ASME PAPER 80-ENAS-31] A80-43206
- Carbon dioxide effects on submarines [ASME PAPER 80-ENAS-32] A80-43207
- Atmospheric monitoring for submarine applications [ASME PAPER 80-ENAS-33] A80-43208
- A monitor for atmospheric composition and contaminants in closed environments [ASME PAPER 80-ENAS-35] A80-43210

SURFACE COOLING
- Interactions between surface cooling and LBNP-induced central hypovolemia --- Lower Body Negative Pressure A80-41987

SURFACTANTS
- Combined effect of hypoxia and cold on the phospholipid composition of lung surfactant in rats A80-41980
- Alveolar macrophages and pulmonary surfactant of altitude-raised rats A80-42012

SURVIVAL EQUIPMENT
- The thermal properties of a survival bag incorporating metallised plastic sheeting A80-41883

SYMPTOMOLOGY
- Evaluation of an acute mountain sickness questionnaire - Effects of intermediate-altitude staging upon subjective symptomatology A80-41886

SYSTEMS ANALYSIS
- Some problems in pattern detection --- human creativity A80-42346
- A concept for developing human performance specifications [AD-A084617] N80-28054

T

TARGET RECOGNITION
- The influence of the flight altitude and the limitation of the field of view on the visibility of targets on the ground and the maximum visibility flight altitude [DFVLR-FB-79-35] N80-27095

TARGETS
- Target position and velocity - The stimuli for smooth pursuit eye movements A80-41646

TASK COMPLEXITY
- Dynamic decisions and work load in multitask supervisory control A80-40898

TECHNOLOGY UTILIZATION
- Adaptive delta modulation for telephone biotelemetry of ECG (electrocardiograph) [PB80-160773] N80-27089

TELEOPERATORS
- The Shuttle's remote manipulator system - Status and operation [DGLR PAPER 80-075] A80-41757

TEMPERATURE EFFECTS
- Effect of induced cyclic changes of deep body temperature on performance in a flight simulator A80-41881
- Effect of direction and rate of change of deep body and skin temperatures on performance of a rotary pursuit task A80-41978
- Ambiguous response of lung lamellar bodies to sauna-like heat stress in two age groups of adult male rats A80-41993
- Psychomotor deterioration during exposure to heat A80-42004
- Primary productivity, heterotrophy, metabolic indicators of stress and interactions in algal-bacterial mat communities affected by a fluctuating thermal regime [DP-MS-80-14] N80-27082
- Effect of high ambient temperature on human performance N80-28023

TERMINAL CONFIGURED VEHICLE PROGRAM
- NASA TLA workload analysis support. Volume 2: Metering and spacing studies validation data [NASA-CR-3239] N80-27091
- NASA TLA workload analysis support. Volume 3: FFD autopilot scenario validation data [NASA-CR-3240] N80-27093

TESTS
- Toward the development of a new aptitude selection test battery for air traffic control specialists A80-42011

THALLIUM ISOTOPES
- Diagnosis of coronary artery disease with exercise radionuclide imaging - State of the art A80-40547

THERMAL INSULATION
The thermal properties of a survival bag incorporating metallised plastic sheeting
A80-41883

THERMODYNAMIC PROPERTIES
The thermal properties of a survival bag incorporating metallised plastic sheeting
A80-41883

THRESHOLDS (PERCEPTION)
Thresholds for detection of constant rotary acceleration during vibratory rotary acceleration
A80-42003

THROMBOSIS
Effects of hypodynamia on the hemocoagulative properties of the vascular wall and myocardium
[NASA-TM-76199] N80-27992

THYROID GLAND
Effect of sharply lowered muscular activity on the thyroid gland of the white rat
[NASA-TM-76114] N80-27070
State of rat thyroid C cells following flights on the Cosmos type of biosatellites (according to results of a morphological study) --- effects of weightlessness
N80-28001

TISSUES (BIOLOGY)
The architecture of the avian retina following exposure to chronic 2 G
A80-42013
The effect of hypodynamia on mineral and protein metabolism in calcified tissues of the maxillodental system (experimental radioisotope study)
[NASA-TM-75998] N80-27078
Isolation and gas chromatographic demonstration of volatile organic substances in thin-layer biological samples
N80-28014
State of human bone tissue protein fraction after space flights
N80-28018

TORQUE
Active muscle torques about long-bone axes of major human joints
A80-41994

TOXIC HAZARDS
Carbon dioxide effects on submarines
[ASME PAPER 80-ENAS-32] A80-43207
Characteristics of enzymatic induction provoked by chlordane
[NASA-TM-76194] N80-28047

TOXICITY
Toxicity of vinyl chloride. Citations from the NTIS data base
[PB80-807662] N80-28051

TRACE CONTAMINANTS
Atmospheric monitoring for submarine applications
[ASME PAPER 80-ENAS-33] A80-43208

TRACKING (POSITION)
Performance effects of alcohol intoxication and hangover at ground level and at simulated altitude
A80-41876

TRANSDUCERS
Simultaneous muscle force and displacement transducer
[NASA-CASE-NPO-14212-1] N80-27072

TRANSFER ORBITS
Maintainable maintenance disconnect valve /MMDV/ for on-orbit component replacement
[ASME PAPER 80-ENAS-42] A80-43216

TRANSIENT RESPONSE
Transient diffusion in multi-layer biological tissue
N80-27979

TRANSVERSE ACCELERATION
Effect of transverse accelerations on innervation of the guinea pig's crural skeletal muscles
N80-28005

TREADMILLS
Use of the multivariate approach to enhance the diagnostic accuracy of the treadmill stress test
A80-42098

U

U.S.S.R. SPACE PROGRAM
Results of the investigation of the otolith function in manned space flights
[NASA-TM-76103] N80-28046

ULCERS
The effect produced by phenobarbital, sex hormone and by castration on the development of gastric mucosa destruction due to electrization of immobilized rats
[NASA-TM-76156] N80-27071
Experimental gastric ulcers induced by immobilization and electric shock of rats and their pharmacotherapy
[NASA-TM-76157] N80-27981
Effect of psychotropic drugs on gastric ulcers induced by immobilization: Increased protective effect of amitriptyline caused by chlordiazepoxide
[NASA-TM-76197] N80-27991

ULTRASONIC TESTS
Ultrasonic method of recording gas bubbles in animal venous blood in a rarefied atmosphere
N80-28013

URINE
Water recovery by catalytic treatment of urine vapor
[ASME PAPER 80-ENAS-16] A80-43192
Development of a preprototype thermoelectric integrated membrane evaporation subsystem for water recovery
[ASME PAPER 80-ENAS-46] A80-43220
Upgrading efficacy of membrane techniques for regenerating water from urine
N80-28035

V

VAPORS
Water recovery by catalytic treatment of urine vapor
[ASME PAPER 80-ENAS-16] A80-43192

VASCULAR SYSTEM
Effects of hypodynamia on the hemocoagulative properties of the vascular wall and myocardium
[NASA-TM-76199] N80-27992

VECTORCARDIOGRAPHY
Frank orthogonal vectorcardiograms in humans during and after exposure to +Gz acceleration stress
A80-42006

VELOCITY
Target position and velocity - The stimuli for smooth pursuit eye movements
A80-41646

VENTILATION
Theoretical analysis of the effect of state of pulmonary circulation on distribution of ventilation-perfusion relations and gas exchange in the lungs
N80-28011

VERTEBRAL COLUMN
The classification of spinal column deformities resulting from aircraft ejection forces
[ASME PAPER 80-ENAS-44] A80-43218
Vertebral pain in helicopter pilots
[NASA-TM-75792] N80-28083

VERTICAL MOTION
Predicting the effects of vertical vibration frequency, combinations of frequencies and viewing distance on the reading of numeric displays
A80-41690

VERTICAL ORIENTATION
Piracetam and fish orientation during parabolic aircraft flight
A80-41997

VESTIBULAR TESTS
Human color discriminating function with muscular tension during exposure to vestibular stimuli
N80-28004

VIBRATION EFFECTS
Predicting the effects of vertical vibration frequency, combinations of frequencies and viewing distance on the reading of numeric displays
A80-41690
Thresholds for detection of constant rotary acceleration during vibratory rotary acceleration
A80-42003

VISCERA
Scale effects in the musculoskeletal system, viscera and skin of small terrestrial mammals
A80-40625

VISCOSITY
Instrumentation for the measurement of viscosity and flow of biological fluids --- nuclear magnetic resonance
N80-27980

VISIBILITY
The influence of the flight altitude and the limitation of the field of view on the visibility of targets on the ground and the maximum visibility flight altitude
[DFVLR-FB-79-35] N80-27095

VISUAL ACCOMMODATION
A technique for estimating the contribution of photomechanical responses to visual adaptation
A80-41645

VISUAL ACUITY
Predicting the effects of vertical vibration frequency, combinations of frequencies and viewing distance on the reading of numeric displays
A80-41690

VISUAL DISCRIMINATION
Human color discriminating function with muscular tension during exposure to vestibular stimuli
N80-28004

VISUAL FIELDS
Brightness exponent as a function of retinal eccentricity in the peripheral visual field - Effects of dark and light adaptation
A80-41139

VISUAL OBSERVATION
Investigation of the operation of eye-telescope systems
A80-42341

VISUAL PERCEPTION
Pickup of visual information by the pilot during a ground control approach in a fighter aircraft simulator
A80-41981

Two-dimensional spatial frequency content and confusions among dot matrix characters
A80-42847

The influence of the flight altitude and the limitation of the field of view on the visibility of targets on the ground and the maximum visibility flight altitude
[DFVLR-FB-79-35] N80-27095

VISUAL STIMULI
Target position and velocity - The stimuli for smooth pursuit eye movements
A80-41646

Visual search performance during simulated radar observation with and without a sweepline
A80-41882

Device for measuring the precision of eye-hand coordination while tracking changing size
A80-42010

VISUAL TASKS
Visual search performance during simulated radar observation with and without a sweepline
A80-41882

W

WAKEFULNESS
The organization of the sleep-wakefulness cycle according to data obtained by the continuous daily monitoring of heart rhythm and motor activity
A80-41319

WALKING
Imitation of locomotion under conditions of weightlessness
A80-40846

WARNING SYSTEMS
The effect of hearing protectors on the perception of warning and indicator sounds: A general review
[ISVR-TR-98] N80-27087

WASTE TREATMENT
Water recovery by catalytic treatment of urine vapor
[ASME PAPER 80-ENAS-16] A80-43192
Development of a preprototype thermoelectric integrated membrane evaporation subsystem for water recovery
[ASME PAPER 80-ENAS-46] A80-43220

WATER CONSUMPTION
Space victualling
A80-41750

WATER POLLUTION
Method and automated apparatus for detecting coliform organisms
[NASA-CASE-MSC-16777-1] N80-27067

WATER RECLAMATION
Water recovery by catalytic treatment of urine vapor
[ASME PAPER 80-ENAS-16] A80-43192
Development of a preprototype thermoelectric integrated membrane evaporation subsystem for water recovery
[ASME PAPER 80-ENAS-46] A80-43220
Upgrading efficacy of membrane techniques for regenerating water from urine
N80-28035

WATTMETERS
Development of a method for the traceable calibration of defibrillator energy meters
[NPL-DES-55] N80-27085

WEIGHTLESSNESS
Piracetam and fish orientation during parabolic aircraft flight
A80-41997

Results of studies of pulsed blood flow and regional vascular tonus during flights in the first and second expeditions aboard the Salyut-6-Soyuz orbital complex --- effects of weightlessness
N80-27996

Hemodynamics and phase structure of the cardiac cycle in members of the first crew of Salyut-5 at rest --- effects of hypokinesia and weightlessness
N80-27998

Effect of weightlessness and artificial gravity on ion-regulating function of rat kidneys
N80-27999

Activity of some hepatic enzymes and lipogenetic processes in rat aipose tissue after space flight --- effects of weightlessness
N80-28000

State of rat thyroid C cells following flights on the Cosmos type of biosatellites (according to results of a morphological study) --- effects of weightlessness
N80-28001

Studies of prognostic significance of antiorthostatic position
N80-28006

Evaluation of efficacy of the set of preventive measures referable to the human neuromuscular system under hypokinetic conditions
N80-28007

Theoretical analysis of the effect of state of pulmonary circulation on distribution of ventilation-perfusion relations and gas exchange in the lungs
N80-28011

Isolation and gas chromatographic demonstration of volatile organic substances in thin-layer biological samples
N80-28014

Circulation at rest in crew members of the first main expedition aboard Salyut 6
N80-28017

State of human bone tissue protein fraction after space flights
N80-28018

Research hardware and habitat of animals used in experiment aboard Cosmos-936 biosatellite
N80-28019

Principal results of physiological experiments with mammals aboard the Cosmos-936 biosatellite
N80-28020

Semicircular canal function in rats after flight aboard the Cosmos-936 biosatellite
N80-28021

Role of dynamic space flight factors in the pathogenesis of involution of lymphatic organs (experimental morphological study)
N80-28022

Results of the investigation of the otolith function in manned space flights
[NASA-TM-76103] N80-28046

WEIGHTLESSNESS SIMULATION
Imitation of locomotion under conditions of weightlessness
A80-40846

Functional state of the cardiovascular system under the combined effect of 28 day immersion, rotation on a short-arm centrifuge and exercise on a bicycle ergometer
N80-28025

WHITE BLOOD CELLS
Changes in leukocyte stability in hypodynamia
[NASA-TM-75944] N80-27074

WINGS
Biological and aerodynamic problems with the flight of animals
[NASA-TM-75337] N80-27985

WORK CAPACITY
Absolute and relative work capacity in women at 758, 586, and 523 torr barometric pressure
A80-41977

WORKLOADS (PSYCHOPHYSIOLOGY)
Dynamic decisions and work load in multitask supervisory control
A80-40898

Heart rate variability, pilot workload, task difficulty, tracking
[DFVLR-FB-79-33] N80-27086

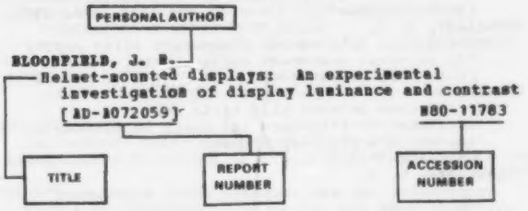
NASA TLA workload analysis support. Volume 2: Metering and spacing studies validation data
[NASA-CR-3239] N80-27091

NASA TLA workload analysis support. Volume 3: FFD autopilot scenario validation data
[NASA-CR-3240] N80-27093

PERSONAL AUTHOR INDEX

AEROSPACE MEDICINE AND BIOLOGY / *A Continuing Bibliography (Suppl. 211)* OCTOBER 1980

Typical Personal Author Index Listing



PERSONAL AUTHOR
BLOOMFIELD, J. R.
Helmet-mounted displays: An experimental investigation of display luminance and contrast
[AD-A072059]
N80-11783
TITLE
REPORT NUMBER
ACCESSION NUMBER

The title of the document is used to provide the user with a brief description of the subject matter. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstract in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

A

ABDUSATTAROV, A.
Effect of hypokinesia on invertase activity of the mucosa of the small intestine
[NASA-TM-76191] N80-28039

ACKLES, K. N.
Respiratory gas exchange during positive pressure breathing and rapid decompression to simulated altitudes of 18.3 and 24.4 km A80-41979

ADAMOVICH, B. A.
Research hardware and habitat of animals used in experiment aboard Cosmos-936 biosatellite N80-28019
Upgrading efficacy of membrane techniques for regenerating water from urine N80-28035

ADAMS, J. D.
Relation of breathing oxygen-argon gas mixtures to altitude decompression sickness A80-41992

AGADZHANYAN, N. A.
Dynamics of human external respiration and blood gases under the combined effect of hypercapnia and hypoxia N80-28024

ALEKSEYEV, D. A.
Method for assessing hemodynamics and detecting latent insufficiency of cerebral circulation in cosmonaut candidates N80-28012
Bioelectric activity of the human brain during and after 182-day anitorthosatic hypokinesia N80-28027

ALFEROVA, I. V.
Circulation in exercising crew members of the first main expedition aboard Salyut-6 N80-27997

ALICO, R.
The intracellular Na/+/ and K/+/ composition of the moderately halophilic bacterium, Paracoccus halodenitrificans A80-41250

ALLAN, J. R.
Effect of induced cyclic changes of deep body temperature on performance in a flight simulator A80-41881
Effect of direction and rate of change of deep body and skin temperatures on performance of a rotary pursuit task A80-41978

ALPERT, N. M.

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

CALIFORNIA
University of California, Berkeley
COLORADO
University of Colorado, Boulder
DISTRICT OF COLUMBIA
Library of Congress
GEORGIA
Georgia Institute of Technology, Atlanta
ILLINOIS
The John Crerar Library, Chicago

MASSACHUSETTS
Massachusetts Institute of Technology, Cambridge
MISSOURI
Linda Hall Library, Kansas City
NEW YORK
Columbia University, New York
OKLAHOMA
University of Oklahoma, Bizzell Library
PENNSYLVANIA
Carnegie Library of Pittsburgh
WASHINGTON
University of Washington, Seattle

NASA publications (those indicated by an "*" following the accession number) are also received by the following public and free libraries:

CALIFORNIA
Los Angeles Public Library
San Diego Public Library
COLORADO
Denver Public Library

WISCONSIN
Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols "#" and "*", from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

AEROSPACE MEDICINE AND BIOLOGY

A CONTINUING BIBLIOGRAPHY WITH INDEXES

(Supplement 212)

A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in October 1980 in

- *Scientific and Technical Aerospace Reports (STAR)*
- *International Aerospace Abstracts (IAA).*

NASA Scientific and Technical Information Branch 1980
National Aeronautics and Space Administration
Washington, DC

NASA SP-7011 and its supplements are available from the National Technical Information Service (NTIS). Questions on the availability of the predecessor publications, Aerospace Medicine and Biology (Volumes I - XI) should be directed to NTIS.

This supplement is available as NTISUB/123/093 from the National Technical Information Service (NTIS), Springfield, Virginia 22161 at the price of $7.00 domestic; $14.00 foreign.

INTRODUCTION

This Supplement to *Aerospace Medicine and Biology* (NASA SP-7011) lists 146 reports, articles and other documents announced during October 1980 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*. The first issue of the bibliography was published in July 1964; since that time, monthly supplements have been issued.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the earth's atmosphere or in interplanetary space. References describing similar effects of biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis is placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion.

Each entry in the bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged in two major sections: *IAA Entries* and *STAR Entries*, in that order. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR*, including the original accession numbers from the respective announcement journals. This procedure, which saves time and money, accounts for the slight variation in citation appearances.

Two indexes -- subject and personal author -- are included.

An annual index will be prepared at the end of the calendar year covering all documents listed in the 1980 Supplements.

AVAILABILITY OF CITED PUBLICATIONS

IAA ENTRIES (A80-10000 Series)

All publications abstracted in this Section are available from the Technical Information Service, American Institute of Aeronautics and Astronautics, Inc. (AIAA), as follows: Paper copies of accessions are available at $7.00 per document up to a maximum of 40 pages. The charge for each additional page is $0.25. Microfiche (1) of documents announced in *IAA* are available at the rate of $3.00 per microfiche on demand, and at the rate of $1.25 per microfiche for standing orders for all *IAA* microfiche. The price for the *IAA* microfiche by category is available at the rate of $1.50 per microfiche plus a $1.00 service charge per category per issue. Microfiche of all the current AIAA Meeting Papers are available on a standing order basis at the rate of $1.50 per microfiche.

Minimum air-mail postage to foreign countries is $1.00 and all foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to AIAA Technical Information Service. Please refer to the accession number when requesting publications.

STAR ENTRIES (N80-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code followed by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page vii.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard $3.50 price, for those documents identified by a # symbol.)

---

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size, containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction).

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Documents Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free.

Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

SUBSCRIPTION AVAILABILITY

This publication is available on subscription from the National Technical Information Service (NTIS). The annual subscription rate for the monthly supplements, excluding the annual cumulative index, is $50.00 domestic; $100.00 foreign. All questions relating to the subscriptions should be referred to NTIS.

EXTENDED DURATION ORBITER STUDY: CO2 REMOVAL AND WATER RECOVERY Final Report
R. D. Marshall, G. S. Ellis, F. H. Schubert, and R. A. Wynveen
May 1979 91 p refs
(Contract NAS9-15218)
(NASA-CR-160317; LSI-ER-319-24) Avail: NTIS
HC A05/MF A01 CSCL 06K

Two electrochemical depolarized carbon dioxide concentrator subsystems were evaluated against baseline lithium hydroxide for (1) the baseline orbiter when expanded to accommodate a crew of seven (mission option one), (2) an extended duration orbiter with a power extension package to reduce fuel cell expendables (mission option two), and (3) an extended duration orbiter with a full capability power module to eliminate fuel cell expendables (mission option three). The electrochemical depolarized carbon dioxide concentrator was also compared to the solid amine regenerable carbon dioxide removal concept. Water recovery is not required for Mission Option One since sufficient water is generated by the fuel cells. The vapor compression distillation subsystem was evaluated for mission option two and three only. Weight savings attainable using the vapor compression distillation subsystem for water recovery versus on-board water storage were determined. Combined carbon dioxide removal and water recovery was evaluated to determine the effect on regenerable carbon dioxide removal subsystem selection. R.E.S.

A80-12230 * **Soil stabilization by a prokaryotic desert crust - Implications for Precambrian land biota.** S. E. Campbell (Boston University, Boston, Mass.), *Origins of Life*, vol. 9, Sept. 1979, p. 335-348. 24 refs. NSF Grants No. GA-43391; No. EAR-76-84233; No. EAR-76-84233-A01; Grant No. NsG-7588.

The ecology of the cyanophyte-dominated stromatolitic mat forming the ground cover over desert areas of Utah and Colorado is investigated and implications for the formation of mature Precambrian soils are discussed. The activation of the growth of the two species of filamentous cyanophyte identified and the mobility of their multiple trichromes upon wetting are observed, accompanied by the production and deposition of a sheath capable of accreting and stabilizing sand and clay particles. The formation of calcium carbonate precipitates upon the repeated wetting and drying of desert crust is noted, and it is suggested that the desert crust community may appear in fossil calcrete deposits as lithified microscopic tubes and cellular remains of algal trichromes. The invasion of dry land by both marine and freshwater algae on the model of the desert crust is proposed to be responsible for the accumulation, stabilization and biogenic modification of mature Precambrian soils. A.L.W.

AEROSPACE MEDICINE AND BIOLOGY

A Continuing Bibliography (Suppl. 212)

NOVEMBER 1980

IAA ENTRIES

A80-44125 **Biological studies on the Cosmos biosatellite (Biologicheskie issledovaniia na biosputnikakh 'Kosmos').** Edited by E. A. Il'in and G. P. Parfenov. Moscow, Izdatel'stvo Nauka, 1979. 240 p. In Russian.

Results of biological experiments performed on board recent Soviet Cosmos biosatellites are reviewed, with attention given to the joint Soviet-American investigations on board Cosmos 782 and 936. The significance of biological experiments in space is discussed, and consideration is also given to the design and control of biosatellites and their life support equipment and scientific instruments. Results are then presented for studies of the effects of weightlessness on the development and vestibular apparatus of the fish Fundulus heteroclitus, drosophila genetics and development, isolated carrot cell morphogenesis and embryogenesis, carrot tissue development, anatomy and biochemistry, and the orientation, growth and development of higher and lower plants. Experiments on the effects of artificial gravity and cosmic radiation on dried seeds, the effects of the space environment on mammalian cell cultures and on bacterial genetics are also indicated. A.L.W.

A80-44195 **Magnetic study of the His-Purkinje conduction system in man.** D. E. Farrell, J. H. Tripp (Case Western Reserve University, Cleveland, Ohio), and R. Norgren (California, University, Livermore, Calif.). *IEEE Transactions on Biomedical Engineering,* vol. BME-27, July 1980, p. 345-350. 22 refs. Research supported by the American Heart Association; NSF Grant No. ENG-77-15952-A01.

It has recently been suggested that depolarization of the entire His-Purkinje conduction system of the heart produces a characteristic waveform in the surface electrocardiogram. The magnetic probe offers a different and, in some respects, advantageous means of observing such waveforms, and extensive records of the surface magnetic field generated by the human heart have been obtained for four normal subjects. A first-order SQUID gradiometer was employed having the lowest noise level yet reported in any biomagnetic study (6 x 10 to the -15th T/square root of Hz). Using an on-line computer, 100 beat averages were taken at 49 positions over the chest on a 1 in. square grid. The fields observed have a characteristic symmetry and provide support for the suggestion that events associated with depolarization of the conduction system may be observed at the surface of the torso. (Author)

A80-44196 **Long-term biological effects of very intense 60 Hz electric field on mice.** W. Z. Fam (Nova Scotia Technical College, Halifax, Canada). *IEEE Transactions on Biomedical Engineering,* vol. BME-27, July 1980, p. 376-381. 10 refs. Research supported by the Natural Sciences and Engineering Research Council of Canada.

This paper presents the results of long-term exposure of mice to a 240 kV/m, 60 Hz electric field. Both males and females were subjected to this very intense field for over 4500 h before they were sacrificed for tests. The progenies resulting from breeding the various couples were also exposed to the same field. Studies were made to determine the effects of the electric field on drinking water consumption, rate of growth, body weight, number of progenies born and survived, blood count and blood chemistry, protein analysis, and organs histology. In each study, the results were compared with those obtained from the corresponding control group. (Author)

A80-44201 * # **Development of a multi-media crew-training program for the terminal configured vehicle mission simulator.** J. A. Rhouck and A. T. Markos (NASA, Langley Research Center, Hampton, Va.). *Society for Computer Simulation, American Meteorological Society, and Instrument Society of America, Summer Computer Simulation Conference, Seattle, Wash., Aug. 25-27, 1980, Paper.* 6 p. 6 refs.

This paper describes the work being done at the National Aeronautics and Space Administration's (NASA) Langley Research Center on the development of a multi-media crew-training program for the Terminal Configured Vehicle (TCV) Mission Simulator. Brief descriptions of the goals and objectives of the TCV Program and of the TCV Mission Simulator are presented. A detailed description of the training program is provided along with a description of the performance of the first group of four commercial pilots to be qualified in the TCV Mission Simulator. (Author)

A80-44213 * **Visually induced self-motion sensation adapts rapidly to left-right visual reversal.** C. M. Oman, O. L. Bock, and J.-K. Huang (MIT, Cambridge, Mass.). *Science,* vol. 209, Aug. 8, 1980, p. 706-708. 16 refs. Grant No. NsG-2032; Contract No. NAS9-15343.

The experimental demonstration of a reversal of the circularvection (CV) phenomenon is reported. After one to three hours of active movement while wearing vision-reversing goggles, 9 of 12 stationary human subjects viewing a moving stripe display experienced a self-rotation illusion in the same direction as the seen stripe motion. In addition, the subjects showed a 17% reduction in vestibulo-ocular reflex slow phase gain over their brief exposure period. It is noted that whether a subject demonstrated reversed CV within the allowed exposure period appeared to be correlated with CV strength produced with a narrow field stimulus. J.P.B.

A80-44249 **Maximal cardiac output during upright exercise - Approximate normal standards and variations with coronary heart disease.** K. F. Hossack, R. A. Bruce, B. Green, F. Kusumi, T. A. DeRouen, and S. Trimble (Washington, University, Seattle, Wash.). *American Journal of Cardiology,* vol. 46, Aug. 1980, p. 204-212. 28 refs. Research supported by the American Heart Association of Washington; Grants No. NIH-HL-23404; No. NIH-RR-37.

A80-44441 # **Interpretation of findings of the biological experiments of the Viking lander on Mars (Zur Interpretation der Befunde der biologischen Experimentiereinheiten der Viking-Landesonden auf dem Mars).** S. Fränzle. *Sterne und Weltraum,* vol. 19, July-Aug. 1980, p. 258-260. 10 refs. In German.

The biological experiments aboard the Viking lander encompassed three aspects: (1) experiments to determine a chemical reaction of nutrient solutions, (2) gas exchange experiments between the ground and the atmosphere, and (3) studies on photosynthesis and chemical synthesis. The significance of the measured results is examined in detail. M.E.P.

A80-44593 # **Ocular risks of astronomical observations (Risques oculaires des observations astronomiques).** G. Quentel (Cretéil, Hôpital Intercommunal, Cretéil, Val-de-Marne, France). *L'Astronomie,* vol. 94, July-Aug. 1980, p. 311-317. In French.

The mechanism and physiological reason for retinal alterations from the astronomical observation of the sun are examined. Attention is given to the constitution of the eye, the image formed on the retina, and the foveolate region. It is noted that in the absence of all movement, a lesion will create a definitive and irreversible alteration of the eye when the acuity is high, in the case of binoculars as well as telescopes. J.P.B.

A80-44608 * **Three-dimensional structure of Escherichia coli initiator tRNA/f//Met/.** N. H. Woo, A. Rich (MIT, Cambridge, Mass.), and B. A. Roe (Kent State University, Kent, Ohio). *Nature,* vol. 286, July 24, 1980, p. 346-351. 23 refs. Research supported by the American Cancer Society, NIH, NSF, and NASA.

The crystal structure of Escherichia coli tRNA(f)(Met), an initiator transfer RNA, has been determined. While grossly similar to that of the chain-elongating yeast tRNA(Phe), there are three major differences. One involves the folding of the anticodon loop; in particular, the position of the constant uridine, U33. This difference was unexpected and may be of functional significance. (Author)

A80-44765 **Parallel visual pathways - A review.** P. Lennie (Sussex, University, Brighton, England). *Vision Research,* vol. 20, no. 7, 1980, p. 561-594. 210 refs.

Within the last fifteen years it has become clear that the principal visual pathway in higher mammals, which connects the retina to the cortex via the dorsal lateral geniculate nucleus may fruitfully be regarded as a group of parallel pathways, each containing neutrons that have distinctive physiological properties and which presumably contribute distinctively to vision. The aims of this paper are first, to examine the properties that characterize the neurons of the different classes and to understand what mechanisms might underlie the differences; second, to trace the major central projection of the different cell types; and third, to try to understand their significance for seeing. The work to be discussed concerns primarily the cat and the macaque monkey, for the visual organization of the former is best understood, and the visual organization of the latter is of greatest relevance to human vision. Related observations made on other species are mentioned in passing. (Author)

A80-45025 **Pilots who drink - FAA regulations and policy, and the Air Line Pilots Association treatment program.** E. D. Weed, III. *Journal of Air Law and Commerce,* vol. 45, Summer 1980, p. 1089-1114. 102 refs.

Pilot alcoholism is discussed along with the methods of coping with the problem adopted by the CAB and the FAA: sanctions such as pecuniary penalties and revocation of certification are considered. Emphasis is placed on an alternative early identification and treatment plan, approved and supported by the FAA, which is currently being developed by the Air Line Pilots Association and involves the peer group approach and human intervention. J.P.B.

A80-45078 # **Standard man-machine procedure of optimal synthesis in computer-aided design systems. II (Tipovi choveko-mashinni protseduri na optimalniia sintez v sistemite za avtomatizirano proektirane. II).** D. D. Burev (B'lgarska Akademiia na Naukite, Institut po Tekhnicheska Kibernetika i Robotika, Sofia, Bulgaria). *Problemi na Tekhnicheskata Kibernetika,* vol. 9, 1980, p. 3-14. 5 refs. In Bulgarian.

Standard man-machine procedures are described for four classes of optimal synthesis in CAD systems. Consideration is given to question of systems design under off-line conditions of operation. B.J.

A80-45092 # **The effect of the temperatures of different skin layers on the activity of cold thermoreceptors (Vliianie temperatury razlichnykh sloev kozhi na impul'satsiiu kholodovykh termoretseptorov).** V. A. Konstantinov, N. K. Danilova, and K. P. Ivanov (Akademiia Nauk SSSR, Institut Fiziologii, Leningrad, USSR). *Fiziologicheskii Zhurnal SSSR,* vol. 66, June 1980, p. 902-907. 8 refs. In Russian.

The responses of skin thermoreceptors to variations in skin surface and interior layer temperatures are investigated. Rabbit upper lip and nose skin surfaces were cycled repeatedly between 22 and 40 C, and skin temperatures at depths of 0.1-0.2 and 2.55 mm and the activities of 16 individual cold thermoreceptors were monitored. The 18 C variations in surface temperature are found to cause variations of only 4.5 C in the temperature of the lower layers, with a time delay of 5-7 min. The firings of nine of the thermoreceptors are found to vary as skin surface temperature changed, while the remaining seven exhibited a pattern related to deep skin layer temperatures, demonstrating the existence of thermoreceptors at various depths within the skin. It is suggested that such a distribution allows the organism to assess the direction and intensity of heat flow through the skin. A.L.W.

A80-45093 # **The role of the hypoxic factor at elevated temperatures and possible mechanisms of its development (Rol' gipoksicheskogo faktora pri povyshennoi temperature i vozmozhnye mekhanizmy ego razvitiia).** L. V. Ngi and Iu. Iu. Keerig (Voenno-Meditsinskaia Akademiia, Leningrad, USSR). *Fiziologicheskii Zhurnal SSSR,* vol. 66, June 1980, p. 908-913. 20 refs. In Russian.

Biochemical indicators of hypoxia are examined at elevated temperatures and conditions of decreased and increased humidity, and mechanisms for the development of hypoxia in response to elevated temperatures are discussed. The blood pH and blood levels of CO2, buffer bases, bicarbonate, lactic acid and pyruvic acid of rabbits exposed to a simulated altitude of 5000 m at 20-22 C are found to be identical with those of rabbits exposed to a temperature of 44-45 C at low relative humidity, while those of rabbits kept at the same temperature and a humidity from 90-95% exhibit even greater differences from initial values. Of the factors suggested to be responsible for the observed hypoxia accompanying hyperthermia, it is argued that the reduced partial oxygen pressure of alveolar air and the shift of the hemoglobin dissociation curve can be only of small importance, and that hypoxia of mixed type can be induced by a redistribution of blood and changes in the activity of certain respiratory enzymes. A.L.W.

A80-45273 **Accuracy of visual estimate of the remoteness of an object in a space having no optical reference.** V. I. Kushpil' and E. K. Veselova. *(Optiko-Mekhanicheskaia Promyshlennost',* vol. 46, Dec. 1979, p. 54.) *Soviet Journal of Optical Technology,* vol. 46, Dec. 1979, p. 752, 753. Translation.

The question of the possibilities of estimating the remoteness of a point light source in a space having no optical reference is examined. The results of an experiment in which observers place a point light source at a specified distance are presented. The results obtained are compared with the data of a direct estimate of remoteness in meters. (Author)

A80-45623 **Low frequency asymptotics for a hydroelastic model of the cochlea.** M. H. Holmes (Rensselaer Polytechnic Institute, Troy, N.Y.). *SIAM Journal on Applied Mathematics,* vol. 38, June 1980, p. 445-456. 8 refs.

A three dimensional hydroelastic model of the cochlea is analyzed, where the fluid motion is described using the linearized Navier-Stokes equations and the basilar membrane is modeled as an elastic plate. By expanding in terms of the width to length ratio it is found that to first order there is Poiseuille flow down the cochlea and the plate reduces to a massless beam in the transverse direction. After this the solution is found for a particular geometry and comparison is made with experiment. (Author)

A80-45676 **Symposium on Theory and Practice of Robots and Manipulators, 3rd, Udine, Italy, September 12-15, 1978, Proceedings.** Symposium sponsored by the Centre International des Sciences Mécaniques and International Federation for the Theory of Machines and Mechanisms. Edited by A. Morecki (Warszawa, Politechnika, Warsaw, Poland), G. Bianchi (Milano, Politecnico, Milan, Italy), and K. Kedzior. Amsterdam, Elsevier Scientific Publishing Co.; Warsaw, PWN-Polish Scientific Publishers, 1980. 613 p. $123.

The symposium focused on the mechanics and biomechanics of motion, the synthesis and design of robots and manipulators, motion control, sensors and artificial intelligence, man-machine systems, and applications. Papers are presented on the optimization of manipulator performance and actuation by interactive computing, the dimensional synthesis of manipulators, the decoupled feedback control of robot and manipulator arms, and the manipulation of large objects. Other papers include the optimal manipulator control on the basis of actual information on movement limitation, a microprocessor-based telemanipulator system, and the adaptive control of technological industrial robots for welding. V.L.

A80-45680 # **On the grasping process for objects of irregular shape.** G. Bianchi and A. Rovetta (Milano, Politecnico, Milan, Italy). In: Symposium on Theory and Practice of Robots and Manipulators, 3rd, Udine, Italy, September 12-15, 1978, Proceedings. Amsterdam, Elsevier Scientific Publishing Co.; Warsaw, PWN-Polish Scientific Publishers, 1980, p. 67-86. Research supported by the Consiglio Nazionale delle Ricerche.

A limitation in the efficient use of manipulators is often found in the difficulty of designing a mechanical hand capable of safely handling objects of different shapes. With the aim of developing models of multipurpose extremities, a hand with two fingers and a palm was designed (Rovetta, 1977; Rovetta and Casarico, 1978; Rovetta, 1980). This paper describes a first step in the analysis of the prehension process of an object of irregular shape. The motion of the object relative to the fingers and the palm is studied during the grasping process. (Author)

A80-45682 # **Application of bond graphs to the synthesis and analysis of telechirics and robots.** J. E. E. Sharpe (Queen Mary College, London, England). In: Symposium on Theory and Practice of Robots and Manipulators, 3rd, Udine, Italy, September 12-15, 1978, Proceedings. Amsterdam, Elsevier Scientific Publishing Co.; Warsaw, PWN-Polish Scientific Publishers, 1980, p. 217-227.

A80-45687 * # **Manipulation of large objects.** A. K. Bejczy (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, Calif.). In: Symposium on Theory and Practice of Robots and Manipulators, 3rd, Udine, Italy, September 12-15, 1978, Proceedings. Amsterdam, Elsevier Scientific Publishing Co.; Warsaw, PWN-Polish Scientific Publishers, 1980, p. 301-322. 7 refs. Contract No. NAS7-100.

Remote manipulator control experiments have been conducted to investigate the problems related to the 'controlled collision' aspect of manipulation. A six degrees of freedom pantograph arm with a six-dimensional force-torque balance sensor and microprocessor-driven real-time graphics display are employed in the experiments. Among other results, it is found that the use of computer force-torque feedback loop for 'stop at contact' provides a nearly linear relation between load transfer to jigs at 'stop at contact', rate of motion, and preset force-torque threshold values for stop under limited motion and load conditions. V.L.

A80-45691 # **A contribution to the biomechanics of master-slave manipulators.** K. V. Frolov and A. E. Kobrinskii (Akademiia Nauk SSSR, Institut Mashinovedeniia, Moscow, USSR). In: Symposium on Theory and Practice of Robots and Manipulators, 3rd, Udine, Italy, September 12-15, 1978, Proceedings. Amsterdam, Elsevier Scientific Publishing Co.; Warsaw, PWN-Polish Scientific Publishers, 1980, p. 461-475.

The paper deals with the results of the analysis of a method to control manipulators that is based on the admission of arbitrary divergence between the positions of the master and slave arms. This method assures a considerable gain in the slave arms' working zone yet the system feature that is usually referred to as mnemonicity suffers a decrease. An attempt has been made to suggest quantitative estimates for the mnemonicity of duplication systems and for the hand control systems performance. (Author)

A80-45752 # **Cost effectiveness modeling for a total training system.** J. R. Milligan and R. J. Strohl (Rockwell International, North American Aircraft Div., Columbus, Ohio). *American Institute of Aeronautics and Astronautics, Aircraft Systems Meeting, Anaheim, Calif., Aug. 4-6, 1980, Paper 80-1894.* 9 p. 5 refs.

The Training System Cost Effectiveness (TSCE) Model enables many disciplines to assist in quantifying the critical relationship between system cost and effectiveness. In the TSCE model, trainer aircraft requirements and their relationship to other training media are defined using an expansion of the instructional system development process. In addition, the Model is designed to determine the influence of terminal learning objectives on combinations of people, support equipment, and training media. The result is a highly flexible model which can be used by decision makers to iteratively examine many alternatives and select a final system which best meets their needs. (Author)

A80-45975 **The influence of temperature on the amplitude and frequency components of the EMG during brief and sustained isometric contractions.** J. S. Petrofsky (Wright State University, Dayton, Ohio) and A. R. Lind (St. Louis University, St. Louis, Mo.). *European Journal of Applied Physiology*, vol. 44, Aug. 1980, p. 189-200. 34 refs. Grant No. AF-AFOSR-76-3084; Contract No. F33615-78-C-0501.

The influence of temperature on the amplitude and frequency components of the EMG power spectra of the surface EMG recorded over the forearm muscles was examined in five male and five female subjects during brief and fatiguing isometric contractions of their handgrip muscles. Brief (3 s) isometric contractions were exerted at tensions ranging between 10 and 100% of each subject's maximum strength while fatiguing contractions were exerted at tensions of 25, 40, and 70% of their maximum strength. The temperature of the muscles during those contractions was varied by placing the forearms of the subjects in a controlled temperature water bath at temperatures of 10, 20, 30, and 40 C. The results of these experiments showed that the center frequency of the power spectra of the surface EMG was directly related to the temperature of the exercising muscles during brief isometric contractions. During fatiguing isometric contractions, the amplitude of the EMG increased while the center frequency of the EMG power spectra decreased for all tensions examined. (Author)

A80-46196 * **Extremes of urine osmolality - Lack of effect on red blood cell survival.** H. A. Leon and J. E. Fleming (NASA, Ames Research Center, Biomedical Research Div., Moffett Field, Calif.). *American Journal of Physiology*, vol. 239, July 1980, p. C27-C31. 13 refs.

Rats were allowed a third of normal water intake for 20 days, and food consumption decreased. The reticulocyte count indicated a suppression of erythropoiesis. Urine osmolality increased from 2,000 mosmol/kg to 3,390 mosmol/kg. Random hemolysis and senescence of a cohort of red blood cell (RBC) previously labeled with (2-(C-14)) glycine was monitored via the production of (C-14)O. Neither hemolysis nor senescence was affected. Following water restriction, the polydipsic rats generated a hypotonic urine. Urine osmolality decreased to 1,300 mosmol/kg for at least 6 days; a reticulocytosis occurred, but RBC survival was unaffected. These results contradict those previously reported, which suggest that RBC survival is influenced by the osmotic stress imposed on the RBC by extremes of urine tonicity. This discrepancy, it is concluded, is due to differences in the methods employed for measuring RBC survival. The random-labeling technique employed previously assumes a steady state between RBC production and destruction. The cohort-labeling technique used here measures hemolysis and senescence independent of changes in RBC production, which is known to be depressed by fasting. (Author)

A80-46378 # **Controlled ecological life support systems /CELSS/ and space habitats, anthropology, and psychology.** T. S. Cheston (Georgetown University, Washington, D.C.). In: Space manufacturing III; Proceedings of the Fourth Conference, Princeton, N.J., May 14-17, 1979. New York, American Institute of Aeronautics and Astronautics, Inc., 1979, p. 25-29.

Controlled ecological life support systems (CELSS) and the social, anthropological and psychological aspects of life in a space habitat are discussed. The results of studies indicating the value of a ground-based CELSS experiment and further research required in CELSS development are presented, and the relation of nutrition, diet and food processing in space to CELSS are discussed, with attention also given to instances of controlled environmental agriculture on earth and the waste treatment options and requirements for a closed system. Design considerations for a zero-gravity environment are examined in light of social interactions and human needs and the problems of children's growth in a permanent settlement. Consideration is then given to the benefits of including anthropology in the development of space settlements, consciousness alterations in space such as those undergone by various Apollo and Skylab astronauts, and the legal background and responsibilities of governments in space. A.L.W.

A80-46392 # **Nutrition, diet and food processing in controlled environment life support systems.** J. P. Clark (ITT Continental Baking Co., Rye, N.Y.). In: Space manufacturing III; Proceedings of the Fourth Conference, Princeton, N.J., May 14-17, 1979. New York, American Institute of Aeronautics and Astronautics, Inc., 1979, p. 371-373; Discussion, p. 373, 374.

The status and research requirements for the nutrition, diet and food processing components of a controlled environment life support system have recently been evaluated. The nutritional requirements for man, even in space, can be specified in terms of chemical composition rather than traditional foods. The dietary requirements are less well-known in terms of acceptability, variability and other psychological factors. Food processing requirements refer both to preservation of stored foods and processing of recycled nutrients. There are novel constraints imposed by space conditions and by various potential raw materials. The key need is for efficient means of providing the organoleptic characteristics found necessary for an acceptable and nutritional diet. (Author)

A80-46393 # **Agriculture and food production.** J. M. Phillips (Arizona Research Associates, Inc., Tucson, Ariz.). In: Space manufacturing III; Proceedings of the Fourth Conference, Princeton, N.J., May 14-17, 1979. New York, American Institute of Aeronautics and Astronautics, Inc., 1979, p. 375-380. 16 refs.

The development of agriculture and food production systems for controlled ecological life support systems (CELSS) such as would be necessary in large space habitats is discussed. The adoption of a conservative strategy for supplying human dietary requirements, which would imply a diet composed of traditional food sources in sufficient diversity and abundance, is discussed, and implications of this strategy for the potential crop, livestock and aquatic components and biomass flow of a CELSS food production system are considered. The influence of CELSS for large space habitats on the coevolution of humans and agricultural and livestock species is argued to be a factor necessitating the maintenance of comprehensive selection criteria for potential biological components of CELSS. Finally, areas of further study on the ground and in the space environment are recommended and the terrestrial benefits and applications of the development of food production systems for CELSS in space habitats are indicated. A.L.W.

A80-46398 # **Design opportunities - Zero gravity versus one gravity environments.** C. A. O'Donnell (M. Rosenblatt and Son, Inc., Arlington, Va.). In: Space manufacturing III; Proceedings of the Fourth Conference, Princeton, N.J., May 14-17, 1979. New York, American Institute of Aeronautics and Astronautics, Inc., 1979, p. 505-507, Discussion, p. 507-508.

The weightless environment produces physical changes in man, alters his modes of perception, and presents a new interface with his physical surroundings. These changes suggest that the eventual shape and form of habitat interiors will differ from many present concepts. This paper presents selected examples of physical and perceptual changes in zero gravity and raises issues which must be incorporated into the design process to provide space habitats which will meet man's new needs in a changed environment. It also suggests that methods must be developed to measure the qualitative effects of design on persons in confined environments. (Author)

A80-46549 **A rule-based model of human problem solving performance in fault diagnosis tasks.** W. B. Rouse, S. J. Pellegrino (McDonnell Douglas Automation Co., St. Louis, Mo.), and S. H. Rouse. *IEEE Transactions on Systems, Man, and Cybernetics*, vol. SMC-10, July 1980, p. 366-376. 22 refs. Grant No. DAHC19-78-G-0011; Contract No. MDA903-79-C-0421.

The paper considers the modeling of human fault diagnosis behavior in terms of sequences of tests selected. A rule-based model was proposed and evaluated in the context of fault diagnosis tasks: one task included data for 118 subjects and the second task had 36 subjects. It was shown that the model chose tests similar to those of the human 94% and 88% of the time, respectively. Considering the model's ability to choose the same tests as subjects, the comparison between model and subjects was not good, resulting in only a 52% agreement for the first task. However, such a result is expected when subjects are placed in a situation where they must choose between two or more equally attractive alternatives. It was concluded that the fairly favorable results presented in terms of similar tests should be interpreted as meaning that the model and subjects used the same rule in the same situation over 90% of the time. A.T.

A80-46550 **Use of active compliance in the control of legged vehicles.** C. A. Klein (Ohio State University, Columbus, Ohio) and R. L. Briggs (MIT, Lexington, Mass.). *IEEE Transactions on Systems, Man, and Cybernetics,* vol. SMC-10, July 1980, p. 393-400. 29 refs. NSF Grant No. ENG-78-18957.

Often it is desirable to specify both position and force at the end effector of a manipulator system; however, when the system forms a closed kinematic chain both cannot be realized independently. Active compliance is a trade-off method that can be easily incorporated into the supervisory control philosophy which is often used to control complex man-machine system. An example of such a system is the Ohio State University (OSU) Hexapod which is a legged walking vehicle. Active compliance is shown to be invaluable for allowing legged locomotion over irregular terrain. (Author)

A80-46804 # Results of the experiment 'Microorganism growth' on the Soyuz-22 spacecraft (Rezul'taty eksperimenta 'Rost mikroorganizmov' na kosmicheskom korable 'Soiuz-22'). V. A. Kordium, L. V. Polivoda, V. G. Man'ko, V. G. Babskii, N. I. Kon'shin, T. G. Gavrish, L. P. Polishchuk, and A. L. Mashinskii. *Kosmicheskie Issledovaniia na Ukraine,* no. 12, 1978, p. 3-14. 13 refs. In Russian.

Results of the Soyuz-22 experiment concerning the effects of the space environment on the growth of the bacterium Proteus vulgaris are presented. Following growth under anaerobic conditions in a ROST-3 growth chamber, bacteria innoculated onto a growth medium under space conditions were observed to be inhibited in growth relative to ground-based laboratory and transported controls, with the experimental cultures containing fewer and smaller cells. Chemotaxis investigations have shown the experimental cells to be less responsive to the products of their own metabolism than controls, while exhibiting inhibited colony growth on solid media with varying agar concentrations. It is noted that the differences found in the present experiment were more pronounced than decreases in viability and growth rate observed in previous experiments on board Soyuz-16 and Soyuz-19. A.L.W.

A80-46805 # The ultrastructure of Proteus vulgaris cells grown in orbit on board the Soyuz-22 spacecraft (Ul'trastruktura kletok Proteus vulgaris, vyrosshikh v orbital'nom polete na bortu kosmicheskogo korablia 'Soiuz-22'). O. P. Bochagova, N. I. Kon'shin, E. L. Kordium, and A. F. Popova. *Kosmicheskie Issledovaniia na Ukraine,* no. 12, 1978, p. 14-20. In Russian.

Results of an electron microscopic analysis of the ultrastructure of cells of the bacterium Proteus vulgaris grown under anaerobic conditions in orbit on board Soyuz-22 and in the laboratory are presented. Four types of bacterial cell are observed, corresponding to cell types I, III, IV and VI, which are characterized by varying amounts of regions of electron-transparent deposits of easily dissolved formazan, fibrillar-granular formations and membrane structures. In addition, a number of other cell types was observed, all without formazan deposits but with a great extent of internal lysis. The ultrastructures of the experimental and control cells are found to be similar in many ways, exhibiting signs of premature aging due to the experimental manipulation. Ultrastructural observations are also found to be in agreement with the observed growth patterns of the cells, with the presence of formazan deposits in 3% of the experimental cells, 6.8% of the laboratory controls and 1.5% of the transported controls, and the laboratory controls remaining in the best condition. A.L.W.

A80-46806 # The survival rate of various species of dark-colored mushrooms under the influence of artificial solar radiation (Vyzhivaemost' nekotorykh vidov temnookrashennykh gribov pod vliianiem iskusstvennogo solnechnogo izlucheniia). N. N. Zhdanova, A. N. Liulichev, A. I. Vasilevskaia, and A. L. Antonenko. *Kosmicheskie Issledovaniia na Ukraine,* no. 12, 1978, p. 20-24. 18 refs. In Russian.

The resistance of several species of melanin-containing mushrooms to artificial solar radiation is investigated in light of their demonstrated resistance to UV radiation prevalent in the space environment. Specimens of the UV-resistant mushrooms Stemphylium ilicis, S. sarciniforme and Cladosporium transchelii and certain of its mutations with defects in melaninogenesis were irradiated by a simulated solar radiation with 10-12% of its energy in the UV at levels of up to 700 J/sq m sec in air and 1400 J/sq m sec in vacuum. Results obtained in air are found to be similar to those in vacuum, and indicate that resistance to damage induced by solar radiation is dependent on melanin content in the cellular envelope of the mushrooms studied. A.L.W.

A80-46807 # The effect of space flight factors on the characteristics of nutrient media for the bacterium Proteus vulgaris (Vliianie faktorov kosmicheskogo poleta na kharakteristiki pitatel'noi sredy dlia bakterii Proteus vulgaris). V. G. Babskii, V. G. Man'ko, L. V. Polivoda, A. A. S'edin, and V. A. Kordium. *Kosmicheskie Issledovaniia na Ukraine,* no. 12, 1978, p. 24-30. 18 refs. In Russian.

The effects of the space flight environment on the physicochemical and biological properties of the weak gel of nutrient agar used to support cultures of the bacterium Proteus vulgaris during space experiments are investigated. The bacterial growth properties, viscosity and sedimentation characteristics of the indicator-containing nutrient medium used in space-borne microorganism growth experiments were measured for samples flown on Soyuz 20 for a period of three months and laboratory and transported controls. It is found that the transport of the medium to the launch facility and space flight conditions lead to a significant decrease in the mechanical strength of the agar gel, accompanied even in the laboratory samples by a decrease in its capacity to support bacterial growth and mobility. A.L.W.

A80-46809 # The effect of space flight conditions on higher plant cells in vitro culture (Vliianie uslovii kosmicheskogo poleta na kletki vysshikh rastenii v kul'ture in vitro). P. G. Sidorenko and A. L. Mashinskii. *Kosmicheskie Issledovaniia na Ukraine,* no. 12, 1978, p. 39-42. 5 refs. In Russian.

The effects of space flight conditions on the growth, reproduction and several structural and function characteristics of tissue cultures of the higher plant Haplopappus gracilis are investigated. For cultures grown on a solid agar medium on board the Soyuz-22 spacecraft for nine days, optical and electron microscopic analysis indicates that the growth of the culture was slowed relative to control cultures, with a disruption of tissue structure evidently due to in-flight vibrations. No substantial differences were found between the nature of growth, the formation of reproductive cells, mitosis frequencies, nuclear dimensions and population karyotypes in experimental and control cultures kept at 18 C, although controls grown at the optimum temperature of 26 C exhibited a larger increase in biomass. A.L.W.

A80-46810 # The effects of orbital flight conditions on the formation of the generative organs in Muscari racemosum and Anethum graveolens (Vliianie uslovii orbital'nogo poleta na formirovanie generativnykh organov Mussari racemosum i Anethum graveolens). E. L. Kordium, A. L. Mashinskii, A. F. Popova, S. A. Uvarova, and L. A. Khristenko. *Kosmicheskie Issledovaniia na Ukraine,* no. 12, 1978, p. 42-49. In Russian.

The effects of orbital space flight conditions on the growth of the male gametophyte of the bulbous herb Muscari racemosum and on the formation of the generative organs of dill plants (Anethum graveolens) are investigated. The plants were grown from seeds carried on board the Soyuz-20 spacecraft during the course of its three-month flight beginning in November, 1975, and compared with laboratory controls and plants grown under natural conditions by means of optical microscopy. It is found that space flight conditions lead to an acceleration in the development of the male gametophyte of M. racemosum and a decrease in the germination rate and the percent of shoot formation in dill plants. However, the numbers of buds and leaves and the characteristics of the establishment of generative organs, sporo- and gametogenesis, male and female gametophyte development, fruiting and embryo- and endospermgenesis in the dill are observed to be basically similar to those of the controls. Finally, it is noted that the seeds produced by the experimental plants were similar in size and weight to those of the controls. A.L.W.

A80-46811 # **Investigation of the effects of space flight factors on the emergence from the anabiotic state of turions of the great duckweed (Izuchenie vliianiia faktorov kosmicheskogo poleta na vykhod iz anabioticheskogo sostoianiia turinov spirodely mnogokorennoi).** Iu. A. Kutlakhmedov, G. S. Sokirko, D. M. Grodzinskii, A. L. Mashinskii, G. S. Nechitailo, and N. I. Kon'shin. *Kosmicheskie Issledovaniia na Ukraine,* no. 12, 1978, p. 49-54. In Russian.

The effects of space flight conditions on the emergence of turions from the dormant state to a state of active growth is investigated in the great duckweed Spirodela polyrhiza. Specimens of dormant spirodela turions placed in IFS growth chambers on board the Soyuz-12 and 13 and Cosmos-656 spacecraft were activated under space flight conditions by the awakening factor kinetin, and subsequent growth was monitored by tritiated thymidine uptake and fascicle growth. The early stages of cell division in the meristem are found to be inhibited in experimental specimens relative to controls, accompanied by an irregular suppression of the function of the first daughter fascicle. It is concluded that the early stages of the awakening of the duckweed appear to be a sensitive and convenient model for the investigation of the effects of the space flight environment. A.L.W.

A80-46812 # **The effects of simulated weightlessness on the reproductive capacity of the great duckweed in the norm and under irradiation (Vliianie simulirovannoi nevesomosti na reproduktivnuiu sposobnost' spirodely mnogokorennoi v norme i pri obluchenii).** Iu. A. Kutlakhmedov, G. S. Sokirko, and D. M. Grodzinskii. *Kosmicheskie Issledovaniia na Ukraine,* no. 12, 1978, p. 55-58. 7 refs. In Russian.

The effects of weightlessness simulated on a clinostat on the generative capacity of meristem cells of the great duckweed are investigated for samples irradiated by various doses of Co-60 gamma radiation. Irradiated cells grown under simulated weightlessness are found to exhibit an increased number of descendants relative to meristems cultured under normal gravity, indicating an increase in radiation stability. Increased numbers of generations, descendents in each generation and generation rates are also observed for nonirradiated specimens in the clinostat relative to those grown under normal conditions. A.L.W.

A80-46813 # **The effects of low-intensity magnetic fields on plant cell reproduction (Vliianie magnitnykh polei nizkoi napriazhennosti na reproduktsiiu kletok).** V. M. Fomicheva, N. I. Bogatina, B. I. Verkin, V. M. Litvin, and N. B. Rudenko. *Kosmicheskie Issledovaniia na Ukraine,* no. 12, 1978, p. 58-62. 28 refs. In Russian.

The effects of magnetic fields on the order of 0.5 millioersted on the reproduction rate of cells of the seeds of the pea plant are investigated by means of autoradiography. Following a 24-h incubation of the seeds in an artificial magnetic field and control fields, autoradiographs were made of cells labeled by tritiated thymidine. Results indicate a 30% increase in the duration of the cell cycle for cells grown in a null magnetic field, which is due to the prolongation of the G1 (presynthetic) phase. In addition, in hypomagnetic conditions the size of the proliferative pool is decreased to 68% of the population, in contrast to the 96% of the population undergoing proliferation in control cells. Results thus demonstrate the sensitivity of the phase preceding DNA synthesis to environmental factors and the complexity of the system regulating cell proliferation. A.L.W.

A80-46961 # **The axiomatic introduction of a metric in binocular visual space. I, II (Aksiomaticheskoe vvedenie metriki v binokuliarnom zritel'nom prostranstve. I, II).** B. K. Lopatchenko. *Problemy Bioniki,* no. 23, 1979, p. 10-20. In Russian.

Consideration is given to the development of a mathematical model of the physical space revealed by binocular visual mechanisms. The black box method for investigating visual perception, in which the subject is regarded as an undetermined transformer of information (black box), is discussed, with attention given to the types of input-output tasks involved in such experiments, and it is noted that such experiments have indicated that in perception, binocular space is characterized by Lobachevskii geometry. A set of axioms is then derived based on the operations of equipartition and distance comparison for specifying the metric properties of visual space. It is noted that the axioms and definitions presented are in agreement with experimental observations and can be used to obtain Hilbert's axioms describing three-dimensional space. A.L.W.

A80-46962 # **The discreteness of auditory information (K voprosu o diskretnosti slukhovoi' informatsii).** S. A. Usenko. *Problemy Bioniki,* no. 23, 1979, p. 27-32. In Russian.

On the basis of psychoacoustic experiments, it is proposed that the quantity of information derivable by the human auditory apparatus from an audio oscillogram is finite and thus can be represented in discrete form. Consideration is given to the observed behavior of sensory systems as nonideal instruments, reacting only to sufficiently large changes in sensory input, and the limited temporal passband of acoustic information receivers. An analytic expression is derived for a discrete signal perceived as an analog signal, and an experimental transformer circuit used to verify the formulation, which is in accordance with Talbot's law is presented. It is pointed out that the discreteness of auditory information can be used as a basis for the development of an instrument for the analysis and synthesis of speech. A.L.W.

A80-46970 # **Experimental investigations of binocular space perception (Eksperimental'nye issledovaniia binokuliarnogo vospriiatiia prostranstva).** B. K. Lopatchenko and I. V. Shul'gin. *Problemy Bioniki,* no. 22, 1979, p. 17-24. 18 refs. In Russian.

Experimental investigations of binocular perception are reviewed in light of their applicability to the formulation of a mathematical model of space perception. Attention is given to the work of Helmholtz (1911) and Blumenfeld (1913), which demonstrated that a line perceived as straight in the frontal plane is in reality curved, the experiments of Ames (1951, 1957) on the perception of distorted rooms, the theoretical work of Luneburg which concluded that visual space was not Euclidian but Riemannian with constant negative curvature, and the subsequent work of Blank, (1958), von Schelling (1960), Faley (1964), Buzeman (1962), and Ziman (1970) which developed Luneburg's ideas. In addition, the conclusions of Zajaczkowska (1956) and Kienle (1963) which point out some of the difficulties of the Luneburg theory of a hyperbolic space projected on a Euclidian space are indicated. A.L.W.

A80-46972 # **An information processing mechanism for systems with boundary contrast and some optical illusions (Mekhanizm obrabotki informatsii v sistemakh s kraevym kontrastom i nekotorye zritel'nye illiuzii).** G. V. Aleshin and V. A. Grabina. *Problemy Bioniki,* no. 22, 1979, p. 60-65. In Russian.

Mechanisms for enhancing the contrast of contours are discussed and the implications of these mechanisms for certain optical illusions encountered in observational tasks are examined. Expressions for contrast enhancement for a linear receptor field are presented, and it is pointed out that the increase in brightness observed at the light side of a boundary is equal to the brightness drop observed at the dark edge. Conditions for the perception of a widening of the white field of the contrasting system at the expense of the darker field are also obtained and shown to account for the well-known square illusion, the Mueller-Lyer illusion and illusions of radiating lines by retinal mechanisms. A.L.W.

A80-47021 * **Characterization of renal response to prolonged immersion in normal man.** M. Epstein, A. G. DeNunzio, and M. Ramachandran (U.S. Veterans Administration, Medical Center; Miami, University, Miami, Fla.). *Journal of Applied Physiology:*

Respiratory, Environmental and Exercise Physiology, vol. 49, Aug. 1980, p. 184-188. 21 refs. Research supported by the U.S. Veterans Administration; Contract No. NAS9-15473.

During the initial phase of space flight, there is a translocation of fluid from the lower parts of the body to the central vascular compartment with a resultant natriuresis, diuresis, and weight loss. Because water immersion is regarded as an appropriate model for studying the redistribution of fluid that occurs in weightlessness, an immersion study of relatively prolonged duration was carried out in order to characterize the temporal profile of the renal adaptation to central hypervolemia. Twelve normal male subjects underwent an immersion study of 8-h duration in the sodium-replete state. Immersion resulted in marked natriuresis and diuresis which were sustained throughout the immersion period. The failure of that natriuresis and diuresis of immersion to abate or cease despite marked extracellular fluid volume contraction as evidenced by a mean weight loss of -2.2 + or - 0.3 kg suggests that central blood volume was not restored to normal and that some degree of central hypervolemia probably persisted. A80-47023 **Plasma testosterone during treadmill exercise.** J. E. Wilkerson, S. M. Horvath, and B. Gutin (California, University, Santa Barbara, Calif.). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 49, Aug. 1980, p. 249-253. 18 refs. Grant No. AF-AFOSR-78-3534.

Five male volunteers performed 20 min of steady-state submaximal exercise on a motor-driven treadmill at five intensities (30, 45, 60, 75, and 90% maximal aerobic capacity) as well as several maximal aerobic capacity tests. Peripheral venous plasma testosterone concentrations increased above resting values in proportion to exercise intensity. However, this increase in plasma testosterone concentration was virtually equal in magnitude to the decrease in plasma volume observed consequent to the exercise bouts, resulting in no change in total testosterone contents. There was an unexpected anticipatory elevation in resting preexercise control testosterone concentration and content with increasing work intensity. The possibility that testosterone has a direct role in the organism's response to whole-body exercise is questioned. (Author)

A80-47025 **Work capacity during 3-wk sojourn at 4,300 m - Effects of relative polycythemia.** D. Horstman, R. Weiskopf, and R. E. Jackson (U.S. Army Research Institute of Environmental Medicine, Natick, Mass.). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 49, Aug. 1980, p. 311-318. 29 refs.

The effects of a three-week exposure to an altitude of 4300 m on physiological work capacity are investigated, with particular emphasis on the contribution of high-altitude polycythemia. Nine healthy male subjects were tested for maximal exercise capacity and endurance at sea level, during a three-week sojourn at 4300 m and following the subsequent removal of 450 ml of whole blood from five of the subjects. Following two weeks at altitude, maximal O2 consumption and systemic O2 transport are observed to increase 10%, the latter of which is due to a 19% increase in arterial O2 content despite a 9% decrease in maximal cardial output. The increased arterial O2 content in turn is found to be a result of a 12% increase in O2 carrying capacity and a 6% increase in arterial O2 saturation, while decreased cardiac output is attributed to a 9% decrease in maximal stroke volume. Following blood removal, reductions of 8 and 7% in maximal O2 consumption and systemic O2 transport respectively are obtained, accompanied by decreases in arterial O2 content and capacity and increases in cardiac output and stroke volume. Results indicate that the effects of increased carrying capacity exceed those of reduced cardiac output, resulting in increased work capacity to which relative polycythemia is a major contributor. A80-47064 # **Thermal response model of a simulated cranial structure exposed to radiofrequency radiation.** J. G. Burr, D. K. Cohoon, E. L. Bell, and J. W. Penn (USAF, School of Aerospace Medicine, Brooks AFB, Tex.). *IEEE Transactions on Biomedical Engineering*, vol. BME-27, Aug. 1980, p. 452-460. 21 refs.

A thermal response model of a simulated cranial structure (multilayered sphere) exposed to radiofrequency radiation (RFR) has been developed and experimentally verified for the no blood flow case. The thermal response model considers the RFR energy absorption distribution as predicted through use of the Mie theory, the thermal properties of the many layers, the blood flow to the central core area, and surface cooling through the application of a nonhomogeneous Newton cooling law. The model was preliminarily verified using homogeneous muscle equivalent spheres and an electrothermia monitor. (Author)

A80-47065 **Theoretical analysis of error during signal averaging for detection of His-bundle activity.** J. E. Ribeiro, A. G. Neto, N. G. Wiederehecker, A. F. C. Infantosi (Rio de Janeiro, Universidade Federal, Rio de Janeiro, Brazil), and A. Caprihan (Lovelace Medical Center, Albuquerque, N. Mex.). *IEEE Transactions on Biomedical Engineering*, vol. BME-27, Aug. 1980, p. 473-476. 5 refs.

Errors associated with the use of coherent signal averaging in synchronism with the ECG R wave to detect His-bundle activity are analyzed. A model of signal averaging is developed in order to investigate the effects of the sampling interval, periodic noise, quantization error and trigger detection for an information signal occuring up to 40 msec before the QRS complex at an amplitude from 0.001 to 0.01 times that of the QRS complex. It is found that 60-Hz interference muscular noise and quantization error all behave as white noise, an accurate detection of the R wave is necessary, and that quantization error is negligible for 8 bits of quantization. A VERY LONG BASELINE INTERFEROMETRY SKY SURVEY

Robert A. Preston and D. D. Morabito *In* NASA. Goddard Space Flight Center Radio Interferometry Jul. 1980 p 173-179 refs
(Contract NAS7-100)
Avail: NTIS HC A20/MF A01 CSCL 08E

A systematic very long baseline interferometry (VLBI) sky survey, undertaken to find a suitable set of compact celestial radio sources from which a more complete VLBI reference frame can be constructed, discussed. The survey was conducted by searching known celestial radio sources for compact components by means of VLBI observations. Baseline lengths were about 7 x 10 to the 7th power RF wavelengths (lambda = 13.1 cm), so the spatial wavelengths being sampled by the interferometer were generally on the order of a few milliarcseconds. Hence, the radio sources detected have a measurable portion of their total flux density contained in components that are no more than a few milliarcseconds in angular extent. Existing information of radio sources were used as clues to source size. E.D.K.

ELECTROENCEPHALOGRAPHIC CHANGES IN ALBINO RATS SUBJECTED TO STRESS

J. Mercier, G. Assouline, and J. Fondarai Apr. 1980 8 p ref Transl. into ENGLISH from OMPT Rend. Soc. Biol. (France), v. 161, no. 7, Jun. 1967 p 1639-1641 Presented at Marseilles Biol. Soc. Meeting, 20 Jun. 1967 Transl. by Kanner (Leo) Associates, Redwood City, Calif. Original doc. prep. by Med. and Pharm. Fac. of Marseilles
(Contract NASw-3199)
(NASA-TM-76118) Avail: NTIS HC A02/MF A01 CSCL 06C

Twenty one albino Wistar rats were subjected to stress for 7 hours. There was a significant difference in the slopes of regression lines for 7 nonulcerous rats and those for 14 ulcerous rats. Nonulcerous rats subjected to stress showed greater EEG curve synchronization than did ulcerous rats. If curve synchronization can be equated to a relaxed state, it may therefore be possible to explain the protective action of hypnotics, tranquilizers and analgesics on ulcers. Author

FROM INANIMATE MATTER TO LIVING SYSTEMS

Sidney W. Fox 27 May 1980 33 p refs
(Grant NGR-10-007-008)
(NASA-CR-163372) Avail: NTIS HC A03/MF A01 CSCL 06C

Since the early part of this century, the Genesis account of the origin and evolution of life has been explained as an extrapolation of astronomical and geochemical processes. The essence of the answer to date is a protoreproductive protocell of much biochemical and cytophysical competance. The processes of its origin, molecular ordering, and its functions are described. A crucial understanding is that of the nonrandomness of evolutionary processes at all stages (with perhaps a minor statistical component). In this way, evolution conflicts with statistical randomness; the latter is a favorite assumption of both scientific and creationistic critics of the proteinoid theory. The principle contribution of the proteinoid theory to the understanding of general biology is to particularize the view that evolutionary direction is rooted in the shapes of molecules, in stereochemistry. After molecules of the right kind first assembled to protocells, life in its various stages of evolution was an inevitable consequence. It is molecules that continue to assemble as part of living process and, in the role of enzymes, continue to direct life cycle of the cell. A.R.H.

Air-dry seeds of the barley Zimujuschij moscowskyi of the 1969 harvest were taken into space onboard the spaceships Soyuz-5 and Soyuz-9. A cytological study of the mitoses in meristemic cells in rootlet terminals revealed that space flight factors (SFF) in nonirradiated seeds induced about 3% of aberrant cells. After irradiation the effect of SFF increased over two-fold. Although the radio protectors ensured the seeds against from the SFF-induced damage either in irradiated or nonirradiated seed cells which is inconsistent with the previously obtained data. L.F.M.

McCrimmon (North Carolina State Univ.), Madeleine Engle (North Carolina State Univ.), Louse A. Romanow (North Carolina State Univ.), Alan G. Sawyer (North Carolina State Univ.), and James D. Tyson (North Carolina State Univ.) Aug. 1980 158 p refs
(NASA-TM-74109; KSC-TR-51-1) Avail: NTIS HC A08/MF A01 CSCL 06C

The effects of solid rocket fuel (SRF) exhaust on selected plant and and insect species in the Merritt Island, Florida area was investigated in order to determine if the exhaust clouds generated by shuttle launches would adversely affect the native, plants of the Merritt Island Wildlife Refuge, the citrus production, or the beekeeping industry of the island. Conditions were simulated in greenhouse exposure chambers and field chambers constructed to model the ideal continuous stirred tank reactor. A plant exposure system was developed for dispensing and monitoring the two major chemicals in SRF exhaust, HCl and Al2O3, and for dispensing and monitoring SRF exhaust (controlled fuel burns).

Plants native to Merritt Island, Florida were grown and used as test species. Dose-response relationships were determined for short term exposures of selected plant species to HCl, Al2O3, and mixtures of the two to SRF exhaust. R.E.S.

ULCERS IN RESTRAINED RATS: STUDY OF PROTECTIVE SUBSTANCES

L. Buche and D. Gallaire May 1980 21 p refs Transl. into ENGLISH from Arch. Sci. Physiol. (France), v. 21, no. 4, 1967 p 537-552 Transl. by Kanner (Leo) Associates, Redwood City, Calif. Original doc. prep. by Pharmacology Inst.
(Contract NASw-3199)
(NASA-TM-76184) Avail: NTIS HC A02/MF A01 CSCL 06C

The genesis of ulcers in restrained rats is discussed through an investigation of the relationship between the protective effects of nervous system effectual substances examined vis-a-vis ulcers in restrained rats and their elective or secondary pharmacologic effects. The substances used were capable of either peripheral parasympatholytic, sympatholytic, ganglioplegic, spasmolytic effects or central, hypnotic, tranquilizing, neuroleptic, analgesic effects. The regular and considerable protection observed with parasympatholytics (atropine sulfate, benzylonium bromide, dihexyverine, J.L. 1344) and a ganglioplegic (pentamethonium) is a function of their anticholinergic properties. It is of less importance with dibenamine, a sympatholytic action on the adrenergic receptors. Among the central depressive substances tested (hypnotics, tranquilizers, neuroleptics, analgesic), phenobarbital at a nonhypnotic dose, and dextromoramide at a nonanalgesic dose, show antiulcerous effects, which are found with chlorpromazine only at cataleptogenic doses. (NASA-TM-76185) Avail: NTIS HC A02/MF A01 CSCL 06C

Experiments staged on rats demonstrated that the formation of pathological states caused by stress and accompanied by the development of ulcerative lesion of the gastric mucosa are associated with the degree of the catecholamines level drop in the mesencephalon and hypothalamus. The application of seduxen and also of combinations consisting of L-DOPA with seduxen, or with an L-adrenoblocking agent pyroxan tends to reduce the frequency of developing alcerative lesions of the stomach. The protective effect produced by the combination of L-DOPA with an L-adrenoblocking agent pyroxan is barred by an additional administration of an B-adrenoblocking agent, inderal. Author

AN EMPIRICAL STUDY OF FACTORS AFFECTING BLUE-GREEN VERSUS NONBLUE-GREEN ALGAL DOMINANCE IN LAKES Project Completion Report, 1 Oct. 1978 - 30 Sep. 1979

Kenneth H. Reckhow and Jonathan T. Simpson Feb. 1980 108 p refs
(Contract DI-14-34-0001-9024)
(PB80-169311; W80-04441; OWRT-A-102-MICH(3)) Avail: NTIS HC A06/MF A01 CSCL 06C

Exploratory data analysis techniques were applied to 90 north temperate lakes included in the EPA National Eutrophication Survey to examine empirical relationships between: (1) the chemical and physical variables that affect algal dominance in lakes; and (2) the dominant algal type. Single variable box plots and bivariate-discriminant plots document the importance of the inorganic nitrogen concentration and hydraulic detention time in determining blue-green versus nonblue-green algal dominance in eutrophic lakes. The multivariate statistical technique of discriminant analysis was also applied to 68 high, alkalinity lakes in the data set to: (1) further identify variable relationships; and (2) construct a simple predictive model for algal dominance. CHANGES IN THE QRS COMPLEX OF THE ELECTROCARDIOGRAM DURING SLEEP AND EXERCISE M.S. Thesis

The abrupt change in mean value, the beat by beat variability of the amplitudes and the gradual change of mean amplitude may assist the analysis of sleep. (4) The response of the QRS waveform to inspiration has two components, namely a step response caused by movement of the heart with the diaphragm, and a transient response possibly caused by ventricular volume changes. (5) The amplitudes of the R and S waves change in a defined pattern during exercise. (6) Changes of the R and S

Pretoria Univ.
John Nicholas Amoore May 1979 178 p refs
(CSIR-ELEK-167) Avail: NTIS HC A09/MF A01

Changes in the QRS complex in normal healthy individuals during sleep were identified and studied in order to determine whether they are due to alteration in the cardiac signal or in the transfer function. A knowledge of the mechanism of the changes could provide useful information on the nature of sleep. The following conclusions were reached: (1) The surface ECG is a function of both the electrical activity of the heart and the transfer of the signals to the body surface. (2) An analysis of the transfer function extends the usefulness of the ECG. (3) Three modes of R and S amplitude changes occur during sleep. wave amplitudes may reflect changes in left ventricular end diastolic volume. R.E.S.

DESIGN, FABRICATION AND TESTING OF A DUAL CATALYST AMMONIA REMOVAL SYSTEM FOR A URINE VCD UNIT Final Report
P. Budinikas Jun. 1980 43 p ref
(Contract NAS2-10237)
(NASA-CR-152372) Avail: NTIS HC A03/MF A01 CSCL 06B

A three-man capacity catalytic system for the recovery of water from urine was designed, constructed, and tested, it was designed to operate with feed streams containing high concentrations of urine vapor and only 5 to 7% of oxygen for the oxidation of ammonia and volatile organic vapor.It can operate either in a flow-through or a recycle mode and is capable of accepting the urine vapor produced by a vapor compression distillation evaporator. Testing consisted of short preliminary and optimization test, an endurance test of 74 hours continuous operation, and recycle tests using both air and oxygen. The system was designed for a urine processing rate of 0.86 liters/hr; however, it was tested at rates up to 1.2 liter/hr. Untreated urine evaporated by an electrically heated evaporator was used. The quality of the recovered water meets the U.S. Drinking Water Standards, with the exception of a low pH. Accumulation of solids in the urine sludge is reduced to approximately 65% of the anticipated value. L.F.M.

(Contract NASw-3198)
(NASA-TM-76190) Avail: NTIS HC A02/MF A01 CSCL 06S

An investigation into the effect of hypokinesia on the ribonucleic acid (RNA) content, the nucleotide composition, and dynamics of protein content in the motoneuron of the rat spinal cord anterior horns is described. Methodology and findings are presented. The study results showed that the nucleotide composition of the total cellular RNA at all the studied periods of hypokinesia remained unchanged and is characteristic for the cytoplasmic, high polymer ribosomal RNA. This means that with a change in the functional state of the neuron the newly formed RNA of the nerve cell has the same composition of bases as the original RNA that belongs to the ribosomal type. The effect of a diminished motor activity of rats upon the ribonucleic and (RNA) content in a single isolated motoneuron of frontal of their spinal cord was studied. Within a 1 to 30 day exposure of rats to the hypokinetic conditions, RNA content was found to decrease on the 1st, 3rd, and 5th day and to return to the initial level by the 7th day. No changes in RNA content were observed during the subsequent stages of the experiments. The volume of the nerve cells declined on the 3rd and 5th day, whereas RNA concentration reduced on the 1st, 3rd, 5th, and 30th day. L.F.M.

A COMPUTER IMPLEMENTATION OF A THEORY OF HUMAN STEREO VISION
W. E. L. Grimson Jan. 1980 62 p refs
(Contract N00014-75-C-0643; Grant NSF MCS-77-07569)
(AD-A084696; AI-M-565) Avail: NTIS HC A04/MF A01 CSCL 06/16

Recently, Marr and Poggio (1979) presented a theory of human stereo vision. An implementation of that theory is presented, and consists of five steps: (1) The left and right images are each filtered with masks of four sizes that increase with eccentricity; the shape of these masks is given by the laplacian of a Gaussian function. (2) Zero-crossings in the filtered images are found along horizontal scan lines. (3) For each mask size, matching takes place between zero-crossings of the same sign and roughly the same orientation in the two images, for a range of disparities up to about the width of the mask's central region. Within this disparity range, Marr and Poggio showed that false targets pose only a simple problem. (4) The output of the wide masks can control vergence movements, thus causing small masks to come into correspondence. In this way, the matching process gradually moves from dealing with large disparities at a low resolution to dealing with small disparities at a high resolution. (5) When a correspondence is achieved, it is stored in a dynamic buffer, called the 2 1/2 dimensional sketch. To support the sufficiency of the Marr-Poggio model of human stereo vision, the implementation was tested on a wide range of stereograms from the human stereopsis literature. The performance of the implementation is illustrated and compared with human perception. As well, statistical assumptions made by Marr and Poggio are supported by comparison with statistics found in practice. Finally, the process of implementing the theory has led to the clarification and refinement of a number of details within the theory; these are discussed in detail. GRA

(AD-A083576; AFOSR-80-0263TR) Avail: NTIS
HC A05/MF A01 CSCL 06/16

Experiments were performed with 20 female and 20 male subjects in order to determine indicators of whether the subjects performed maximal or submaximal isometric strength exertion. The exertion tested were elbow flexion, finger flexion, knee flexion and knee extension. The only performance measures used were analog recordings of the strength scores exerted on a static dynamometer. The following was found: (1) The variability of tests scores in repeated exertion is not a viable indicator of the actual portion of individual strength exerted. (2) The buildup phase of strength exertion is a reliable indicator of the force level to be attained. The steeper the strength formation curve, the stronger the following muscle strength exertion. INITIAL STUDY ON THE EFFECTS OF TRANSFORMER AND TRANSMISSION LINE NOISE ON PEOPLE. VOLUME 1: ANNOYANCE Final Report

K. S. Pearsons, R. L. Bennett, and S. A. Fidell Dec. 1979 114 p refs Sponsored by DOE 3 Vol.
(EPRI-EA-1240-Vol-1; EPRI-RP852-Vol-1) Avail: NTIS
HC A06/MF A01

The relative annoyance of transmission line and transformer noise along with shaped noise and other environmental noises was evaluated in a laboratory setting. Thirty-two test subjects made paired comparisons of the annoyance of 19 signals under free field listening conditions. The study shows that transformer noise is about 10 decibles more acceptable than transmission line noise and thus casts doubt on the general validity of the A-weighted sound level index as a predictor of the relative noise annoyance of transformer noise as compared to transmission line corona noise. The inadequacy of the dBA as a unit for assessing certain types of relative noise evaluation is confirmed. DOE

INITIAL STUDY ON THE EFFECTS OF TRANSFORMER AND TRANSMISSION LINE NOISE ON PEOPLE. VOLUME 2: SLEEP INTERFERENCE Final Report

R. D. Horonjeff, R. L. Bennett, and S. R. Teffeteller Dec. 1979 68 p refs Sponsored by Electric Power Research Inst. 3 Vol.
(EPRI-EA-1240-Vol-2; EPRI-RP852-Vol-2) Avail: NTIS
HC A04/MF A01

The relative awakening potential of four different sounds (a transformer, transmission line, window air conditioner, and distant traffic) was evaluated in a behavioral awakening study conducted in peoples' own homes. Fourteen participants in the Los Angeles, California area each participated in the experiment for a three week period. The results of the study indicate that the transformer, air conditioner, and traffic sounds would all awaken essentially the same proportion of the test population when presented at the same A-weighted sound level. The transmission line around, however, had to be presented at a level 10 dB(A) less than the other sounds to awaken an equivalent proportion of the population. DOE

INITIAL STUDY ON THE EFFECTS OF TRANSFORMER AND TRANSMISSION LINE NOISE ON PEOPLE. VOLUME 3: COMMUNITY REACTION Final Report

S. A. Fidell, S. R. Teffeteller, and K. S. Pearsons Dec. 1979 61 p refs 3 Vol.
(EPRI-EA-1240-Vol-3; EPRI-RP852-Vol-3) Avail: NTIS
HC A04/MF A01

A social survey intended to assess reactions to exposure to noise emissions of overhead electric power transmission lines and power transformers was conducted in Southern California. A structured questionnaire was administered by personal interview to a purposive sample of about 400 people residing at 17 sites along power line rights-of-way and in neighborhoods adjacent to transformer substations in urban areas. Estimates of the proportion of the American population exposed to noise of different levels from power lines and transformers were developed by analyses of several information sources. Acoustic measurements were made at all interviewing sites to assess the contributions of these low level electrical noise sources to overall background noise environments. DOE

STUDIES OF CARBON-SURFACED POLYMERIC, METALLIC AND CERAMIC BIOMATERIALS Annual Report, 1 Apr. 1978 - 31 Mar. 1979

A. D. Haubold and H. S. Shim Dec. 1979 71 p refs
(Contract N01-HV-4-2928)
(PB80-168859) Avail: NTIS HC A04/MF A01 CSCL 06B

Carbon-surfaced composite biomaterials were investigated in order to: (1) determine whether thin carbon films that have physical and chemical properties similar to those of LTI carbon also confer the biochemical properties of LTI carbon to the coated composites, and (2) determine if the carbon-surfaced composites possess the necessary engineering properties for use in prosthetic devices. It was found that the strain to failure of carbon films on polymeric substrates is on the order of 4 to 5%. Failure of the carbon coating always coincided with the onset of plastic deformation in the substrate. The adhesion of the thin coatings is greater than the bulk strength of the polymer. GRA

THE EFFECT OF A PREDICTIVE WIND SHEAR CHART ON PILOT LANDING PERFORMANCE

Eric Nick Solowka Apr. 1980 82 p refs Sponsored by National Research Council of Canada
(UTIAS-TN-220; ISSN-0082-5263) Avail: NTIS HC A05/MF A01

A fixed base aircraft simulator limited to providing only the longitudinal equations of motion was used to study the effect of a predictive wind shear chart on landing performance through wind shear. It was found that the introduction of the predictive wind shear chart alone did not significantly alter the pilot's landing performance. Training as to wind shear effect and limited coaching combined with the presence of the predictive shear display did however improve pilot ability to maintain the aircraft on the desired flight path with little effect on airspeed control. This inability to improve airspeed control might not be an indication of poor pilot performance but suggests the adoption of another airspeed performance criterion. The overreaction of pilots to a novel wind shear (that was slightly different from those used in training flights) when the wind shear chart was available to them indicates that although better glide slope control can be achieved, care will have to be exercised when introducing a predictive shear display to the general aviation field. DECISION AIDS FOR NAVAL AIR ASW Technical Report, Aug. 1978 - Aug. 1979

Wayne W. Zachary 15 Mar. 1980 136 p refs
(Contract N00014-78-C-0743; NR Proj. 199-003)
(AD-A085134; Rept-1366-A) Avail: NTIS HC A07/MF A01 CSCL 15/7

This report examines the applicability of a variety of decision aiding techniques to operation decision situations encountered in Naval Air Anti-Submarine Warfare (ASW). Decisions performed by the Tactical Coordinator (TACCO) in the three major Navy air ASW platforms, P-3C, S-3A, and LAMPS MK-III, are examined and synthesized into six decision making situations. These six situations are lost contact reacquisition, contact classification/verification, on-station search, localization, surveillance tracking, and attack planning. They represent distinct decision making contexts in which specific mission objectives are sought. A method for prioritizing these decision situations for decision and construction is developed and applied. A survey of numerous decision aids and a detailed analysis of 15 military decision aids results in the development of a six category taxonomy of decision aiding techniques. Possible combinations of techniques that could be applied to aid each of the decision situations are determined by matching the decision aiding techniques from the taxonomy to the detailed descriptions of the decision situations. The matching of techniques to situations is facilitated by the development of a descriptive framework for the decision situations. The categories in this framework are chosen so as to uncover the aspects of the situations most amenable to decision aiding by the techniques in the taxonomy. GRA

EFFECTS OF AIRCRAFT NOISE ON SLEEP: AN IN-SITU EXPERIENCE

M. Vallet, J. M. Gagneux, and F. Simonet 1979 10 p refs Presented at 3d Intern. Congr. on Noise as a Public Health Problem Sponsored by Min. de l'Environ. and Direc. de l'Aviation Civile
Avail: NTIS HC A02/MF A01

Electroencephalogram data and bedroom noise levels were recorded during four consecutive nights for 40 men living near the Roissy Airport in Paris questionnaire about sleep quality was administered each morning. All subjects had lived in the same location before the opening of the airport, and had been exposed to the noise for at least a year. The immediate effects of each noise event were noted and an analysis made of sleep structure. For the noisiest nights, total sleep decreased as the noise increased sleep induction latency increased with the noise index, and stage three and four sleep increase were noted. Author (ESA)

ENVIRONMENTAL CONTROL AND LIFE SUPPORT SYSTEM: ANALYSIS OF STS-1

G. J. Steines Jul. 1980 38 p refs
(NASA-TM-81032; JSC-16730; Rept-80-FM-36) Avail: NTIS HC A03/MF A01 CSCL 06K

The capability of the orbiter environmental control and life support system (ECLSS) to support vehicle cooling requirements in the event of cabin pressure reduction to 9 psia was evaluated.

using the Orbiter versions of the shuttle environmental consumables usage requirement evaluation (SECURE) program, and using heat load input data developed by the spacecraft electrical power simulator (SEPS) program. The SECURE model used in the analysis, the timeline and ECLSS configuration used in formulating the analysis, and the results of the analysis are presented. The conclusion which may be drawn drom these results. is summarized. There are no significant thermal problems with the proposed mission. There are, however, several procedures which could be optimized for better performance: setting the cabin HX air bypass and the interchanger watet bypass to the zero flow position is of questionable efficacy; the cabin air pressure monitoring procedure should be re-evaluated; and the degree of equipment power down specified for this analysis and no problems were noted. A.R.H.

THE ADVANTAGE OF THE COLOR-CODE MODALITY VERSUS ALPHANUMERIC AND SYMBOL CODE M.S. Thesis
Henning Hoops Mar. 1980 68 p refs
(AD-A084383) Avail: NTIS HC A04/MF A01 CSCL 05/8

This study describes an experiment designed to investigate potential advantages and/or disadvantages of color-coding relative to symbol - or alphanumeric-codes. Performance was evaluated in terms of reaction time and the number and type of errors made. The stimuli used in the experiment were the letters: E, F, N, U, the colors: red, yellow, green, blue, and the symbols: square, triangle, circle, and cross. They stood for enemy, friendly, neutral, and unknown forces, respectively. The analysis of the data obtained from the experiment suggested that the color and symbol-codes were significantly better than the alphanumeric-code with respect to the number of errors. The reaction time of the color-code was shortest, followed by the symbol-code with reaction time for the alphanumerics being longest. GRA

DETERMINATION OF THE IMPACT OF DIGITAL DATA BROADCAST ON FLIGHT TECHNICAL ERROR Final Report
Donald W. Richardson Feb. 1980 85 p refs
(Contract DOT-FA01-80-P-85745)
(AD-A085177; F-80-01; FAA/RD-80-35) Avail: NTIS HC A05/MF A01 CSCL 05/9

This report documents the data reduction and analysis of existing flight test data regarding the digital data broadcast system (DDBS) concept of automating cockpit data input procedures in an area navigation environment. Particular attention is paid to the statistical quantification of the impact of the DDBS concept on pilot steering performance, mainly flight technical error (FTE). Results of this analysis indicate that DDBS significantly reduces both pilot blunder rate and FTE, for both the enroute and approach phases of flight. GRA

BLOOD FLOW TO ADIPOSE TISSUES IN THE MALE SPRAGUE-DAWLEY RAT Ph.D. Thesis
Barbara Jean Maren 1980 214 p
Avail: Univ. Microfilms Order No. 8018275

The differences in adipocyte size among adipose depots in the male Sprague Dawley rat were studied with respect to their effect on blood flow. Blood flow was also examined within adipose depots to detect how it might vary with an increase of both adipocyte size and animal body size (age). In addition, since adipose tissue serves different metabolic functions of the body during the fed and fasted states, the effect of nutritional status on adipose tissue blood flow was studied. Results are presented. Dissert. Abstr.

VESTIBULAR COMPENSATION IN THE RAT: A MODEL FOR MOTOR LEARNING Ph.D. Thesis
Kerry Dee Walton 1980 290 p
Avail: Univ. Microfilms Order No. 8017600

A global picture of the changes in neuronal activity underlying the acquisition and retention of vestibular compensation (VC). Brain stem and cerebellar nuclear levels was obtained using 2-deoxy-D-glucose. The distribution of glucose uptake at these sites was determined in normal, uncompensated, compensated, and 3-acetylpyridine decompensated animals. Results indicate that the asymmetries following hemilabyrinthectomy reflect an imbalance in the activity of the vestibular nuclei (VN) and that compensation results from the restoration of balance. In uncompensated and decompensated animals the VN ipsilateral to the lesion were significantly less active than the contralateral VN. In compensated animals, VN activity was the same on the both sides, the level being close to or higher than normal. Thus, VC is accompanied by an increase in activity in the ipsilateral VN. Author

EFFECT OF ACCELERATION ON CIRCULATORY AND RESPIRATORY FUNCTION IN THE DOMESTIC FOWL Ph.D. Thesis
Sue Carol Walgenbach 1979 123 p
Avail: Univ. Microfilms Order No. 8016790

The respiratory and circulatory function was examined in chickens exposed to high sustained G sub z (exposure to fields greater than 6 G for 15 seconds: HGS sub z) Acceleration tolerance was determined for cocks exposed to + 6, +8, +10, and +12 G sub z. Acceleration tolerance time was found to be hyperbolically related to the field strength (G). Blood gases in chickens during HSG sub z exposure showed that chickens, unlike mammals, had near normal PaO2 and PaCO2. Forced ventilation of centrifuging chickens with oxygen increased PaO, a response not found mammals. Ventilation of one lung with air produced near normal PaO2 and PaCO, at 1 G, but in HGS sub z gave low PaO, as observed in spontaneously breathing mammals. Ventilation did not extend all tolerance times suggesting circulatory impairments are principally responsible for acceleration tolerance limitations. Expired P(CO2) during oxygen ventilation indicated that cardiac output decreased during HSG sub z, even down to zero for several seconds; after HSG sub z, expired P(CO2) increased, indicating that oxygen debt and metabolism perfusion inequalities were developed during HSG sub z. Dissert. Abstr.

N80-29986 Kentucky Univ., Lexington.
THE NEURAL CONTROL OF THE CORONARY CIRCULATION DURING BEHAVIORAL STRESS IN CONSCIOUS DOGS Ph.D. Thesis

George Edward Billman 1980 161 p
Avail: Univ. Microfilms Order No. 8018226

Experiments were performed on eight (3 female, 5 male) mongrel dogs during classical aversive conditioning. The conditioning paradigm consisted of two 30 second tones: one was paired with a one second pulsed DC shock, the other was nonreinforced. The subjects were chronically instrumented to measure aortic pressure, left ventricular pressure, and left circumflex coronary blood flow. The data were analyzed with multifactorial analysis of variances and Newman's-Keul's multiple range test. Results indicate that the coronary vascular response to stress consisted of two components: an initial alpha adrenergic vasoconstriction followed by a more complex vasodilation, which was mediated by metabolites released secondarily to increases in heart rate and inotropic state. The vasodilation may also involve a reactive hyperemic response to the initial vasoconstriction or perhaps a reflex withdrawal of alpha receptor tonus. Dissert. Abstr.

N80-29987 Florida Technological Univ., Orlando.
A COMPARATIVE STUDY IN MOLECULAR AGING: ALTERATIONS TO THE NUCLEIC ACIDS OF CELLS OF A REPRESENTATIVE PLANT, INVERTEBRATE AND VERTEBRATE ANIMAL OF VARIOUS AGES Ph.D. Thesis
Charles David Allen Polson 1979 93 p
Avail: Univ. Microfilms Order No. 8016621

The DNA of three tissues of Mus musculus, wild type and short lived vestigial wing mutant of Drosophila melanogaster and cotyledons of bush beans, Phaseolus vulgaris, was examined for age related fragmentation, formation of single stranded gaps, and decrease in RNA genes. Agarose gel electrophoresis showed that no DNA fragmentation occurred in wild type or vestigial wing Drosophila, or in DNA from mouse brain and heart. Mouse liver appeared to possess a large fragment in both ages tested; thus, no age related change occurred. Phaseolus cotyledon DNA possessed a fragment of approximately 3.5 megadaltons in both imbibed seeds and 12 day old cotyledons. Therefore, there was no age related increase in DNA fragmentation. Results indicate that DNA fragmentation, formation of single-stranded gaps, and loss of RNA genes are not of universal occurrence in aging organisms. Dissert. Abstr.

N80-29988 American Univ., Washington, D. C.
INTERACTION OF ELECTROMAGNETIC ENERGY WITH ABSORPTIVE MATERIAL BY THERMALLY INDUCING ELASTIC STRESS WAVES Ph.D Thesis
Kenneth John Oscar 1980 225 p
Avail: Univ. Microfilms Order No. 8017445

Rats were exposed to 1.3 or 2.8 gHz, pulsed or continuous wave (CW) microwave energy. Exposure time, incident power, and microwave pulse characteristics were varied. Local cerebral blood flow, blood volume, and blood-brain barrier permeability experiments were performed with several different, quantitative, radioactive isotope techniques with measurement by brain homogenization and liquid scintillation counting. It was confirmed that low power microwaves could alter the uptake of small molecular weight saccharides in the blood-brain barrier of rats. It was further learned that the permeability increases occurred for small but not large molecular weight saccharides. The rises returned to normal after 24 hours and were of greatest magnitude in the medulla, cerebellum, and hypothalamus. The relationship between the magnitude of the increase and the pulse characteristics of the microwaves were determined. Other pertinent observation and results are reported. Dissert. Abstr.

BIOMEDICAL RESEARCH, DEVELOPMENT AND ENGINEERING AT THE JOHNS HOPKINS UNIVERSITY APPLIED PHYSICS LABORATORY Annual Report, 1 Oct. 1978 - 30 Sep. 1979
Oct. 1979 74 p refs
(PB80-175268; JHU/APL/MQR-79) Avail: NTIS HC A04/MF A01 CSCL 06B

The Medical Institutions of The Johns Hopkins University and The Johns Hopkins University and The Johns Hopkins University Applied Physics Laboratory have developed a vigorous collaborative program of biomedical research, development, and systems engineering. An important objective of the program is to apply the expertise in engineering, the physical sciences, and systems analysis acquired by APL in defense and space research and development to problems of medical research and health care delivery. This program has grown to include collaboration with many of the clinical and basic science departments of the medical divisions. Active collaborative projects exist in ophthalmology, neurosensory research and instrumentation development, cardiovascular systems, patient monitoring, therapeutic and rehabilitation systems, clinical information systems, and clinical engineering. This application of state-of-the-art technology has contributed to advances in many areas of basic medical research and in clinical diagnosis and therapy through improvement of instrumentation, techniques, and basic understanding. HIGH-SPEED, LOW-LEVEL FLIGHT: AIRCREW FACTORS
David H. Glaister, ed. (Royal Air Force Inst. of Aviation Medicine) Mar. 1980 321 p refs In ENGLISH and FRENCH Presented at the Aerospace Med. Panel's Meeting, Lisbon, 22-26 Oct. 1979
(AGARD-CP-2670; ISBN-92-835-0263-9) Avail: NTIS HC A14/MF A01

Factors effecting aircrews during high speed, low level flight are addressed. Specific topics include ride quality and the effect of the physical environment; thermal effects; vibration effects; cockpit design and aircrew workload; and escape and survival. Particular attention is paid to ride bumpiness and the influence of airframe design and control strategy, the effects of vibration on vision, and the problems and potential uses of helmet mounted sights and displays.

N80-29991# Royal Air Force, Farnborough (England).
RIDE-BUMPINESS AND THE INFLUENCE OF ACTIVE CONTROL SYSTEMS
J. G. Jones *In* AGARD High-Speed, Low-Level Flight Mar. 1980 16 p refs
Avail: NTIS HC A14/MF A01

The influence of aircraft design and control strategy on aircraft disturbances stressful to aircrew in high-speed, low-altitude flight is discussed. Standard methods for assessing ride quality are briefly reviewed. In addition, a technique is described that combines time-plane characteristics of response with frequency-plane features usually defined in terms of power spectra. This method, which has been developed as a tool for assessing the dynamic response of aircraft in turbulence, may provide useful additional information for human factors work. The technique leads in particular to a 'characteristic signature', in the time plane, of the aircraft response to gusts. In determining the dependence on aircraft dynamics of this characteristic energy pattern emphasis is placed on the concept of signal 'increments' or 'differences', in contrast to the sinusoidal components of Fourier analysis. It is perhaps relevant that the role of signal differences in time or space is also stressed in classical work on the mechanisms of human sensory perception. M.G.

N80-29992# Amt fuer Wehrgeophysik, Traben-Trarbach (West Germany).
INFLUENCES OF GEOPHYSICAL FACTORS (METEOROLOGICAL AND TOPOGRAPHICAL) ON THE PILOT-AIRCRAFT-SYSTEM IN HIGH SPEED LOW LEVEL FLIGHT (HSLLF)

Karl Krames *In* AGARD High-Speed, Low-Level Flight Mar. 1980 46 p refs
Avail: NTIS HC A14/MF A01

The effects of interaction between atmosphere, lithosphere, and biosphere on low level high speed flight are discussed along with particular examinations of visibility, wind, thunderstorms, and sleet and hailstones. Since geophysical hazards are at their maximum in low levels, it follows that an extreme reaction ability of the man-machine system in that domain is an absolute requirement. The primary function of geophysical information consists in assessing those flight routes and flight levels presenting minimum potential hazards to the accomplishment of the individual military mission. The use of terrain data bases offers an optimal approach in achieving a high degree of resolution on the basis of 95-by-150-m-grid. The inclusion of weather, vegetation, and surface data will ensure detailed flight information. M.G.

N80-29993# British Aerospace Aircraft Group, Preston (England).
DEVELOPMENT IN HIGH-SPEED LOW-LEVEL FLIGHT: THE PILOT'S VIEWPOINT
J. J. Lee *In* AGARD High-Speed, Low-Level Flight Mar. 1980 3 p
Avail: NTIS HC A14/MF A01

Developments in aviation technology during the last one and a half decades leading to significant benefits to high speed low level flight are briefly reviewed. It is concluded that the human characteristics of sensitiveness to stimuli, reaction time, strength/stamina, and adaptability have remained virtually unchanged in evolution terms and will remain a constant in flight assessment. Given the requirements of the mission and the scenario, the areas where development can be applied to improve mission success still remain firmly in the fields of performance, handling, guidance/navigation and vehicle design characteristics. M.G.

N80-29994# Aerospace Medical Research Labs., Wright-Patterson AFB, Ohio.
BIOTECHNOLOGY CHALLENGES PRESENT IN OPERATIONAL HIGH-SPEED LOW-LEVEL FLIGHT
Roy L. DeHart *In* AGARD High-Speed, Low-Level Flight Mar. 1980 6 p refs
Avail: NTIS HC A14/MF A01

Operational stressors in high speed low level flight (HSLL) are identified for the mission scenarios of the B-52, F-111, and the A-10 aircraft. It is concluded that there exists a common technology need requiring contributions from the aerospace medical practitioner which becomes evident in discussing the aircraft in their respective HSLL combat missions. Continued development of automated systems integrating components within the cockpit affecting aircraft controls and weapons delivery systems is required. The specialist in aerospace medicine must ensure that sophisticated systems do in fact offload peripheral tasks of the pilot and increase his performance and ability to successfully accomplish the mission in a high threat combat environment. In addition, it is evident opportunities are available for biotechnology to improve or develop systems providing required information to the aircrew member in a method or format which permits him to remain heads-up and eyes-out-of the cockpit. M.G.

N80-29995# Centre d'Etudes et de Recherches de Medecine Aerospatiale, Paris (France).
THERMIC PROBLEMS PRESENTED BY HIGH-SPEED, LOW-LEVEL FLIGHT [PROBLEMES THERMIQUES POSES PAR LE VOL A GRANDE VITESSE ET A BASSE ALTITUDE]
J. Timbal and J. Colin *In* AGARD High-Speed, Low-Level Flight Mar. 1980 7 p refs In FRENCH
Avail: NTIS HC A14/MF A01

In certain cases, high speed flight at low altitude is likely to create conditions which surpass the tolerance limits of pilots. The physical factors of the environment as well as their effects on performance have been the subject of numerous studies. One method of predicting the period of heat tolerance is presented and discussed. The important part played by the humidity of the air and the physical activity of the pilot is demonstrated. The prevention of climatic inconveniences requires the use of relatively simple means which must be put into effect before flight. During the course of flight, prevention implies that the inconveniences were predicted during the design of the aircraft. The problem of risk associated with thermal loads is discussed under three principles: evaluating thermal ambience, evaluating human tolerance, and increasing the tolerance. Transl. by A.R.H.

N80-29996# Royal Air Force Inst. of Aviation Medicine, Farnborough (England).
EFFECTS ON PERFORMANCE OF THERMAL STRAIN ENCOUNTERED DURING HIGH-SPEED, LOW-LEVEL FLIGHT
T. M. Gibson, J. R. Allan, C. J. Lawson, and R. G. Green *In* AGARD High-Speed, Low-Level Flight Mar. 1980 9 p refs
Avail: NTIS HC A14/MF A01

The effects of thermal strain on pilot performance during high speed, low level flight are examined through flight simulator testing. Each subject carried out two replicate experiments in which he was first heated to a deep body temperature of 37.5 C, then alternately heated and cooled twice between deep body temperature limits of 37.9 and 38.5 C, and finally cooled to 37.5 C. Core temperatures and skin temperatures were monitored. The results demonstrate that differences in performance on the flight simulator can be produced by heating or cooling the skin at the same level of deep body temperature. These differences do not exist at deep body temperatures of 37.5 C, but at core temperatures between 37.9 and 38.5 C, performance during heating is worse than during cooling. Above the critical core temperature (i.e., above 37.5 C), skin temperature is a more important determinant of performance than the absolute level of deep body temperature; it is, however, impossible to exclude possible effects on performance of direction and rate of change of both core and skin temperatures. It is clear that the thermal strain encountered by aircrew in routine high speed, low level flight in warm conditions could cause a reduction in the operational capability of the aircrew. The situation will be exacerbated by anything that increases the thermal strain such as the wearing of more insulative protective clothing, higher work rates and repeated sorties separated by inadequate time for thermal recovery. AIRCREW HEAT STRESS DURING HIGH-SPEED, LOW-LEVEL FLIGHT
Richard F. Stribley and Sarah A. Nunneley *In* AGARD High-Speed, Low-Level Flight Mar. 1980 5 p refs
Avail: NTIS HC A14/MF A01

An overview of the problems related to aircrew heat stress during high speed low level flight is given. Physiological heat exchange mechanisms in the cockpit environment and the performance consequences of heat stress are examined. Current cockpit cooling systems designs are assessed and suggestions are made for the design of man-oriented cockpit cooling. M.G.

QUANTIFYING THE AGRESSION GENERATED BY LOW FREQUENCY VIBRATIONS [ESSAI DE QUANTIFICATION DE L'AGRESSION ENGENDREE PAR LES VIBRATIONS DE BASSE FREQUENCE]
P. Quandieu, P. Borredon, J. C. Rouhet, and L. Pellieux *In* AGARD High-Speed, Low-Level Flight Mar. 1980 17 p refs In FRENCH
Avail: NTIS HC A14/MF A01

From a biomechanical viewpoint, man can be considered as a deformable solid under the effect of mechanical stimulation such that as provoked by flight at high speed and low altitude. A physiological response to physical stimulation results and muscular mass struggles against the deformation imposed. According to the degree of muscle tension, the vibratory response of the subject is a phase displacement in relation to the oscillation which gives birth to movement. The final deformation is the result of mechanical action and physiological reaction. A baboon was used in laboratory tests to demonstrate magnitude of the mechanical capability to account for the behavior of a subject exposed to vibrations. A loads transducer and an accelerometer were placed at the point where force was applied in order to determine the effective mass (the complex relation of dynamic force to the acceleration). With the help of measurements obtained totally outside the body, it was possible to record an eminently variable dynamic behavior the whole length of the same vibration. The importance of the variations obtained on the parameters considered provides hope for using the method to examine the total behavior of man exposed to vibrations. Transl. by A.R.H.

A METHOD FOR STUDYING HUMAN BIODYNAMIC RESPONSES TO WHOLE-BODY Z-AXIS
J. C. Guignard, C. L. Ewing, G. C. Willems, W. Anderson, W. H. Muzzy, III, D. J. Thomas, and P. L. Majewski *In* AGARD High-Speed, Low-Level Flight Mar. 1980 7 p refs

Avail: NTIS HC A14/MF A01

The methodology used as well as some illustrative results obtained in current experiments to determine the transmissibility of mechanical vibration to major axial segments (pelvis, upper torso, head) of the seated human body vibrated in the z-axis are presented. Factors influencing transmissibility are mentioned and the importance of controlling such factors in experimental determinations of the human biodynamic response to vibration is discussed. The methodology described, adapted from established use in human impact studies, includes the use of standardized anatomical coordinate systems for data reference, which is essential to the meaningful comparison of responses measured in different subjects or in different conditions of vibration. HEAD MOVEMENTS INDUCED BY VERTICAL VIBRATIONS
L. Vogt, E. Schwartz, and H. Mertens *In* AGARD High-Speed, Low-Level Flight Mar. 1980 14 p refs

Avail: NTIS HC A14/MF A01

Eleven subjects were vibrated on a shake-table in the frequency range of 2 Hz to 19 Hz to assess the complex head motion induced by z-axis mechanical vibration. Acceleration amplitude was sinusoidal and held constant at 0.35 g (rms). Each subject was given two trials: one sitting relaxed without a backrest; the other leaning against a backrest with a 12 deg inclination from the vertical. Head motion was recorded with a special television camera (x-y tracker) by pursuing a target painted on the temporal part of the subject's forehead. This instrument continuously records the horizontal and vertical coordinates of the tracked point and gives the output as analogues voltages. For each frequency and experimental condition the vertical and horizontal motion of the tracking target was related to the displacement of the shake-table. The results are given as different transmissibility curves for vertical and horizontal head motion. When relating horizontal to vertical transmissibility it becomes obvious that, without a backrest, at the resonant frequency the horizontal transmissibility is about 75 percent of the vertical transmissibility. When using a backrest horizontal transmissibility is reduced to about 35 percent of the vertical transmissibility. R.C.T.

THE EFFECT OF RECLINED SEATING ON THE TRANSMISSION OF LINEAR VIBRATION TO THE HEAD
Mary E. Johnston *In* AGARD High-Speed, Low-Level Flight Mar. 1980 14 p refs

Avail: NTIS HC A14/MF A01

The transmission of vibration to the heads of subjects seated in a Mk 10B ejection seat exposed to vibration within the frequency range 2-25 Hz was measured. Measurements were made for the seat conventionally mounted (back angle 20 deg to the vertical) and reclined for seat back angles of 30 deg., 45 deg., and 60 deg. to the vertical. The seat was vibrated using a swept sine wave technique in either the vertical or lateral direction. Head motion in each of the three head anatomical orthogonal linear axes (G sub x, G ub y, G sub z) was measured on a bite bar fitted with accelerometers. Ten subjects were used, each fitted with a standard Mk 2/3 flying helmet. The results indicate that for a given input, particularly in the lateral axis, head motion increases considerably when the head is in contact with the rest. Also head motion both against and off the rest increases as the seat back angle to the vertical is increased. Such increases in vibration to the head are very uncomfortable and could well lead to a performance decrement for a visual task. R.C.T.

THE EFFECTS OF AIRCRAFT VIBRATION ON VISION
G. R. Barnes *In* AGARD High-Speed, Low-Level Flight Mar. 1980 11 p refs
Avail: NTIS HC A14/MF A01

Movements of the head resulting from aircraft vibration were investigated in terms of their effects on visual performance. Major emphasis was placed on the limitations in the response of the pursuit reflex and the vestibulo-ocular reflex. The following analyses were conducted in order to assess: (1) the frequency characteristics of the vestibulo-ocular and pursuit reflexes; (2) the ability of subjects to suppress reflex vestibular eye movements which become inappropriate when viewing a helmet-mounted display; (3) the effect of relative movement between the eye and the viewed object on visual performance, and (4) the biodynamic response of the head during vibration which gives rise to stimulation of the vestibular system. The results are discussed in an attempt to estimate the effects of aircraft vibration on visual performance. R.C.T.

THE EFFECT OF 3-25 Hz VIBRATION ON THE LEGIBILITY OF NUMERIC LIGHT EMITTING DIODE DISPLAYS
Mary E. Johnston and John H. Wharf *In* AGARD High-Speed, Low-Level Flight Mar. 1980 9 p refs

Avail: NTIS HC A14/MF A01

The effects of 3-25 Hz2 sinusoidal vibration at an rms acceleration level of 2.5 m/s2 in both the vertical and lateral axes on the performance of a reading task are described. The task was to read aloud numeric characters presented on a yellow high luminance light emitting diode display which was designed for the military cockpit. Random numbers were presented on the display in sets of four changed every 3 s. The subjects were each fitted with a MK 2/3 flying helmet and strapped into an Mk 10B ejection seat which was mounted on the same vibration platform as the display. Tests were conducted with the subject's head held both against and just off the head rest. The results indicate that reading performance is affected most by lateral vibration, when the head is against the head rest. Maximum errors occurred for lateral vibration frequencies of 15-16 Hz which is shown to correspond to the probable onset of overlapping nodal images due to head vibration. R.C.T.

THE EFFECT OF TURBULENCE ON HELMET MOUNTED SIGHT AIMING ACCURACIES
N. O. Tatham *In* AGARD High-Speed, Low-Level Flight Mar. 1980 4 p
Avail: NTIS HC A14/MF A01

The effects of the turbulence associated with high speed, low level flight on the accuracies achievable with helmet mounted sighting equipment were assessed. In-flight analysis were conducted during trials in a Canberra aircraft, flying straight and level at 350 km, 250 ft. Laboratory analysis were conducted using a two axis vibration rig driven by vibration data recorded from the same Canberra aircraft to provide simulated turbulence. Aiming accuracies were obtained for collimated targets fixed in space in the simulation, and for both collimated targets fixed to the airframe and ground targets in flight. The results obtained show a good correlation between aiming errors achieved in flight and those obtained from the simulation, and demonstrate that the aiming errors consist mainly of a low frequency random motion which increases with vibration level. In addition, various techniques were investigated to overcome the errors involved in order to enable fine aiming to be performed with the helmet sight. R.C.T.

Volunteers were subjected to various degrees of impact acceleration. The directions of applied acceleration were -X (front to back), +Y (right to left), and -X+Y (45 degrees between -X, and +Y). The major categories of symptoms were neck pain, headache, restraint related musculoskeletal symptoms, and syncope. A few special cases had findings which required clinical evaluation and followup. The type, extent, duration, and severity of the symptoms were related in some cases to the direction peak acceleration, and acceleration duration. R.C.T.

OPERATIONAL ASPECTS OF GUIDANCE AND CONTROL ADVANCES VERSUS PILOT WORKLOAD FOR LOW ALTITUDE, HIGH SPEED FLIGHT
Morris A. Ostgaard *In* AGARD High-Speed, Low-Level Flight Mar. 1980 10 p refs

Avail: NTIS HC A14/MF A01

Some of the characteristics of the human operator and their similarity to guidance and control functions are discussed. It is shown that the operator's characteristics as a controller depend on four kinds of variables: control task variables, which include the system inputs and all the system elements external to the operator; environmental variables such as ambient illumination, temperature, vibration, etc.; operator centered variables such as training, fatigue, motivation; and procedural variables such as instructions, practice, order of presentation relating to a given task. When these variables are essentially time stationary or invariant over an interval of interest, the operator vehicle system can be modeled as a quasilinear system much the same as standard servo loops. TV OPERATOR PERFORMANCE IN REAL TIME AIR-TO-GROUND RECONNAISSANCE MISSIONS UNDER TASK-LOADING CONDITIONS
H. Mutschler *In* AGARD High-Speed, Low-Level Flight Mar. 1980 11 p refs Sponsored by the German Federal Ministry of Defense
Avail: NTIS HC A14/MF A01

The detection performance of a black-and-white-TV operator in real time reconnaissance missions was determined by the parameters of the RPV-system, the scene, and the task. A series of 6 experiments were performed with 19 untrained subjects who had to find military vehicles in static ground scenes displayed on a TV screen. The scenes were presented only shortly, for 1 to 10 secs. This corresponds to a speed of about 50 to 500 km/h at a nonoverlapping frame rate. The subjects pointed to located targets with a light-pen. Analysis of variance indicate that the detection rate is influenced by: (1) scene parameters which consititute the conspicuity of a target in a natural scene, such as global context, contrast and local context; (2) short presentation times of less than 3 secs; (3) system parameters such as resolution and image segmentation; and (4) number of targets. Detection rate decreases if the task is to mark all targets and detection rate increases if the task is only to indicate those scenes which contain at least one target. The false alarm rate decreases with the number of sessions the subjects took part in and was finally at low level. Taking the confidence level expressed into account proved to increase the detection-false alarm ratio remarkably. Search times were nearly equal to presentation times from 1 to 5 secs only. The search times for the 50% detection rate decreased from 4 secs in the first experiment to 2 secs in the last one. R.C.T.

HELMET-MOUNTED DEVICES IN LOW-FLYING HIGH-SPEED AIRCRAFT
D. N. Jarrett *In* AGARD High-Speed, Low-Level Flight Mar. 1980 9 p refs
Avail: NTIS HC A14/MF A01

Two separate simulation studies are described. The first assesses the amount of movement occurring between the pilot's helmet and his eyes. The second concerns the legibility of information presented on an experimental LED matrix display. It is concluded that aircraft vibration does not cause significant helmet movement in comparison with natural voluntary head motion, and that the degrading effect of aircraft vibration on the legibility of displayed information could be counteracted using a brighter display. E.D.K.

THE ROLE OF HELMET MOUNTED DISPLAYS IN HIGH-SPEED LOW-LEVEL FLIGHT
Gloria Twine Chisum *In* AGARD High-Speed, Low-Level Flight Mar. 1980 5 p refs

Avail: NTIS HC A14/MF A01

During critical phases of flight operations the requirement for shifts of gaze between the environment outside the cockpit and the interior of the cockpit is a problem which can be eased by the development of an effective helmet mounted display capable of presenting sensor and aircraft position and condition information. In both fixed wing and rotary wing aircraft, a head out of the cockpit attitude is considered to be highly desirable. An effective helmet mounted display is one which is comfortable to use, does not degrade normal visual functioning, can present the required information, and does not increase crew fatigue due to weight and bulk. The general design concerns regarding helmet mounted displays apply to those to be used in a high speed, low level environment. Some of the design parameters take on special significance, however, in high speed low level flight. E.D.K.

WEAPONS SYSTEMS OF THE MIRAGE 2000: MAN MACHINE INTERFACE [LE SYSTEME D'ARMES DU MIRAGE 2000 INTERFACE HOMME MACHINE]
G. Varin *In* AGARD Operational Roles, Aircrew Systems and Human Factors in Future High Performance Aircraft Mar. 1980 15 p In FRENCH
Avail: NTIS HC A05/MF A01

The multipurpose role of the Mirage 2000 aircraft led to the design of a very complex weapon system which includes navigation, automatic pilot, radar, and countermeasures. The use of such a system which already saturates the pilot in combat aircraft actually in service could be still more difficult in the Mirage 2000. In face, considering the maneuverability qualities of the aircraft, which is largely augmented by electric flight control, the Air Army could introduce new combat techniques which would be more trying and more constraining for the pilot. In order to best utilize the capabilities of the Mirage 2000, an important integration effort was made at the cabin level to realize the best compromise in the presentation of parameters and of the controls at the pilot station: displays highly adapted to each flight phase, multiplexed control, and synthetic representation of tactical situations. INFORMATION TRANSFER FOR IMPROVED PILOT PERFORMANCE
Robert N. Lutter *In* AGARD Operational Roles, Aircrew Systems and Human Factors in Future High Performance Aircraft Mar. 1980 6 p refs
Avail: NTIS HC A05/MF A01

The missile intercept confidence factor (MICF) concept was developed to provide the pilot with information about the engagement dynamics of an air-to-air missile engagement. It attempts to account for the critical parameter target maneuver by bounding the possible aerodynamic boundaries, by calculating upper and lower boundary limits. A no-escape target maneuver is utilized to establish the lower boundary and the current maneuver is used for the upper boundary. The MICF factor relates the pilot's position relative to these two boundaries and a minimum range boundary. As an interceptor varies its position within the missile launch envelope boundaries, the MICF varies between a value of zero to one and presents the pilot with an indication of the increasing/decreasing goodness of his launch condition. The MICF allows the pilot to be interactive with the fire control system. Through an assessment of the tactical situation, the pilot can determine whether to accept a low confidence launch or to maneuver to a more favorable launch position. E.D.K.

HUMAN FACTORS IN MIRAGE 2000 MISSIONS [FACTEURS HUMAINS DES MISSIONS DU MIRAGE 2000]

Henri Vieillefond *In* AGARD Operational Roles, Aircrew Systems and Human Factors in Future High Performance Aircraft Mar. 1980 6 p refs In FRENCH

Avail: NTIS HC A05/MF A01

Like modern aircraft, the Mirage 2000 is characterized essentially by a great degree of controllability, an aptitude to perform at high altitude, and a lessening of the pilot's workload. These three essential characteristics require that the pilot adapt to his aircraft. The great controllability implies very brutal variations of intense accelerations which the pilot must endure. Toleration of repeated accelerations is still poorly understood, especially over a long period, consequently pilot selection must be rigorous. The physiopathological effects of high altitude are better known and effective protection can be proposed. The chances of mission success are real only if the pilot has at his disposal a comfortable environment, which involves ergonometric studies of the seat, of controls, of protective equipment, and of cabin ventilation. INTERACTION OF RESPONSES TO ACOUSTIC AND ELECTRIC STIMULI AT THE AUDITORY CORTEX Ph.D. Thesis

Hugh Sherbon Lusted 1980 82 p

Avail: Univ. Microfilms Order No. 8016846

The interaction of tone pips and electrical pulses to the auditory nerve was studied. The evoked cortical response to each type of stimulus was recorded from the primary auditory cortex of barbiturate anesthetized cats. The stimuli were then delivered in time delayed pairs where the interstimulus interval was within the refractory period of the evoked response (typically 50 msec) to either stimulus alone. The amplitude of the cortical response to the trailing stimulus was compared with its single stimulus amplitude as the frequency of the tone pips was changed from 250 through 40 kHz. Results are reported. Dissert. Abstr.

THE STRUCTURE OF FIBRINOGEN AND ITS INTERMOLECULAR ASSOCIATIONS Ph.D. Thesis

Walter Earle Fowler 1980 120 p

Avail: Univ. Microfilms Order No. 8017140

Fibrinogen was prepared by shadowing with platinum in the conventional manner and by a novel technique of negative staining, which has not previously been used with fibrinogen. With the electron microscope, images were obtained that show a single consistent structure for the fabrinogen molecule in both types of preparations, conforming the trinocular model for fibrinogen. Plasmin degradation products of fibrinogen were examined in the electron microscope using the same preparatory techniques and the structures of these proteolytic fragments were related to the trinodular structure of the intact molecule. This work demonstrates structurally the sequence of events which occurs during the proteolysis of fibrinogen and also allows the well known effects of the various fragments on fibrin polymerization to be interpreted in structrural terms. The mechanism of fibrin polymerization was studied by many different techniques, but the location of intermolecular contact sites on the trinodular molecule and the packing arrangement of these molecules in the fibrin fiber are not known. Fibrinogen dimers were studied in the electron microscope using the same techniques that we developed for the study of single fibrinogen molecules and it was determined that their mode of association is end to end and linear. Evidence is presented that this intermolecular contact and arrangement are the same within the fibrin fiber. Dissert. Abstr.

EFFECTS OF BACKGROUND ILLUMINATION AND TARGET CONTRAST ON FLASHBLINDNESS RECOVERY TIME

David C. Smedley and Diana R. Nelson Wright-Patterson AFB, Ohio AMRL Apr. 1979 18 p refs

(Contract F00615-76-C-5001)

(AD-A071906; AMRL-TR-79-30) Avail: NTIS HC A02/MF A01 CSCL 06/16

Seven subjects were shown a series of Landolt Cs with gaps oriented one of eight compass directions. After a randomly occurring flash, the subjects were asked to identify the gap orientation of the target. A tungsten halogen lamp was used as the flash source. The duration was 100 msec and the luminance was 60000 foot lamberts. Five background luminances (16,62,120,230, and 575 foot lamberts) and four target contrast ratios (0.1,0.2,0.3 and 0.5) were used in this experiment. Results show recovery times at the 0.1 contrast level differ significantly from those obtained at the other levels regardless of background. Recovery times on the 16 foot lambert background level were significantly different from all other backgrounds regardless of contrast. There were no differences between recovery times at the other constrast levels or background luminances. Author

ON THE INTERACTION OF NON-IONIZING RADIATION WITH PEOPLE

Malvin A. Ruderman and Gordon J. MacDonald Mar. 1980 47 p refs

(Contract MDA903-78-C-0086; ARPA Order 2504)

(AD-A082538; SRI-JSR-79-14) Avail: NTIS HC A03/MF A01 CSCL 06/18

This report examines the physical basis for many of the thermal and non-thermal interactions between microwaves and the human body. Although a microwave beam incident on the human body dissipates, on the average, about the same amount of heat as does normal metabolism, it can actually dissipate considerably more heat in certain local regions of the body because of strong beam focusing effects (e.g., within the brain), flow of induced currents through small, constricted areas of the body (e.g., ankle, neck) and differences in electrical properties among body tissues. Since relatively large heat dissipation can occur on a local level, it would appear more rational to determine a maximum permissive radiation exposure in terms of maximum allowed dissipation in a specific sensitive part of the body rather than, as is presently done, in terms of external beam intensity (the present U.S. standard is 10 milliwatts/sq cm). For non-thermal processes, no special biological process or structure has been identified as likely to be especially sensitive to microwave fields or frequencies. The experimental results designed to explore the non-thermal effect of microwaves were studied. The results of all experiments purporting to demonstrate a significant non-thermal biological effect have been disputed. In fact, very few experiments in the entire field have ever been replicated; a situation which should be rectified. GRA

RESPONSE OF THE CARDIOVASCULAR SYSTEM TO

VIBRATION AND COMBINED STRESSES Final Report, 1 Oct. 1978 - 30 Sep. 1979
Charles F. Knapp Nov. 1979 52 p refs
(Contract F49620-79-C-0034; AF Proj. 2312)
(AD-A081879; AFOSR-80-0203TR) Avail: NTIS
HC A04/MF A01 CSCL 06/19

Cardiovascular regulation of acceleration-induced pressure and flow disturbances entails a complex pattern of afferent and efferent neural activity. The global nature of the stress in the levels applied invokes a response from both low and high pressure sensory areas as well as possible mechano-vestibular mechanisms. In this light, it was felt that the dual activation of both peripheral and cardiac efferent activity in response to acceleration stress would disguise the contribution from either mechanisms separately and for that reason a preparation was sought which would allow for delineation of these reactions. As a result, a canine chronic preparation that included a surgically denervated heart thereby permitting a detailed analysis of the peripheral vascular contribution to barostatic regulation has been developed. The synthetic-work methodology of the Multiple Task Performance Battery (MTPB) was employed in a series of studies designed to determine the effects of 48 hours of continuous work and sleep loss on the work performance of four groups of female subjects and one group of male subjects. The specific female groups were defined in the design by a factorial combination of the phase of the menstrual cycle at the beginning of the sleep-loss period (i.e., Menstrual vs Mid-Cycle) and whether or not the subjects were using contraceptive pills (i.e., Pill vs Normally Cycling). The performances of these four groups of female subjects were compared with those of a group of male subjects who performed the tasks of the MTPB under identical conditions; comparisons were performed during training, during a baseline period, during the sleep-loss, continuous-work period, and during a post-recovery period. An extension of these studies subsequently compared the performances of two groups of female subjects (i.e., Normally Cycling and Pill) for an additional five weeks under normal work conditions; the purpose of this extension was to assess the effects of the phases of the menstrual cycle on work performance. HC A03/MF A01 CSCL 06/16

Exposure to 100% oxygen at 1 atm. pressure has compromising effects on the ability of the lung to carry out gas exchange. The initial stages of injury include decreases in lung compliance, fluid accumulation in interstitial and alveolar spaces, and alveolar atelectasis. It is unknown whether pulmonary surfactant undergoes compositional or functional changes prior to or during the observed pathophysiology. Such alterations, if occurring, would interfere with normal physiological function and could exacerbate other effects of the environmental challenge. In order to better define alterations in surfactant that may result from breathing enriched concentrations of oxygen we exposed pathogen-free Wistar rats to 100% oxygen for 48 hours. In separate experiments we injected 3H-palmitate into rats and followed its incorporation and metabolism in the DSPC of Type 2 cells, alveolar surfactant, and alveolar macrophages. The results indicated that the DSPC moved from Type 2 cells to the alveolus, and at least part was ingested by alveolar macrophages. Overall metabolic flux was unchanged in animals exposed to oxygen. We conclude that breathing 100% oxygen for 48 hours has direct effects on the amount of surfactant in the lung, but probably no effect on the metabolic pathways which regulate its phospholipid composition. These differences probably occur because of metabolic changes in catabolic processes associated with the clearance of surfactant. GRA

RADIOFREQUENCY RADIATION AND LIVING TISSUE: THEORETICAL STUDIES Interim Report, Jan. 1978 - May 1979
Richard A. Albanese and Earl L. Bell Dec. 1979 44 p refs
(AF Proj. 7757)
(AD-A085952; SAM-TR-79-41) Avail: NTIS
HC A03/MF A01 CSCL 06/18

Basic mechanisms whereby radiofrequency electromagnetic radiation can interact with living tissue were investigated. An elementary statistical physics model of tissue, viewed as a chemical mixture, was considered, followed by a nonquantum physics analysis of macromolecular motion in an electromagnetic field. These studies of basic mechanisms suggest that radiofrequency electromagnetic radiation may be important in its effect on living tissue without causing significant tissue-temperature rises. GRA

ASSESSMENT OF THE EFFECTS OF THE ZERO GRAVITY ENVIRONMENT ON THE HEALTH AND SAFETY OF SPACE WORKERS
18 Feb. 1980 17 p refs
(Contract DE-AI02-79CH-10025)
(NASA-TM-81122; DOE/CH-10025) Avail: NTIS
HC A02/MF A01 CSCL 06S

A review was conducted of currently available information relating to adverse effects to the health and safety that space power system (SPS) space workers may experience. Currently available information on the responses of humans to space flight is somewhat limited and was obtained under conditions which are grossly different from conditions to be experienced by future space workers. The limitations in information and differences in conditions were considered in the assessment of potential health and safety hazards to the SPS space workers. The study did not disclose any adverse effects that would result in long term deviations to the medical physiological health of space workers so long as proper preventive or ameliorating action were taken. A REVIEW OF DYNAMIC VISUAL ACUITY Interim Report
Tommy R. Morrison Mar. 1980 28 p refs
(MF51524004; MR0410103)
(AD-A085860; NAMRL-Monograph-28) Avail: NTIS HC A03/MF A01 CSCL 06/16

In many everyday situations relative motion exists between human beings and the visual information which they must acquire and resolve in order to perform their tasks successfully. In particular, tasks, such as flying aircraft, driving automobiles and other vehicles, and resolving moving information presented via visual displays, impose a requirement on the human operator to process moving information. Since Dynamic Visual Acuity (DVA) is a critical visual skill involved in performing such visual tasks, the present review was undertaken in order to better understand the visual skill and to provide a basis for continuing research in this area. PRESSURE SUIT JOINT ANALYZER Patent Application
Hubert C. Vykukal and Bruce Webbon, inventors (to NASA) Filed 11 Jul. 1980 13 p
(NASA-Case-ARC-11314-1; US-Patent-Appl-SN-168943) Avail: NTIS HC A02/MF A01 CSCL 06Q

A measurement system for simultaneously measuring torque and angular flexure in a pressure suit joint. One end of a joint under test is held rigid, and a torque transducer is pivotably supported on the other movable end of the joint. A potentiometer is attached to the transducer by an arm. The wiper shaft of the potentiometer is gripped by a reference arm that rotates the wiper shaft the same angle as the flexure of joint. A signal, generated by the potentiometer, is representative of the joint flexure angle, and a compensation circuit coverts the output of the transducer to a signal representative of joint torque. NASA

THERMAL AND ACCELERATION EFFECTS ON AIRCREW MEMBERS IN CHEMICAL DEFENSE GEAR Technical Report, Nov. 1978 - Jan. 1979
Ronald E. Yates, Clyde R. Replogle, and James H. Veghte Jan. 1980 36 p refs
(AF Proj. 6893)
(AD-A086026; AFAMRL-TR-79-71) Avail: NTIS HC A03/MF A01 CSCL 06/19

An experiment was conducted to determine the combined thermal and acceleration effects on aircrew members in chemical defense protective gear in a simulated air-to-ground mission. The subject flew two sorties per day in the Dynamic Environment Simulator. The environmental conditions simulated were typical of a 95th percentile hot summer central European day. Most of the responses seen in the subjects can be attributed to the thermal stress caused by the hot temperatures and the heavy protective clothing. GRA

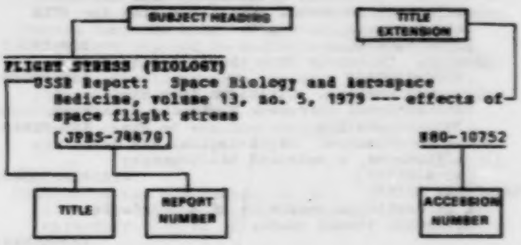
HUMAN ENGINEERING DESIGN CRITERIA FOR MODERN CONTROL/DISPLAY COMPONENTS AND STANDARD PARTS Final Report
David R. Eike, Thomas B. Malone, Stephen A. Fleger, and Jimmie H. Johnson May 1980 171 p refs
(Contract DAAK40-79-C-0144)
(AD-A086139; DRSMI/RS-CR-80-1) Avail: NTIS HC A08/MF A01 CSCL 05/8

A study was conducted to identify requirements for modification of MIL-STD-1472B to include human engineering design criteria for modern controls and displays; and to reduce the incidence of requests for waiver of MIL-STD-1472 resulting from unavailability of standard parts. Recommended changes are presented with rationales and references. GRA

SUBJECT INDEX

AEROSPACE MEDICINE AND BIOLOGY */A Continuing Bibliography (Suppl. 212)* NOVEMBER 1980

Typical Subject Index Listing



SUBJECT HEADING
TITLE EXTENSION
FLIGHT STRESS (BIOLOGY)
USSR Report: Space Biology and Aerospace Medicine, volume 13, no. 5, 1979 --- effects of space flight stress
[JPRS-74470]
N80-10752
TITLE
REPORT NUMBER
ACCESSION NUMBER

The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of the document content, a title extension is added, separated from the title by three hyphens. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstract in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

A rule-based model of human problem solving performance in fault diagnosis tasks
A80-46549

CONDITIONING (LEARNING)
The neural control of the coronary circulation during behavioral stress in conscious dogs
N80-29986

CONFERENCES
Symposium on Theory and Practice of Robots and Manipulators, 3rd, Udine, Italy, September 12-15, 1978, Proceedings
A80-45676
High-Speed, Low-Level Flight: Aircrew Factors
[AGARD-CP-267] N80-29990

CONTOURS
An information processing mechanism for systems with boundary contrast and some optical illusions
A80-46972

CONTRAST
Effects of background illumination and target contrast on flashblindness recovery time
[AD-A071906] N80-30031

CONTROL EQUIPMENT
Adaptive control of technological industrial robots for welding
A80-45693
Human engineering design criteria for modern control/display components and standard parts
[AD-A086139] N80-30046

CORONARY ARTERY DISEASE
Maximal cardiac output during upright exercise - Approximate normal standards and variations with coronary heart disease
A80-44249

COSMOS SATELLITES
Biological studies on the Cosmos biosatellite --- Russian book
A80-44125

COST EFFECTIVENESS
Cost effectiveness modeling for a total training system
[AIAA PAPER 80-1894] A80-45752

CREW STATIONS
Crew station assessment using the Bioman modeling system
N80-30014

D

DATA BASES
Chemical identified in human biological media: A data base, volume 1, part 1, records 1-1580
[ORNL/EIS-163/V1-P1] N80-29029
Chemicals identified in human biological media: A data base, volume 1, part 2, records 1-1580
[ORNL/EIS-163/V1-P2] N80-29030

DATA PROCESSING
Determination of the impact of digital data broadcast on flight technical error
[AD-A085177] N80-29045

DECISION MAKING
Decision aids for naval air ASW
[AD-A085134] N80-29040

DECISION THEORY
Decision aids for naval air ASW
[AD-A085134] N80-29040

DEEP SPACE NETWORK
A very long baseline interferometry sky survey
N80-28812

DESIGN ANALYSIS
The influence of the design of displays on cockpit workload
N80-30008

DETECTION
Automated psychological stress detection in an entry portal system
[SAND-80-7026] N80-29041

DIESEL ENGINES
Teratologic effects of long-term exposure to diesel exhaust emissions (rats)
[PB80-159965] N80-29018
Teratologic effects of long-term exposure to diesel exhaust emission (rabbits)
[PB80-168529] N80-29019

DIETS
Nutrition, diet and food processing in controlled environment life support systems
A80-46392
Agriculture and food production
A80-46393

DIGITAL SYSTEMS
Determination of the impact of digital data broadcast on flight technical error
[AD-A085177] N80-29045

DISPLAY DEVICES
The effect of a predictive wind shear chart on pilot landing performance
[UTIAS-TN-220] N80-29039
The advantage of the color-code modality versus alphanumeric and symbol code
[AD-A084383] N80-29044
The effect of 3-25 Hz vibration on the legibility of numeric light emitting diode displays
N80-30003
The influence of the design of displays on cockpit workload
N80-30008
Colour displays: Their availability, performance and application to improved crew efficiency
N80-30009
Weapons systems of the Mirage 2000: Man machine interface
N80-30023
A review of dynamic visual acuity
[AD-A085860] N80-30041
Human engineering design criteria for modern control/display components and standard parts
[AD-A086139] N80-30046

DISTANCE
Accuracy of visual estimate of the remoteness of an object in a space having no optical reference
A80-45273

DISTILLATION
Design, fabrication and testing of a dual catalyst ammonia removal system for a urine VCD unit
[NASA-CR-152372] N80-29023

DRUGS
Ulcers in restrained rats: Study of protective substances
[NASA-TM-76184] N80-29015

DUCTED FLOW
Low frequency asymptotics for a hydroelastic model of the cochlea A80-45623

DUMMIES
Crew station assessment using the Bioman modeling system N80-30014

DYNAMIC CONTROL
Use of active compliance in the control of legged vehicles A80-46550

DYNAMIC MODELS
A rule-based model of human problem solving performance in fault diagnosis tasks A80-46549

E

ECOLOGY
An empirical study of factors affecting blue-green versus nonblue-green algal dominance in lakes [PB80-169311] N80-29020

EFFECTIVE PERCEIVED NOISE LEVELS
Initial study on the effects of transformer and transmission line noise on people. Volume 3: Community reaction [EPRI-EA-1240-VOL-3] N80-29033

EFFERENT NERVOUS SYSTEMS
Vestibular compensation in the rat: A model for motor learning N80-29984

ELECTRIC CORONA
Initial study on the effects of transformer and transmission line noise on people. Volume 1: Annoyance [EPRI-EA-1240-VOL-1] N80-29031

ELECTRIC FIELDS
Long-term biological effects of very intense 60 Hz electric field on mice A80-44196

ELECTROCARDIOGRAPHY
Magnetic study of the His-Purkinje conduction system in man A80-44195
Theoretical analysis of error during signal averaging for detection of His-bundle activity, A80-47065
Changes in the QRS complex of the electrocardiogram during sleep and exercise [CSIR-ELEK-167] N80-29022

ELECTROENCEPHALOGRAPHY
Electroencephalographic changes in albino rats subjected to stress [NASA-TM-76118] N80-29010

ELECTROMAGNETIC RADIATION
Interaction of electromagnetic energy with absorptive material by thermally inducing elastic stress waves N80-29988

ELECTROMYOGRAPHY
The influence of temperature on the amplitude and frequency components of the EMG during brief and sustained isometric contractions A80-45975

ELECTRON MICROSCOPY
The ultrastructure of Proteus vulgaris cells grown in orbit on board the Soyuz-22 spacecraft A80-46805

ELECTROPHYSIOLOGY
Electroencephalographic changes in albino rats subjected to stress [NASA-TM-76118] N80-29010
Changes in the QRS complex of the electrocardiogram during sleep and exercise [CSIR-ELEK-167] N80-29022
Effects of aircraft noise on sleep: An in-situ experience N80-29042

ENERGY POLICY
Assessment of the effects of the zero gravity environment on the health and safety of space workers [NASA-TM-81122] N80-30038

ENVIRONMENT EFFECTS
The effect of space flight factors on the characteristics of nutrient media for the bacterium Proteus vulgaris A80-46807
The effects of orbital flight conditions on the formation of the generative organs in Muscari racemosum and Anethum graveolens A80-46810
Response of selected plant and insect species to simulated solid rocket exhaust mixtures and to exhaust components from solid rocket fuels [NASA-TM-74109] N80-29014
Health effects of low level radiation [DOE/TIC-11176] N80-29034

ENVIRONMENTAL CONTROL
Environmental control and life support system: Analysis of STS-1 [NASA-TM-81032] N80-29043

EQUIPMENT SPECIFICATIONS
The role of helmet mounted displays in high-speed low-level flight N80-30011

ERROR ANALYSIS
Theoretical analysis of error during signal averaging for detection of His-bundle activity, A80-47065

ERYTHROCYTES
Extremes of urine osmolality - Lack of effect on red blood cell survival A80-46196

ESCAPE SYSTEMS
Tornado - aircrew systems N80-30024

ESCHERICHIA
Three-dimensional structure of Escherichia coli initiator tRNA/f//Met/ A80-44608

EUTROPHICATION
An empirical study of factors affecting blue-green versus nonblue-green algal dominance in lakes [PB80-169311] N80-29020

EVOLUTION (DEVELOPMENT)
From inanimate matter to living systems [NASA-CR-163372] N80-29011

EXERCISE PHYSIOLOGY
Astronaut training manual [NASA-CR-160758] N80-29024

EXHAUST EMISSION
Response of selected plant and insect species to simulated solid rocket exhaust mixtures and to exhaust components from solid rocket fuels [NASA-TM-74109] N80-29014
Teratologic effects of long-term exposure to diesel exhaust emissions (rats) [PB80-159965] N80-29018
Teratologic effects of long-term exposure to diesel exhaust emission (rabbits) [PB80-168529] N80-29019

EXOBIOLOGY
Biological studies on the Cosmos biosatellite --- Russian book A80-44125
Interpretation of findings of the biological experiments of the Viking lander on Mars A80-44441
Results of the experiment 'Microorganism growth' on the Soyuz-22 spacecraft A80-46804
The effect of space flight conditions on higher plant cells in vitro culture A80-46809
The effects of orbital flight conditions on the formation of the generative organs in Muscari racemosum and Anethum graveolens A80-46810
Investigation of the effects of space flight factors on the emergence from the anabiotic state of turions of the great duckweed A80-46811

EXTRAGALACTIC RADIO SOURCES
A very long baseline interferometry sky survey N80-28812

EYE (ANATOMY)
Ocular risks of astronomical observations A80-44593

EYE MOVEMENTS
A review of dynamic visual acuity [AD-A085860] N80-30041

F

FAILURE ANALYSIS
- A rule-based model of human problem solving performance in fault diagnosis tasks A80-46549

FAILURE MODES
- Procedural tests for anti-G protective devices. Volume 2: G-sensitivity tests [AD-A085982] N80-30044

FEMALES
- Physiological responses of physically fit men and women to acclimation to humid heat A80-47024

FIBRINOGEN
- The structure of fibrinogen and its intermole associations N80-30030

FIGHTER AIRCRAFT
- Operational roles, aircrew systems and human factors in future high performance aircraft [AGARD-CP-266] N80-30019
- Information transfer for improved pilot performance N80-30025

FLASH BLINDNESS
- Effects of background illumination and target contrast on flashblindness recovery time [AD-A071906] N80-30031

FLEXING
- Pressure suit joint analyzer [NASA-CASE-ARC-11314-1] N80-30043

FLIGHT
- The effect of turbulence on helmet mounted sight aiming accuracies N80-30004
- Operational aspects of guidance and control advances versus pilot workload for low altitude, high speed flight N80-30006

FLIGHT CHARACTERISTICS
- High-Speed, Low-Level Flight: Aircrew Factors [AGARD-CP-267] N80-29990
- Ride-bumpiness and the influence of active control systems N80-29991
- Influences of geophysical factors (meteorological and topographical) on the pilot-aircraft-system in high speed low level flight (HSLLF) N80-29992
- Development in high-speed low-level flight: The pilot's viewpoint N80-29993
- Biotechnology challenges present in operational high-speed low-level flight N80-29994
- Effects on performance of thermal strain encountered during high-speed, low-level flight N80-29996
- Aircrew heat stress during high-speed, low-level flight N80-29997

FLIGHT CLOTHING
- Protective clothing: Survival, aircraft, and combat environments. Citations from the NTIS data base [PB80-809650] N80-29047
- Human factors aspects in high speed low level flight N80-30026

FLIGHT CONDITIONS
- Influences of geophysical factors (meteorological and topographical) on the pilot-aircraft-system in high speed low level flight (HSLLF) N80-29992
- Development in high-speed low-level flight: The pilot's viewpoint N80-29993
- Biotechnology challenges present in operational high-speed low-level flight N80-29994

FLIGHT CONTROL
- Operational aspects of guidance and control advances versus pilot workload for low altitude, high speed flight N80-30006

FLIGHT CREWS
- High-Speed, Low-Level Flight: Aircrew Factors [AGARD-CP-267] N80-29990
- Colour displays: Their availability, performance and application to improved crew efficiency N80-30009
- Human factors aspects in high speed low level flight N80-30026
- Thermal and acceleration effects on aircrew members in chemical defense gear [AD-A086026] N80-30045

FLIGHT FITNESS
- Astronaut training manual [NASA-CR-160758] N80-29024

FLIGHT SAFETY
- Crew station assessment using the Bioman modeling system N80-30014

FLIGHT SIMULATORS
- Cost effectiveness modeling for a total training system [AIAA PAPER 80-1894] A80-45752

FLIGHT STRESS (BIOLOGY)
- Thermic problems presented by high-speed, low-level flight N80-29995
- Effects on performance of thermal strain encountered during high-speed, low-level flight N80-29996
- Aircrew heat stress during high-speed, low-level flight N80-29997
- Human factors in Mirage 2000 missions N80-30028
- Response of the cardiovascular system to vibration and combined stresses [AD-A081879] N80-30034

FLIGHT TESTS
- Determination of the impact of digital data broadcast on flight technical error [AD-A085177] N80-29045

FLY BY WIRE CONTROL
- Addressing human factor options in conceptual design N80-30027

FOOD INTAKE
- Extremes of urine osmolality - Lack of effect on red blood cell survival A80-46196

FUNGI
- The survival rate of various species of dark-colored mushrooms under the influence of artificial solar radiation A80-46806

G

GASTROINTESTINAL SYSTEM
- Electroencephalographic changes in albino rats subjected to stress [NASA-TM-76118] N80-29010
- Effect of certain psychopharmacological preparations on adaptation under stress conditions [NASA-TM-76185] N80-29016

GENETICS
- Genetic changes induced by space flight factors in barley seeds on Soyuz-5 and Soyuz-9 craft [NASA-TM-76281] N80-29013

GEOPHYSICS
- Influences of geophysical factors (meteorological and topographical) on the pilot-aircraft-system in high speed low level flight (HSLLF) N80-29992

GOVERNMENT/INDUSTRY RELATIONS
- Pilots who drink - FAA regulations and policy, and the Air Line Pilots Association treatment program A80-45025

GRAVITATIONAL EFFECTS
- Design opportunities - Zero gravity versus one gravity environments A80-46398

H

HABITATS
- Controlled ecological life support systems /CELSS/ and space habitats, anthropology, and psychology A80-46378
- Design opportunities - Zero gravity versus one gravity environments A80-46398

HANDLING EQUIPMENT
On the grasping process for objects of irregular shape A80-45680
Application of bond graphs to the synthesis and analysis of telechirics and robots A80-45682
A contribution to the biomechanics of master-slave manipulators A80-45691
Adaptive control of technological industrial robots for welding A80-45693

HEAD (ANATOMY)
Thermal response model of a simulated cranial structure exposed to radiofrequency radiation A80-47064

HEAD MOVEMENT
Head movements induced by vertical vibrations N80-30000
The effect of reclined seating on the transmission of linear vibration to the head N80-30001
The effects of aircraft vibration on vision N80-30002

HEART FUNCTION
Magnetic study of the His-Purkinje conduction system in man A80-44195

HEART RATE
Maximal cardiac output during upright exercise - Approximate normal standards and variations with coronary heart disease A80-44249

HEAT ACCLIMATIZATION
Physiological responses of physically fit men and women to acclimation to humid heat A80-47024

HEAT TOLERANCE
Thermic problems presented by high-speed, low-level flight N80-29995

HELMET MOUNTED DISPLAYS
Helmet-mounted devices in low-flying high-speed aircraft N80-30010
The role of helmet mounted displays in high-speed low-level flight N80-30011
Research for visual enhancement for high speed low level flight sponsored by the Naval Air Systems Command N80-30012

HELMETS
The effect of turbulence on helmet mounted sight aiming accuracies N80-30004
Helmet-mounted devices in low-flying high-speed aircraft N80-30010

HEURISTIC METHODS
A rule-based model of human problem solving performance in fault diagnosis tasks A80-46549

HIGH ALTITUDE ENVIRONMENTS
Work capacity during 3-wk sojourn at 4,300 m - Effects of relative polycythemia A80-47025

HIGH PRESSURE
Hypothermia. Citations from the NTIS data base [PB80-180526] N80-29037

HIGH SPEED
The effect of turbulence on helmet mounted sight aiming accuracies N80-30004
Operational aspects of guidance and control advances versus pilot workload for low altitude, high speed flight N80-30006
Human factors aspects in high speed low level flight N80-30026

HIS BUNDLE
Magnetic study of the His-Purkinje conduction system in man A80-44195
Theoretical analysis of error during signal averaging for detection of His-bundle activity, A80-47065

HORMONE METABOLISMS
Plasma AVP, neurophysin, renin activity, and aldosterone during submaximal exercise performed until exhaustion in trained and untrained men A80-45974

HORMONES
Plasma testosterone during treadmill exercise A80-47023

HUMAN BEHAVIOR
Initial study on the effects of transformer and transmission line noise on people. Volume 2: Sleep interference [EPRI-EA-1240-VOL-2] N80-29032

HUMAN FACTORS ENGINEERING
A computer implementation of a theory of human stereo vision [AD-A084696] N80-29027
The effect of a predictive wind shear chart on pilot landing performance [UTIAS-TN-220] N80-29039
The advantage of the color-code modality versus alphanumeric and symbol code [AD-A084383] N80-29044
High-Speed, Low-Level Flight: Aircrew Factors [AGARD-CP-267] N80-29990
Biotechnology challenges present in operational high-speed low-level flight N80-29994
Operational roles, aircrew systems and human factors in future high performance aircraft [AGARD-CP-266] N80-30019
Tornado - aircrew systems N80-30024
Human factors aspects in high speed low level flight N80-30026
Addressing human factor options in conceptual design N80-30027
Human factors in Mirage 2000 missions N80-30028
A review of dynamic visual acuity [AD-A085860] N80-30041
Human engineering design criteria for modern control/display components and standard parts [AD-A086139] N80-30046

HUMAN PERFORMANCE
A rule-based model of human problem solving performance in fault diagnosis tasks A80-46549
A technique for establishing true levels of muscle strength exertion [AD-A083576] N80-29028
Physiological influences upon the work performance of men and women [AD-A081947] N80-30035
Human performance: Psychological and sex differences, a selected bibliography [AD-A085824] N80-30042

HUMAN REACTIONS
Magnetic study of the His-Purkinje conduction system in man A80-44195
Automated psychological stress detection in an entry portal system [SAND-80-7026] N80-29041
Assessment of the effects of the zero gravity environment on the health and safety of space workers [NASA-TM-81122] N80-30038

HUMAN TOLERANCES
Initial study on the effects of transformer and transmission line noise on people. Volume 1: Annoyance [EPRI-EA-1240-VOL-1] N80-29031
A method for studying human biodynamic responses to whole-body Z-axis N80-29999

HUMIDITY
The role of the hypoxic factor at elevated temperatures and possible mechanisms of its development A80-45093
Physiological responses of physically fit men and women to acclimation to humid heat A80-47024

HYDROELASTICITY
Low frequency asymptotics for a hydroelastic model of the cochlea A80-45623

HYPERTHERMIA

The role of the hypoxic factor at elevated temperatures and possible mechanisms of its development A80-45093

HYPODYNAMIA

The effect of hypodynamia on the structure of the intraorganic blood vessels and the capacity of the blood stream in the diaphragm of white rats [NASA-TM-76140] N80-29012

HYPOKINESIA

Effect of restricted mobility on RNA content and nucleotide composition and on protein content in motoneurons of spinal cord anterior horns [NASA-TM-76190] N80-29025

RNA content in spinal cord motoneurons during hypokinesia [NASA-TM-76200] N80-29026

HYPOTHERMIA

Hypothermia. Citations from the NTIS data base [PB80-180526] N80-29037

HYPOXIA

The role of the hypoxic factor at elevated temperatures and possible mechanisms of its development A80-45093

I

ICE ENVIRONMENTS

Protective clothing: Arctic and tropical environments. Citations from the NTIS data base [PB80-809635] N80-29046

IMAGE PROCESSING

An information processing mechanism for systems with boundary contrast and some optical illusions A80-46972

INJURIES

Crew station assessment using the Bioman modeling system N80-30014

INTOXICATION

Pilots who drink - FAA regulations and policy, and the Air Line Pilots Association treatment program A80-45025

INVENTIONS

Pressure suit joint analyzer [NASA-CASE-ARC-11314-1] N80-30043

INVESTIGATION

RNA content in spinal cord motoneurons during hypokinesia [NASA-TM-76200] N80-29026

IRRADIATION

Genetic changes induced by space flight factors in barley seeds on Soyuz-5 and Soyuz-9 craft [NASA-TM-76281] N80-29013

J

JOINTS (JUNCTIONS)

Pressure suit joint analyzer [NASA-CASE-ARC-11314-1] N80-30043

JUDGMENTS

Decision aids for naval air ASW [AD-A085134] N80-29040

L

LAKES

An empirical study of factors affecting blue-green versus nonblue-green algal dominance in lakes [PB80-169311] N80-29020

LEARNING

Vestibular compensation in the rat: A model for motor learning N80-29984

LIFE SCIENCES

Parallel visual pathways - A review A80-44765

The effect of the temperatures of different skin layers on the activity of cold thermoreceptors A80-45092

From inanimate matter to living systems [NASA-CR-163372] N80-29011

LIFE SUPPORT SYSTEMS

Controlled ecological life support systems /CELSS/ and space habitats, anthropology, and psychology A80-46378

Nutrition, diet and food processing in controlled environment life support systems A80-46392

Agriculture and food production A80-46393

Environmental control and life support system: Analysis of STS-1 [NASA-TM-81032] N80-29043

LIGHT EMITTING DIODES

Helmet-mounted devices in low-flying high-speed aircraft N80-30010

LONG TERM EFFECTS

Long-term biological effects of very intense 60 Hz electric field on mice A80-44196

LOW ALTITUDE

High-Speed, Low-Level Flight: Aircrew Factors [AGARD-CP-267] N80-29990

Thermic problems presented by high-speed, low-level flight N80-29995

Operational aspects of guidance and control advances versus pilot workload for low altitude, high speed flight N80-30006

Human factors aspects in high speed low level flight N80-30026

LUMINESCENCE

Effects of background illumination and target contrast on flashblindness recovery time [AD-A071906] N80-30031

M

MAGNETIC EFFECTS

The effects of low-intensity magnetic fields on plant cell reproduction A80-46813

MALES

Physiological responses of physically fit men and women to acclimation to humid heat A80-47024

MAN MACHINE SYSTEMS

Standard man-machine procedure of optimal synthesis in computer-aided design systems. II A80-45078

A contribution to the biomechanics of master-slave manipulators A80-45691

Use of active compliance in the control of legged vehicles A80-46550

The effect of a predictive wind shear chart on pilot landing performance [UTIAS-TN-220] N80-29039

The advantage of the color-code modality versus alphanumeric and symbol code [AD-A084383] N80-29044

Operational roles, aircrew systems and human factors in future high performance aircraft [AGARD-CP-266] N80-30019

Weapons systems of the Mirage 2000: Man machine interface N80-30023

Human factors in Mirage 2000 missions N80-30028

Human engineering design criteria for modern control/display components and standard parts [AD-A086139] N80-30046

MANIPULATORS

Symposium on Theory and Practice of Robots and Manipulators, 3rd, Udine, Italy, September 12-15, 1978, Proceedings A80-45676

On the grasping process for objects of irregular shape A80-45680

A contribution to the biomechanics of master-slave manipulators A80-45691

Use of active compliance in the control of legged vehicles A80-46550

MANNED SPACE FLIGHT

Characterization of renal response to prolonged immersion in normal man A80-47021

MARS (PLANET)
Interpretation of findings of the biological experiments of the Viking lander on Mars
A80-44441

MECHANICAL DEVICES
On the grasping process for objects of irregular shape
A80-45680

MEDICAL ELECTRONICS
Theoretical analysis of error during signal averaging for detection of His-bundle activity,
A80-47065

MERRITT ISLAND (FL)
Response of selected plant and insect species to simulated solid rocket exhaust mixtures and to exhaust components from solid rocket fuels
[NASA-TM-74109] N80-29014

METABOLISM
RNA content in spinal cord motoneurons during hypokinesia
[NASA-TM-76200] N80-29026

METRIC SPACE
The axiomatic introduction of a metric in binocular visual space. I, II
A80-46961

MICROANALYSIS
The structure of fibrinogen and its intermole associations
N80-30030

MICROPROCESSORS
Manipulation of large objects
A80-45687

MICROWAVES
Cerebrovascular permeability to sucrose in the rat exposed to 2,450-MHz microwaves
A80-47022
On the interaction of non-ionizing radiation with people
[AD-A082538] N80-30033

MILITARY OPERATIONS
Weapons systems of the Mirage 2000: Man machine interface
N80-30023

MILITARY PSYCHOLOGY
Research abstracts in the behavioural sciences, 1971 to 1975: A bibliography
[FPRC-MEMO-259] N80-29038

MIRAGE AIRCRAFT
Weapons systems of the Mirage 2000: Man machine interface
N80-30023
Human factors in Mirage 2000 missions
N80-30028

MISSILE CONTROL
Information transfer for improved pilot performance
N80-30025

MOLECULAR STRUCTURE
Three-dimensional structure of Escherichia coli initiator tRNA/f//Met/
A80-44608
The structure of fibrinogen and its intermole associations
N80-30030

MORPHOLOGY
The effect of hypodynamia on the structure of the intraorganic blood vessels and the capacity of the blood stream in the diaphragm of white rats
[NASA-TM-76140] N80-29012

MOTION PERCEPTION
Visually induced self-motion sensation adapts rapidly to left-right visual reversal
A80-44213

MRCA AIRCRAFT
Tornado - aircrew systems
N80-30024

MUSCULAR FATIGUE
The influence of temperature on the amplitude and frequency components of the EMG during brief and sustained isometric contractions
A80-45975

MUSCULAR FUNCTION
Quantifying the agression generated by low frequency vibrations
N80-29998

MUSCULAR STRENGTH
A technique for establishing true levels of muscle strength exertion
[AD-A083576] N80-29028

N

NECK (ANATOMY)
Clinical medical effects of head and neck response during biodynamic stress experiments
N80-30005

NETWORK SYNTHESIS
Standard man-machine procedure of optimal synthesis in computer-aided design systems. II
A80-45078

NEUROLOGY
The neural control of the coronary circulation during behavioral stress in conscious dogs
N80-29986

NEURONS
Parallel visual pathways - A review
A80-44765
Effect of restricted mobility on RNA content and nucleotide composition and on protein content in motoneurons of spinal cord anterior horns
[NASA-TM-76190] N80-29025
RNA content in spinal cord motoneurons during hypokinesia
[NASA-TM-76200] N80-29026

NEUROPHYSIOLOGY
Changes in the QRS complex of the electrocardiogram during sleep and exercise
[CSIR-ELEK-167] N80-29022

NOISE (SOUND)
Initial study on the effects of transformer and transmission line noise on people. Volume 2: Sleep interference
[EPRI-EA-1240-VOL-2] N80-29032

NOISE POLLUTION
Effects of aircraft noise on sleep: An in-situ experience
N80-29042

NOISE TOLERANCE
Initial study on the effects of transformer and transmission line noise on people. Volume 1: Annoyance
[EPRI-EA-1240-VOL-1] N80-29031
Initial study on the effects of transformer and transmission line noise on people. Volume 3: Community reaction
[EPRI-EA-1240-VOL-3] N80-29033

NUCLEIC ACIDS
A comparative study in molecular aging: Alterations to the nucleic acids of cells of a representative plant, invertebrate and vertebrate animal of various ages
N80-29987

NUMERICAL CONTROL
Use of active compliance in the control of legged vehicles
A80-46550

NUTRIENTS
The effect of space flight factors on the characteristics of nutrient media for the bacterium Proteus vulgaris
A80-46807

NUTRITION
Agriculture and food production
A80-46393

NUTRITIONAL REQUIREMENTS
Nutrition, diet and food processing in controlled environment life support systems
A80-46392

O

OPERATOR PERFORMANCE
TV operator performance in real time air-to-ground reconnaissance missions under task-loading conditions
N80-30007

OPTICAL ILLUSION
Visually induced self-motion sensation adapts rapidly to left-right visual reversal
A80-44213
An information processing mechanism for systems with boundary contrast and some optical illusions
A80-46972

OPTIMAL CONTROL
Standard man-machine procedure of optimal synthesis in computer-aided design systems. II
A80-45078

OSMOSIS
  Extremes of urine osmolality - Lack of effect on red blood cell survival
  A80-46196

OXYGEN CONSUMPTION
  Effects of inspired oxygen on the metabolism of pulmonary surfactant
  [AD-A082006] N80-30036

OXYGEN METABOLISM
  Plasma testosterone during treadmill exercise
  A80-47023

P

PARAMECIA
  Paramecium tetraurelia: Prescreen for hazardous agents
  [DOE/EV-04477/1] N80-29017

PATTERN RECOGNITION
  An information processing mechanism for systems with boundary contrast and some optical illusions
  A80-46972

PERFORMANCE PREDICTION
  Colour displays: Their availability, performance and application to improved crew efficiency
  N80-30009

PHOTORECEPTORS
  Research for visual enhancement for high speed low level flight sponsored by the Naval Air Systems Command
  N80-30012

PHYSICAL EXERCISE
  Maximal cardiac output during upright exercise - Approximate normal standards and variations with coronary heart disease
  A80-44249
  Plasma AVP, neurophysin, renin activity, and aldosterone during submaximal exercise performed until exhaustion in trained and untrained men
  A80-45974
  The influence of temperature on the amplitude and frequency components of the EMG during brief and sustained isometric contractions
  A80-45975
  Plasma testosterone during treadmill exercise
  A80-47023
  Changes in the QRS complex of the electrocardiogram during sleep and exercise
  [CSIR-ELEK-167] N80-29022
  Astronaut training manual
  [NASA-CR-160758] N80-29024

PHYSICAL FITNESS
  Plasma AVP, neurophysin, renin activity, and aldosterone during submaximal exercise performed until exhaustion in trained and untrained men
  A80-45974
  Physiological responses of physically fit men and women to acclimation to humid heat
  A80-47024
  Astronaut training manual
  [NASA-CR-160758] N80-29024

PHYSIOLOGICAL EFFECTS
  Extremes of urine osmolality - Lack of effect on red blood cell survival
  A80-46196
  Electroencephalographic changes in albino rats subjected to stress
  [NASA-TM-76118] N80-29010
  The effect of hypodynamia on the structure of the intraorganic blood vessels and the capacity of the blood stream in the diaphragm of white rats
  [NASA-TM-76140] N80-29012
  Effect of certain psychopharmacological preparations on adaptation under stress conditions
  [NASA-TM-76185] N80-29016
  Teratologic effects of long-term exposure to diesel exhaust emissions (rats)
  [PB80-159965] N80-29018
  Teratologic effects of long-term exposure to diesel exhaust emission (rabbits)
  [PB80-168529] N80-29019
  Chemical identified in human biological media: A data base, volume 1, part 1, records 1-1580
  [ORNL/EIS-163/V1-P1] N80-29029
  Chemicals identified in human biological media: A data base, volume 1, part 2, records 1-1580
  [ORNL/EIS-163/V1-P2] N80-29030
  Health effects of low level radiation
  [DOE/TIC-11176] N80-29034
  Aircraft sonic boom: Biological effects. Citations from the NTIS data base
  [PB80-810310] N80-29036
  Hypothermia. Citations from the NTIS data base
  [PB80-180526] N80-29037
  Effects of aircraft noise on sleep: An in-situ experience
  N80-29042
  Quantifying the agression generated by low frequency vibrations
  N80-29998
  Clinical medical effects of head and neck response during biodynamic stress experiments
  N80-30005

PHYSIOLOGICAL FACTORS
  Research abstracts in the behavioural sciences, 1971 to 1975: A bibliography
  [FPRC-MEMO-259] N80-29038
  Physiological influences upon the work performance of men and women
  [AD-A081947] N80-30035
  Human performance: Psychological and sex differences, a selected bibliography
  [AD-A085824] N80-30042

PHYSIOLOGICAL RESPONSES
  Long-term biological effects of very intense 60 Hz electric field on mice
  A80-44196
  The effect of the temperatures of different skin layers on the activity of cold thermoreceptors
  A80-45092
  Characterization of renal response to prolonged immersion in normal man
  A80-47021
  Cerebrovascular permeability to sucrose in the rat exposed to 2,450-MHz microwaves
  A80-47022
  Plasma testosterone during treadmill exercise
  A80-47023
  Physiological responses of physically fit men and women to acclimation to humid heat
  A80-47024
  Circadian rhythms. Citations from the International Aerospace Abstracts data base
  [NASA-CR-163323] N80-30040

PHYSIOLOGICAL TESTS
  A technique for establishing true levels of muscle strength exertion
  [AD-A083576] N80-29028

PHYSIOLOGY
  Parallel visual pathways - A review
  A80-44765

PILOT ERROR
  Pilots who drink - FAA regulations and policy, and the Air Line Pilots Association treatment program
  A80-45025

PILOT PERFORMANCE
  The effect of a predictive wind shear chart on pilot landing performance
  [UTIAS-TN-220] N80-29039
  Determination of the impact of digital data broadcast on flight technical error
  [AD-A085177] N80-29045
  Influences of geophysical factors (meteorological and topographical) on the pilot-aircraft-system in high speed low level flight (HSLLF)
  N80-29992
  Effects on performance of thermal strain encountered during high-speed, low-level flight
  N80-29996

PILOT TRAINING
  Cost effectiveness modeling for a total training system
  [AIAA PAPER 80-1894] A80-45752

PILOTS (PERSONNEL)
  Research abstracts in the behavioural sciences, 1971 to 1975: A bibliography
  [FPRC-MEMO-259] N80-29038
  Operational aspects of guidance and control advances versus pilot workload for low altitude, high speed flight
  N80-30006

PIPE FLOW
  Low frequency asymptotics for a hydroelastic model of the cochlea
  A80-45623

PLANTS (BOTANY)
The effect of space flight conditions on higher plant cells in vitro culture
A80-46809
The effects of orbital flight conditions on the formation of the generative organs in Muscari racemosum and Anethum graveolens
A80-46810
Investigation of the effects of space flight factors on the emergence from the anabiotic state of turions of the great duckweed
A80-46811
The effects of simulated weightlessness on the reproductive capacity of the great duckweed in the norm and under irradiation
A80-46812
The effects of low-intensity magnetic fields on plant cell reproduction
A80-46813
Genetic changes induced by space flight factors in barley seeds on Soyuz-5 and Soyuz-9 craft
[NASA-TM-76281] N80-29013
A comparative study in molecular aging: Alterations to the nucleic acids of cells of a representative plant, invertebrate and vertebrate animal of various ages
N80-29987

POINT SOURCES
Accuracy of visual estimate of the remoteness of an object in a space having no optical reference
A80-45273

POLYCYTHEMIA
Work capacity during 3-wk sojourn at 4,300 m - Effects of relative polycythemia
A80-47025

POTABLE WATER
Design, fabrication and testing of a dual catalyst ammonia removal system for a urine VCD unit
[NASA-CR-152372] N80-29023

PRESSURE SUITS
Pressure suit joint analyzer
[NASA-CASE-ARC-11314-1] N80-30043

PRESSURIZED CABINS
Environmental control and life support system: Analysis of STS-1
[NASA-TM-81032] N80-29043

PROBLEM SOLVING
A rule-based model of human problem solving performance in fault diagnosis tasks
A80-46549

PROSTHETIC DEVICES
Studies of carbon-surfaced polymeric, metallic and ceramic biomaterials
[PB80-168859] N80-29035

PROTECTIVE CLOTHING
Protective clothing: Arctic and tropical environments. Citations from the NTIS data base
[PB80-809635] N80-29046
Protective clothing: Survival, aircraft, and combat environments. Citations from the NTIS data base
[PB80-809650] N80-29047
Procedural tests for anti-G protective devices. Volume 2: G-sensitivity tests
[AD-A085982] N80-30044
Thermal and acceleration effects on aircrew members in chemical defense gear
[AD-A086026] N80-30045

PROTOBIOLOGY
From inanimate matter to living systems
[NASA-CR-163372] N80-29011

PSYCHOACOUSTICS
The discreteness of auditory information
A80-46962

PSYCHOLOGICAL FACTORS
Controlled ecological life support systems /CELSS/ and space habitats, anthropology, and psychology
A80-46378
Human performance: Psychological and sex differences, a selected bibliography
[AD-A085824] N80-30042

PSYCHOPHARMACOLOGY
Effect of certain psychopharmacological preparations on adaptation under stress conditions
[NASA-TM-76185] N80-29016
Automated psychological stress detection in an entry portal system
[SAND-80-7026] N80-29041

PSYCHOPHYSIOLOGY
Visually induced self-motion sensation adapts rapidly to left-right visual reversal
A80-44213
Automated psychological stress detection in an entry portal system
[SAND-80-7026] N80-29041
Research for visual enhancement for high speed low level flight sponsored by the Naval Air Systems Command
N80-30012

PULMONARY FUNCTIONS
Effects of inspired oxygen on the metabolism of pulmonary surfactant
[AD-A082006] N80-30036

PULMONARY LESIONS
Effects of inspired oxygen on the metabolism of pulmonary surfactant
[AD-A082006] N80-30036

R

RADIATION DOSAGE
Health effects of low level radiation
[DOE/TIC-11176] N80-29034

RADIATION EFFECTS
Ocular risks of astronomical observations
A80-44593
Cerebrovascular permeability to sucrose in the rat exposed to 2,450-MHz microwaves
A80-47022
Thermal response model of a simulated cranial structure exposed to radiofrequency radiation
A80-47064
Genetic changes induced by space flight factors in barley seeds on Soyuz-5 and Soyuz-9 craft
[NASA-TM-76281] N80-29013
Interaction of electromagnetic energy with absorptive material by thermally inducing elastic stress waves
N80-29988
On the interaction of non-ionizing radiation with people
[AD-A082538] N80-30033

RADIATION HAZARDS
On the interaction of non-ionizing radiation with people
[AD-A082538] N80-30033
Radiofrequency radiation and living tissue: Theoretical studies
[AD-A085952] N80-30037

RADIATION TOLERANCE
The survival rate of various species of dark-colored mushrooms under the influence of artificial solar radiation
A80-46806
On the interaction of non-ionizing radiation with people
[AD-A082538] N80-30033

RADIO ASTRONOMY
A very long baseline interferometry sky survey
N80-28812

RADIO FREQUENCIES
Radiofrequency radiation and living tissue: Theoretical studies
[AD-A085952] N80-30037

RADIO FREQUENCY HEATING
Thermal response model of a simulated cranial structure exposed to radiofrequency radiation
A80-47064

RATS
Ulcers in restrained rats: Study of protective substances
[NASA-TM-76184] N80-29015

READING
The effect of 3-25 Hz vibration on the legibility of numeric light emitting diode displays
N80-30003

REAL TIME OPERATION
TV operator performance in real time air-to-ground reconnaissance missions under task-loading conditions
N80-30007

RECONNAISSANCE
TV operator performance in real time air-to-ground reconnaissance missions under task-loading conditions
N80-30007

REGULATIONS
Pilots who drink - FAA regulations and policy, and the Air Line Pilots Association treatment program
A80-45025

REMOTE CONTROL
Manipulation of large objects
A80-45687

REMOTE HANDLING
Application of bond graphs to the synthesis and analysis of telechirics and robots
A80-45682

A contribution to the biomechanics of master-slave manipulators
A80-45691

REMOTE MANIPULATOR SYSTEM
Manipulation of large objects
A80-45687

RENAL FUNCTION
Characterization of renal response to prolonged immersion in normal man
A80-47021

REPRODUCTION (BIOLOGY)
The effects of simulated weightlessness on the reproductive capacity of the great duckweed in the norm and under irradiation
A80-46812

The effects of low-intensity magnetic fields on plant cell reproduction
A80-46813

Teratologic effects of long-term exposure to diesel exhaust emissions (rats)
[PB80-159965] N80-29018

Teratologic effects of long-term exposure to diesel exhaust emission (rabbits)
[PB80-168529] N80-29019

REPRODUCTIVE SYSTEMS
The effects of orbital flight conditions on the formation of the generative organs in Muscari racemosum and Anethum graveolens
A80-46810

RESPIRATION
Effect of acceleration on circulatory and respiratory function in the domestic fowl
N80-29985

RESPONSES
Interaction of responses to acoustic and electric stimuli at the auditory cortex
N80-30029

RIBONUCLEIC ACIDS
Three-dimensional structure of Escherichia coli initiator tRNA/f//Met/
A80-44608

Effect of restricted mobility on RNA content and nucleotide composition and on protein content in motoneurons of spinal cord anterior horns
[NASA-TM-76190] N80-29025

RNA content in spinal cord motoneurons during hypokinesia
[NASA-TM-76200] N80-29026

RIDING QUALITY
Ride-bumpiness and the influence of active control systems
N80-29991

ROBOTS
Symposium on Theory and Practice of Robots and Manipulators, 3rd, Udine, Italy, September 12-15, 1978, Proceedings
A80-45676

On the grasping process for objects of irregular shape
A80-45680

Application of bond graphs to the synthesis and analysis of telechirics and robots
A80-45682

Adaptive control of technological industrial robots for welding
A80-45693

S

SATELLITE SOLAR POWER STATIONS
Assessment of the effects of the zero gravity environment on the health and safety of space workers
[NASA-TM-81122] N80-30038

SECURITY
Automated psychological stress detection in an entry portal system
[SAND-80-7026] N80-29041

SEX FACTOR
Physiological influences upon the work performance of men and women
[AD-A081947] N80-30035

Human performance: Psychological and sex differences, a selected bibliography
[AD-A085824] N80-30042

SIGNAL PROCESSING
Theoretical analysis of error during signal averaging for detection of His-bundle activity,
A80-47065

SIGNAL TRANSMISSION
The discreteness of auditory information
A80-46962

SKIN TEMPERATURE (BIOLOGY)
The effect of the temperatures of different skin layers on the activity of cold thermoreceptors
A80-45092

SLEEP
Changes in the QRS complex of the electrocardiogram during sleep and exercise
[CSIR-ELEK-167] N80-29022

Effects of aircraft noise on sleep: An in-situ experience
N80-29042

SLEEP DEPRIVATION
Initial study on the effects of transformer and transmission line noise on people. Volume 2: Sleep interference
[EPRI-EA-1240-VOL-2] N80-29032

SOCIAL FACTORS
Controlled ecological life support systems /CELSS/ and space habitats, anthropology, and psychology
A80-46378

SOLAR RADIATION
The survival rate of various species of dark-colored mushrooms under the influence of artificial solar radiation
A80-46806

SOLID ROCKET PROPELLANTS
Response of selected plant and insect species to simulated solid rocket exhaust mixtures and to exhaust components from solid rocket fuels
[NASA-TM-74109] N80-29014

SONIC BOOMS
Aircraft sonic boom: Biological effects. Citations from the NTIS data base
[PB80-810310] N80-29036

SPACE COLONIES
Agriculture and food production
A80-46393

SPACE ENVIRONMENT SIMULATION
The effects of simulated weightlessness on the reproductive capacity of the great duckweed in the norm and under irradiation
A80-46812

SPACE FLIGHT
Genetic changes induced by space flight factors in barley seeds on Soyuz-5 and Soyuz-9 craft
[NASA-TM-76281] N80-29013

SPACE FLIGHT FEEDING
Nutrition, diet and food processing in controlled environment life support systems
A80-46392

Agriculture and food production
A80-46393

SPACE FLIGHT STRESS
The effect of space flight factors on the characteristics of nutrient media for the bacterium Proteus vulgaris
A80-46807

The effect of space flight conditions on higher plant cells in vitro culture
A80-46809

The effects of orbital flight conditions on the formation of the generative organs in Muscari racemosum and Anethum graveolens
A80-46810

Investigation of the effects of space flight factors on the emergence from the anabiotic state of turions of the great duckweed
A80-46811

SPACE FLIGHT TRAINING
Development of a multi-media crew-training program for the terminal configured vehicle mission simulator
A80-44201

SPACE MISSIONS
Development of a multi-media crew-training program for the terminal configured vehicle mission simulator
A80-44201
SPACE PERCEPTION
Accuracy of visual estimate of the remoteness of an object in a space having no optical reference
A80-45273
The axiomatic introduction of a metric in binocular visual space. I, II
A80-46961
Experimental investigations of binocular space perception
A80-46970
SPACE SHUTTLE ORBITERS
Environmental control and life support system: Analysis of STS-1
[NASA-TM-81032] N80-29043
SPACE SHUTTLES
Response of selected plant and insect species to simulated solid rocket exhaust mixtures and to exhaust components from solid rocket fuels
[NASA-TM-74109] N80-29014
SPACE SUITS
Pressure suit joint analyzer
[NASA-CASE-ARC-11314-1] N80-30043
SPACE TRANSPORTATION SYSTEM
Response of selected plant and insect species to simulated solid rocket exhaust mixtures and to exhaust components from solid rocket fuels
[NASA-TM-74109] N80-29014
SPACEBORNE EXPERIMENTS
Biological studies on the Cosmos biosatellite --- Russian book
A80-44125
Interpretation of findings of the biological experiments of the Viking lander on Mars
A80-44441
Results of the experiment 'Microorganism growth' on the Soyuz-22 spacecraft
A80-46804
The ultrastructure of Proteus vulgaris cells grown in orbit on board the Soyuz-22 spacecraft
A80-46805
SPACECRAFT CABIN ATMOSPHERES
Environmental control and life support system: Analysis of STS-1
[NASA-TM-81032] N80-29043
SPACECRAFT ENVIRONMENTS
Results of the experiment 'Microorganism growth' on the Soyuz-22 spacecraft
A80-46804
SPINAL CORD
Effect of restricted mobility on RNA content and nucleotide composition and on protein content in motoneurons of spinal cord anterior horns
[NASA-TM-76190] N80-29025
RNA content in spinal cord motoneurons during hypokinesia
[NASA-TM-76200] N80-29026
STEREOCHEMISTRY
From inanimate matter to living systems
[NASA-CR-163372] N80-29011
STEREOSCOPIC VISION
A computer implementation of a theory of human stereo vision
[AD-A084696] N80-29027
STRESS (PHYSIOLOGY)
Electroencephalographic changes in albino rats subjected to stress
[NASA-TM-76118] N80-29010
The effect of hypodynamia on the structure of the intraorganic blood vessels and the capacity of the blood stream in the diaphragm of white rats
[NASA-TM-76140] N80-29012
Effect of certain psychopharmacological preparations on adaptation under stress conditions
[NASA-TM-76105] N80-29016
The neural control of the coronary circulation during behavioral stress in conscious dogs
N80-29986
A method for studying human biodynamic responses to whole-body Z-axis
N80-29995
Clinical medical effects of head and neck response during biodynamic stress experiments
N80-30005
Acceleration and Performance Modeling Workshop
[AD-A083700] N80-30032
STRESS WAVES
Interaction of electromagnetic energy with absorptive material by thermally inducing elastic stress waves
N80-29988
STRUCTURAL DESIGN CRITERIA
Human engineering design criteria for modern control/display components and standard parts
[AD-A086139] N80-30046
SUBMERGED BODIES
Characterization of renal response to prolonged immersion in normal man
A80-47021
SUCROSE
Cerebrovascular permeability to sucrose in the rat exposed to 2,450-MHz microwaves
A80-47022
SURFACTANTS
Effects of inspired oxygen on the metabolism of pulmonary surfactant
[AD-A082006] N80-30036
SURVIVAL EQUIPMENT
Tornado - aircrew systems
N80-30024
SYSTEMS ANALYSIS
Application of bond graphs to the synthesis and analysis of telechirics and robots
A80-45682

T

TARGET RECOGNITION
Information transfer for improved pilot performance
N80-30025
TECHNOLOGY ASSESSMENT
Assessment of the effects of the zero gravity environment on the health and safety of space workers
[NASA-TM-81122] N80-30038
TECHNOLOGY UTILIZATION
Biomedical research, development and engineering at the Johns Hopkins University Applied Physics Laboratory
[PB80-175268] N80-29989
TELEOPERATORS
Manipulation of large objects
A80-45687
A contribution to the biomechanics of master-slave manipulators
A80-45691
TELEVISION EQUIPMENT
TV operator performance in real time air-to-ground reconnaissance missions under task-loading conditions
N80-30007
TEMPERATURE DEPENDENCE
The influence of temperature on the amplitude and frequency components of the EMG during brief and sustained isometric contractions
A80-45975
TEMPERATURE EFFECTS
The effect of the temperatures of different skin layers on the activity of cold thermoreceptors
A80-45092
TERMINAL CONFIGURED VEHICLE PROGRAM
Development of a multi-media crew-training program for the terminal configured vehicle mission simulator
A80-44201
TESTES
Plasma testosterone during treadmill exercise
A80-47023
THERMAL ENVIRONMENTS
The role of the hypoxic factor at elevated temperatures and possible mechanisms of its development
A80-45093
THERMAL PROTECTION
Protective clothing: Arctic and tropical environments. Citations from the NTIS data base
[PB80-809635] N80-29046
THERMAL STRESSES
Thermal and acceleration effects on aircrew members in chemical defense gear
[AD-A086026] N80-30045

THERMORECEPTORS
The effect of the temperatures of different skin layers on the activity of cold thermoreceptors
A80-45092

THREE DIMENSIONAL FLOW
Low frequency asymptotics for a hydroelastic model of the cochlea
A80-45623

TISSUES (BIOLOGY)
Radiofrequency radiation and living tissue: Theoretical studies
[AD-A085952] N80-30037

TORQUE
Pressure suit joint analyzer
[NASA-CASE-ARC-11314-1] N80-30043

TOXIC HAZARDS
Paramecium tetraurelia: Prescreen for hazardous agents
[DOE/EV-04477/1] N80-29017
Chemical identified in human biological media: A data base, volume 1, part 1, records 1-1580
[ORNL/EIS-163/V1-P1] N80-29029
Chemicals identified in human biological media: A data base, volume 1, part 2, records 1-1580
[ORNL/EIS-163/V1-P2] N80-29030

TOXICOLOGY
Teratologic effects of long-term exposure to diesel exhaust emissions (rats)
[PB80-159965] N80-29018
Teratologic effects of long-term exposure to diesel exhaust emission (rabbits)
[PB80-168529] N80-29019

TRAINING ANALYSIS
Cost effectiveness modeling for a total training system
[AIAA PAPER 80-1094] A80-45752

TRAINING SIMULATORS
Development of a multi-media crew-training program for the terminal configured vehicle mission simulator
A80-44201

TRANSFORMERS
Initial study on the effects of transformer and transmission line noise on people. Volume 1: Annoyance
[EPRI-EA-1240-VOL-1] N80-29031
Initial study on the effects of transformer and transmission line noise on people. Volume 3: Community reaction
[EPRI-EA-1240-VOL-3] N80-29033

TRANSMISSION LINES
Initial study on the effects of transformer and transmission line noise on people. Volume 1: Annoyance
[EPRI-EA-1240-VOL-1] N80-29031
Initial study on the effects of transformer and transmission line noise on people. Volume 3: Community reaction
[EPRI-EA-1240-VOL-3] N80-29033

TROPICAL REGIONS
Protective clothing: Arctic and tropical environments. Citations from the NTIS data base
[PB80-809635] N80-29046

TURBULENCE EFFECTS
The effect of turbulence on helmet mounted sight aiming accuracies
N80-30004

U

ULCERS
Electroencephalographic changes in albino rats subjected to stress
[NASA-TM-76110] N80-29010
Ulcers in restrained rats: Study of protective substances
[NASA-TM-76104] N80-29015
Effect of certain psychopharmacological preparations on adaptation under stress conditions
[NASA-TM-76105] N80-29016

ULTRAVIOLET RADIATION
The survival rate of various species of dark-colored mushrooms under the influence of artificial solar radiation
A80-46806

URINE
Extremes of urine osmolality - Lack of effect on red blood cell survival
A80-46196

Design, fabrication and testing of a dual catalyst ammonia removal system for a urine VCD unit
[NASA-CR-152372] N80-29023

V

VASCULAR SYSTEM
Cerebrovascular permeability to sucrose in the rat exposed to 2,450-MHz microwaves
A80-47022

VERY LONG BASE INTERFEROMETRY
A very long baseline interferometry sky survey
N80-28812

VESTIBULAR NYSTAGMUS
Vestibular compensation in the rat: A model for motor learning
N80-29984

VIBRATION EFFECTS
A method for studying human biodynamic responses to whole-body Z-axis
N80-29999
Head movements induced by vertical vibrations
N80-30000
The effect of reclined seating on the transmission of linear vibration to the head
N80-30001
The effects of aircraft vibration on vision
N80-30002
The effect of 3-25 Hz vibration on the legibility of numeric light emitting diode displays
N80-30003
Helmet-mounted devices in low-flying high-speed aircraft
N80-30010
Response of the cardiovascular system to vibration and combined stresses
[AD-A081879] N80-30034

VIBRATION MEASUREMENT
Head movements induced by vertical vibrations
N80-30000

VIBRATIONAL STRESS
Quantifying the agression generated by low frequency vibrations
N80-29998

VIKING LANDER SPACECRAFT
Interpretation of findings of the biological experiments of the Viking lander on Mars
A80-44441

VISION
Parallel visual pathways - A review
A80-44765
Research for visual enhancement for high speed low level flight sponsored by the Naval Air Systems Command
N80-30012

VISUAL ACUITY
A review of dynamic visual acuity
[AD-A085060] N80-30041

VISUAL FIELDS
The role of helmet mounted displays in high-speed low-level flight
N80-30011

VISUAL OBSERVATION
Accuracy of visual estimate of the remoteness of an object in a space having no optical reference
A80-45273

VISUAL PERCEPTION
A computer implementation of a theory of human stereo vision
[AD-A084696] N80-29027
The effects of aircraft vibration on vision
N80-30002

VISUAL TASKS
An information processing mechanism for systems with boundary contrast and some optical illusions
A80-46972
A review of dynamic visual acuity
[AD-A085060] N80-30041

W

WALKING MACHINES
Use of active compliance in the control of legged vehicles
A80-46550

WATER BALANCE
  Plasma AVP, neurophysin, renin activity, and aldosterone during submaximal exercise performed until exhaustion in trained and untrained men
    A80-45974
WATER CONSUMPTION
  Extremes of urine osmolality - Lack of effect on red blood cell survival
    A80-46196
WATER RECLAMATION
  Design, fabrication and testing of a dual catalyst ammonia removal system for a urine VCD unit
  [NASA-CR-152372] N80-29023
WEAPON SYSTEMS
  Operational roles, aircrew systems and human factors in future high performance aircraft
  [AGARD-CP-266] N80-30019
  Weapons systems of the Mirage 2000: Man machine interface
    N80-30023
WEAPONS DELIVERY
  Information transfer for improved pilot performance
    N80-30025
WEIGHTLESSNESS
  Design opportunities - Zero gravity versus one gravity environments
    A80-46398
  Assessment of the effects of the zero gravity environment on the health and safety of space workers
  [NASA-TM-81122] N80-30030
  Procedural tests for anti-G protective devices. Volume 2: G-sensitivity tests
  [AD-A085982] N80-30044
WEIGHTLESSNESS SIMULATION
  The effects of simulated weightlessness on the reproductive capacity of the great duckweed in the norm and under irradiation
    A80-46812
WELDING MACHINES
  Adaptive control of technological industrial robots for welding
    A80-45693
WIND SHEAR
  The effect of a predictive wind shear chart on pilot landing performance
  [UTIAS-TN-220] N80-29039
WORK CAPACITY
  Work capacity during 3-wk sojourn at 4,300 m - Effects of relative polycythemia
    A80-47025
  Physiological influences upon the work performance of men and women
  [AD-A081947] N80-30035
WORKLOADS (PSYCHOPHYSIOLOGY)
  Operational aspects of guidance and control advances versus pilot workload for low altitude, high speed flight
    N80-30006
  The influence of the design of displays on cockpit workload
    N80-30008
  Human factors in Mirage 2000 missions
    N80-30028

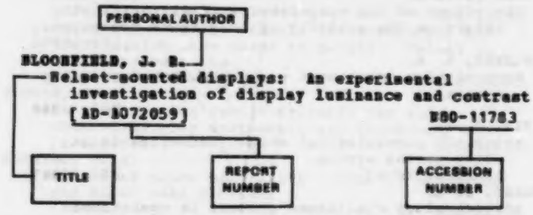
PERSONAL AUTHOR INDEX

AEROSPACE MEDICINE AND BIOLOGY / *A Continuing Bibliography (Suppl. 212)* **NOVEMBER 1980**

Typical Personal Author Index Listing



PERSONAL AUTHOR
BLOOMFIELD, J. R.
Helmet-mounted displays: An experimental investigation of display luminance and contrast
[AD-A072059]
N80-11783
TITLE
REPORT NUMBER
ACCESSION NUMBER

The title of the document is used to provide the user with a brief description of the subject matter. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstract in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

A

ALBANESE, R. A.
Radiofrequency radiation and living tissue: Theoretical studies
[AD-A085952] N80-30037

ALESHIN, G. V.
An information processing mechanism for systems with boundary contrast and some optical illusions
A80-46972

ALLAN, J. R.
Effects on performance of thermal strain encountered during high-speed, low-level flight
N80-29996

ALLEVARD, A. M.
Plasma AVP, neurophysin, renin activity, and aldosterone during submaximal exercise performed until exhaustion in trained and untrained men
A80-45974

ALLRED, J. E.
Procedural tests for anti-G protective devices. Volume 2: G-sensitivity tests
[AD-A085982] N80-30044

AMBROSE, J. T.
Response of selected plant and insect species to simulated solid rocket exhaust mixtures and to exhaust components from solid rocket fuels
[NASA-TM-74109] N80-29014

AMOORE, J. N.
Changes in the QRS complex of the electrocardiogram during sleep and exercise
[CSIR-ELEK-167] N80-29022

ANDERSON, N.
A method for studying human biodynamic responses to whole-body Z-axis
N80-29999

ANNAT, G.
Plasma AVP, neurophysin, renin activity, and aldosterone during submaximal exercise performed until exhaustion in trained and untrained men
A80-45974

ANTONENKO, A. L.
The survival rate of various species of dark-colored mushrooms under the influence of artificial solar radiation
A80-46806

ANTONENKO, V. T.
Adaptive control of technological industrial robots for welding
A80-45693

ASSOULINE, G.
Electroencephalographic changes in albino rats subjected to stress
[NASA-TM-76118] N80-29010

AUXIER, J. A.
Health effects of low level radiation
[DOE/TIC-11176] N80-29034

AVELLINI, B. A.
Physiological responses of physically fit men and women to acclimation to humid heat
A80-47024

B

BABSKII, V. G.
Results of the experiment 'Microorganism growth' on the Soyuz-22 spacecraft
A80-46804

The effect of space flight factors on the characteristics of nutrient media for the bacterium Proteus vulgaris
A80-46807

BALDAUF, R. F.
Chemical identified in human biological media: A data base, volume 1, part 1, records 1-1580
[ORNL/EIS-163/V1-P1] N80-29029

Chemicals identified in human biological media: A data base, volume 1, part 2, records 1-1580
[ORNL/EIS-163/V1-P2] N80-29030

BARNES, G. R.
The effects of aircraft vibration on vision
N80-30002

BECK, R. P.
Tornado - aircrew systems
N80-30024

BEJCZY, A. K.
Manipulation of large objects
A80-45687

BELL, R. L.
Thermal response model of a simulated cranial structure exposed to radiofrequency radiation
A80-47064

Radiofrequency radiation and living tissue: Theoretical studies
[AD-A085952] N80-30037

BENNETT, R. L.
Initial study on the effects of transformer and transmission line noise on people. Volume 1: Annoyance
[EPRI-EA-1240-VOL-1] N80-29031

Initial study on the effects of transformer and transmission line noise on people. Volume 2: Sleep interference
[EPRI-EA-1240-VOL-2] N80-29032

BIANCHI, G.
Symposium on Theory and Practice of Robots and Manipulators, 3rd, Udine, Italy, September 12-15, 1978, Proceedings
A80-45676

On the grasping process for objects of irregular shape
A80-45680

BILLMAN, G. E.
The neural control of the coronary circulation during behavioral stress in conscious dogs
N80-29986

BOCHAGOVA, O. P.
The ultrastructure of Proteus vulgaris cells grown in orbit on board the Soyuz-22 spacecraft
A80-46805

BOCK, O. L.
Visually induced self-motion sensation adapts rapidly to left-right visual reversal
A80-44213

BOGATINA, N. I.
The effects of low-intensity magnetic fields on plant cell reproduction
A80-46813

BORREDON, P.
Quantifying the agression generated by low frequency vibrations
N80-29998

BRIGGS, G. B.
Teratologic effects of long-term exposure to diesel exhaust emissions (rats)
[PB80-159965] N80-29018
Teratologic effects of long-term exposure to diesel exhaust emission (rabbits)
[PB80-168529] N80-29019

BRIGGS, R. L.
Use of active compliance in the control of legged vehicles
A80-46550

BRUCE, R. A.
Maximal cardiac output during upright exercise - Approximate normal standards and variations with coronary heart disease
A80-44249

BUCHE, L.
Ulcers in restrained rats: Study of protective substances
[NASA-TM-76184] N80-29015

BUDINIKAS, P.
Design, fabrication and testing of a dual catalyst ammonia removal system for a urine VCD unit
[NASA-CR-152372] N80-29023

BUREV, D. D.
Standard man-machine procedure of optimal synthesis in computer-aided design systems. II
A80-45078

BURR, J. G.
Thermal response model of a simulated cranial structure exposed to radiofrequency radiation
A80-47064

C

CAPRIHAN, A.
Theoretical analysis of error during signal averaging for detection of His-bundle activity,
A80-47065

CARRIGAN, B.
Bionics. Citations from the NTIS data base
[PB80-810641] N80-30039

CHAFFEE, V. W.
Teratologic effects of long-term exposure to diesel exhaust emissions (rats)
[PB80-159965] N80-29018

CHESTON, T. S.
Controlled ecological life support systems /CELSS/ and space habitats, anthropology, and psychology
A80-46378

CHISUM, G. T.
The role of helmet mounted displays in high-speed low-level flight
N80-30011
Research for visual enhancement for high speed low level flight sponsored by the Naval Air Systems Command
N80-30012

CLARK, J. F.
Nutrition, diet and food processing in controlled environment life support systems
A80-46392

COATES, G. D.
Physiological influences upon the work performance of men and women
[AD-A081947] N80-30035

COHEN, H. H.
Research for visual enhancement for high speed low level flight sponsored by the Naval Air Systems Command
N80-30012

COHOON, D. K.
Thermal response model of a simulated cranial structure exposed to radiofrequency radiation
A80-47064

COLEMAN, E. A.
Astronaut training manual
[NASA-CR-160758] N80-29024

COLIN, J.
Thermic problems presented by high-speed, low-level flight
N80-29995

CONE, M. V.
Chemical identified in human biological media: A data base, volume 1, part 1, records 1-1580
[ORNL/EIS-163/V1-P1] N80-29029
Chemicals identified in human biological media: A data base, volume 1, part 2, records 1-1580
[ORNL/EIS-163/V1-P2] N80-29030

D

DANILOVA, N. K.
The effect of the temperatures of different skin layers on the activity of cold thermoreceptors
A80-45092

DAULERIO, L. A.
Crew station assessment using the Bioman modeling system
N80-30014

DAVIS, J. G.
Automated psychological stress detection in an entry portal system
[SAND-80-7026] N80-29041

DEHART, R. L.
Biotechnology challenges present in operational high-speed low-level flight
N80-29994

DELL, J. L.
Human factors aspects in high speed low level flight
N80-30026

DENUNZIO, A. G.
Characterization of renal response to prolonged immersion in normal man
A80-47021

DEROUEN, T. A.
Maximal cardiac output during upright exercise - Approximate normal standards and variations with coronary heart disease
A80-44249

DOBORTSEVA, R. L.
Genetic changes induced by space flight factors in barley seeds on Soyuz-5 and Soyuz-9 craft
[NASA-TM-76281] N80-29013

E

EBERHARDT, N. K.
Physiological influences upon the work performance of men and women
[AD-A081947] N80-30035

ECLACHE, J. P.
Plasma AVP, neurophysin, renin activity, and aldosterone during submaximal exercise performed until exhaustion in trained and untrained men
A80-45974

EIKE, D. R.
Human engineering design criteria for modern control/display components and standard parts
[AD-A086139] N80-30046

ENGLE, R.
Response of selected plant and insect species to simulated solid rocket exhaust mixtures and to exhaust components from solid rocket fuels
[NASA-TM-74109] N80-29014

ENSMINGER, J. T.
Chemical identified in human biological media: A data base, volume 1, part 1, records 1-1580
[ORNL/EIS-163/V1-P1] N80-29029
Chemicals identified in human biological media: A data base, volume 1, part 2, records 1-1580
[ORNL/EIS-163/V1-P2] N80-29030

EPSTEIN, M.
Characterization of renal response to prolonged immersion in normal man
A80-47021

EWING, C. L.
A method for studying human biodynamic responses to whole-body Z-axis
N80-29999
Clinical medical effects of head and neck response during biodynamic stress experiments
N80-30005

F

FAM, W. Z.
Long-term biological effects of very intense 60 Hz electric field on mice
A80-44196

FARRELL, D. E.
Magnetic study of the His-Purkinje conduction system in man
A80-44195

FIDELL, S. A.
Initial study on the effects of transformer and transmission line noise on people. Volume 1: Annoyance
[EPRI-EA-1240-VOL-1] N80-29031
Initial study on the effects of transformer and transmission line noise on people. Volume 3: Community reaction
[EPRI-EA-1240-VOL-3] N80-29033

FLEGER, S. A.
Human engineering design criteria for modern control/display components and standard parts
[AD-A086139] N80-30046

FLEMING, J. E.
Extremes of urine osmolality - Lack of effect on red blood cell survival
A80-46196

FOMICHEVA, V. M.
The effects of low-intensity magnetic fields on plant cell reproduction
A80-46813

FONDARAI, J.
Electroencephalographic changes in albino rats subjected to stress
[NASA-TM-76118] N80-29010

FOWLER, W. E.
The structure of fibrinogen and its intermole associations
N80-30030

FOX, S. W.
From inanimate matter to living systems
[NASA-CR-163372] N80-29011

FRAENZLE, S.
Interpretation of findings of the biological experiments of the Viking lander on Mars
A80-44441

FRISCH, G. D.
Crew station assessment using the Bioman modeling system
N80-30014

FROLOV, K. V.
A contribution to the biomechanics of master-slave manipulators
A80-45691

G

GAGNEUX, J. M.
Effects of aircraft noise on sleep: An in-situ experience
N80-29042

GALLAIRE, D.
Ulcers in restrained rats: Study of protective substances
[NASA-TM-76184] N80-29015

GALVIN, C. E.
Procedural tests for anti-G protective devices. Volume 2: G-sensitivity tests
[AD-A085982] N80-30044

GAVRISH, T. G.
Results of the experiment 'Microorganism growth' on the Soyuz-22 spacecraft
A80-46804

GEELEN, G.
Plasma AVP, neurophysin, renin activity, and aldosterone during submaximal exercise performed until exhaustion in trained and untrained men
A80-45974

GERUS, A. I.
The effect of hypodynamia on the structure of the intraorganic blood vessels and the capacity of the blood stream in the diaphragm of white rats
[NASA-TM-76140] N80-29012

GHARIB, C.
Plasma AVP, neurophysin, renin activity, and aldosterone during submaximal exercise performed until exhaustion in trained and untrained men
A80-45974

GIBSON, T. M.
Effects on performance of thermal strain encountered during high-speed, low-level flight
N80-29996

GILBERT, N. S.
Clinical medical effects of head and neck response during biodynamic stress experiments
N80-30005

GLAISTER, D. H.
High-Speed, Low-Level Flight: Aircrew Factors
[AGARD-CP-267] N80-29990

GORBUNOVA, A. V.
Effect of restricted mobility on RNA content and nucleotide composition and on protein content in motoneurons of spinal cord anterior horns
[NASA-TM-76190] N80-29025
RNA content in spinal cord motoneurons during hypokinesia
[NASA-TM-76200] N80-29026

GRABINA, V. A.
An information processing mechanism for systems with boundary contrast and some optical illusions
A80-46972

GREEN, D.
Maximal cardiac output during upright exercise - Approximate normal standards and variations with coronary heart disease
A80-44249

GREEN, R. G.
Effects on performance of thermal strain encountered during high-speed, low-level flight
N80-29996

GRIMSON, W. E. L.
A computer implementation of a theory of human stereo vision
[AD-A084696] N80-29027

GRODZINSKII, D. M.
Investigation of the effects of space flight factors on the emergence from the anabiotic state of turions of the great duckweed
A80-46811
The effects of simulated weightlessness on the reproductive capacity of the great duckweed in the norm and under irradiation
A80-46812

GUIGNARD, J. C.
A method for studying human biodynamic responses to whole-body Z-axis
N80-29999

GUTIN, B.
Plasma testosterone during treadmill exercise
A80-47023

H

HARRISON, E. A.
Aircraft sonic boom: Biological effects. Citations from the NTIS data base
[PB80-810310] N80-29036
Hypothermia. Citations from the NTIS data base
[PB80-180526] N80-29037

HAUBOLD, A. D.
Studies of carbon-surfaced polymeric, metallic and ceramic biomaterials
[PB80-168859] N80-29035

HECK, W. W.
Response of selected plant and insect species to simulated solid rocket exhaust mixtures and to exhaust components from solid rocket fuels
[NASA-TM-74109] N80-29014

HENNE, S. P.
Teratologic effects of long-term exposure to diesel exhaust emission (rabbits)
[PB80-168529] N80-29019

HERR, C.
Paramecium tetraurelia: Prescreen for hazardous agents
[DOE/EV-04477/1] N80-29017

HOLMES, M. H.
Low frequency asymptotics for a hydroelastic model of the cochlea
A80-45623

HOLMES, R. H.
The influence of the design of displays on cockpit workload
N80-30008

HOOPS, H.
The advantage of the color-code modality versus alphanumeric and symbol code
[AD-A084383] N80-29044

HORONJEFF, R. D.
Initial study on the effects of transformer and transmission line noise on people. Volume 2: Sleep interference
[EPRI-EA-1240-VOL-2] N80-29032

HORSTMAN, D.
Work capacity during 3-wk sojourn at 4,300 m - Effects of relative polycythemia
A80-47025

HORVATH, S. M.
Plasma testosterone during treadmill exercise
A80-47023

HOSSACK, K. F.
Maximal cardiac output during upright exercise - Approximate normal standards and variations with coronary heart disease
A80-44249

HUANG, J.-K.
Visually induced self-motion sensation adapts rapidly to left-right visual reversal
A80-44213

HUDGENS, G. A.
Human performance: Psychological and sex differences, a selected bibliography
[AD-A085824] N80-30042

HUSSEY, D. W.
Colour displays: Their availability, performance and application to improved crew efficiency
N80-30009

I

IAMPIETRO, P. F.
Operational roles, aircrew systems and human factors in future high performance aircraft
[AGARD-CP-266] N80-30019

ILIN, E. A.
Biological studies on the Cosmos biosatellite
A80-44125

INFANTOSI, A. F. C.
Theoretical analysis of error during signal averaging for detection of His-bundle activity,
A80-47065

IVANOV, K. P.
The effect of the temperatures of different skin layers on the activity of cold thermoreceptors
A80-45092

J

JACKSON, R. E.
Work capacity during 3-wk sojourn at 4,300 m - Effects of relative polycythemia
A80-47025

JARRETT, D. N.
Helmet-mounted devices in low-flying high-speed aircraft
N80-30010

JARSAILLON, E.
Plasma AVP, neurophysin, renin activity, and aldosterone during submaximal exercise performed until exhaustion in trained and untrained men
A80-45974

JOHNSON, J. H.
Human engineering design criteria for modern control/display components and standard parts
[AD-A086139] N80-30046

JOHNSTON, M. E.
The effect of reclined seating on the transmission of linear vibration to the head
N80-30001

The effect of 3-25 Hz vibration on the legibility of numeric light emitting diode displays
N80-30003

JONES, J. G.
Ride-bumpiness and the influence of active control systems
N80-29991

K

KAMON, E.
Physiological responses of physically fit men and women to acclimation to humid heat
A80-47024

KEDZIOR, K.
Symposium on Theory and Practice of Robots and Manipulators, 3rd, Udine, Italy, September 12-15, 1978, Proceedings
A80-45676

KENRIG, IU. IU.
The role of the hypoxic factor at elevated temperatures and possible mechanisms of its development
A80-45093

KENTON, E.
Protective clothing: Arctic and tropical environments. Citations from the NTIS data base
[PB80-809635] N80-29046

Protective clothing: Survival, aircraft, and combat environments. Citations from the NTIS data base
[PB80-809650] N80-29047

KHRISTENKO, L. A.
The effects of orbital flight conditions on the formation of the generative organs in Muscari racemosum and Anethum graveolens
A80-46810

KING, M.
Effects of inspired oxygen on the metabolism of pulmonary surfactant
[AD-A082006] N80-30036

KING, R. J.
Effects of inspired oxygen on the metabolism of pulmonary surfactant
[AD-A082006] N80-30036

KIRBY, R. H.
Physiological influences upon the work performance of men and women
[AD-A081947] N80-30035

KLEIN, C. A.
Use of active compliance in the control of legged vehicles
A80-46550

KNAPP, C. F.
Response of the cardiovascular system to vibration and combined stresses
[AD-A081879] N80-30034

KNOTT, W. M.
Response of selected plant and insect species to simulated solid rocket exhaust mixtures and to exhaust components from solid rocket fuels
[NASA-TM-74109] N80-29014

KOBRINSKII, A. E.
A contribution to the biomechanics of master-slave manipulators
A80-45691

KONSHIN, N. I.
Results of the experiment 'Microorganism growth' on the Soyuz-22 spacecraft
A80-46804

The ultrastructure of Proteus vulgaris cells grown in orbit on board the Soyuz-22 spacecraft
A80-46805

Investigation of the effects of space flight factors on the emergence from the anabiotic state of turions of the great duckweed
A80-46811

KONSTANTINOV, V. A.
The effect of the temperatures of different skin layers on the activity of cold thermoreceptors
A80-45092

KORDIUM, E. L.
The ultrastructure of Proteus vulgaris cells grown in orbit on board the Soyuz-22 spacecraft
A80-46805

The effects of orbital flight conditions on the formation of the generative organs in Muscari racemosum and Anethum graveolens
A80-46810

KORDIUM, V. A.
Results of the experiment 'Microorganism growth' on the Soyuz-22 spacecraft
A80-46804

The effect of space flight factors on the characteristics of nutrient media for the bacterium Proteus vulgaris
A80-46807

KRAJEWSKI, J. T.
Physiological responses of physically fit men and women to acclimation to humid heat
A80-47024

KRABBS, E.
Influences of geophysical factors (meteorological and topographical) on the pilot-aircraft-system in high speed low level flight (HSLLF)
N80-29992

KROEMER, K. H. E.
A technique for establishing true levels of muscle strength exertion
[AD-A083576] N80-29028

KULIK, J. J.

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

CALIFORNIA
University of California, Berkeley
COLORADO
University of Colorado, Boulder
DISTRICT OF COLUMBIA
Library of Congress
GEORGIA
Georgia Institute of Technology, Atlanta
ILLINOIS
The John Crerar Library, Chicago

MASSACHUSETTS
Massachusetts Institute of Technology, Cambridge
MISSOURI
Linda Hall Library, Kansas City
NEW YORK
Columbia University, New York
OKLAHOMA
University of Oklahoma, Bizzell Library
PENNSYLVANIA
Carnegie Library of Pittsburgh
WASHINGTON
University of Washington, Seattle

NASA publications (those indicated by an "*" following the accession number) are also received by the following public and free libraries:

CALIFORNIA
Los Angeles Public Library
San Diego Public Library
COLORADO
Denver Public Library
CONNECTICUT
Hartford Public Library
MARYLAND
Enoch Pratt Free Library, Baltimore
MASSACHUSETTS
Boston Public Library
MICHIGAN
Detroit Public Library
MINNESOTA
Minneapolis Public Library
MISSOURI
Kansas City Public Library
St. Louis Public Library
NEW JERSEY
Trenton Public Library

NEW YORK
Brooklyn Public Library
Buffalo and Erie County Public Library
Rochester Public Library
New York Public Library
OHIO
Akron Public Library
Cincinnati Public Library
Cleveland Public Library
Dayton Public Library
Toledo Public Library
TENNESSEE
Memphis Public Library
TEXAS
Dallas Public Library
Fort Worth Public Library
WASHINGTON
Seattle Public Library
WISCONSIN
Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols "#" and "*", from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

AEROSPACE MEDICINE AND BIOLOGY

A CONTINUING BIBLIOGRAPHY WITH INDEXES

(Supplement 213)

A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in November 1980 in

- *Scientific and Technical Aerospace Reports (STAR)*
- *International Aerospace Abstracts (IAA).*

Scientific and Technical Information Branch 1980
National Aeronautics and Space Administration
Washington, DC

NASA SP-7011 and its supplements are available from the National Technical Information Service (NTIS). Questions on the availability of the predecessor publications, Aerospace Medicine and Biology (Volumes I - XI) should be directed to NTIS.

This supplement is available as NTISUB/123/093 from the National Technical Information Service (NTIS), Springfield, Virginia 22161 at the price of $7.00 domestic; $14.00 foreign.

INTRODUCTION

This Supplement to *Aerospace Medicine and Biology* (NASA SP-7011) lists 180 reports, articles and other documents announced during November 1980 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*. The first issue of the bibliography was published in July 1964; since that time, monthly supplements have been issued.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the earth's atmosphere or in interplanetary space. References describing similar effects of biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis is placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion.

Each entry in the bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged in two major sections: *IAA Entries* and *STAR Entries*, in that order. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR*, including the original accession numbers from the respective announcement journals. This procedure, which saves time and money, accounts for the slight variation in citation appearances.

Two indexes -- subject and personal author -- are included.

An annual index will be prepared at the end of the calendar year covering all documents listed in the 1980 Supplements.

AVAILABILITY OF CITED PUBLICATIONS

IAA ENTRIES (A80-10000 Series)

All publications abstracted in this Section are available from the Technical Information Service, American Institute of Aeronautics and Astronautics, Inc. (AIAA), as follows: Paper copies of accessions are available at $7.00 per document up to a maximum of 40 pages. The charge for each additional page is $0.25. Microfiche(1) of documents announced in *IAA* are available at the rate of $3.00 per microfiche on demand, and at the rate of $1.25 per microfiche for standing orders for all *IAA* microfiche. The price for the *IAA* microfiche by category is available at the rate of $1.50 per microfiche plus a $1.00 service charge per category per issue. Microfiche of all the current AIAA Meeting Papers are available on a standing order basis at the rate of $1.50 per microfiche.

Minimum air-mail postage to foreign countries is $1.00 and all foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to AIAA Technical Information Service. Please refer to the accession number when requesting publications.

STAR ENTRIES (N80-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code followed by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page viii.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard $3.50 price, for those documents identified by a # symbol.)

---

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size, containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction).

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Documents Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free.

Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

SUBSCRIPTION AVAILABILITY

This publication is available on subscription from the National Technical Information Service (NTIS). The annual subscription rate for the monthly supplements, excluding the annual cumulative index, is $50.00 domestic; $100.00 foreign. All questions relating to the subscriptions should be referred to NTIS.

EXTENDED DURATION ORBITER STUDY: CO2 REMOVAL AND WATER RECOVERY Final Report
R. D. Marshall, G. S. Ellis, F. H. Schubert, and R. A. Wynveen
May 1979 91 p refs
(Contract NAS9-15218)
(NASA-CR-160317; LSI-ER-319-24) Avail: NTIS
HC A05/MF A01 CSCL 06K

Two electrochemical depolarized carbon dioxide concentrator subsystems were evaluated against baseline lithium hydroxide for (1) the baseline orbiter when expanded to accommodate a crew of seven (mission option one), (2) an extended duration orbiter with a power extension package to reduce fuel cell expendables (mission option two), and (3) an extended duration orbiter with a full capability power module to eliminate fuel cell expendables (mission option three). The electrochemical depolarized carbon dioxide concentrator was also compared to the solid amine regenerable carbon dioxide removal concept. Water recovery is not required for Mission Option One since sufficient water is generated by the fuel cells. The vapor compression distillation subsystem was evaluated for mission option two and three only. Weight savings attainable using the vapor compression distillation subsystem for water recovery versus on-board water storage were determined. Combined carbon dioxide removal and water recovery was evaluated to determine the effect on regenerable carbon dioxide removal subsystem selection. R.E.S.

A80-12230 * Soil stabilization by a prokaryotic desert crust - Implications for Precambrian land biota. S. E. Campbell (Boston University, Boston, Mass.), *Origins of Life*, vol. 9, Sept. 1979, p. 335-348. 24 refs. NSF Grants No. GA-43391; No. EAR-76-84233; No. EAR-76-84233-A01; Grant No. NsG-7588.

The ecology of the cyanophyte-dominated stromatolitic mat forming the ground cover over desert areas of Utah and Colorado is investigated and implications for the formation of mature Precambrian soils are discussed. The activation of the growth of the two species of filamentous cyanophyte identified and the mobility of their multiple trichromes upon wetting are observed, accompanied by the production and deposition of a sheath capable of accreting and stabilizing sand and clay particles. The formation of calcium carbonate precipitates upon the repeated wetting and drying of desert crust is noted, and it is suggested that the desert crust community may appear in fossil calcrete deposits as lithified microscopic tubes and cellular remains of algal trichromes. The invasion of dry land by both marine and freshwater algae on the model of the desert crust is proposed to be responsible for the accumulation, stabilization and biogenic modification of mature Precambrian soils. A.L.W.

AEROSPACE MEDICINE AND BIOLOGY

A Continuing Bibliography (Suppl. 213)

DECEMBER 1980

IAA ENTRIES

A80-47692 # **Deformations of human skull produced by impact /experimental studies and modeling problems/. II - The dynamics of the skull base during impact loading of the vault (Deformatsii cherepa cheloveka pri udare /eksperimental'noe izuchenie i nekotorye problemy modelirovaniia/. II - Dinamika osnovaniia cherepa pri udarnom nagruzhenii svoda).** A. S. Barer, Iu. G. Konakhevich, L. N. Sholpo, V. Kh. Petliuk, and N. A. Uglanova. *(Vsesoiuznaia Konferentsiia po Problemam Biomekhaniki, 2nd, Riga, Latvian SSR, Apr. 1979.) Mekhanika Kompozitnykh Materialov,* May-June 1980, p. 525-529. 7 refs. In Russian.

A80-47693 # **Change of biomechanical properties of rat's bones produced by a 19-day spaceflight in the artificial satellite Cosmos-936 (Izmenenie biomekhanicheskikh svoistv kosti krys v rezul'tate 19-sutochnogo kosmicheskogo poleta na iskusstvennom sputnike zemli 'Kosmos-936').** G. P. Stupakov, A. I. Volozhin, V. V. Zasypkin, and S. M. Remizov. *(Vsesoiuznaia Konferentsiia po Problemam Biomekhaniki, 2nd, Riga, Latvian SSR, Apr. 1979.) Mekhanika Kompozitnykh Materialov,* May-June 1980, p. 530-537. 13 refs. In Russian.

A80-47763 # **Myocardial ischemia and its risk factors (Die ischämische Herzkrankheit und ihre Risikofaktoren).** I. Rademacher, B. Neeb, and J. Wirth (Medizinischer Dienst des Verkherswesens, East Germany). *Technisch-ökonomische Information der zivilen Luftfahrt,* vol. 16, no. 1, 1980, p. 60-64. In German.

The intrinsic features of ischemia are discussed with particular reference to the role of ischemia in aeronautical medicine, its manifestations, and diagnostics. Major risk factors, such as hypertonia, hypercholesterinemia, physical inactivity, overweight, and cigarette smoking are noted. V.P.

A80-47791 # **Symposium on human factors in civil aviation. II (Symposium 'Menschliche Faktoren in der zivilen Luftfahrt'. II).** *Technisch-ökonomische Information der zivilen Luftfahrt,* vol. 16, no. 2, 1980, p. 119-124. In German. (Translation).

The increased performance capability of aviation operations is discussed in light of steadily growing air travel, as well as the incorporation of larger and faster aircraft. Better aircraft construction, more automation, and improvements in the relationship between man and machine are recommended to achieve higher standards. Methods for assessing human performance are stressed. The role of the pilot, the importance of training and motivation, and occupational aptitude are discussed. R.C.

A80-47932 # **Mass measurement under conditions of weightlessness (Izmerenie massy v usloviiakh nevesomosti).** V. A. Sarychev, V. V. Sazonov, A. A. Zlatorunskii, I. A. Samorukov, V. R. Freidel', S. F. Khlopina, A. D. Egorov, and V. I. Somov. *Kosmicheskie Issledovaniia,* vol. 18, July-Aug. 1980, p. 536-549. 5 refs. In Russian.

The properties of a massmeter - a device for measuring the human mass during space missions - are examined, and the measurement accuracy is assessed. The calibration and testing of the device under terrestrial conditions are described, along with the measurement procedure under conditions of weightlessness. Some measurement data obtained for crew members of Salyut 5 and 6 are examined. V.P.

A80-48086 * # **Fluid-electrolyte shifts and thermoregulation - Rest and work in heat with head cooling.** J. E. Greenleaf, W. Van Beaumont, P. J. Brock, L. D. Montgomery, J. T. Morse, E. Shvartz, and S. Kravik (NASA, Ames Research Center, Biomedical Research Div., Moffett Field, Calif.). *Aviation, Space, and Environmental Medicine,* vol. 51, Aug. 1980, p. 747-753. 28 refs.

The effects of head cooling on thermoregulation and associated plasma fluid and electrolyte shifts during rest and submaximal exercise in the heat are investigated. Thermoregulatory responses and plasma volume were measured in four male subjects fitted with liquid-cooled neoprene headgear during 60 min of rest, 60 min of ergometer exercise at 45% maximal oxygen uptake and 30 min of recovery in the supine position at 40.1 C and 40% relative humidity. It is found that, compared to control responses, head cooling decreased thigh sweating and increased mean skin temperature at rest and attenuated increases in thigh sweating, heart rate, rectal temperature and ventilation during exercise. During recovery, cooling is observed to facilitate decreases in sweat rate, heart rate, rectal temperature and forearm blood flow and enhance the increase in average temperature. Cooling had no effect on plasma protein, osmotic or electrolyte shifts, and decreased plasma volume losses. The findings indicate the effectiveness of moderate head cooling for the improvement of human performance during exercise in heat.

A.L.W.

A80-48087 # **Hypothermia induced by 5-thio-D-glucose - Effects on treadmill performance in the heat.** R. P. Francesconi and M. Mager (U.S. Army, Research Institute of Environmental Medicine, Natick, Mass.). *Aviation, Space, and Environmental Medicine,* vol. 51, Aug. 1980, p. 754-758. 25 refs.

A80-48088 # **Psychophysical comparison of vertical and angular vibrations.** R. W. Shoenberger (USAF, Aerospace Medical Research Laboratory, Wright-Patterson AFB, Ohio). *Aviation, Space, and Environmental Medicine,* vol. 51, Aug. 1980, p. 759-762. 9 refs. Contract No. F33615-79-C-0509. (AMRL-TR-80-46)

Three psychophysical matching experiments were conducted to compare the perceived intensity of angular vibrations, in roll, pitch or yaw, with the perceived intensity of Z-axis translational vibrations. Seated subjects matched their perceptions of the intensity of Z-axis stimulus vibrations - at six frequencies from 2.5-8 Hz, at each of three intensity levels - by adjusting the intensity of angular response vibrations at the same frequencies. The results showed that the acceleration of the angular matching responses increased significantly as a function of both the frequency and the intensity of the stimulus vibrations. Since the stimuli were chosen from existing Z-axis equal intensity contours, the mean matching responses define equivalent contours for angular vibrations. Determination of relationships between translational and angular vibration is essential for the development of improved vibration exposure criteria applicable to complex vibration environments. (Author)

A80-48089 # **Altitude convulsion threshold and time to altitude convulsion in gold thioglucose obese mice.** H. J. Liu and H. S. Fang (National Taiwan University, Taipei, Nationalist China). *Aviation, Space, and Environmental Medicine*, vol. 51, Aug. 1980, p. 763-766. 8 refs. Research supported by the National Science Council of Nationalist China.

Gold thioglucose-induced hypothalamic obesity caused a higher altitude convulsion threshold and a decrease in the time to altitude convulsion. The average altitude convulsion threshold for the obese mice was 151 torr (38,500 ft). In contrast, the average value for the controls was 131 torr (41,500 ft). It was also observed that at 206 torr (32,000 ft), the average time until altitude convulsion of the obese mice was 69 s; at 179 torr (35,000 ft), 27 s; at 141 torr (40,000 ft), 17 s; at 111 torr (45,000 ft), 10 s; at 87 torr (50,000 ft), 9 s; and at 69 torr (55,000 ft), 8 s. On the other hand, the average control time until altitude convulsion at the above-mentioned altitudes was 97, 37, 26, 11, 9, and 8 s, respectively. Moreover, the average accumulation of fat between pleura and lungs in obese mice was 154 or 181 mg, while the value of the control group was only 72 or 67 mg. Such an increase of fat accumulation in the thoracic cage could decrease the tidal volume. The altitude convulsion threshold and the time until altitude convulsion might thus be changed. The time until altitude convulsion may be regarded as a convenient objective measure of altitude tolerance in mice. (Author)

A80-48090 # **The oxygen-adapted rat model - Tolerance to oxygen at 1.5 and 2 ATA.** G. Kravetz, A. B. Fisher, and H. J. Forman (Pennsylvania, University, Philadelphia, Pa.). *Aviation, Space, and Environmental Medicine*, vol. 51, Aug. 1980, p. 775-777. 18 refs. Grants No. NIH-HL-15061; No. NIH-HL-15013.

The effect of pre-exposure to graded hyperoxia on subsequent survival under hyperbaric conditions was investigated in 250-300 g male Sprague-Dawley rats. The average survival of normal rats was approximately 4 d in 1 ATA O2, 1 d in 1.5 ATA O2, and 16 h in 2 ATA O2. Rats pre-exposed to O2 at 0.8 ATA for one week became O2 tolerant and survived a subsequent one week in O2 at 1 ATA with zero mortality. These O2-tolerant rats had a three-fold increase of survival duration in O2 at 1.5 ATA, but showed no significant prolongation of survival in 2 ATA O2. Pre-exposure to 0.8 ATA O2 for two weeks had no further effect on tolerance. However, rats pre-exposed to O2 at 0.8 ATA for one week followed by exposure to O2 at 1 ATA for a second week demonstrated approximately a three-fold increase in subsequent survival at 2 ATA O2. The results indicate that oxygen-tolerant rats remain susceptible to mortality in 1.5-2 ATA O2 and that graded tolerance to O2 develops as a function of the oxygen exposure regimen. (Author)

A80-48091 # **Effects of whole-body vibrations on standing posture in man.** B. Martin, G. M. Gauthier, J. P. Roll, M. Hugon, and F. Harlay (Aix-Marseille I, Université, Marseille, France). *Aviation, Space, and Environmental Medicine*, vol. 51, Aug. 1980, p. 778-787. 34 refs. Research supported by the Société Nationale Industrielle Aérospatiale; Centre Nationale de la Recherche Scientifique Grant No. ERA-272.

The effects of vibrations of amplitude and frequency similar to those encountered in cruising helicopters on human postural adjustment are investigated. Twenty male and female subjects were successively submitted to whole-body vibration, head-trunk vibration, leg vibration, head vibration and control situations, all in the seated position, and tested for postural responses on a stabilometer prior to, immediately after and 30 min after the 30-min vibration period. In addition, the per-vibration effects on postural equilibrium were studied for six subjects tested in a standing position on a vibrating platform. Results indicate that whole-body and leg vibration induce highly significant disturbances in postural control mechanisms, as evidenced by shifts in resting position and increases in oscillation amplitudes, although the subjects were not aware of any alterations. Results thus suggest that the site of action of vibration is essentially limited to the legs, where the muscle spindles are particularly affected. A.L.W.

A80-48092 # **Effect of alcohol on man's response to mild physical activity in a cold environment.** T. Graham and J. Dalton (Guelph, University, Guelph, Ontario, Canada). *Aviation, Space, and Environmental Medicine*, vol. 51, Aug. 1980, p. 793-796. 32 refs. Research supported by the Distilled Spirits Council of the United States.

A80-48093 # **A human performance/workload evaluation of the AN/PVS-5 bifocal night vision goggles.** L. W. Stone, M. G. Sanders, D. D. Glick, R. W. Wiley, and K. A. Kimball (U.S. Army, Aeromedical Research Laboratory, Fort Rucker, Ala.). *Aviation, Space, and Environmental Medicine*, vol. 51, Aug. 1980, p. 797-804. 15 refs.

Eight experienced U.S. Army aviators performed various maneuvers in an instrumented helicopter to test the relative usability of two bifocal-configured night vision goggles. Both configurations were statistically better than the unmodified arrangement when looking at a pilot's ability to fly a standard traffic pattern and to hold a precise altitude at night. The subjective data, supported by comparative flight performances with the two bifocals, further suggested that a 24% bifocal version was more desirable than a 14% configuration. The inference is that the reduced inside field of view presented by the 14% bifocal interferes with a pilot's ability to readily locate instruments once he has directed his attention inside the cockpit. (Author)

A80-48094 * # **Space motion sickness - Skylab revisited.** A. Graybiel (U.S. Naval Aerospace Medical Center, Naval Aerospace Medical Research Laboratory, Pensacola, Fla.). *Aviation, Space, and Environmental Medicine*, vol. 51, Aug. 1980, p. 814-822. 8 refs. NASA Order T-3384-G.

Biomedical findings in the area of space motion sickness of the Skylab missions are reviewed and compared with the results of laboratory simulations. The motion sickness experiences of the three Skylab crews are related, and it is pointed out that of the nine astronauts, four were not sick at all, and of the five who were sick, only two vomited. In addition, it is noted that soon after recovery all five were immune in a provocative test based on the generation of cross-coupled angular accelerations while they executed head movements during rotation, in which they had manifested symptoms before the flight. Is is concluded that the findings indicate that susceptibility to motion sickness on earth is not a reliable predictor of susceptibility to motion sickness in orbit, and that free fall is a partial motion environment. Difficulties in dealing with motion sickness under operational conditions and the limitations of anti-motion sickness remedies are noted. A.L.W.

A80-48095 # **Noise-induced hearing loss and vestibular dysfunction.** W. J. Oosterveld, A. R. Polman, and J. Schoonheyt (KLM - Royal Dutch Airlines, Medical Dept.; Amsterdam, Universiteit, Amsterdam, Netherlands). *Aviation, Space, and Environmental Medicine*, vol. 51, Aug. 1980, p. 823-826. 43 refs.

In a group of 29 technicians of the maintenance department of Royal Dutch Airlines, all with an industrial type of hearing loss, the vestibular function was examined. From these 29 persons, 18 showed a spontaneous nystagmus and 24 had a positional nystagmus exceeding a velocity of 5 deg/s in three or more positions. A cervical nystagmus could be provoked in 17 subjects. In seven persons, the rotational test proved a nystagmus preponderance of more than 20%. A difference in excitability between the labyrinths of more than 20% appeared in seven cases. The tests for central vestibular disorders did not show pathology in any of the subjects. According to their hearing loss, the subjects were divided into four groups. There was no correlation between the grade of hearing loss and the vestibular function disturbance. An explanation can be sought in the adaptation capability of the vestibular system. All technicians showed pathology in one or more of the vestibular tests. This means that noise exposure not only damages the cochlea, but threatens the vestibular organs too. (Author)

A80-48096 # **Coincident loss of consciousness and ventricular tachycardia during +Gz stress.** J. E. Whinnery, M. H. Laughlin, and G. S. Uhl (USAF, School of Aerospace Medicine, Brooks AFB, Tex.). *Aviation, Space, and Environmental Medicine*, vol. 51, Aug. 1980, p. 827-831. 24 refs.

An episode of ventricular tachycardia coincident with loss of consciousness has been observed in an apparently healthy aircrewman during high +Gz training in a human centrifuge. The implications of these events to the balance of the sympathetic and parasympathetic branches of the autonomic nervous system and to the etiology of ventricular tachycardia are discussed. It is pointed out that the patient evidenced a high vagal (parasympathetic) tone attributed to a daily exercise program as well as an excessive amount of sympathetic input during testing, due to stress and loss of consciousness in agreement with the current understanding of the interaction of vagal and sympathetic stimulation in provoking ventricular tachycardia. The importance of identifying pilots at an increased risk of incapacitation under stressful flight conditions is emphasized. A.L.W.

A80-48137 **Man, aircraft and navigation systems - An evaluation for the 80s.** F. Sguerri (Aeronautica Militare, Rome, Italy). In: Man and navigation; Proceedings of the International Congress, Brighton, England, September 10-14, 1979. Volume 1. London, Royal Institute of Navigation, 1979, p. 186-196.

It is predicted that the 1980's will be a period of transition in air navigation. Advanced technologies will bring about a complete revolution in aircraft operations and in the pilot's traditional role. The role of microelectronics and navigation satellites in the 1980's is discussed. B.J.

A80-48518 **Velocity specificity of the flicker to pattern sensitivity ratio in human vision.** M. G. Harris (Bristol, University, Bristol, England). *Vision Research*, vol. 20, no. 8, 1980, p. 687-691. 14 refs.

Flicker and pattern sensitivities were compared for sine-wave gratings drifting at different rates. Relative sensitivity was found to be constant at each velocity, irrespective of spatial and temporal frequencies, and to vary monotonically with velocity. At velocities below 1 deg/sec, pattern sensitivity exceeded flicker sensitivity. At higher velocities the reverse was true. (Author)

A80-48519 **Wavelength difference limit for binocular color fusion.** M. Ikeda and Y. Nakashima (Tokyo Institute of Technology, Yokohama, Japan). *Vision Research*, vol. 20, no. 8, 1980, p. 693-697. 15 refs.

A80-48520 **Foveal and peripheral displacement thresholds as a function of stimulus luminance, line length and duration of movement.** C. A. Johnson and R. P. Scobey (California, University, Davis, Calif.). *Vision Research*, vol. 20, no. 8, 1980, p. 709-715. 17 refs. Grant No. NIH-EY-01495.

Displacement thresholds for moving line targets were determined in the fovea and periphery (18 deg eccentricity) as a function of duration of movement, line length and stimulus luminance. At both visual field locations, displacement thresholds were essentially constant for durations of movement between 5 and 500 msec. Longer durations of movement produced progressively higher displacement thresholds and greater response variability. Stimulus luminance and line length displayed little or no influence on foveal displacement thresholds. In contrast, peripheral displacement thresholds became significantly reduced as a function of both increasing line length and higher luminance values. Preliminary comparisons are drawn between the current psychophysical findings and retinal receptive field properties. (Author)

A80-48611 # **The effects of water-salt stresses on orthostatic test endurance under conditions of hypoxia (Vliianie vodno-solevykh nagruzok na perenosimost' ortostaticheskoi proby v usloviiakh gipoksii).** I. S. Balakhovskii, I. G. Dlusskaia, V. A. Karpusheva, P. Ia. Azhevskii, V. N. Poliakov, and V. K. Stepanov. *Fiziologiia Cheloveka*, vol. 6, July-Aug. 1980, p. 651-655. 8 refs. In Russian.

A80-48612 # **Changes in alpha activity during decreases in human operator work capacity (Izmeneniia al'fa-aktivnosti pri snizhenii rabotosposobnosti cheloveka-operatora).** L. A. Vlaskina, V. N. Dumbai, S. D. Medvedev, and G. L. Fel'dman (Rostovskii Gosudarstvennyi Universitet, Rostov-on-Don, USSR). *Fiziologiia Cheloveka*, vol. 6, July-Aug. 1980, p. 672-678. 18 refs. In Russian.

Changes in electroencephalographic alpha waves during decreases in work capacity brought on by fatigue and drowsiness are investigated. EEGs, reaction times and errors were measured for subjects engaged in a complex discrete tracking task, and the alpha index, amplitude, wave period, dispersion and phase relations were determined for periods before the task and during work at optimal and decreased capacity. Results of the analysis reveal decreases of work capacity to be accompanied by increases in the duration and dispersion of alpha waves and the phase shifts between alpha waves of different regions. The directions as well as the magnitudes of these changes in alpha wave patterns are considered to be useful in the assessment of operator conditions. A.L.W.

A80-48613 # **The effects of various regimes of work and rest following a 64-72 hour period of wakefulness on sleep dynamics (Vliianiia na dinamiku sna razlichnykh rezhimov truda i otdykha posle 64-72-chasovogo bodrstvovaniia).** A. N. Litsov. *Fiziologiia Cheloveka*, vol. 6, July-Aug. 1980, p. 686-694. 19 refs. In Russian.

A80-48614 # **The structure of oxygen debt in humans following prolonged hypokinesis (Struktura kislorodnogo dolga u cheloveka posle dlitel'noi gipokinezii).** B. S. Katkovskii and S. S. Kaniovskii. *Fiziologiia Cheloveka*, vol. 6, July-Aug. 1980, p. 695-700. 25 refs. In Russian.

The effects of a prolonged limitation of motor activity on total oxygen debt and its lactate and alactate components are investigated. Twenty healthy but poorly conditioned male subjects were put on a regimen of strict bed rest in an antiorthostatic position for a period of seven weeks, prior to and following which their physiological responses to bicycle ergometer stresses were measured. A graphical analysis of oxygen uptake and heart rate during exercise testing reveals that after 8 min of physical work at a level of 100 W, 19 of the subjects did not exhibit a lactate oxygen debt component prior to the bed rest period. Following hypokinesis, the lactate fraction is observed to increase in all subjects and the alactate fraction to decrease in most. It is concluded that the dynamics of the structure of oxygen debt following moderate exercise allow the evaluation of human conditioning. A.L.W.

A80-48615 # **Changes in the system of external respiration /respiration mechanics/ during cold adaptation (Izmeneniia v sisteme vneshnego dykhaniia /mekhaniki dykhaniia/ pri adaptatsii k kholodu).** I. V. Landysheva, V. F. Ushakov, and E. N. Ias'kov (Blagoveshchenskii Meditsinskii Institut, Blagoveshchensk, USSR). *Fiziologiia Cheloveka*, vol. 6, July-Aug. 1980, p. 701-706. 28 refs. In Russian.

A80-48796 # **Astronauts keep queuing up for Space Shuttle.** D. Dooling. *Astronautics and Aeronautics*, vol. 18, Sept. 1980, p. 24, 25, 72.

New guidelines in selection processes of crew members for the Space Shuttle are described. New astronauts selected in 1978 and 1980 outnumber other astronauts by two to one. Of the 26 remaining elders, only 9 have flight experience. Selection processes are different from those used in picking the original 7 in 1959. While NASA's physical standards have remained nearly the same, less stringent academic criteria have allowed men and women to mold their educations and careers to match the anticipated needs of the space program. The proposed numbers of annual flights by specific types of astronauts are outlined. NASA's new selection process for payload scientists in conjunction with the IWG is explained. Additional revised NASA regulations regarding the crew for the operational Space Shuttle are included. A.C.W.

A80-48949 * **A design tool for estimating passenger ride discomfort within complex ride environments.** J. D. Leatherwood, T. K. Dempsey, and S. A. Clevenson (NASA, Langley Research Center, Hampton, Va.). *Human Factors,* vol. 22, June 1980, p. 291-312. 31 refs.

A series of experimental studies utilizing approximately 2200 test subjects has led to the development of a general empirical model for the prediction of passenger ride discomfort in the presence of complex noise and vibration inputs. The ranges of vibration and noise stimuli used to derive the model included the amplitudes and frequencies that are known to most influence passenger comfort. The ride quality model accounts for the effects of combined axis vibrations (up to three axes simultaneously) and includes corrections for the effect of vibration duration and interior noise. Output of the model consists of an estimate of the passenger discomfort produced by a given noise and/or vibration environment. The discomfort estimate is measured along a continuous scale that spans the range from below discomfort threshold to values of discomfort that are far above discomfort threshold. (Author)

A80-48950 * **Response time effects of alerting tone and semantic context for synthesized voice cockpit warnings.** C. A. Simpson and D. H. Williams (Psycho-Linguistic Research Associates, Menlo Park, Calif.). *Human Factors,* vol. 22, June 1980, p. 319-330. 24 refs. Grants No. NGL-05-046-002; No. NGR-45-003-108.

Some handbooks and human factors design guides have recommended that a voice warning should be preceded by a tone to attract attention to the warning. As far as can be determined from a search of the literature, no experimental evidence supporting this exists. A fixed-base simulator flown by airline pilots was used to test the hypothesis that the total 'system-time' to respond to a synthesized voice cockpit warning would be longer when the message was preceded by a tone because the voice itself was expected to perform both the alerting and the information transfer functions. The simulation included realistic ATC radio voice communications, synthesized engine noise, cockpit conversation, and realistic flight routes. The effect of a tone before a voice warning was to lengthen response time; that is, responses were slower with an alerting tone. Lengthening the voice warning with another work, however, did not increase response time. (Author)

A80-49020 # **The effect of mountain conditions on work capacity and acclimatization times (Vliianie uslovii vysokogor'ia na rabotosposobnost' i sroki akklimatizatsii).** P. A. Pal'chikov, L. P. Pukach, and V. P. Uzhva. *Voenno-Meditsinskii Zhurnal,* June 1980, p. 51-53. In Russian.

Ninety-eight healthy males were tested for adaptation and physical work capacity in high-altitude conditions (3300-3600 meters above sea level). The criterion of work capacity and adaptation was the ability to withstand sufficiently intense physical loads without unfavorable symptoms. Data are presented on functional changes of the cardiovascular and respiratory systems. B.J.

A80-49021 # **Psychological features of the pilot's personality in the case of diseases of the gastrointestinal tract (Psikhologicheskie osobennosti lichnosti letchika pri zabolevaniiakh zheludochno-kishechnogo trakta).** N. F. Luk'ianova and E. N. Lobova. *Voenno-Meditsinskii Zhurnal,* June 1980, p. 54-57. 6 refs. In Russian.

A80-49022 **Implications of probability analysis on the strategy used for noninvasive detection of coronary artery disease.** S. E. Epstein (National Institutes of Health, National Heart, Lung and Blood Institute, Bethesda, Md.). *American Journal of Cardiology,* vol. 46, Sept. 1980, p. 491-499. 41 refs.

The implications of a pretest analysis of disease probability to noninvasive screening studies involving electrocardiographic exercise testing, radionuclide cineangiography and thallium perfusion scanning for the detection of coronary artery disease are reviewed. The consequences of Bayes' theorem, which states that a less than perfect test cannot be adequately interpreted without reference to the prevalence of the disease in the population under study, for exercise testing of symptomatic and asymptomatic patients are examined. Means for the determination of pretest probabilities of coronary artery disease in individual subjects, the likelihood of noninvasive screening studies resulting in useful information and the advisability of combinations of noninvasive studies to define more accurately the likelihood of coronary artery disease are then presented. A.L.W.

A80-49401 **On human response to prolonged repeated whole-body vibration.** H. Seidel, R. Bastek, D. Bräuer, Ch. Buchholz, A. Meister, A.-M. Metz, and R. Rothe (Zentralinstitut für Arbeitsmedizin, Berlin, East Germany). *Ergonomics,* vol. 23, Mar. 1980, p. 191-211. 43 refs.

The experiment was aimed at investigating human response to different doses of whole-body vibration (WBV), at checking adaptation to repeated exposures, at further evaluating the frequency weighting, and at examining the effect of a distinct interruption of prolonged exposure. Eight male seated subjects were exposed for 3 h to sinusoidal WBV in the z-axis with frequencies 4 Hz and 8 Hz, at a constant acceleration level of 1.0 m/sec per sec rms, each frequency being repeated four times on consecutive days. Transmissibility, impedance, bioelectrical activity of trunk muscles, postural sway, performance in vigilance tasks, and the subjectively assessed psychological state, efforts, and stress experienced in performing the tasks were investigated. The transmissibility decreased during exposure time at 4 Hz and increased at 8 Hz when a controlled posture was maintained. The power-spectral density distribution and amplitude of postural sway were affected by WBV, depending on both duration and frequency. Performance data and rating data exhibited decrements and adverse effects, being greater beyond the fatigue-decreased proficiency boundary (FDPB); adaptation and habituation were more pronounced at the FDPB dose. Generally, there were no cumulative effects. A pause for 20 min did not essentially affect the reactions investigated. (Author)

A80-49425 # **Paths of the origin of life (Puti vozniknoveniia zhizni).** A. I. Oparin. *Akademiia Nauk SSSR, Vestnik,* no. 6, 1980, p. 57-64. In Russian.

Various paths to the origin of life in the chemical and prebiological stages of evolution are discussed. Consideration is given to the abiotic formation of organic compounds on the primitive earth and in other regions of the universe, and it is pointed out that whether it was proteins or nucleic acids that evolved first, neither could have performed their present-day functions until the transition to biological evolution and the formation of phase-separated systems (probionts). Means for the study of these systems, which were capable of interactions with their environment, making use of energy and matter, growing, multiplying and undergoing natural selection, are examined, with attention given to the bubbles, microspheres, marigranules, liposomes and coacervate droplets created by investigators as models of the probionts. A.L.W.

A80-49849 **Temporal precision in circadian systems - A reliable neuronal clock from unreliable components.** J. T. Enright (California, University, La Jolla, Calif.). *Science,* vol. 209, Sept. 26, 1980, p. 1542-1545. 12 refs. NSF Grants No. GB-2469; No. GB-5471; No. GB-23949; No. GB-3750; No. PCM-77-19949.

It is proposed that mutual coupling among the less reliable component oscillators of an ensemble may explain the unusually high precision of the circadian rhythms of higher vertebrates. Consideration is given to the implications of ergodic theory for the frequency stability of coupled circadian oscillators, and an elementary model of relaxation-oscillator dynamics is invoked in an examination of the behavior of an idealized array of pacemakers triggered by reciprocal excitatory coupling in which all pacemakers have identical intrinsic frequency and each element has an equal opportunity to trigger the rest. It is shown that the improvements in temporal precision possible in such an array relative to single components are limited. However, if the resetting of the ensemble is evoked by an appreciable fraction of the pacemakers present, circadian precision can be derived from oscillators that are intrinsically sloppy. Such a system would require that the output of the individual components be summed, and that mutual triggering be mediated by a threshold. A.L.W.

A80-49868 **Irradiation of prolate spheroidal models of humans in the near field of a short electric dipole.** M. F. Iskander, P. W. Barber, C. H. Durney, and H. Massoudi (Utah, University, Salt Lake City, Utah). *IEEE Transactions on Microwave Theory and Techniques*, vol. MTT-28, July 1980, p. 801-807. 16 refs.

A80-49871 * **Clays in prebiological chemistry.** M. Rao, J. Oro (Houston, University, Houston, Tex.), and D. G. Odom (Cornell College, Mount Vernon, Iowa). *Journal of Molecular Evolution*, vol. 15, Aug. 1980, p. 317-331. 73 refs. Grant No. NGR-44-005-002.

The ways in which clays have been utilized in studies of prebiological chemistry are reviewed, and an assessment is given of the possible role of clays in prebiological systems. The adsorption of organic molecules on clays has been demonstrated, as has the synthesis of bioorganic monomers in the presence of clays. For instance, amino acids, purines and pyrimidines have been obtained from carbon monoxide and nitric acid in the presence of clays at relatively high temperatures (250-325 C). The oligomerization of biochemical monomers, mediated by clays, has also been shown to result in the formation of polymer molecules basic to life. Clays have also been found to affect the condensation of mononucleotides to oligonucleotides. S.S.

A80-49872 * **Studies of the chemical basis of the origin of protein synthesis - Initiation and direction of peptide growth.** D. W. Mullins, Jr. and J. C. Lacey, Jr. (Alabama, University, Birmingham, Ala.). *Journal of Molecular Evolution*, vol. 15, Aug. 1980, p. 339-345. 18 refs. Grant No. NGR-01-010-001.

The data presented in this paper show that the ease of nonenzymatic activation of carboxylic acids by ATP at pH 5 varies directly with the pKa of the carboxyl group, and is consistent with the idea that it is the protonated form of the carboxyl group which participates in the activation reaction. Consequently, since most N-blocked amino acids have higher pKas than do their unblocked forms, they are activated more readily, and it has been demonstrated that this principle applies to peptides as well, which are activated more rapidly than single amino acids. It is proposed that this fact may be partly responsible for the origin of two important features still observed in contemporary protein synthesis: (1) initiation in prokaryotes is accomplished with an N-blocked amino acid, and (2) elongation in all living systems occurs at the carboxyl end of the growing peptide. (Author)

A80-49873 * **Template-directed synthesis and selective adsorption of oligoadenylates in hydroxyapatite.** D. Gibbs, R. Lohrmann, and L. E. Orgel (Salk Institute for Biological Studies, San Diego, Calif.). *Journal of Molecular Evolution*, vol. 15, Aug. 1980, p. 347-354. 10 refs. Grants No. NIH-GM-13435; No. NGR-05-067-001.

Polyuridylic acid is adsorbed completely from aqueous solution by hydroxyapatite under conditions that permit template-directed synthesis of oligoadenylates in free solution. The yield of oligoadenylates is enhanced to almost the same extent by poly(U) in the presence or the absence of hydroxyapatite. Under very similar conditions small quantities of hydroxyapatite adsorb higher-molecular-weight oligoadenylates selectively from a mixture of oligomers. On the basis of these results a mechanism for prebiotic oligonucleotide formation is proposed in which selective adsorption on hydroxyapatite or some other immobilized anion-exchanging material plays a major role. Monomers are released from the surface for reactivation, while oligomers are retained in a protected environment by adsorption to the apatite surface. (Author)

A80-50051 **Life sciences and space research. Volume 18 - Proceedings of the Open Meeting of the Working Group on Space Biology, Bangalore, India, May 29-June 9, 1979.** Meeting sponsored by COSPAR. Edited by R. Holmquist (California, University, Berkeley, Calif.). Oxford and Elmsford, N.Y., Pergamon Press, 1980. 230 p. In English and French. $40.

The volume covers the following subjects: organic molecules in space, planetary research, early biological evolution, radiation biology, and gravitational biology. Papers are presented on the origin and chemistry of planets, on the possibility of life on Mars, the influence of life on the evolution of the atmosphere, the genetic effect of space hadrons on bacteriophage under alpine conditions, and physiological aspects of automatic physical training control by biofeedback in weightlessness. V.L.

A80-50056 **On the possibility of life on Mars.** A. A. Imshenetskii, B. G. Murzakov, M. D. Evdokimova, I. K. Dorofeeva, L. A. Kuziurina, and V. M. Iakshina (Akademiia Nauk SSSR, Institut Mikrobiologii, Moscow, USSR). In: Life sciences and space research. Volume 18 - Proceedings of the Open Meeting of the Working Group on Space Biology, Bangalore, India, May 29-June 9, 1979. Oxford and Elmsford, N.Y., Pergamon Press, 1980, p. 45-51. 14 refs.

It is possible to assume that there are hydrated iron oxides (of the limonite type) and frozen H2O2 on Mars based on studies carried out to explain the data collected by the Viking landers. Despite the strong biocidal effect of H2O2 on microorganisms, it also promotes the extraction of organic nutrients in chernozem (black earth), which are consumed by surviving microorganisms. The increase of CO2, along with a decrease of O2, is evidence for active metabolic processes of soil aerobic microorganisms in chernozem. Organisms stable to H2O2 action and capable of induced synthesis of catalase (which breaks down H2O2) may explain the increase of O2 in desert soil; this increase of O2 persists after adding nutrient medium to the desert soil, when an increase in CO2 is also observed. The addition of limonite seems to decrease the toxic effect of H2O2 on microorganisms. R.C.

A80-50057 **Description of an apparatus for studying micro-organisms in the upper atmosphere.** S. V. Lysenko, G. A. Kazakov (Akademiia Nauk SSSR, Institut Mikrobiologii, Moscow, USSR), and A. V. Fedynskii (Tsentral'naia Aerologicheskaia Observatoriia, Dolgoprudny, USSR). In: Life sciences and space research. Volume 18 - Proceedings of the Open Meeting of the Working Group on Space Biology, Bangalore, India, May 29-June 9, 1979. Oxford and Elmsford, N.Y., Pergamon Press, 1980, p. 53-58. 5 refs.

An apparatus and technique for measuring microorganisms at 52-83 km altitude with the aid of a special impactor mounted on the M-100B meteorological rocket are described. The results obtained in six successful launchings in the middle latitudes of the USSR are consistent with existent data on quantity and species of microorganisms at these altitudes. (Author)

A80-50058 **Further studies on the environmental capabilities of fungi - Interactions of salinity, ultraviolet irradiation, and temperature in Penicillium.** B. Z. Siegel and S. M. Siegel (Hawaii, University, Honolulu, Hawaii). In: Life sciences and space research. Volume 18 - Proceedings of the Open Meeting of the Working Group on Space Biology, Bangalore, India, May 29-June 9, 1979. Oxford and Elmsford, N.Y., Pergamon Press, 1980, p. 59-64. 10 refs.

A strain of Penicillium currently under study has revealed some unexpected features in response to salts and UV-radiation. These responses include: (a) stimulation of growth by one molar NaCl and

KCl at 23 but not at 5 C, (b) total inhibition by LiCl and RbCl at 5 but not at 23 C, (c) stimulation by 254 nm radiation (2 million erg/sq cm min, 30-90 minutes) at 23 and 5 C, and (d) very elevated growth rates at 23 after incubation at 5 C. (Author)

A80-50060 * The possible role of metal ions and clays in prebiotic chemistry. J. G. Lawless (NASA, Ames Research Center, Extraterrestrial Research Div., Moffett Field, Calif.) and E. H. Edelson (Southern California, University, Los Angeles, Calif.). In: Life sciences and space research. Volume 18 - Proceedings of the Open Meeting of the Working Group on Space Biology, Bangalore, India, May 29-June 9, 1979. Oxford and Elmsford, N.Y., Pergamon Press, 1980, p. 83-88. 17 refs.

Eight homoionic bentonites were prepared using alkali, alkaline earth, and transition metal ions as counterions. The interaction of the clays with 5'-AMP was studied and it was found that the alkali metal-substituted clays did not remove any nucleotide from dilute solution, and that zinc-bentonite adsorbed the most (98%). In addition, study of the interaction of seven other nucleotides with zinc-bentonite showed that the purine nucleotides were more strongly absorbed than the pyrimidine nucleotides. Langmuir isotherms were obtained for these systems and the adsorption data were explained by the adsorption coefficient and the accessibility of metal for binding. (Author)

A80-50061 The influence of life on the evolution of the atmosphere. J. C. G. Walker (Arecibo Observatory, Arecibo, P.R.). In: Life sciences and space research. Volume 18 - Proceedings of the Open Meeting of the Working Group on Space Biology, Bangalore, India, May 29-June 9, 1979. Oxford and Elmsford, N.Y., Pergamon Press, 1980, p. 89-100. 84 refs.

The early history of life on earth may have been characterized by coevolution of microbial metabolism and atmospheric composition. Metabolic developments affected the composition of the atmosphere, and the resulting changes in the atmosphere stimulated the evolution of new metabolic capabilities. The first organisms eked out an existence by deriving energy from the fermentation of organic compounds abiotically synthesized. The abiotic source was meager, however, and when autotrophy arose, life was freed from its dependence on abiotic synthesis. The expanded level of biological activity made possible by autotrophy resulted in an increased rate of burial of reduced organic matter in sea floor sediments. The resultant drain on the concentration of electron donors in the biosphere caused a decline in the hydrogen content of the atmosphere. Biological productivity was limited by the supply of reduced compounds. This paper explores the biogeochemical circulation of electron donors in the primitive anaerobic ocean, concluding that their shortage was so critical as to provide strong selective pressure for the evolution of algal photosynthesis. (Author)

A80-50062 * Early photosynthetic microorganisms and environmental evolution. S. Golubic (Boston University, Boston, Mass.). In: Life sciences and space research. Volume 18 - Proceedings of the Open Meeting of the Working Group on Space Biology, Bangalore, India, May 29-June 9, 1979. Oxford and Elmsford, N.Y., Pergamon Press, 1980, p. 101-107. 51 refs. NSF Grant No. GA-43391; Grant No. NsG-7588.

Microfossils which are preserved as shrivelled kerogenous residues provide little information about cellular organization and almost none about the metabolic properties of the organisms. The distinction between prokaryotic vs eukaryotic, and phototrophic vs chemo- and organotrophic fossil microorganisms rests entirely on morphological comparisons with recent counterparts. The residual nature of the microbial fossil record promotes the conclusion that it must be biased toward (a) most abundant organisms, (b) those most resistant to degradation, and (c) those inhabiting environments with high preservation potential e.g., stromatolites. These criteria support the cyanophyte identity of most Precambrian microbial fossils on the following grounds: (1) as primary producers they dominate prokaryotic communities in modern extreme environments, e.g., intertidal zone; (2) several morphological counterparts of modern cyanophytes and microbial fossils have been established based on structure, cell division patterns and degradation sequences. The impact of anaerobic and oxygenic microbial photosynthesis on the evolution of Precambrian environments is discussed. (Author)

A80-50063 * Lipids as a principle for the identification of Archaebacteria. T. G. Tornabene, R. E. Lloyd (Colorado State University, Fort Collins, Colo.), G. Holzer, and J. Oro (Houston, University, Houston, Tex.). In: Life sciences and space research. Volume 18 - Proceedings of the Open Meeting of the Working Group on Space Biology, Bangalore, India, May 29-June 9, 1979. Oxford and Elmsford, N.Y., Pergamon Press, 1980, p. 109-121. 39 refs. Contract No. EE-77-5-02-4478; Grant No. NGR-44-005-002.

The 'Archaebacteria' consist of several distinct subgroups including methanogens, extreme halophiles and specific thermoacidophiles. These bacteria are distinct from other bacteria with respect to their characteristic RNA compositions, the absence of muramic acid in the cell walls and the predominance of nonsaponifable lipids. The lipid composition of the Archaebacteria consists of isoprenoid and hydroisoprenoid hydrocarbons and isopranyl glycerol ether lipids. The pathways for the biosynthesis of the lipid components are those shared by most microorganisms and demonstrate a close relationship; however, an independent line of descent is indicated by the formation of the isopranyl glycerol ether lipids. This discontinuity formulates a point for delineating the early stages of biological evolution and for dividing bacteria into two subgroups. (Author)

A80-50065 * Late degeneration in rabbit tissues after irradiation by heavy ions. J. T. Lett, A. B. Cox, P. C. Keng, A. C. Lee, C. M. Su, and D. S. Bergtold (Colorado State University, Fort Collins, Colo.). In: Life sciences and space research. Volume 18 - Proceedings of the Open Meeting of the Working Group on Space Biology, Bangalore, India, May 29-June 9, 1979. Oxford and Elmsford, N.Y., Pergamon Press, 1980, p. 131-142. 10 refs. Research supported by the Department of Energy; Grants No. NsG-9045; No. NIH-AG-00005; No. NIH-CA-05450; No. NIH-CA-09236.

Results are presented for investigations of the late effects of heavy-ion irradiation on rabbit tissues which were undertaken to assess the hazards associated with the long-term exposure of humans to heavy ions in space during such activities as the construction of solar power stations or voyages to Mars. White rabbits approximately six weeks old were exposed to various doses of collimated beams of 400-MeV/n Ne ions, 570 MeV/n Ar ions and Co-60 gamma rays directed through both eyes, and the responses of the various tissues (hair follicles, skin, cornea, lens, retina, Harderian glands, bone and forebrain) were examined. Proliferating tissues are found to exhibit high damage levels in the early and late periods following irradiation, while terminally differentiating tissues repond to radiation most intensely in the late period, years after irradiation, with no intermediate recovery. The results obtained from rabbits are used to predict the occurrence of late tissue degeneration in the central nervous system, terminally differentiating systems and stem cells of humans one or more decades following exposure to radiation levels anticipated during long-duration space flights. The studies also indicate that tissues may be prematurely aged in the sense that tissue life spans may be shortened without the development of malignancies. A.L.W.

A80-50066 Predicted LET-spectra of HZE-particles for the Free Flyer Biostack Experiment on the Long Duration Exposure Facility mission. W. Heinrich (Seigen, Universitat, Seigen, West Germany). In: Life sciences and space research. Volume 18 - Proceedings of the Open Meeting of the Working Group on Space Biology, Bangalore, India, May 29-June 9, 1979. Oxford and Elmsford, N.Y., Pergamon Press, 1980, p. 143-152. 16 refs.

The LDEF (long duration exposure facility) mission, scheduled for a launch on the Space Shuttle in 1981, will fly for about 9 months in a near-earth orbit with an inclination angle of 28 deg. In this flight the Free Flyer Biostack Experiment has the objective of measuring the biological effects of individual heavy ions from cosmic radiation (HZE particles). This paper presents results of a calculation of LET-spectra in free space and within the absorber of the experiment. The calculation considers the geomagnetic shielding of the spacecraft against charged particles with low energies and the disintegration of the heavy ions within the absorbing material by fragmentation. For this mission the LET spectra turn out to differ from those of previous experiments. The steepness of the spectra changes significantly with LET and also with depth of absorber. (Author)

A80-50067 **A sclerocorneal electrode for the study of the characteristics of primate vision under condition of space flight.** Y. Grall, R. Dudragne, J. Keller, C. Menguy (Paris VII, Université, Paris, France), and C. Milhaud (Centre de Recherche de Médecine Aérospatiale, Paris, France). In: Life sciences and space research. Volume 18 - Proceedings of the Open Meeting of the Working Group on Space Biology, Bangalore, India, May 29-June 9, 1979. Oxford and Elmsford, N.Y., Pergamon Press, 1980, p. 153-157. 8 refs.

A sclerocorneal contact lens electrode has been developed to allow the recording of the electroretinographic responses of primates under space flight conditions. The lens includes a metallic electrode together with an optical fiber to produce a calibrated stimulus exactly at the surface of the pupil of the eye, and is part of a system consisting of a primate containing system, a stimulation system with colored filters, optical fibers and a recording system. Preliminary investigations have been performed to verify component performance and study system possibilities, and further investigations have shown the system to provide more sensitive, less noisy results than classical electrode systems. A data system has also been developed for the treatment of electroretinographic data. The optical fiber system also may permit the determination of thresholds for response to the variation of environmental conditions. A.L.W.

A80-50068 **Genetic effects of space hadrons on bacteriophage under Alpine conditions.** S. S. Iurov, G. A. Leont'eva, I. N. Kniazeva, E. G. Mozgovoi, A. M. Kuzin, I. G. Akoev (Akademiia Nauk SSSR, Institut Biologicheskoi Fiziki, Pushchino, USSR), and V. S. Belkin (Tadzhik Academy of Sciences, Dyushambe, Tadzhik SSR). In: Life sciences and space research. Volume 18 - Proceedings of the Open Meeting of the Working Group on Space Biology, Bangalore, India, May 29-June 9, 1979. Oxford and Elmsford, N.Y., Pergamon Press, 1980, p. 159-165. 8 refs.

A dried film culture of bacteriophage T4Br(+) was kept in a lead bioblock for 366 days under Alpine conditions at an altitude of 6100 m above sea level to study the genetic effect of space hadrons. In the gelatin-like film under study some film plots with markedly reduced bacteriophage survival were discovered. In such plots, the mutation frequency exceeded the spontaneous background mutation rate 60-100 times. The spectrum of r mutations as classified into standard groups rI, rII and rIII differred from that found for other model radiation systems such as gamma-ray radiation in buffer or nutrient broth, and hadron and HZE particle radiation under space flight conditions. (Author)

A80-50069 **Physiological aspects of automatic physical training control by biofeedback in weightlessness.** S. Baranski, L. Markiewicz, and Z. Sarol (Wojskowy Instytut Medycyny Lotniczej, Warsaw, Poland). In: Life sciences and space research. Volume 18 - Proceedings of the Open Meeting of the Working Group on Space Biology, Bangalore, India, May 29-June 9, 1979.
Oxford and Elmsford, N.Y., Pergamon Press, 1980, p. 169-173. 5 refs.

An automatically regulated biofeedback apparatus 'UN-1' is described for enabling astronauts to maintain specified levels of exercise or lower body negative pressure within acceptable limits of cardiac function. The apparatus was also used to assess the workload tolerance of cosmonauts during space flight. Under these conditions the cosmonaut was unable to exercise on the cycloergometer when his heart rate reached 140 beats/minute steady state. (Author)

A80-50070 **Physiological reactions during acute adaptation to reduced gravity.** E. B. Shulzhenko, R. A. Tigranian, V. E. Panfilov, and I. I. Bzhalava (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). In: Life sciences and space research. Volume 18 - Proceedings of the Open Meeting of the Working Group on Space Biology, Bangalore, India, May 29-June 9, 1979. Oxford and Elmsford, N.Y., Pergamon Press, 1980, p. 175-179. 9 refs.

Experiments were carried out on healthy volunteers exposed to a 7-day water immersion. The subjects were kept dry by use of a water proof, highly elastic cloth. During the experiment different cardiovascular, fluid-electrolyte and biochemical parameters were recorded. The experimental results suggest that the hypophyseal-adrenal system and renal function are closely coupled regulatory mechanisms for adaptive reactions of the cardiovascular system and for fluid-electrolyte metabolism during acute adaptation of the human body to reduced gravity. (Author)

A80-50071 **A preliminary study of vestibular equilibrium in primates under space flight conditions (Etude préliminaire de l'équilibre vestibulaire chez le primate dans les conditions de vol spatial).** M. Burgeat, D. Loth, C. Menguy, M. Toupet (Paris VII, Université, Paris, France), and P. C. Pesquies (Centre de Recherche de Médecine Aéronautique, Paris, France). In: Life sciences and space research. Volume 18 - Proceedings of the Open Meeting of the Working Group on Space Biology, Bangalore, India, May 29-June 9, 1979. Oxford and Elmsford, N.Y., Pergamon Press, 1980, p. 181-185. 8 refs. In French.

Preliminary studies concerning the application of a rotatory stimulation and vestibular response recording technique to be used with the proposed two-primate module for the investigation of the responses of monkeys to rotation under space flight conditions are presented. The technique involves the making of a classical electronystagmographic recording using conventional periocular surface electrodes during controlled oscillations and rotations in a rotating armchair. The technique has been found to give excellent results in determining vestibulo-ocular as well as optokinetic ocular responses in baboons, and a technique for calibrating the electrophysiological nystagmus response to the actual angular eye motion in the monkey has been developed based on the use of a television camera. Future plans include the use of implanted periocular electrodes and a head restraint system. A.L.W.

A80-50072 **Variations in the recombination rate of Drosophila melanogaster induced by balloon flight.** J. Proust, C. Prudhommeau (Paris XI, Université, Orsay, Essonne, France), M. C. Giess, and H. Planel (Toulouse III, Université, Toulouse, France). In: Life sciences and space research. Volume 18 - Proceedings of the Open Meeting of the Working Group on Space Biology, Bangalore, India, May 29-June 9, 1979. Oxford and Elmsford, N.Y., Pergamon Press, 1980, p. 187-191. 7 refs.

A80-50073 **Gravity and land plant evolution - Experimental induction of lignification by simulated hypergravity and water stress.** N. Chen, S. M. Siegel, and B. Z. Siegel (Hawaii, University, Honolulu, Hawaii). In: Life sciences and space research. Volume 18 - Proceedings of the Open Meeting of the Working Group on Space Biology, Bangalore, India, May 29-June 9, 1979.
Oxford and Elmsford, N.Y., Pergamon Press, 1980, p. 193-198. 17 refs.

A80-50074 **Biological studies of Chlorella pyrenoidosa /strain LARG-1/ cultures grown under space flight conditions.** V. A. Kordium, A. L. Mashinskii (Ukrainian Academy of Sciences, Institute of Molecular Biology and Genetics, Kiev, Ukrainian SSR), E. Ia. Shepelev, G. I. Meleshko (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR), I. Setlik

(Ceskoslovenska Akademie Ved, Mikrobiologicky Ustav, Trebon, Czechoslovakia), E. L. Kordium, K. M. Sytnik, A. F. Popova (Ukrainian Academy of Sciences, Institute of Botany, Kiev, Ukrainian SSR), N. P. Dubinin, and E. N. Vaulina (Akademiia Nauk SSSR, Institut Obshchei Genetiki, Moscow, USSR). In: Life sciences and space research. Volume 18 - Proceedings of the Open Meeting of the Working Group on Space Biology, Bangalore, India, May 29-June 9, 1979. Oxford and Elmsford, N.Y., Pergamon Press, 1980, p. 199-204. 5 refs.

The paper reports data from an electron microscopic analysis of Chlorella pyrenoidosa (LARG-1) cultures after five days of growth in the dark on a semiliquid mineral/glucose medium in the IFS-2 device on board the Soyuz 27-Salyut 6-Soyuz 28 orbital research complex (Soviet-Czechoslovak experiment 'Chlorella-1'). For a space flight of five days duration the ultrastructural cellular organization of the flight and control cultures were similar. This testifies to normal cell function. (Author)

A80-50075 **Development of higher fungi under weightlessness.** T. B. Kasatkina, G. G. Zharikova, A. B. Rubin, L. R. Palmbakh, E. N. Vaulina, and A. L. Mashinskii (Moskovskii Gosudarstvennyi Universitet; Akademiia Nauk SSSR, Institut Obshchei Genetiki, Moscow, USSR). In: Life sciences and space research. Volume 18 - Proceedings of the Open Meeting of the Working Group on Space Biology, Bangalore, India, May 29-June 9, 1979. Oxford and Elmsford, N.Y., Pergamon Press, 1980, p. 205-211. 5 refs.

The development of Polyporus brumalis basidomycete cultures, both in the dark and in the light, was studied in the 17-day experiment on the orbital station Salyut 5 and in the 20-day experiment on the orbital station Salyut 6. In the first experiment the test tube cultures were exposed to weightlessness beginning from the stage of the fruiting body primordium. In the second experiment the culture was exposed in large containers at the stage of mycelium growth. In the first experiment fruiting bodies that had formed in light had stems and caps approximating the appearance and anatomical structure of the control culture. The fruiting bodies and caps were oriented towards the light. Some structural changes in the hymenophore were observed. Fruiting bodies developed in the dark had twisted stems and no caps. In the second experiment no fruiting bodies were formed in the dark. Light-optical and electron-microscopic studies of Polyporus brumalis growth under weightlessness were carried out. (Author)

A80-50076 **Growth and cell structure of Proteus vulgaris when cultivated in weightlessness in the Cytos apparatus.** V. A. Kordium, A. L. Mashinskii, V. G. Man'ko, V. G. Babskii (Ukrainian Academy of Sciences, Institute of Molecular Biology and Genetics, Kiev, Ukrainian SSR), K. M. Sytnik, E. L. Kordium, O. P. Bochagova (Ukrainian Academy of Sciences, Institute of Botany, Kiev, Ukrainian SSR), Iu. L. Nefedov, V. I. Kozharinov (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR), and G. M. Grechko. In: Life sciences and space research. Volume 18 - Proceedings of the Open Meeting of the Working Group on Space Biology, Bangalore, India, May 29-June 9, 1979. Oxford and Elmsford, N.Y., Pergamon Press, 1980, p. 213-218. 7 refs.

Growth data and electron-microscopic analyses are presented for Proteus vulgaris cultures which were grown during space flight in polyethylene packets in a semisolid medium with Tryptose for 96 h. In the suboptimal culture conditions the growth and morphological characteristics of the flight and ground control variants were nearly identical, but it was possible to detect a number of differences between the cellular ultrastructure of these variants. These differences testify to changes in the bacterial cell metabolism during space flight. (Author)

A80-50101 **Joint Committee on Aviation Pathology, Scientific Session, 11th, U.S. Naval Academy, Annapolis, Md., September 5-8, 1978, Proceedings.** *Aviation, Space, and Environmental Medicine*, vol. 51, Sept. 1980. 126 p.

Papers are presented concerning the types of pathologies encountered in aviation. Specific topics include the effects of alcohol on body heat loss, acceleration forces on human subjects, the analysis of tissues for thiazide diuretics, the organization of pathologic identification in mass disasters, blood group determination from teeth, a technique for the identification of crash hazards in army aircraft, the significance of asymptomatic atherosclerotic occlusive vascular disease in the evaluation of aircrew members and the mechanism of extremity injuries during ejection from F-4 aircraft. A.L.W.

A80-50102 **The effect of alcohol on body heat loss.** S. D. Livingstone, L. A. Kuehn, R. E. Limmer, and B. Weatherson (Defence and Civil Institute of Environmental Medicine, Downsview, Ontario, Canada). *(Joint Committee on Aviation Pathology, Scientific Session, 11th, Annapolis, Md., Sept. 5-8, 1978.) Aviation, Space, and Environmental Medicine*, vol. 51, Sept. 1980, p. 961-964. 15 refs.

The effect of the ingestion of alcohol on cooling in seminude human subjects was examined at 25 and 30 C in air; in heavily clothed individuals at -23 C in air; and nude subjects in a water calorimeter at 25 C. It was observed that consumption of the equivalent of five bar whiskey drinks did not affect the cooling rate of subjects as measured by infrared techniques or by thermistors. Total heat loss, measured in the calorimeter, was also not affected by drinking alcohol. It is concluded that the ingestion of alcohol does not cause an increase in cooling rate in humans. (Author)

A80-50103 **Acceleration forces on the human subject.** V. M. Voge (U.S. Naval Material Command, Naval Air Development Center, Warminster, Pa.). *(Joint Committee on Aviation Pathology, Scientific Session, 11th, Annapolis, Md., Sept. 5-8, 1978.) Aviation, Space, and Environmental Medicine*, vol. 51, Sept. 1980, p. 970-980. 171 refs.

An overall view of the methodology of acceleration research, i.e. G-tolerance measuring devices and the peculiarities of each, general information on G tolerance and types of G stress, the methods of determining G tolerance, and the methods of modifying one's G tolerance, is presented. Some human factors aspects of G tolerance, as well as some physiologic changes under G, i.e., ECG changes, cardiac problems, and various other biochemical and hematological alterations, are discussed. Special emphasis is placed on the proven G-associated cardiac pathology found in various animal models, and its possible application to the human subject. (Author)

A80-50104 **Investigation of life change as a contributing factor in aircraft accidents - A prospectus.** N. H. Haakonson (Department of National Defence, Directorate of Preventive Medicine, Ottawa, Canada). *(Joint Committee on Aviation Pathology, Scientific Session, 11th, Annapolis, Md., Sept. 5-8, 1978.) Aviation, Space, and Environmental Medicine*, vol. 51, Sept. 1980, p. 981-988. 28 refs.

A personal perspective on attempts to reduce aircraft accidents resulting from human failure in the cockpit is presented. The premise is that accidents result from an imbalance between performance ability and performance demand. Advances in decreasing pilot-induced accidents must come from methods that will prevent the stresses that diminish performance ability. It is suggested that the investigation of life change as a contributing factor in aircraft accidents will be fruitful because of the tremendous amount of research that has already been done in this field. A review of previous work leads to three recommendations: the Recent Life Change Questionnaire (RLCQ) should be developed as a tool for management and individual aircrew; a character assurance program should be adopted; and a technique to remove accident-prone individuals should be developed. (Author)

A80-50105 **Tissue analysis for thiazide diuretics.** R. A. Merriken (U.S. Armed Forces Institute of Pathology, Washington, D.C.). *(Joint Committee on Aviation Pathology, Scientific Session, 11th, Annapolis, Md., Sept. 5-8, 1978.) Aviation, Space, and*

Environmental Medicine, vol. 51, Sept. 1980, p. 996-998. 15 refs.

A practical method is presented for the extraction and analysis of benzothiadiazide diuretics (thiazides) which are used by pilots to control hypertension, in tissue samples. The method involves the extraction of the acid drug from a tissue homogenate, followed by an initial screening with the sensitive but nonspecific diazo colorimetric test, and then identification and confirmation by thin-layer chromatography and gas-liquid chromatography. Quantitation is performed by derivatizing the thiazide and injecting it on the gas-liquid chromatograph. A.L.W.

A80-50106 **An organizational concept for pathologic identification in mass disasters.** R. R. McMeekin (U.S. Armed Forces Institute of Pathology, Washington, D.C.). *(Joint Committe on Aviation Pathology, Scientific Session, 11th, Annapolis, Md., Sept. 5-8, 1978.) Aviation, Space, and Environmental Medicine*, vol. 51, Sept. 1980, p. 999-1003. 5 refs.

The concept used by the Armed Forces Institute of Pathology for the organization of the procedures involved in the identification of the casualities of a mass disaster is presented. The identification process is divided into four distinct phases: (1) the preliminary evaluation of the location and nature of the disaster, the number of casualties and the availability of resources for identification; (2) the collection of data, including antemortem records, body locations at the time of the disaster, and photographic, radiological, fingerprint, dental and pathological data; (3) data analysis by the methods of spotting obvious identities, correlating classes of victims and records, and identification by exclusion; and (4) conclusion and confirmation. It is noted that the organization of the process leads to greater efficiency and accuracy. A.L.W.

A80-50107 **Role of radiology in aviation accident investigation.** J. E. Lichtenstein, J. E. Madewell, R. R. McMeekin, D. S. Feigin, and J. H. Wolcott (U.S. Armed Forces Institute of Pathology, Washington, D.C.). *(Joint Committee on Aviation Pathology, Scientific Session, 11th, Annapolis, Md., Sept. 5-8, 1978.) Aviation, Space, and Environmental Medicine*, vol. 51. Sept. 1980, p. 1004-1014. 25 refs.

Radiographic screening of fatality victims for skeletal detail, dental and surgical artifacts, personal effects, and foreign bodies is of established value. Radiography as the primary means of positive victim identification, through comparison with antemortem films and records, is an important new role. Data on sources of injury and relationships between victims and the crash environment may be derived from radiographic injury patterns and may be correlated with mechanisms of injury production. The result of such analysis is improved safety design. Such radiography poses unique technical and logistical problems, often involving temporary or remote facilities, which must be solved with consideration for privacy and safety. Advance planning is essential for maximum benefit from radiographic investigation. (Author)

A80-50108 **Dental identification in fatal aircraft accidents.** I. R. Hill (RAF, Institute of Pathology, Aylesbury, Bucks., England). *(Joint Committee on Aviation Pathology, Scientific Session, 11th, Annapolis, Md., Sept. 5-8, 1978.) Aviation, Space, and Environmental Medicine*, vol. 51, Sept. 1980, p. 1021-1025. 5 refs.

A80-50109 **Blood group determination from teeth.** A. G. Higginson and I. R. Hill (RAF, Institute of Pathology and Tropical Medicine, Aylesbury, Bucks., England). *(Joint Committee on Aviation Pathology, Scientific Session, 11th, Annapolis, Md., Sept. 5-8, 1978.) Aviation, Space, and Environmental Medicine*, vol. 51, Sept. 1980, p. 1026-1029.

The blood groups of 18 individuals were determined from the dental pulp of extracted teeth, using a microelution technique. This method of identification has obvious implications for forensic science and aerospace pathology because of the individuality of blood groups. (Author)

A80-50111 **Summary of the means used to positively identify the American victims in the Canary Islands crash.** J. H. Wolcott and C. A. Hanson (U.S. Armed Forces Institute of Pathology, Washington, D.C.). *(Joint Committee on Aviation Pathology, Scientific Session, 11th, Annapolis, Md., Sept. 5-8, 1978.) Aviation, Space, and Environmental Medicine*, vol. 51, Sept. 1980, p. 1034, 1035.

A80-50114 **Physical standards for high-performance fighter aircraft pilots.** J. R. Hickman, J. H. Triebwasser, and M. C. Lancaster (USAF, School of Aerospace Medicine, Brooks AFB, Tex.). *(Joint Committee on Aviation Pathology, Scientific Session, 11th, Annapolis, Md., Sept. 5-8. 1978.) Aviation, Space, and Environmental Medicine*, vol. 51, Sept. 1980, p. 1052-1056.

The new generation of high-performance aircraft has clearly emphasized man's physiological limitations to withstand sustained high G loading. The selection and retention standards required to function in this environment have not been completely defined. This paper presents a format of standards and screening tests, placing special emphasis on the detection of subclinical disease, particularly coronary artery disease. Cases which illustrate the spectrum of asymptomatic coronary disease are presented. Other entities discussed include conduction defects, mild valvular lesions, arrhythmias, and degenerative joint disease of the spine. An overall approach based on age, screening milestones, and specialized tests is presented. Finally, a data repository on all pilots with chronic high G exposure is discussed. (Author)

A80-50115 **Coronary heart disease - An expensive Air Force problem.** R. M. DeHart (USAF, Medical Service Center, Brooks AFB, Tex.). *(Joint Committee on Aviation Pathology, Scientific Session, 11th, Annapolis, Md., Sept. 5-8, 1978.) Aviation, Space, and Environmental Medicine*, vol. 51, Sept. 1980, p. 1057-1063. 26 refs.

Coronary heart disease is a major public health problem and a leading cause of death and disability in Air Force personnel. The paper discusses what is known about the cause of this serious disease and various means for its prevention in the 20% of the 30,000 Air Force pilots who may have a significant degree of coronary atherosclerosis. It is pointed out that although the basic mechanisms leading to the development of coronary heart disease are not fully understood, it appears to be a multifactorial condition, and risk factors associated with the development of the disease are indicated. Programs undertaken by HEW and the Air Force to identify, educate and treat those at high risk are discussed, and the costs, benefits, risks, sensitivity and predictive value of available tests to detect coronary heart disease in asymptomatic individuals are outlined. A.L.W.

A80-50116 **Asymptomatic atherosclerotic occlusive vascular disease - Its significance in the evaluation of aircrew members.** C. J. Buckley, L. G. Manning, and J. W. Hallett, Jr. (USAF, Medical Center, Lackland AFB, Tex.). *(Joint Committee on Aviation Pathology, Scientific Session, 11th, Annapolis, Md., Sept. 5-8, 1978.) Aviation, Space, and Environmental Medicine*, vol. 51, Sept. 1980, p. 1064-1068. 17 refs.

During the past 5 years, seven active aircrew members have been referred to the Vascular Surgery Unit for evaluation of previously asymptomatic lower extremity claudication or cerebrovascular symptoms identified during treadmill exercise testing for abnormal electrocardiograms noted on periodic flying physical evaluations. Noninvasive vascular evaluation included pre- and postexercise lower extremity segmental blood pressures, Doppler Ultrasonic Velocity Detector supraorbital cerebrovascular screen, carotid phonoangiography, and oculoplethysmography. Four of those evaluated showed evidence of moderately severe aorto-iliac occlusive disease. More importantly, three also showed evidence of significant extracranial occlusive cerebrovascular disease and two pilots were found to have asymptomatic total occlusions of one internal carotid artery. It is recommended that noninvasive diagnostic techniques for evaluation of the peripheral arterial system be added to complement the evaluation of those aircrew members suspected of having atherosclerotic coronary arterial disease. (Author)

A80-50119 # **Hemodynamic effects of extreme positive pressure breathing using a two-pressure flying suit.** U. I. Balldin (Forsvarets Forskningsanstalt, Linkoping, Sweden) and B. Wranne (University Hospital, Linkoping, Sweden). *Aviation, Space, and Environmental Medicine*, vol. 51, Sept. 1980, p. 851-855. 20 refs. Research supported by the County Council of Ostergotland and Swedish National Association against Heart and Chest Diseases.

The central hemodynamics during extreme positive pressure breathing (PPB) with 4.0-9.3 kPa breathing pressures using a two-pressure flying suit was studied with the thermodilution technique. Pressures measured simultaneously in right atrium, pulmonary artery, and systemic circulation increased in proportion to, but somewhat less than, the breathing pressures. A decreased transmural right atrial and pulmonary arterial pressure was found during PPB to be most pronounced during simultaneous counterpressure to the thorax. Stroke volume (SV) as well as cardiac output (CO) decreased successively during PPB, mostly during PPB with more than 4 kPa. Simultaneous counterpressure to the thorax added no further hemodynamic effects. During recovery after PPB, a marked compensatory increase in SV and CO was registered. An increased systemic blood pressure and heart frequency was found at all levels of PPB, suggesting that PPB may be of value to increase G tolerance. (Author)

A80-50120 * # **Multiple sensory and motor cues enhance the accuracy of pursuit eye movements.** J. A. Mather and J. R. Lackner (Brandeis University, Waltham, Mass.). *Aviation, Space, and Environmental Medicine*, vol. 51, Sept. 1980, p. 856-859. 14 refs. Contract No. NAS9-15147.

Oculomotor pursuit can be elicited by moving visual, tactile, proprioceptive, and occasionally auditory targets presented singly. Both the accuracy and amount of pursuit are enhanced if the position of the target is specified by cues from several sensory modalities. When the motion of the target is topologically related to movements of the subject's arm, the subject's eyes are more closely phase-locked with the target and reversals of the eyes generally precede target reversal by 10-20 ma. (Author)

A80-50121 # **A questionnaire study of psychological background factors in U.S. Navy aircraft accidents.** R. A. Alkov and M. S. Borowsky (U.S. Naval Safety Center, Norfolk, Va.). *Aviation, Space, and Environmental Medicine*, vol. 51, Sept. 1980, p. 860-863. 12 refs.

A questionnaire concerning life changes, personality factors, and judgmental and leadership qualities of U.S. Naval aircrewmembers involved in aircraft accidents was sent to investigating flight surgeons during 1977-78. The responses were divided into two groups: those who were causally involved in accidents and those who were not. In order to cross-validate the results, data were collected and analyzed during 1979. Results indicate that aircrewmembers in the process of deciding about staying in the service are more likely to fall into the causally involved group. So were those who had trouble with interpersonal relationships, had no sense of humor or humility concerning themselves, were immature, or had recently lost a friend or family member through death. (Author)

A80-50122 # **Tap water, an efficient method for cooling heatstroke victims - A model in dogs.** A. Magazanik, Y. Epstein, R. Udassin, Y. Shapiro, and E. Sohar (Chaim Sheba Medical Center, Ramat-Gan; Tel Aviv University, Tel Aviv, Israel). *Aviation, Space, and Environmental Medicine*, vol. 51, Sept. 1980, p. 864-866. 17 refs.

Forty experimentally heatstroked dogs were cooled by immersion in water at temperatures varying from 1-25 C. At all water temperatures, cooling occurred at a much slower rate in comatose dogs than in conscious ones. Dogs cooled in tap water (15-16 C) had the same cooling rate as those cooled in ice water (1-3 C). At water temperatures above 18 C, cooling rates were considerably decreased. Since tap water cooled as efficiently as ice water, its use may prove the method of choice for human heatstroke victims. Its advantages are ready availability, simplicity of use, and its failure to cause shivering. (Author)

A80-50123 # **Equiperception maneuvers.** H. Jaslow (Gould, Inc., Simulation Systems Div., Melville, N.Y.). *Aviation, Space, and Environmental Medicine*, vol. 51, Sept. 1980, p. 867-871. 5 refs.

Based on a study of the physical mechanism of the utricular otolith, equiperception maneuvers are quantitatively defined. Analytic expressions are presented along with examples of different aircraft dynamic states having the same perceived sensation. Equiperception maneuvers are particularly important for investigating aircraft accidents where pilot misjudgment may be caused by confusing one aircraft maneuver for another (e.g., errors in approach angle or climb angle). Equiperception maneuvers are also important for motion simulation in aircraft trainers. (Author)

A80-50124 # **The Environmental Symptoms Questionnaire - Revisions and new field data.** J. B. Sampson and J. L. Kobrick (U.S. Army, Research Institute of Environmental Medicine, Natick, Mass.). *Aviation, Space, and Environmental Medicine*, vol. 51, Sept. 1980, p. 872-877. 6 refs.

The Environmental Symptoms Questionnaire (ESQ) was developed to obtain information about the incidence and severity of symptoms produced by exposure to several different climatic conditions. A subsequent revision is reported here, along with a description of its use in two studies involving physical stresses frequently encountered by military personnel. The first study examined the effects of prolonged flight on the health and physical work performance of man assigned to an overseas station. The second study tested the effects of acute altitude exposure on the load-carrying capacity of men over a period of several days. Five independent symptom factors were identified in the data of the first study, and then were applied to the analyses of treatments of both studies. The factor scores exhibited predictable and meaningful data in both cases. The factors are described, results are compared to previous studies, and general recommendations for use of the questionnaire are made. (Author)

A80-50125 # **Pulmonary and symptom threshold effects of ozone in airline passenger and cockpit crew surrogates.** M. T. Lategola, C. E. Melton, and E. A. Higgins (FAA, Civil Aeromedical Institute, Oklahoma City, Okla.). *Aviation, Space, and Environmental Medicine*, vol. 51, Sept. 1980, p. 878-884. 14 refs.

Previous studies showed that the ozone concentration for pulmonary and symptom threshold effects in flight attendant surrogates lies between 0.20 and 0.30 ppmv for a 3-h exposure with intermittent treadmill exercise at 1829 m (MSL) simulated cabin altitude. In the present study of sedentary occupants of the in-flight airline cabin, the same protocol was used except for omitting all treadmill exercise. Symptoms were assessed with a standardized questionnaire. Pulmonary function was assessed using standardized quantitative spirometry. Male smoker and nonsmoker airline passenger and cockpit crew surrogates 40-59 years of age were used. Small but statistically significant displacements occurred in symptoms and in some spirometry parameters. In general, the younger subjects appeared more sensitive to ozone than the older subjects. No significant differences appeared between smokers' and nonsmokers' responses to ozone exposure. It is concluded that the ozone threshold of these sedentary surrogates under these experimental conditions is right at 0.30 ppmv. (Author)

A80-50126 # **The importance of ammonia in the metabolic effects of hydrazine.** W. N. Floyd, Jr. (Texas Medical Center, Houston, Tex.). *Aviation, Space, and Environmental Medicine*, vol. 51, Sept. 1980, p. 899-901. 7 refs.

Acute exposure to hydrazine (N2H4), mol wt 32.05, an important liquid rocket propellant and parent compound of useful pharmaceutical agents such as isoniazid and hydralazine and other chemical compounds, produces severe central nervous system effects, such as coma and convulsions sometimes resulting in death. Heretofore, treatment has been symptomatic, e.g., quick-acting barbiturates for convulsions. The results of this study emphasize the importance of acute ammonia intoxication as a major component of the metabolic effects of hydrazine. Further, the results support the theory of competitive inhibition of ammonia by hydrazine. (Author)

A80-50127 * # **Femur-bending properties as influenced by gravity. IV - Limits after high and low weight-bearing.** C. C. Wunder, C. M. Tipton (Iowa, University, Iowa City, Iowa), and K. M. Cook (Coe College, Cedar Rapids, Iowa). *Aviation, Space, and Environmental Medicine*, vol. 51, Sept. 1980, p. 902-907. 10 refs. Grants No. NIH-HL-2124503; No. NGR-16-001-031.

Gravity enhances femur growth as measured in terms of strength, but shows little or even a growth-retarding effect in terms of relative brittleness, defined as the inverse of ultimate or tolerable strain. Chronic weightlessness was simulated by harness suspension or by extrapolation of results from 3-g centrifugation. Experimental results from 45 male, white rats (34-520 d old) were compared to 72 control or baseline rats (28-520 d old) with correction for age and size differences. After suspension, the youngest rats showed subnormal tolerable strains. Combined results, however, although predicting 19 + or - 1% below normal strength, after a week of weightlessness, predicted less effect (1 + or - 4%) for the tolerable strain. (Author)

A80-50128 # **Effects of different body positions on the Eustachian tube function in the selection of airmen.** P. Groth and O. Tjernstrom (Lund, Universitet, Malmo General Hospital, Malmo, Sweden). *Aviation, Space, and Environmental Medicine*, vol. 51, Sept. 1980, p. 913-917. 18 refs. Research supported by the Forsvarets Forskningsanstalt. FOA Project H-352.

The Eustachian tube function of 52 applicants accepted for flight training had earlier been comprehensively tested during simulated flights in a pressure chamber in the sitting position. Despite the fact that all were otologically healthy, the wide range of pressure-equilibrating capacity in the sitting position was even more pronounced when they were retested in recumbency, and in every type of test the pressure-equilibrating capacity was reduced. For instance, 17% of the recumbent subjects could not equilibrate at all during simulated descent as compared to 8% in the sitting position; 81% of the ears were Toynbee positive in the sitting position and only 69% in recumbency. The advantages of the recumbent compared to the seated test position are discussed. (Author)

A80-50129 * # **Emergency medicine and the airline passenger.** S. R. Mohler (Wright State University, Dayton, Ohio), A. Nicogossian (NASA, Life Sciences Div., Washington, D.C.), and R. A. Margulies (U.S. Navy, Naval Submarine Medical Research Laboratory, Groton, Conn.). *Aviation, Space, and Environmental Medicine*, vol. 51, Sept. 1980, p. 918-922. 7 refs.

Problems related to immediate medical care in case of in-flight emergencies are discussed with reference to such critical types of medical emergencies as obstructed airway, cardiac dysfunction, trauma, hemorrhage, hypoxia, and pain. It is shown that training flight attendants to deal with in-flight medical emergencies and to use first-aid support equipment and essential and useful drugs may later help with stabilization of a victim and allow continuing the flight to the scheduled destination without the need for a diverted landing. Among the steps suggested in order to upgrade inflight welfare and safety of passengers are the development of an advisory circular by the FAA covering standardized training for flight attendants, regulatory action requiring upgrading of the present rudimentary first-aid kit, and the enactment of Good Samaritan legislation by the U.S. Government. V.L.

A80-50130 # **Pilot study on the value of a beta-blocking drug in initial helicopter training.** E. Donaldson, J. Grant-Thomson, P. Morwood, N. O'Connor, and R. Tippett (Royal Australian Army, Army Aviation Centre, Oakey, Queensland, Australia). *Aviation, Space, and Environmental Medicine*, vol. 51, Sept. 1980, p. 926-929. 25 refs.

The effect on performance of a standard dose of a beta-blocking drug was examined in a controlled test situation closely approximating actual flying training conditions and involving helicopter flying skills. Pindolol or a placebo was administered 90 min before a test flight and the flying and hovering performance of five students was assessed by qualified flying instructors. No significant difference was found between assigned performance ratings of test drug flights and placebo flights. It could not be concluded that a beta-blocking drug would improve the hovering performance of ab initio helicopter trainee pilots. (Author)

A80-50131 # **Incidence of complications from coronary angiography in 463 USAF aviators.** M. M. Thomas, V. F. Froelicher, G. D. Tolan, and R. J. Fuchs (USAF, School of Aerospace Medicine, Brooks AFB, Tex.). *Aviation, Space, and Environmental Medicine*, vol. 51, Sept. 1980, p. 930-936. 39 refs.

Over 600 fliers have had coronary angiography at the USAF School of Aerospace Medicine since 1971. This paper concerns the incidence of complications, long- and short-term, on the first 463. Information on short-term complications was compiled from computerized data storage and included all 463 patients. Mean age of patients was 40.5 with a range of 22-57 years. Information about long-term complications was obtained from 357 respondents to a three-page questionnaire (77% return rate). Most frequent indication for angiography was on an abnormal treadmill stress test, and more than 90% of the patients were asymptomatic. There was no short-term mortality. Nine individuals reported some residual complaints involving the hand, but had no job or physical activity limitation from the procedure. The local arterial complications were more frequent with brachial cutdown than with the femoral percutaneous approach, but the difference in frequency was not statistically significant. (Author)

A80-50196 **Man-machine interaction in aerospace control systems.** D. R. Towill (University of Wales Institute of Science and Technology, Cardiff, Wales). *(Institution of Electronic and Radio Engineers, Colloquium on Design of Control Systems for Advanced Aircraft Having Relaxed or Negative Stability, London, England, Oct. 16, 1979.) Radio and Electronic Engineer*, vol. 50, Sept. 1980, p. 447-458. 39 refs.

Man-machine system concepts are discussed, along with dynamic properties of the machine and typical human operator transfer functions. It is shown how microelectronics can be used to reduce human operator workload, via such techniques as plant augmentation, display quickening, providing a model reference describing the current plant dynamics, and fast models for prediction in terminal-phase docking operations. V.T.

A80-50221 **Design concepts of survival suits for cold water immersion and their thermal protection performance.** J. S. Hayward (Victoria, University, Victoria, British Columbia, Canada). *SAFE Journal*, vol. 10, Fall 1980, p. 8-10.

Twenty-three different survival suits for cold water immersion, comprising the major types available for military and industrial users, were assembled for assessment of their relative thermal protection performance. Changes in rectal and skin temperatures were measured on subjects wearing the suits while immersed for 2-3 hours in ocean water of 11.8 C. The diversity of suits were able to be broadly categorized into three major design concepts: dry, with foam (DF); dry, without foam (D); and wet, with foam (WF). Control immersions with no survival suit worn (C) were also conducted for the 20 experimental subjects. Excepting 4 special cases, each design-concept was distinctive in the level of thermal protection afforded by its representative suits, with a rank order from most to least protection being DF, WF, D, and C in the approximate quantitative proportions of 7, 4, 2, and 1, respectively. These results provide a comprehensive overview of the relative thermal protection qualities of the diversity of survival suits available. (Author)

A80-50222 **F/A-18 foot strikes - An update.** E. R. Winkler and G. L. Johnson (McDonnell Douglas Corp., St. Louis, Mo.). *SAFE Journal*, vol. 10, Fall 1980, p. 11-14. 5 refs.

Early analysis and testing of the F-18 Escape System indicated that there was a probability of foot contact with the instrument panel during ejection. Two studies were accomplished to examine this problem. The first was initiated to determine if this contact would be injurious. Although the results indicated that the forces and motions involved would probably not be injurious, this could not be proven conclusively. The second study used a biodynamic computer model to evaluate three possible methods to eliminate the impact. The design of 'Toe Guides' was developed during this study. The Toe Guide is a passive device attached to the rudder pedal which controls the foot trajectory to eliminate impact during escape. The design has been successfully tested with human subjects on the ejection tower at NADC and is being incorporated in the F/A-18 aircraft. (Author)

A80-50249 **The sensing of retinal motion.** W. C. Gogel (California, University, Santa Barbara, Calif.). *Perception and Psychophysics*, vol. 28, no. 2, Aug. 1980, p. 155-163. 10 refs. NSF Grant No. BNS-77-16620.

The apparent relative motion of physically stationary objects that frequently occurs as the head is moved in a frontoparallel plane is almost always in the direction expected from the projection into the distal world of the relative motion of the images on the eye. It is hypothesized that this is the result of the perceptual underestimation of the depth between the objects. If a perceptual overestimation of the depth were produced, it was predicted that the apparent relative motion would be in a direction opposite to that expected from the projection of the retinal motions. This prediction was tested using the binocular disparity cue to produce perceptual overestimation of the slant (depth) of a luminous line. In this case, perceived slant was the indicator of perceived depth, and perceived rotation concomitant with the motion of the head was the indicator of perceived relative motion. The results support the prediction and also provide some support for a theoretically derived equation specifying the relation between these two perceptual variables. (Author)

A80-50267 **An analysis of human reliability measures in visual inspection.** S. L. Johnson (GM Institute, Flint, Mich.) and D. J. Funke (Calspan Corp., Buffalo, N.Y.). *Journal of Quality Technology*, vol. 12, Apr. 1980, p. 71-74. 10 refs.

One of the weakest links in establishing a quality control system is the lack of information about the efficiency of the visual inspector. This paper examines the advantages and disadvantages of several human performance measures that can be used in evaluating visual inspection effectiveness. B.J.

A80-50279 # **Preparation for long-duration flights (Podgotovka k dlitel'nym poletam)** [illegible]. *Aviatsiia i Kosmonavtika*, Aug. 1980, p. 36, 37. In [illegible]

The preparation of ast[illegible] longed space flight is discussed. Particular attention is given to the development of training and flight-activity criteria for the astronauts. B.J.

A80-50322 * **A microprocessor-based instrument for neural pulse wave analysis.** G. K. Kojima (NASA, Ames Research Center, Moffett Field, Calif.) and F. Bracchi (Milano, Università, Milan, Italy). *IEEE Transactions on Biomedical Engineering*, vol. BME-27, Sept. 1980, p. 515-519. 12 refs.

A80-50331 # **Significance of the heart factor in manifestations of the initial insufficiency of cerebral blood circulation in pilots (Znachenie kardial'nogo faktora v proiavlenii nachal'noi nedostatochnosti tserebral'nogo krovoobrashcheniia u letchikov).** B. I. Parmenov-Trifilov, L. I. Starikov, V. P. Kudin, and E. P. Skrylev. *Voenno-Meditsinskii Zhurnal*, July 1980, p. 53-56. In Russian.

A80-50353 **Sensations of heaviness in man.** S. C. Gandevia. New South Wales, University, Doctor of Philosophy Thesis, 1978. 222 p. 327 refs.

The neural mechanisms involved in the perception of exerted muscular force and the heaviness of lifted objects are investigated. Results of experiments in which the relative heaviness of objects was determined subjectively in the presence of different forms of muscle weakness are presented which suggest that humans normally rely on the magnitude of voluntary, centrally generated motor commands in the judgement of the heaviness of a lifted object. Perceived heaviness is then used in investigations of the magnitudes of motor commands in the presence of peripheral inputs. Anesthetization by the paralysis of joint and skin afferents is used to determine the contribution of reflex assistance to muscle force and the perception of heaviness. A.L.W.

A80-50354 **Living without oxygen: Closed and open systems in hypoxia tolerance.** P. W. Hochachka (British Columbia, University, Vancouver, Canada). Research supported by the Natural Sciences and Engineering Research Council of Canada. Cambridge, Mass., Harvard University Press, 1980. 190 p. 104 refs. $17.50.

Mechanisms of temporary adaptation to anaerobic conditions employed by the most successful animal anaerobes are surveyed in order to serve as a basis for assessing factors which may be adjusted in extending the tolerance of organisms to anoxia or hypoxia. Following a review of adaptation strategies employed by most organisms and the metabolic resources available to them, consideration is given to the cellular (closed-system) mechanisms of CO2 fixation by the parasitic helminths, the coupling of glucose and amino acid catabolism in bivalve mollusks, and coupled glucose and arginine metabolism in cephalopods. The key elements of anaerobic glycolysis used by verterbrates are examined, and the integration of aerobic and anaerobic glycolysis is discussed. Attention is then given to open-system (tissue and organ) adaptation mechanisms in hypoxia-adapted fish, air-breathing fish, and diving marine mammals. A.L.W.

A80-50563 # **Methods of continuum mechanics in investigations of respiration and blood circulation (Metody mekhaniki sploshnykh sred v issledovanii dykhaniia i krovoobrashcheniia).** S. S. Grigorian. In: Current problems of theoretical and applied mechanics; All-Union Conference, 4th, Kiev, Ukrainian SSR, May 21-28, 1976, Transactions. Kiev, Izdatel'stvo Naukova Dumka, 1978, p. 258-288. 27 refs. In Russian.

Current trends of biological hydrodynamics are briefly reviewed. Factual data on the conditions of blood and air motion in the cardiovascular and respiratory systems are examined and are applied to the classification of biomechanical problems associated with the analysis of the cardiovascular and respiratory systems and their elements. Some diagnostic problems which generate new hydrodynamic problems are examined. V.P.

A80-50577 # **The relationship between pulse count and energy expenditure at sub maximal work under different ambient temperatures.** A. K. Sengupta, D. N. Sarkar, S. Mukhopadhyay, and D. C. Goswami (Field Laboratory, Tezpur, India). *Defence Science Journal*, vol. 29, Oct. 1979, p. 173-1[illegible]6. 10 refs.

A80-50629 **Orthostatic tolerance testing - Comparison of LBNP and HUT methods.** J. R. Hordinsky, U. Gebhardt, H.-J. Borger, and J. Birk (Deutsche Forschungs- und Versuchsanstalt fur Luft- und Raumfahrt, Institut fur Flugmedizin, Bonn, West Germany). *Zeitschrift fur Flugwissenschaften und Weltraumforschung*, vol. 4, July-Aug. 1980, p. 194-201. 24 refs.

A comparison of lower body negative pressure (LBNP) and head-up tilting (HUT) methods is presented for orthostatic tolerance testing. Three tests, the stand test, LBNP test, and HUT test are conducted on human beings in order to determine the expected blood pressure and heart rate changes, and cardiovascular changes with different LBNP levels and HUT angles. The variability of LBNP and HUT results led to a comparison of different length LBNP protocols against a standard tilt protocol. The experiment used six males and six females utilizing (1) a table-mounted plexiglas cylinder with a rubber ring used to limit negative pressure and level of the interior iliac crests (for LBNP test) and (2) a parachute harness for support (for HUB test). Results on comparisons of male-female orthostatic response and presyncopal events are presented. C.F.W.

A80-50703 Biological limits of temperature and pressure. R. Y. Morita (Oregon State University, Corvallis, Ore.). *(College Park Colloquium on Chemical Evolution: Limits of Life, 4th, College Park, Md., Oct. 18-20, 1978.) Origins of Life*, vol. 10, Sept. 1980, p. 215-222. 57 refs.

Evidence for upper and lower limits on the temperatures and pressures at which terrestrial organisms can survive and/or grow is presented. Organisms are pointed out which have been discovered growing at temperatures greater than 90 C, at 0 C or lower, at temperatures of 40 C and high salinities, at temperatures of 104 C and pressures of 1000 atm, at altitudes greater than 3000 m at 0 C, and in the deep sea environment at temperatures of 4 C and pressures of 700 atm. It is noted that the low metabolic rates of some of these organisms, which make their growth difficult to detect, may represent adaptations to their extreme environments and may have been characteristic of early forms of life. A.L.W.

A80-50704 * Endolithic microbial life in hot and cold deserts. E. I. Friedmann (Florida State University, Tallahassee, Fla.). *(College Park Colloquium on Chemical Evolution: Limits of Life, 4th, College Park, Md., Oct. 18-20, 1978.) Origins of Life*, vol. 10, Sept. 1980, p. 223-235. 11 refs. NSF Grants No. DPP-76-1551; No. DPP-77-21858; Grant No. NsG-7337.

Endolithic microorganisms (those living inside rocks) occur in hot and cold deserts and exist under extreme environmental conditions. These conditions are discussed on a comparative basis. Quantitative estimates of biomass are comparable in hot and cold deserts. Despite the obvious differences between the hot and cold desert environment, survival strategies show some common features. These endolithic organisms are able to 'switch' rapidly their metabolic activities on and off in response to changes in the environment. Conditions in hot deserts impose a more severe environmental stress on the organisms than in the cold Antarctic desert. This is reflected in the composition of the microbial flora which in hot desert rocks consist entirely of prokaryotic microorganisms, while under cold desert conditions eukaryotes predominate. (Author)

A80-50706 Optical activity and evolution. M. M. Khasanov and G. P. Gladyshev (Akademiia Nauk SSSR, Institut Khimicheskoi Fiziki, Moscow, USSR). *Origins of Life*, vol. 10, Sept. 1980, p. 247-254. 13 refs.

It is noted that the chemical reactions occurring in rarefied cosmic clouds (molecular concentration less than approximately 100/cu cm) differ from similar laboratory reactions by the much greater effect on the outcome of external force fields. In this light it is hypothesized that the synthesis of optically active substances may occur in outer space under the conjoint stereospecific effect of a magnetic and other molecule-orienting field. It is further conjectured that the optically active substances of the solar system had been produced in the course of its formation out of the primal rarefied cloud. (Author)

A80-50707 * Experiments on the amplification of optical activity. N. E. Blair and W. A. Bonner (Stanford University, Stanford, Calif.). *Origins of Life*, vol. 10, Sept. 1980, p. 255-263. 38 refs. Grant No. NGL-05-020-582.

Chemical mechanisms for the amplification of small, abiotically produced enantiomeric excesses leading to the complete stereo specificity of all biochemical reactions observed in the present-day biosphere are investigated quantitatively. Partial copolymerization of a mixture of R- and S-leucine or R- and S-valine N-carboxy anhydrides containing a known excess of one enantiomer was induced and the enantiomeric composition of the resulting oligomer was analyzed by gas chromatography. It is found that the 50% polymerization of leucine mixtures having excesses of 8 to 70% of either enantiomer leads to a significant enhancement of the enantiomeric excess of the polymer, accompanied by a corresponding decrease in the enantiomeric excess of the unpolymerized residue. On the other hand, 25-50% polymerization of valine mixtures is observed to result in polymers showing a decreased enantiomeric excess relative to the starting mixture and corresponding increases in those of the residue. Results of the leucine polymerization are interpreted as supporting the theory of steric interactions between the monomer and the helical structure of the polymer leading to the enrichment of one enantiomer, and possible mechanisms for the reverse stereospecificity observed in valine are discussed. A.L.W.

A80-50708 On the antisymmetry of the amino acid code table. M. Hasegawa (Ministry of Education, Institute of Statistical Mathematics, Tokyo, Japan) and T. Miyata (Kyushu University, Fukuoka, Japan). *Origins of Life*, vol. 10, Sept. 1980, p. 265-270. 28 refs.

Antisymmetry of the amino acid code table in terms of codon degeneracy is pointed out, and it is related to a physico-chemical problem of codon-anticodon interaction energy. A strong negative correlation between molecular weight of an amino acid and its codon degeneracy is pointed out, and its implication to the origin of the amino acid code table is discussed. Finally, an earlier form of the amino acid code table is proposed. (Author)

A80-50709 Possible role of RNA-dependent DNA-polymerase in early stages of evolution. R. Balasubramanian and P. Seetharamulu (Madras, University, Madras, India). *Origins of Life*, vol. 10, Sept. 1980, p. 271-275. 37 refs.

The tDNA cistrons have permuted sequences of triplets corresponding to anticodons in tRNA at specific regions in their sequences. Reverse transcription is invoked for the generation of such sequences in the genome during early stages of evolution. Making the assumption that a single tDNA cistron in a genome might have come into existance by an accident after transcription, tRNA is expected to fold into a three-dimensional shape analogous to the contemporary tRNA, where the anticodon triplet bases are sticking out well-exposed to chemical mutagens. The mutated tRNAs would have been reverse-transcribed into the genome by crude analogs of now-known reverse-transcriptases. The back and forth process of transcription and reverse transcription would give rise to all the tDNA cistrons with the required anticodons. This process may act as an important feedback mechanism for the efficient progress of evolution. (Author)

A80-50710 Facilitated diffusion as a method for selective accumulation of materials from the primordial oceans by a lipid-vesicle protocell. W. Stillwell (Indiana University; Purdue University, Indianapolis, Ind.). *Origins of Life*, vol. 10, Sept. 1980, p. 277-292. 69 refs.

A model is proposed for the selective accumulation of amino acids, sugars, nucleotides, cations and protons from the primordial oceans into a lipid vesicle type of protocell. The model is built on facilitated diffusion using simple, primordial, lipid-soluble carriers. The advantages a lipid vesicle protocell would have had over the other potential types of protocells are discussed. (Author)

A80-50711 Effect of polynucleotides and a basic protein on the condensation of phenylalanyl adenylate. M. Ishigami, N. Tonotsuka-Ohta, K. Nagano (Jichi Medical School, Minamikawachi, Tochigi, Japan), and M. Kinjo (Utsunomiya University, Utsunomiya, Japan). *Origins of Life*, vol. 10, Sept. 1980, p. 293-299. 16 refs.

The effect of polyuridylate and of histone on the oligomerization of phenylalanyl adenylate was tested. Polyuridylate which pairs with adenine under suitable conditions showed no effect. Histone increased the rate of the polymerization whereas a neutral protein, albumin, had no effect. Simultaneous presence of nucleotides diminished the effect of histone. The implication of these results on the prebiotic polypeptide formation is discussed. (Author)

A80-50712 **Is aluminum an essential element for life.** V. Valkovic (Institut Rudjer Boskovic, Zagreb, Yugoslavia). *Origins of Life,* vol. 10, Sept. 1980, p. 301-305. 7 refs. Research supported by the Robert A. Welch Foundation; NSF Grant No. PL-480.

On the basis of abundance considerations, it is argued that aluminum is an element essential for life. Elemental abundances in the solar system and in cosmic rays are examined, and small values in the proportions Li, Be and B, which are not essential for life, are pointed out. It is shown that the elements essential to life in large quantities are the most abundant elements in the solar system and that, with the exception of aluminum, those that make up a secondary solar system abundance peak are essential to life in trace amounts. It is thus suggested that if the chemical compositions of living organisms reflect to some extent the composition of the environment in which they evolved, and since aluminum has been found to be sufficiently abundant in the media in which life evolved, aluminum may be essential to life. A.L.W.

A80-50912 **Automatic contouring for two-dimensional echocardiography.** R. E. Jenkins and J. B. Garrison (Johns Hopkins University, Laurel, Md.). *Johns Hopkins APL Technical Digest,* vol. 1, Apr.-June 1980, p. 139-143. Research supported by the W. W. Smith Charitable Trust.

Real-time phased-array two-dimensional ultrasonic echocardiographic systems have been developed recently. They provide a noninvasive technique that defines the geometry and dynamics of cardiac structure (e.g., the walls of the heat chambers) and allows the rapid collection of image data on cardiac structure and function. These systems are immediately useful for visually diagnosing numerous cardiac disorders. In addition, their output contains subtle information on several regional cardiac performance parameters, such as variations in the rate of change of cardiac dimensions. B.J.

A80-51000 **Device for mass measurement under zero-gravity conditions.** V. A. Sarychev, V. V. Sazonov, A. Zlatorunskii, S. F. Khlopina, A. D. Egorov, and V. I. Somov (Intercosmos Council, Moscow, USSR). *(International Astronautical Federation, International Astronautical Congress, 30th, Munich, West Germany, Sept. 17-22, 1979.) Acta Astronautica,* vol. 7, June 1980, p. 719-730.

The problem considered in this paper is the investigation of the properties of a mass-meter, i.e. the device for determining the mass of cosmonaut's body under zero-gravity conditions. The estimates of accuracy of mass measurement by this device are given, and the results of measuring the masses of cosmonauts' bodies on the Salyut 5 and 6 orbital stations are presented. (Author)

A PARABOLOIDAL FLOW CYTOMETER FOR IMPROVED FLUORESCENCE ANALYSIS OF SINGLE CELLS Ph.D. Thesis
Mary Jane Skogen Hagenson 1980 161 p
Avail: Univ. Microfilms Order No. 8019634

A flow cytometer featuring a paraboloidal flow chamber for optical collection was designed to improve fluorescence analysis of single cells. The improvement is achieved by increasing the fluorescence collection efficiency permitting measurement of weakly fluorescent particles and by improving fluorescent intensity resolution, thereby making it possible to differentiate cells with smaller differences in fluorescence intensity. The paraboloidal flow system was evaluated with standard spheres, mouse testicular cells and nuclei, and weakly fluorescent cells. It was demonstrated that the paraboloid: (1) improves fluorescence intensity resolution relative to orthogonal systems by nearly 20% for standard particles and round spermatid nuclei; (2) increases the fluorescence signal to noise ratio, allowing measurement of fluorescence which was not resolved from background noise in orthogonal systems; and (3) is relatively insensitive to particle orientation with respect to illumination and collection optics. Dissert. Abstr.

The effects of hypergravitational fields on the thermoregulatory system of the rat are examined. The question underlying the investigation was whether the response of the rat to the one hour cold exposure depends only upon the amplitude of the hypergravic field during the period of cold exposure or whether the response is also dependent on the amplitude and duration of the hypergravic field prior to cold exposure. One hour of cold exposure applied over the last hour of either a 1, 4, 7, 13, 19, 25, or 37 hr period of 3G evoked a decrease in core temperature (T sub c) of about 3 C. However, when rats were subjected concurrently to cold and acceleration following 8 days at 3G, they exhibited a smaller fall in T sub c, suggesting partial recovery of the acceleration induced impairment of temperature regulation. In another series of experiments, the gravitational field profile was changed in amplitude in 3 different ways. Despite the different gravitational field profiles used prior to cold, the magnitude of the fall in T sub c over the 1 hr period of cold exposure was the same in all cases. These results suggest that the thermoregulatory impairment has a rapid onset, is a manifestation of an ongoing effect of hypergravity, and is not dependent upon the prior G profile. M.G.

THE EFFECT OF PHYSICAL CONDITIONING ON +Gz TOLERANCE Ph.D. Thesis
William Lewis Epperson 1980 86 p
Avail: Univ. Microfilms Order No. 8018968

The influence of physical conditioning on tolerance to a centrifugation profile of alternating 15 second plateaus at 4.5 and 7.0 +Gz--called Simulated Aerial Combat Maneuvering (SACM)--was determined using 24 young men as subjects. These subjects were assigned to groups as controls (C) (no physical training), runners (R), and weight trainers (W), and followed a 12 week protocol of specified physical training. Tolerance to centrifugation, maximum oxygen consumption, muscle strength, and body composition were periodically determined. The +Gz tolerance of the runners and controls increased at an average rate of 4 seconds per week during the course of the experiment. The weight trainers increased their G tolerance at an average rate of 15 seconds per week. Fatigue scores indicate that group W subjects take longer to reach a given level of fatigue than did the subjects of the other groups. It appears therefore that a physical conditioning program of weight training will improve human tolerance to repeated and prolonged exposure to high +Gz loads. Dissert. Abstr.

AN INVESTIGATION OF CARDIAC THRESHOLD VARIABILITY RELATIVE TO STIMULUS SHAPE AND RESPIRATORY CYCLE Ph.D. Thesis
Leonid Hrebien 1980 168 p
Avail: Univ. Microfilms Order No. 8019351

To study threshold relative to stimulus shape, energy strength duration relationships were determined for three different stimulating waveforms: the standard rectangular, the sawtooth (ramp), and the exponential. Stimulus threshold energies were determined at pulse durations ranging from 0.4 to 3.0 milliseconds for each waveform and the results were plotted as energy strength duration curves. It was found that threshold energy requirements for sawtooth stimuli were 3-27% lower than for standard rectangular stimuli at the same pulse widths. Also, exponential stimuli showed energy reductions of 2-30% from the rectangular stimuli. Threshold determinations were made once a minute for 20 to 30 minutes using rectangular pulses, 1 millisecond in duration. It was found that threshold energies varied as much as 37% above the mean to 19% below the mean value for the 20-30 minute run of the experiment. It was found that during certain portions of the respiration cycle pacemaker pulses of a given amplitude would elicit cardiac response whereas these same pulses failed to pace during other phases of the breathing cycle. Dissert. Abstr.

TOPOGRAPHICAL SIMULATION OF THE BLOOD VESSELS OF THE HUMAN BULBAR CONJUNCTIVA AND APPLICATION TO PRESSURE-FLOW RELATIONSHIPS Ph.D. Thesis
Bruce Miles Fenton 1980 175 p
Avail: Univ. Microfilms Order No. 8018778

A preliminary study was performed in which length of conjunctival vessels per unit area tissue (vascular density) was measured for two categories of patients: diabetics and nondiabetics. It was assumed that the conjunctiva represents a nonspecialized tissue whose microcirculatory network, in the presence of chronic disease, in some way reflects a generalized trend manifest to a varying degree in other vascular beds. Specifically, it was demonstrated that there were significant differences in length per unit area values between diabetic and nondiabetic cohorts. In addition, age was seen to exert a dramatic influence on overall vascularity. In order to more fully explore the influence of these quantitative variations on blood-tissue exchange properties of the system, a much more detailed type of analysis was required, namely a complete topographical mapping of the conjunctival vasculature. By applying an approach developed by the geomorphological sciences, it was shown that changes in vessel lengths, numbers, and diameters could be related to order number by applying three basic mathematical relationships. Dissert. Abstr.

ANALYSIS OF HUMAN AUDITORY BRAINSTEM RESPONSES FOR COMPLEX STIMULI Ph.D. Thesis
Paul Joseph Ainslie 1980 207 p
Avail: Univ. Microfilms Order No. 8020148

The results of the application of an analysis technique to separate responses of the auditory brainstem responses (ABRS) are reported for three types of complex click stimuli: monaural clicks with contralateral masking noise, monaural click trains of 1 to 4 clicks with interclick times of 2 to 61.5 msec, and binaural clicks with interaural time delays of 0 to 7 msec of interaural intensity differences of 0 to 30 dB. Responses recorded for monaural clicks without and with contralateral broadband masking noise were combined to estimate a masking effect waveform. The derived waveform resembled an ABR for direct monaural stimulation at 35 dB lower stimulus magnitude. Control experiments showed this derived masking effect waveform to be due to acoustic crosstalk evoking an ABR in the ear contralateral to the monaurally stimulated ear. Responses for monaural click train stimuli were analyzed by deriving a waveform estimating the response to each click of the click train. These derived responses showed little change after the response to the third click. Responses to binaural stimuli were obtained and compared to the sum of the responses for the constituent monaural stimuli. Dissert. Abstr.

INTRODUCTION TO ELECTROCHEMISTRY OF NERVE MEMBRANES

Ichiji Tasaki Mar. 1980 695 p refs
(PB80-178908; NIMH-80/03) Avail: NTIS HC A99/MF A01 CSCL 06P

The evolution of physiology of nerve fibers is linked closely with that of electrochemistry. Experimental facts known at the present time are described and interpreted on the basis of present level of understanding of morphology, biochemistry and physical chemistry. Old theories are also discussed in detail for the experimental basis of those theories are still meaningful. The volume is written primarily for students of biology and medicine who are interested in the properties of nerve fibers. GRA

INSTRUMENT SCANNING AND CONTROLLING: USING EYE MOVEMENT DATA TO UNDERSTAND PILOT BEHAVIOR AND STRATEGIES Final Report

A. O. Dick Washington, D.C. NASA Sep. 1980 89 p refs
(Contract NAS1-14793)
(NASA-CR-3306; BRAG-TR-79-2) Avail: NTIS HC A05/MF A01 CSCL 05I

Eye movement data and other parameters including instrument readings, aircraft state and position variables, and control maneuvers were recorded while pilots flew ILS simulations in a B 737. The experiment itself employed seven airline pilots, each of whom flew approximately 40 approach/landing sequences. The simulator was equipped with a night visual scene but the scene was fogged out down to approximately 60 meters (200 ft). The instrument scanning appeared to follow aircraft parameters not physical position of instruments. One important implication of the results is: pilots look for categories or packets of information. Control inputs were tabulated according to throttle, wheel position, column, and pitch trim changes. Three seconds of eye movements before and after the control input were then obtained. Analysis of the eye movement data for the controlling periods showed clear patterns. The results suggest a set of miniscan patterns which are used according to the specific details of the situation. A model is developed which integrates scanning and controlling. Differentiations are made between monitoring and controlling scans. R.K.G.

THE PSYCHOMOTOR PERFORMANCE OF MEN AND WOMEN WEARING TWO TYPES OF BODY ARMOR

Carolyn K. Bensel, Darrell S. Fink, and Sirvart A. Mellian Mar. 1980 115 p refs
(DA Proj. 1L1-62723-AH-98; DA Proj. 1G4-64713-DL-42)
(AD-A086742; NATICK/CEMEL-195; NATICK/TR-80/014) Avail: NTIS HC A06/MF A01 CSCL 19/4

This study was conducted to determine the effects of load carrying equipment (LCE) and two types of fragmentation protective armor vests, Standard B Fragmentation Protective Body Armor (STD B) and the Personnel Armor System for Ground Troops (PASGT), on body flexibility, rate of movement, psychomotor coordination, manual dexterity, and effort exerted for task performance. Twelve men and twelve women, outfitted in utilities, performed the battery of 16 tasks under each of the following clothing conditions: utilities alone, STD B armor, PASGT armor, LCE, STD B armor - LCE, and PASGT armor - LCE. In general, performance levels were highest when the utilities were worn without any additional items and lowest when the STD B vest was worn in conjunction with the LCE. The STD B armor impaired certain aspects of psychomotor performance, particularly body flexibility, to a greater extent than the PASGT vest did. The collar and shoulder designs seemed to be the critical features responsible for the superior performance achieved with the PASGT vest. After the data had been transformed to remove effects accounted for by difference in the basic capabilities of men and women, two tasks which required arm movements were found to be significantly affected by the sex variable. The woman's performance of these movements was impaired relative to the men's because of the excessive length of the armor across the women's shoulders. GRA

HUMAN OPERATOR INTERFACE WITH FLIR DISPLAYS Final Report, Jun. 1977 - Sep. 1979

Larry G. Goble, L. G. Williams, P. D. Pratt, J. Wald, G. Rubin, and T. Hanson Wright-Patterson AFB, Ohio AMRL Mar. 1980 251 p refs
(AD-A086284; Doc-79SRC54; AMRL-TR-79-114) Avail: NTIS HC A12/MF A01 CSCL 17/5

This report presents an extensive review of factors which limit performance of forward-looking infrared (FLIR) systems. Two critical variables of system performance, modulation transfer function (MTF) and noise equivalent delta temperature (NE delta T), were chosen for further experimental analysis. The experiment used a digital simulation of minimum resolvable temperature (MRT) paradigm to test two modeled FLIR systems. Detection and recognition data were collected for two targets (four-bar and square) in trials with varying levels of size, contrast, noise, and MTF. The test results were compared with the NVL predictive model(Ratches, et al., 1975) used to evaluate FLIR system performance. GRA

AN INVESTIGATION OF THE DUAL TASK PERFORMANCE RELATIONSHIP TO HEMISPHERIC SPECIALIZATION Interim Report
Christopher D. Wickens and Diane Lynn Sandry Jun. 1980 41 p refs
(Contract N00014-79-C-0658; NR Proj. 196-158)
(AD-A086808; EPL-80-1/ONR-80-1) Avail: NTIS HC A03/MF A01 CSCL 05/10

The efficiency of dual task performance may be influenced by a number of variables such as the level of practice of the individual, the difficulty of the task, and the particular processing resources or capacities for which the two tasks compete. The current research investigates the relation between the capacities employed in two tasks--a verbal processing resource inferred to reside in the left cerebral hemisphere, and a spatial resource in the right--and the controlling hand. Specifically a condition of task-hemispheric integrity is defined when the processing and responding of each task is carried out in a single cerebral hemisphere. In the experiment, this condition occurs when a tracking task, inferred to be spatial right-hemispheric in its processing is controlled with the left hand, while a Sternberg memory search Reaction Time task with the letter stimuli, inferred to be verbal left-hemispheric, is responded to with the right hand. A 'mixture' condition is created with the opposite hand assignment, so that each hemisphere processes the information associated with one task, while responding to the other (i.e., Sternberg Task-left hand, Tracking-right). DIFFERENTIALLY WEIGHTING LINEAR MODELS OF BEHAVIOR: AN EMPIRICAL COMPARISON OF SIX METHODS
Charles K. Parsons (Georgia Inst. of Technology, Atlanta) and Charles L. Hulin Jun. 1980 35 p refs Sponsored in part by Illinois National Guard
(Contract N00014-75-C-0904; NR Proj. 170-802)
(AD-A086876; TR-80-4) Avail: NTIS HC A03/MF A01 CSCL 12/1

Six methods of estimating regression weights for a linear model of behavior were compared in 51 samples of National Guardsmen. Ordinary least squares, Bayesian m-group regression, ridge regression, equal weighting, and two related methods were used. Weights were estimated in one-half of each sample and then applied to data in the other half. Ratios of observations to predictors ranged from 4:1 to 19:1. Cross validation R sq was used as the index of model or equation stability. Results support earlier findings that least squares weights are relatively unstable in small samples, but do not indicate the superiority of any one other method. Future research and implications for using these regression techniques in testing behavioral models are discussed. GRA

ADVANCED FLIGHT DESIGN SYSTEMS SUBSYSTEM PERFORMANCE MODELS. EXECUTIVE SUMMARY
K. C. Parker and J. G. Torian Jun. 1980 17 p
(Contract NAS9-15793)
(NASA-CR-160768; TRW-34902-H001-R0-00) Avail: NTIS HC A02/MF A01 CSCL 06K

Subsystem performance analysis required in flight design to assess the capability of the environmental control and life support system (ECLSS) to support the flight requirements and define operational procedures under contingency flight conditions is described. Current ECLSS modeling techniques are limited in the variety of configurations and they employ batch mode computer programs execution methods. Improvements in the variety of configurations that are modeled and a reduction in effort required for modeling and analysis is accomplished by developing a modular computer program which operates interactively. FLAME TESTING OF TWO SAMPLES OF EXPOSURE SUIT MATERIAL Final Report
Frank H. Jacobson 9 May 1980 16 p refs
(W0606SL00)
(AD-A086739; NADC-80097-60) Avail: NTIS HC A02/MF A01 CSCL 11/5

Reported deficiencies in authorized quick-donning ship-abandon type exposure suits has prompted use of other suits made of materials with unknown flame and heat retardant properties. Therefore, tests were requested to be addressed first to the question of flammability of the material, and second to the question of heat retardation by the material. The materials tested may provide better protection against standard 3 second exposures to fuel fires than any fabrics previously tested in this laboratory. However, the protection falls off sharply as the exposure is continued. GRA

THERMAL INSULATION MATERIALS FOR DIVER'S UNDERWEAR GARMENT Final Technical Report, 1977 - 1978
Norman F. Audet, George M. Orner, and Zelig Kupferman Feb 1980 31 p refs Presented at Ann. Winter Meeting of ASME, Ocean Eng. Div., San Francisco, 12-15 Dec. 1978
(TF51523003)

(AD-A086743: NCTRF-139: Rept-2-78) Avail: NTIS
HC A03/MF A01 CSCL 06/17

The Navy Clothing and Textile Research Facility (NCTRF) conducted studies on commercially available foam and fibrous thermal insulating materials to determine those which would be effective in a diver's dry-suit underwear garment. An effective insulation had to allow the pressurized gaseous environment existing within the diver's dry suit to permeate the insulation, have good compressional resistance at hydrostatic pressures up to 2 psi (13.8 kPa), and provide an intrinsic thermal insulation value of 1.0 to 1.5 clo. Evaluations of candidate materials and comparisons with existing materials used in diver's dry-suit underwear indicated that a fine pore open cell foam and the polypropylene microfiber batt material having densities of approximately 0.12 gr/c cm and 0.05 gr/c cm and thermal insulation resistance of 1.8 and 2.11 clo/cm at 2 psi (13.8 kPa), respectively, would meet the thermal requirements for the uhderwear garment and would be superior to those presently being used. The foam compressed less than 30% at 2 psi (13.8 kPa). The fibrous material compressed 60% at 2 psi (13.8 kPa) but had such a high specific clo value incompressed (2.27 clo/cm) that thermal resistance at 2 psi (13.8 kPa) was still estimated to be 2.11 clo/cm. GRA

(Contract NASw-3198)
(NASA-TM-76161) Avail: NTIS HC AC2/MF A01 CSCL 06C

The state of hypokinesia in rats was reproduced by keeping them for 30 days in special box cages that restricted their mobility in all directions. Results show the resistance to acute hypoxic hypoxia is increased. This is linked to the considerable rise in the reduced level of corticosterone in different organs and the succinate dehydrogenase activity in the liver and brain. The letter indicated the primary oxidation of succinate, which has great importance in the adaptation of the oxidative metabolism to acute oxygen insufficiency. The use of sinusoidal modulated currents in the period of hypokinesia promotes normalization of the indices for resistance of the rats to acute hypoxia. L.F.M.

By perfusion of isolated sections of intestine with a solution containing thiamine at a concentration of 3.1 micromole, it was established that thiamine absorption in animals fasted for 72 hours decreased by 28 percent, whereas absorption increased by 12 percent in rats after 24 hour immobilization. After immobilization, absorption of label in the intestinal mucosa increased. Na K ATPase activity in the intestinal mucosa decreased by 10 percent during fasting, and it increased with immobilization of the animals. Activity of Na K ATPase in the intestinal mucosa cells determined the absorption rate of thiamine and nicotinic acid at the level of vitamin transport through the plasma membranes of the enterocytes. R.K.G.

Problems related to the accurate judgment of size and distance as required of pilots in flight were investigated over a two year period. The experiments covered a broad spectrum of psychophysiological issues involving the measurement of visual accommodation and its correlation with various other dependent variables. The latter included a short term memory task, physiological measures of autonomic balance, scores on a personality test of introversion extraversion, and responses to a personal inventory questionnaire. Psychophysiological issues investigated included the size distance invariance hypothesis, the moon illusion, night and empty field myopia, the dark focus and its so called Mandelbaum effect, the nature of the locus of the accommodative stimulus, and possible relationships among accommodative responses, autonomic balance, and personality. CHANGES IN BONE TISSUE UNDER CONDITIONS OF HYPOKINESIA AND IN CONNECTION WITH AGE
E. P. Podrushnyak and E. I. Suslov Jun. 1980 7 p refs Transl. into ENGLISH from Fiziol. Zh. (USSR), v. 19, no. 6, Nov. - Dec. 1973 p 841-943 Transl. was announced as N80-21971 Transl. by Scientific Translation Service, Santa Barbara, Calif.
(Contract NASw-3198)
(NASA-TM-76154) Avail: NTIS HC A02/MF A01 CSCL 06P

X-ray micrography was used to study the optical density of the blackening of X-ray photographs made of five bones in 9 young people (ages 24 to 29) before and after strict bed rest for 16 to 37 days. Photometric studies of the X-ray film determined the relative concentration of bone structure before and after hypokinesia. In addition, the bone tissues of 25 cadavers of practically healthy individuals (aged 18 to 70) who died from injuries were investigated using X-ray structural analysis. Results show that the reaction to the state of hypokinesia is not uniform in different individuals and is quite often directly reversed. It was established that pronounced osteoporosis can be found in a relatively short time after conditions of hypokinesia in healthy young individuals. Results show that the stabilization of the crystalline structure of hydroxyapatite, especially its crystal formation, is finished by the age of 20 to 25. From 25 to 60, the crystal lattice remains in stable condition but X-ray analysis shows a reduction in the hydroxyapatite density. A.R.H.

EFFECTS OF HIRUDIN-INDUCED ACTIVATION OF NONENZYMATIC FIBRINOLYSIS DURING IMMOBILIZATION STRESS
F. B. Shapiro, I. P. Baskova, L. U. Cherkesova, L. A. Lyapina, and M. D. Goldovskaya Jul. 1980 14 p refs Transl. into ENGLISH from Fiziol. Zh. SSSR (USSR), v. 64, no. 11, Nov. 1978 p 1567-1574 Transl. by Kanner (Leo) Associates, Redwood City, Calif. Original doc. prep. by Moscow State Univ.
(Contract NASw-3199)
(NASA-TM-76189) Avail: NTIS HC A02/MF A01 CSCL 06S

The specific inhibitor of thrombin, hirudin, was used for studying the mechanism of the activating effect of ACTH and adrenalin on nonenzymatic fibrinolytic activity (NEFA), the latter characterizing the function of the anticoagulation system (ACS). Simultaneous administration of ACTH and hirudin to animals subjected to immobilization stress did not reduce the effect of ACTH on NEFA, while simultaneous administration of adrenalin and hirudin revealed a diminished effect of the former. This suggests different mechanisms of ACTH and adrenalin effects upon NEFA: the stimulating effect of norepinephrine is realized through throminogenesis followed by activation of the ACS function and by increased NEFA and therefore inhibitable by hirudin which forms an inactive complex with thrombin. In fact the stimulating effect of ACTH upon NEFA is brought about specifically by another route than thrombinogenesis and thus occurs in the presence of hirudin. Hirudin itself has no effect upon NEFA. Author

RESTORATION OF PHYSICAL PERFORMANCE CAPACITY OF ATHLETES AFTER PROLONGED RESTRICTION OF THEIR MOTOR ACTIVITY
A. D. Soldatov and V. I. Finogeyev Aug. 1980 12 p Transl. into ENGLISH from Teor. Prakt. Fiziol. Kult. (USSR), no. 5, May 1979 p 19-22 Transl. by Scientific Translation Service, Santa Barbara, Calif. Original doc. prep. by All-Union Scientific Research Inst. of Physical Culture
(Contract NASw-3198)
(NASA-TM-76305) Avail: NTIS HC A02/MF A01 CSCL 06P

The effects of different regimens of treatment following prolonged hypokinesia were studied in order to determine the most effective program. The types of programs considered were passive means, consisting of physical therapy; active means, consisting of athletic training; and a combined program. In the first stage of the experiment, the effects of a 10 day period of hypokinesia were studied. It was determined that the restoration programs must address the problems of: (1) increasing defense function and general tone of the body; (2) restore orthostatic stability; and (3) increase general endurance. In later stages, groups of athletes and nonathletes underwent 30 day periods of hypokinesia. Restoration was carefully monitored for groups treated with the various regimens. It was determined that the most effective treatment was a comprehensive program of passive and active therapy. Author

A program of exercises was developed and tested, consisting of a 12 minute session on a variable load bicycle ergometer and a 10-11 min. run with brief stretching and resting sessions between. Physical performance capacity was measured before, during, and after the period of the experiment and physical exams conducted. After a 4 month test period involving 30 men, aged 25-35, the program was found to be successful in increasing physical performance capacity. The PWC170 increased an average of 22 percent and maximum oxygen consumption 14 percent. Arterial pressure dropped (120/75 to 114/68), vital capacity of lungs increased by 6 percent, strength of respiratory muscles by 8.8 percent, duration of respiratory delay by 18 percent. Duration of cardiac cycles increased, stress index decreased. Cardiac contraction rate 2 minutes after work on the ergometer decreased from 118 to 102 bt/min. R.C.T.

THERAPEUTIC GYMNASTICS IN COMPREHENSIVE TREATMENT OF PATIENTS WITH GENERALIZED MYASTHENIA

R. L. Kapelovich Aug. 1980 9 p refs Transl. into ENGLISH from Vop. Kurortol., Fizioter. Lech Fiz. Kul' T. (USSR), no. 5, Sep. - Oct. 1979 p 41-45 Transl. by Scientific Translation Service, Santa Barbara, Calif. Original doc. prep. by I. M. Sechenov First Moscow Medical Inst.
(Contract NASW-3198)
(NASA-TM-76312) Avail: NTIS HC A02/MF A01 CSCL 06E

The technique of therapeutic gymnastics was used for patients with mayasthenia gravis to control the consequences of hypodynamia induced by the myasthenic process. It is concluded that during myasthenia, the severity of the disease is due to the affection of the cross striated musculature. The most life threatening are the disorders in respiration and swallowing, that can be intensified by forced stay in bed and immobility. It is also concluded that the use of therapeutic gymnastics in patients which myasthenia promotes efficient presurgical preparation, and in the post surgical period; prevention of pulmonary complications and normalization of respiration. Therapeutic gymnastics with regard to the severity and localization of the myasthenic disorders must be a component part of the presurgical preparation and postsurgical management of patients with generalized myasthenia. The possible use of different methods to evaluate the autonomic regulation in hygienic studies were examined. The simplest and most objective tests were selected. It is shown that the use of the optimized standards not only makes it possible to detect earlier unfavorables shifts, but also permits a quantitative characterization of the degree of impairment in the state of the organism. Precise interpretation of the observed shifts is possible. Results indicate that the standards can serve as one of the criteria for evaluating the state and can be widely used in hygienic practice. OCCUPATIONAL CHANGES IN THE ORGAN OF HEARING AND EQUILIBRIUM IN SAILORS AND FISHERMAN

R. P. Menyakin and V. I. Poperetskaya Aug. 1980 9 p refs Transl. into ENGLISH from Vestn. Otorino-laringol. (USSR), no. 1, Jan - Feb. 1980 p 39-42 Transl. by Scientific Translation Service, Santa Barbara, Calif. Original doc. prep. by Vladivostok Medical Inst.
(Contract NASW-3198)
(NASA-TM-76335) Avail: NTIS HC A02/MF A01 CSCL 06P

Prophylactic examination in persons engaged in fishing industry and in sailors of ocean-going ships demonstrated occupational cochlear neuritis, resulting from the action of noise and vibration. Five hundred and fifty three sailors and fishermen working under conditions of noise were studied. A total of 233 persons 43.7% were found to be suffering from changes of the auditory analyzer typically resulting from the action of noise and vibration. The most pronounced changes of hearing were revealed in fishermen, in 44.8% of the persons examined, the percentage also being the highest among the engine room workers (63%). The incidence of cochlear neuritis in sailors of the ocean-going steamship line and in personnel of research ocean-going ships was almost equal (39.9-40%). These indices differed in the engine room workers (42-46%). Vestibular function was investigated by caloric and rotation tests with the use of electronystagmography. The data obtained point to diminution of the vestibular analyzer excitability with increase of the length of navigation service. R.C.T.

CERTAIN FEATURES OF THE COCHLEOVESTIBULAR SYNDROME IN THE RESIDUAL STAGE OF TRAUMATIC BRAIN DISEASE
M. I. Garshin and V. Ye. Volyanskiy Aug. 1980 12 p refs Transl. into ENGLISH from Vestn. Otorino-Laringol. (USSR), no. 2, Mar.-Apr. 1980 p 37-41 Transl. by Scientific Translation Service, Santa Barbara, Calif. Original doc. prepared by Psychoneurological Clinic, Odessa
(Contract NASw-3198)
(NASA-TM-76337) Avail: NTIS HC A02/MF A01 CSCL 06E

Caloric and rotation tests were applied to the study of the vestibular analyser in 84 patients in the residual state of traumatic disease of the brain. Vestibular disturbances of different degree revealed in 79 patients were as a rule accomplished by cochlear derangement. In the majority of patients the vestibular syndrome was supratentorial with the involvement of the diencephal-hypothalmic, subcortical, and cortical levels of the brain. Vestibular dysfunction correlated with such factors as severity of the sustained craniocerebral traum, duration of the posttraumatic period, and, particularly, with the character of the residual neurological syndrome. In accordance with the latter, it is recommended that vestibular disturbances be treated in the residual period of closed craniocerebral injuries with due regard for the principal pathophysiological mechanisms of the underlying neurological syndrome. DIAGNOSIS OF LATENT FORMS OF LABYRINTHINE AFFECTIONS
V. P. Vaslilyeva Aug. 1980 10 p refs Transl. into ENGLISH from Vestn. Otorino-Laringol. (USSR), no. 3, May-Jun. 1980 p 22-27 Transl. by Scientific Translation Service, Santa Barbara, Calif. Original doc. prepared by I.M. Sechenov First Moscow Medical Inst.
(Contract NASw-3198)
(NASA-TM-76338) Avail: NTIS HC A02/MF A01 CSCL 06E

Features and significance of individual vestibular symptoms for the diagnosis of latent labyrinthitis and limited forms of labyrinthine affections offering considerable difficulties are discussed. Vestibular symptoms are indistinct. In case of the negative fistular symptom the greatest significance is acquired by the study of posture nystagmus according to the results of electronystagmograms, changes of tonic reactions and statics, as well as data of experimental vestibular tests. The necessity of evaluation of all the vestibular symptoms from the point of view of their vector characteristics and in a complex of evidence obtained by otoneurological examination of the patient is emphasized. Delicate topic and differential diagnosis of vestibular disturbances is of great importance and significance in the choice of the conservative or surgical method of treatment. Author

TECHNIQUE OF ELECTRICAL STIMULATION OF THE VESTIBULAR ANALYZER UNDER CLINICAL CONDITIONS
S. N. Khechinashvili, B. M. Zargaryan, and K. G. Karakozov Aug. 1980 8 p refs Transl. into ENGLISH from Vestn. Otorino-laringol. (USSR), no. 5, Sep. - Oct. 1978 p 74-77 Transl. by Scientific Translation Service Santa Barbara, Calif. Original doc. prep. by Tbilisi Inst. of Physician Advancement
(Contract NASw-3198)
(NASA-TM-76347) Avail: NTIS HC A02/MF A01 CSCL 06P

Vestibular reactions appear under the action of direct current (dc) on the labyrinth of man and animals. A decrease of the stimulation effect of dc on the extralabyrinthine nervous formations in the suggested method is achieved by the use of electric pulses with steep front and back parts, as well as by previous anesthetization of the skin in the electrode application area by means of novocain solution electrophoresis. For this purpose a pulse producer giving trapezoid pulses with smoothly changing fronts and duration was constructed. With the help of an interrupter it is possible to stop the current increase instantly, and stimulation is performed at the level of the pulse 'plateau'. To induce vestibular reactions under monopolar stimulation, it is necessary to apply the current twice as high as that with bipolar electrode position. The use of short pulses with steep front and back parts for electrode stimulation of the vestibular analyzer is considered to be inexpedient. Author

ANALYSIS AND MEASUREMENT OF HELMETED AIRCREWMAN RESPONSE RESULTING FROM BIRDSTRIKE Final Report, 1 Mar. 1977 - 31 Mar. 1979
Norman S. Phillips Wright-Patterson AFB, Ohio AMRL Jan. 1980 234 p refs
(Contract F33615-77-C-0534; AF Proj. 7231)
(AD-A087737; UDR-TR-79-56; AMRL-TR-79-75) Avail: NTIS HC A11/MF A01 CSCL 06/5

The purpose of the research was to investigate and evaluate the birdstrike phenomena in terms of injury potential. Data collected during canopy testing indicated that significant deflection could occur and cause deformation into the space occupied by the helmeted aircrewman. The traveling wave and its interaction with the helmeted head created an unusual impact environment for which evaluation criteria did not exist. In order to generate new criteria it was necessary to utilize the Articulated Total Body Model (ATBM) and incorporate within the model characteristics of the canopy, the helmet and human head and neck system. With a configuration representative of the impact phenomena, the kinetic response of the system to selected impacts could be compared with biomechanical data to infer injury. The deformation characteristics of the canopy were established by analysis of F-16 film data collected during birdstrike tests. The data indicate that the canopy deformation depth is proportional to bird kinetic energy but that canopy deformation wave speed does not increase with bird speed. The helmet stiffness characteristics were established from available drop test data. Force displacement curves were idealized for incorporation into the ATBM. These, along with canopy compliance data, were used to construct the stiffness at the canopy helmet interference. GRA

DETECTION OF MOVING TARGETS IN PERIPHERAL VISION Final Scientific Report, Jun. 1978 - Jul. 1979
Frank E. Ward Dec. 1979 26 p refs
(Grant AF-AFOSR-3647-78; AF Proj. 2313)
(AD-A082541; AFOSR-80-0211TR) Avail: NTIS HC A03/MF A01 CSCL 06/16

Human detection of a moving target is a function of target size and contrast and target velocity. Recent work in human psychophysics and animal electrophysiology has shown that visual information is processed in many channels, each specialized to detect a particular aspect of the visual stimulus. For example, the human visual system appears to contain channels sensitive to spatial frequency, or target size. It was also shown that different spatial frequencies are processed at different temporal rates, suggesting that detection may depend upon an interaction of target size and velocity. E.D.K.

(Contract N00014-76-C-0328)
(AD-A087831; TR-4) Avail: NTIS HC A03/MF A01 CSCL 06/1

Significant progress occurred in four areas: (1) Effect of hyperoxia on reverse glycolysis. We concluded that glucose protects Escherichia coli against hyperoxia better than other intermediates later in glycolysis and in the Krebs cycle but not because of a specific inhibition of reverse glycolysis. There was no significant impairment of the three enzymes of reverse glycolysis: fructose-1,6-diphosphatase, phosphoenolpyruvate synthase, or phosphoenolpyruvate carboxykinase. (2) Effect of hyperoxia on synthesis of RNA, DNA and pyridine nucleotide coenzymes: Evidence was obtained for direct inhibition of RNA synthesis in cells poisoned by hyperoxia, while protein synthesis was not directly affected. DNA synthesis is impaired but it is not proven whether this is direct or indirect. NAD and NADH were severly decreased in cells during poisoning by hyperoxia. This decrease was prevented by niacin, but not quinolinate which is consistent with poisoning of quinolinate phosphoribosyltransferase (QPT), as previously reported. PRPP does not protect against oxygen poisoning. PRPP synthetase is not affected by hyperoxia, but PRPP accumulates in oxygen poisoned cells which is in agreement with inhibiton of QPT. (3) Relationship of thiamine to oxygen toxicity. GRA

MOLECULAR MECHANISMS OF THE EPITHELIAL TRANSPORT OF TOXIC METAL IONS, PARTICULARLY MERCURY, CADMIUM, LEAD, ARSENIC, ZINC, AND COPPER Progress Report, 1 Jan. - 31 Dec. 1979
R. H. Wasserman 1979 54 p refs
(Contract EY-76-S-02-2792)
(COO-2792-3) Avail: NTIS HC A04/MF A01

The mechanism of lead transport, and especially the particular similarities or dissimilarities between lead and calcium in this process were studied. The absorption of these metals was determined in 3 week old White Leghorn cockerels, raised on a commercial diet or on a specified diet, using in vivo ligated loop procedure. The dose administered into the loop contained 0.5 micron Ci Pb203 (and/or 0.1 micron Ci Ca47), and 0.01 mM lead acetate (and/or 1 mM CaCl2) in 0.5 ml 0.15 M NaCl, pH 6.5. It was shown that lead is rapidly taken up by the mucosal tissue, and slowly transferred into the body, whereas less calcium is retained by the tissue and the transfer of calcium is many times as effective as that for lead. They appear to respond in a similar manner to a low calcium intake and vitamin D treatment. Certain differences were, however, observed in the absorption process. Increasing luminal stable lead concentration from 0.01 to 1.00 mM Pb, significantly reduced the percentage of radiolead absorbed, but did not affect the absorption of calcium. Also, vitamin D enhanced the transfer of plasma Ca47 into the lumen but did not affect the transfer of plasma Pb203. R.C.T.

TOWARDS A BETTER UNDERSTANDING OF TEMPORARY THRESHOLD SHIFT OF HEARING
K. R. Maslen London HMSO Mar. 1980 50 p refs
(RAE-TM-FS-319; BR73973) Avail: NTIS HC A03/MF A01

It was thought that temporary threshold shift (TTS) of hearing due to exposure to noise might be more easily understood if the shifts were considered in terms of the rms pressure rather than in dB. The form is to be expected if the rate of shift of the pressure threshold were proportional to the difference between itself and the ultimate threshold were calculated and compared with a limited selection of published data. Good agreement with data for the growth of TTS in individuals was found, and moderately good agreement with recovery. Agreement with data on intermittent exposures was poor, but this may be due in part to the fact that only averaged data were found and averaging the widely disparate figures obtained for individuals may mask the true effects. It is also shown that the maximum ultimate TTS due to exposure to noise may be simply related to the mean square pressure of that noise. It is suggested that at least some facets of TTS can be simply described in terms of exponential pressure shifts. Author (ESA)

EFFECTS OF AEROSOLS, OXIDES OF NITROGEN, AND OXIDANTS ON HUMAN HEALTH Final Report
Michael T. Kleinman, William S. Linn, and Jack D. Hackney Dec. 1979 112 p refs Sponsored by Coordinating Research Council, Inc.
(PB80-184583; CRC-APRAC-CAPM-31-79) Avail: NTIS HC A06/MF A01 CSCL 06T

Volunteers in normal health and volunteers with asthma were exposed to polydisperse ammonium nitrate aerosol under conditions simulating 'worst-case' ambient exposures. Normal volunteers exposed to 0.37 ppm ozone plus 0.37 ppm sulfur oxide plus 100 micrograms/cu m polydisperse sulfuric acid aerosol under simulated ambient conditions showed small statistically significant decrements in forced expiratory function. Hemoglobin saturation was sampled repeatedly with a Hewlett-Packard ear oximeter during exposures of volunteers to ozone under simulated ambient conditions. GRA

THE INFLUENCE OF VISUAL-SPATIAL ABILITY AND STUDY PROCEDURES ON MAP LEARNING SKILL Progress Report, Jun. 1978 - Jan. 1979
Cathleen Stasz and Perry W. Thorndyke Jun. 1980 40 p refs
(Contract N00014-78-C-0042; NR Proj. 157-410)
(AD-A087247; RAND/N-1501-ONR) Avail: NTIS HC A03/MF A01 CSCL 05/10

This study investigated the influence of two sources of individual differences in knowledge acquisition from maps: abilities and learning procedures. Twenty-five subjects provided verbal protocols while attempting to learn two maps. Visual spatial ability was highly correlated with recall of spatial attributes of the map and with overall learning performance, while associative memory ability was most correlated with verbal attribute recall. Subject selected procedures for encoding spatial information and assessing learning progress also distinguished the behavior of successful and less successful learners. However, subjects of high and low ability differed little in the study procedures they chose. Although both ability differences and procedure use were important contributors to performance, a direct comparison of these sources of variation suggested that abilities are most predictive of map learning. These observations led us to the following conclusions: (1) the use of effective study procedures can influence map learning performance, and (2) high ability subjects benefit more from the use of these procedures than low ability subjects. AIRBORNE PERFORMANCE MEASUREMENT ASSESSMENT: LOW ALTITUDE TACTICAL FORMATION IN TWO OPERATING ENVIRONMENTS Interim Report, Jun. - Oct. 1978
Joseph C. Demaio and Edward E. Eddowes Jul. 1980 17 p refs
(AF Proj. 1123)
(AD-A087068; AFHRL-TR-79-44) Avail: NTIS HC A02/MF A01 CSCL 05/9

A method was developed to assess pilot performance in low altitude tactical formation (LATF) and to relate overall performance to performance on subtasks necessary to mission success. The method was used to evaluate the performance of 28 pilots assigned to an operational A-7 squadron. The method was found to provide a consistent measure of pilot performance and to reveal the importance of certain pilot skills to the LATF task. Performance ratings were obtained under routine operating conditions and under conditions of simulated combat. Differences were obtained in performance ratings under the two conditions. Implications for currency training were discussed. GRA

A REVIEW OF USAFSAM STUDIES EMPLOYING MULTIPLE-TASKS PERFORMANCE DEVICES Final Report, Oct. - Dec. 1979
Bryce O. Hartman, Russell A. Benel, and William F. Storm Jun. 1980 21 p refs
(AD-A087272; SAM-TR-80-16) Avail: NTIS HC A02/MF A01 CSCL 05/10

Apparatus development at the USAF School of Aerospace Medicine to measure the performance and proficiency of systems operators is reviewed. The devices reviewed are all classified as multiple-task performance batteries that were designed to measure efficiency in the general sense. Simulators of specific systems were not included. The bulk of this paper consists of summaries of studies. GRA

TEAM TRAINING APPLICATIONS OF VOICE PROCESSING TECHNOLOGY Final Technical Report, 1 Aug. 1979 - 31 Mar. 1980
Beverly A. Popelka and C. Mazie Knerr 31 Mar. 1980 36 p refs
(Contract MDA903-79-C-0209; ARPA Order 3690)
(AD-A085999) Avail: NTIS HC A03/MF A01 CSCL 05/9

Automated speech technology and intelligent computer assisted instruction offer unique solutions to problems of training teams in communication and coordination skills. At this point in the emergence of automated speech technology, scientists have only begun to explore its training uses. The application of automated speech technology entails adaptive training, or intelligent computer assisted instruction techniques in which the computer acts like a human tutor. This report reviews the goals and accomplishments of automated speech processing and its application to training, especially military team training. GRA

INDIVIDUAL DIFFERENCE RELATIONS IN PSYCHOMETRIC AND EXPERIMENTAL COGNITIVE TASKS Final Report
John B. Carroll Apr. 1980 335 p refs

(Contract N00014-77-C-0722; RR0420401; NR Proj. 150-406)
(AD-A086057; Rept-163) Avail: NTIS HC A15/MF A01 CSCL 05/10

A critical survey is made of recent literature pertaining to the possibility of measuring important dimensions of human cognitive ability through various types of simple cognitive tasks. The survey focuses on individual differences (IDs) found in cognitive tasks that have received extensive study in experimental cognitive psychology-for example, simple and choice reaction time, lexical decision, stimulus matching, probed search of short term memory, memory span, free and serial recall, simple sentence comprehension, and analogical reasoning. Questions of paramount interest were: What kinds of individual differences are observed in these tasks? Do they exhibit sufficient variance and reliability to measure stable individual characteristics that may be of relevance in personnel selection and other operational context? What are the dimensions of these IDs from a factor analytic standpoint? How are they related to those observed through more conventional psychometric tests? To what extent are they subject to the effects of practice and specific training, or related to demographic variables in such a way as to reduce their utility for operational use? Can the study of individual difference in simple cognitive tasks be valuable in the development of psychological theory: A considerable portion of the monograph is devoted to the definition and specification of 'elementary cognitive tasks' (ECTs) and to how ETCs can be administered, in experimental settings, so as optimally to reveal IDs in cognitive processes. A scheme for classifying ECTs according to basic paradigms is presented, and suggestions are made concerning procedures, including computer simulation, for conceptualizing and analyzing underlying processes. METHODS FOR COLLECTING AND ANALYZING TASK ANALYSIS DATA Final Report
A. John Eschenbrenner, Jr., Philip B. DeVries, Jr., James T. Miller, and Hendrick W. Ruck Jul. 1980 176 p refs
(Contract F33615-77-C-0076)
(AD-A087710; AFHRL-TR-79-45-1) Avail: NTIS HC A09/MF A01 CSCL 05/9

Task analysis, a critical front end activity in the Instructional System Development methodology, is the process of partitioning job tasks into their component subtasks and identifying the skills and knowledges required to support task performance. This study was initiated in response to a Request for Personnel Research generated by the Air Training Command, which noted that 'a wide range of nonstandardized task analysis procedures are in use throughout the training community.' Implementation of a standardized procedure for identifying essential subtasks and supporting skills and knowledges was expected to hold considerable potential for increasing training efficiency and reducing training costs. A simplified task analysis procedure and documentation system was specified, and a task analysis handbook was prepared. Handbook procedures were field tested at six Air Force installations. Results indicated that the handbook procedures met the design criteria of simplicity, validity, reliability, and time efficiency/cost effectiveness. The feasibility and utility of implementing a computer based task analysis data bank was assessed, and a preliminary data bank design was then developed. Additionally, two technology transfer seminars were conducted to assist Air Force personnel in applying handbook task analysis procedures. GRA

THE USE OF INFORMATION TRANSMISSION AS NONPARAMETRIC CORRELATION IN THE ANALYSIS OF COMPLEX BEHAVIOR: A PRELIMINARY REPORT Technical Report, 1 Jul. 1979 - 30 Jun. 1980
Neville Moray May 1980 120 p refs
(Contract N00014-77-C-0256)
(AD-A087832) Avail: NTIS HC A06/MF A01 CSCL 05/8

Recent developments of classical information theory by Conant and Ashby have given rise to a number of techniques by which the behavior of a complex system can be analyzed. Even in the absence of any information about the intensity of the variables measured it is possible to detect which parts of the system are closely coupled and which independent. The metrics of the variables can be mixed, nominal, ordinal, etc. and the method is particularly suited to dynamic systems. This paper discusses how the structure of the 'molecules' of behavior can be deduced from the entropies of the 'atoms', and outlines the solutions to certain methodological problems involved. Examples of the method are given from the fields of attention and skills, including the representation of the effects of practice on a 7-degree-of-freedom perceptual motor skill involving a complex man-machine interface. Further analysis and development of the technique is being carried out and will be reported subsequently. GRA

VISUAL SCENE PERCEPTION. FREQUENCY DOMAIN DATA AND MODEL PARAMETER ESTIMATION PROCEDURE
P. H. Wewerinke 15 Mar. 1979 24 p refs Presented at 15th Ann. Conf. on Manual Control, Dayton, Ohio, 20-22 Mar. 1979 Sponsored by Netherlands Agency for Aerospace Programs (NIVR)
(NLR-MP-79009-U) Avail: NTIS HC A02/MF A01

Results of a theoretical study and an accompanying experiment are presented concerning the visual scene perception process and its impact on aircraft approach performance. Visual scene characteristics were represented by the configurations involved. Their effect on approach performance and human information processing (primarily in terms of observation noise spectra and perceptual thresholds) was investigated utilizing a model of the visual scene perception process. The model is based on linear perspective geometrical cues and on relative (visual) motion cues and is combined with the optimal control model. Results are presented of an automated model matching procedure. Via a first order gradient method, a matching criterion (involving variances and frequency domain data) was minimized yielding a set of observation noise model parameter values. These values led to the perceptual thresholds associated with the visual cues involved. Author (ESA)

PROJECT FIRES. VOLUME 1: PROGRAM OVERVIEW AND SUMMARY, PHASE 1B Final Report
Fred J. Abeles May 1980 49 p refs
(Contract NAS8-32329)
(NASA-CR-161529) Avail: NTIS HC A03/MF A01 CSCL 06Q

Overall performance requirements and evaluation methods for firefighters protective equipment were established and published as the Protective Ensemble Performance Standards (PEPS). Current firefighters protective equipment was tested and evaluated against the PEPS requirements, and the preliminary design of a prototype protective ensemble was performed. In phase 1B, the design of the prototype ensemble was finalized. Prototype ensembles were fabricated and then subjected to a series of qualification tests which were based upon the PEPS requirements. Engineering drawings and purchase specifications were prepared for the new protective ensemble. Author

DEVELOPMENT OF A PREPROTOTYPE VAPOR COMPRESSION DISTILLATION WATER RECOVERY SUBSYSTEM Final Report

K. L. Johnson Nov. 1978 289 p ref
(Contract NAS9-15136)
(NASA-CR-160779; LMSC-D626041) Avail: NTIS HC A13/MF A01 CSCL 06K

The activities involved in the design, development, and test of a preprototype vapor compression distillation water recovery subsystem are described. This subsystem, part of a larger regenerative life support evaluation system, is designed to recover usable water from urine, urinal rinse water, and concentrated shower and laundry brine collected from three space vehicle crewmen for a period of 180 days without resupply. Details of preliminary design and testing as well as component developments are included. Trade studies, considerations leading to concept selections, problems encountered, and test data are also presented. The rework of existing hardware, subsystem development including computer programs, assembly verification, and comprehensive baseline test results are discussed. Author

MAN-RATING OF THE NAVY/AIR FORCE OXYGEN GENERATING SYSTEM (NAOGS) Interim Report, 1 Jan. 1978 - 30 Sep. 1979

Ronald D. Holden, Arnott A. Moore, Kenneth G. Ikels, and Richard L. Miller May 1980 15 p refs
(AF Proj. 1930)
(AD-A087270; SAM-TR-80-12) Avail: NTIS HC A02/MF A01 CSCL 01/3

The Navy/Air Force Oxygen Generating System (NAOGS) program is a joint effort between the Air Force and the Naval Air Development Center to develop a two man onboard oxygen generator for tactical aircraft. One of the proposed systems is based upon reversible sorption of oxygen from aircraft engine bleed air using fluomine, a cobalt chelate. The NAOGS fluomine system was manufactured by Garrett/AiResearch Division, Torrance, California. The USAF School of Aerospace Medicine performed man-rating of the NAOGS-fluomine unit prior to flight test by the U.S. Navy. The experimental protocol at USAFSAM consisted of both unmanned and manned testing, during which the product oxygen was monitored for quantity, purity, and trace contaminant content. Man-rating consisted of actual flight simulations with 2 test subjects at four different altitudes for periods up to 2 hours while breathing the product oxygen. The NAOGS, for the most part, performed adequately during both manned and unmanned testing. The exceptions were a lower than specification oxygen production rate and a short-term drop in oxygen purity during each bed switching cycle. These shortcomings are discussed in the context of the forthcoming flight test program. GRA

ADHESIVE COATINGS FOR DH-411 HELMETS

J. C. Lazowski Jan. 1980 18 p refs
(AD-A087319; DCIEM-TC-80-C-02) Avail: NTIS HC A02/MF A01 CSCL 06/17

Helicopter helmets in the Canadian Forces are required in two interchangeable roles, white and camouflaged. At present, helmets used by members of tactical helicopter squadrons are painted green to achieve the camouflage effect. Painting and stripping of helmets are time-consuming tasks which may deteriorate the impact protection of the helmet. Two adhesive coatings, olive drab gun tape and an adhesive vinyl coating in a disruptive pattern, were evaluated to determine the effect of extremes of temperature upon the coatings and the coated helmet shell. It was found that a marked discoloration of the helmet

best copy available

shell occurred during seven hour exposures to 200 F when coated with olive drab gun tape. It is concluded that the adhesive vinyl coating is superior to the gun tape on the basis of appearance and discoloration of the helmet shells. GRA

The psychomotor performance of men and women wearing two types of body armor [AD-A086742] N80-31040

ARTERIOSCLEROSIS
Asymptomatic atherosclerotic occlusive vascular disease - Its significance in the evaluation of aircrew members A80-50116

ASTRONAUT PERFORMANCE
Mass measurement under conditions of weightlessness --- for astronaut body weight determination A80-47932

ASTRONAUT TRAINING
Astronauts keep queuing up for Space Shuttle A80-48796
Preparation for long-duration flights A80-50279

ATHLETES
Restoration of physical performance capacity of athletes after prolonged restriction of their motor activity [NASA-TM-76305] N80-32066

ATMOSPHERIC COMPOSITION
The influence of life on the evolution of the atmosphere A80-50061

ATMOSPHERIC PRESSURE
Biological limits of temperature and pressure A80-50703

ATMOSPHERIC TEMPERATURE
Biological limits of temperature and pressure A80-50703

ATTACK AIRCRAFT
Thermal conditions in the cockpit of USAF aircraft: Inflight measurements from the A-7, A-10, F-4, F-15, and YC-14 [AD-A087273] N80-32104

AUDIO FREQUENCIES
Response time effects of alerting tone and semantic context for synthesized voice cockpit warnings A80-48950

AUDIOMETRY
Analysis of human auditory brainstem responses for complex stimuli N80-31034
USAFSAM microprocessor audiometer: System reference manual [AD-A087342] N80-32081

AUDITORY DEFECTS
Noise-induced hearing loss and vestibular dysfunction A80-48095

AUDITORY PERCEPTION
Towards a better understanding of temporary threshold shift of hearing [RAE-TM-FS-319] N80-32086

AUDITORY STIMULI
Analysis of human auditory brainstem responses for complex stimuli N80-31034

AUTONOMIC NERVOUS SYSTEM
Orthoclinostatic test as one of the methods for evaluating the human functional state [NASA-TM-76321] N80-32070

AZIDES (INORGANIC)
Tissue analysis for thiazide diuretics A80-50105

B

BACTERIA
Lipids as a principle for the identification of Archaebacteria A80-50063
Growth and cell structure of Proteus vulgaris when cultivated in weightlessness in the Cytos apparatus A80-50076

BACTERIOPHAGES
Genetic effects of space hadrons on bacteriophage under Alpine conditions A80-50068

BALLOON FLIGHT
Variations in the recombination rate of Drosophila melanogaster induced by balloon flight A80-50072

BIBLIOGRAPHIES
Cold weather stress on humans. Citations from the NTIS data base [PB80-810989] N80-31035
Ultrasonics in medicine. Citations from the NTIS data base [PB80-810922] N80-31037

BIOMETRICS
Ultrasonic in medicine. Citations from the Engineering Index data base
[PB80-810930] N80-31038

BIOSYNTHESIS
Studies of the chemical basis of the origin of protein synthesis Initiation and direction of peptide growth
A80-49872
Template-directed synthesis and selective adsorption of oligoadenylates in hydroxyapatite
A80-49873

BIRD-AIRCRAFT COLLISIONS
Analysis and measurement of helmeted aircrewman response resulting from birdstrike
[AD-A087737] N80-32082

BLOOD CIRCULATION
Methods of continuum mechanics in investigations of respiration and blood circulation
A80-50563
Effect of hypokinesia on blood microcirculation
[NASA-TM-76308] N80-32068

BLOOD FLOW
Topographical simulation of the blood vessels of the human bulbar conjunctiva and application to pressure-flow relationships
N80-31033
Blood filling and flow in lungs during change in body position in space
[NASA-TM-76333] N80-32071

BLOOD GROUPS
Blood group determination from teeth
A80-50109

BLOOD PLASMA
Fluid-electrolyte shifts and thermoregulation - Rest and work in heat with head cooling
A80-48086

BLOOD PRESSURE
Orthostatic tolerance testing - Comparison of LBNP and HUT methods --- Lower Body Negative Pressure Head-up Tilting
A80-50629

BLOOD VESSELS
Topographical simulation of the blood vessels of the human bulbar conjunctiva and application to pressure-flow relationships
N80-31033

BLOOD VOLUME
Blood filling and flow in lungs during change in body position in space
[NASA-TM-76333] N80-32071

BODY FLUIDS
Fluid-electrolyte shifts and thermoregulation - Rest and work in heat with head cooling
A80-48086

BODY KINEMATICS
Blood filling and flow in lungs during change in body position in space
[NASA-TM-76333] N80-32071

BODY TEMPERATURE
The effect of alcohol on body heat loss
A80-50102

BODY WEIGHT
Mass measurement under conditions of weightlessness --- for astronaut body weight determination
A80-47932

BONE DEMINERALIZATION
Changes in bone tissue under conditions of hypokinesia and in connection with age
[NASA-TM-76154] N80-32064

BONES
Change of biomechanical properties of rat's bones produced by a 19-day spaceflight in the artificial satellite Cosmos-936
A80-47693

BRAIN
Effect of sinusoidal modulated currents and acute hypoxia on corticosterone content and activity of certain dehydrogenases in tissues of different rat organs during hypokinesia
[NASA-TM-76161] N80-32057

BRAIN CIRCULATION
Significance of the heart factor in manifestations of the initial insufficiency of cerebral blood circulation in pilots
A80-50331

BRAIN DAMAGE
Certain features of the cochleovestibular syndrome in the residual stage of traumatic brain disease
[NASA-TM-76337] N80-32073

BRAIN STEM
Analysis of human auditory brainstem responses for complex stimuli
N80-31034

C

CANOPIES
Analysis and measurement of helmeted aircrewman response resulting from birdstrike
[AD-A087737] N80-32082

CARBOXYLIC ACIDS
Studies of the chemical basis of the origin of protein synthesis Initiation and direction of peptide growth
A80-49872

CARDIOLOGY
Incidence of complications from coronary angiography in 463 USAF aviators
A80-50131

CARDIOVASCULAR SYSTEM
Significance of the heart factor in manifestations of the initial insufficiency of cerebral blood circulation in pilots
A80-50331
An investigation of cardiac threshold variability relative to stimulus shape and respiratory cycle
N80-31032
Orthoclinostatic test as one of the methods for evaluating the human functional state
[NASA-TM-76321] N80-32070

CARGO AIRCRAFT
Thermal conditions in the cockpit of USAF aircraft: Inflight measurements from the A-7, A-10, F-4, F-15, and YC-14
[AD-A087273] N80-32104
CASUALTIES
An organizational concept for pathologic identification in mass disasters
A80-50106
CAUSES
Review of book vestibular crises
[NASA-TM-76354] N80-32078
CELLS (BIOLOGY)
Growth and cell structure of Proteus vulgaris when cultivated in weightlessness in the Cytos apparatus
A80-50076
Facilitated diffusion as a method for selective accumulation of materials from the primordial oceans by a lipid-vesicle protocell
A80-50710
A paraboloidal flow cytometer for improved fluorescence analysis of single cells
N80-31029
CEREBRAL CORTEX
The influence of modulated sinusoidal current on the state of chromatin from neurons of the cerebral cortex of rats in hypokinesia
[NASA-TM-76160] N80-32056
CHEMICAL ANALYSIS
A paraboloidal flow cytometer for improved fluorescence analysis of single cells
N80-31029
CHEMICAL BONDS
On the antisymmetry of the amino acid code table
A80-50708
CHEMICAL COMPOSITION
Is aluminum an essential element for life
A80-50712
CHEMICAL EVOLUTION
Paths of the origin of life
A80-49425
Clays in prebiological chemistry
A80-49871
Studies of the chemical basis of the origin of protein synthesis Initiation and direction of peptide growth
A80-49872
The possible role of metal ions and clays in prebiotic chemistry
A80-50060
Experiments on the amplification of optical activity --- molecular chirality in earth biosphere
A80-50707
Is aluminum an essential element for life
A80-50712
CHEMISORPTION
Template-directed synthesis and selective adsorption of oligoadenylates in hydroxyapatite
A80-49873
CHLORELLA
Biological studies of Chlorella pyrenoidosa /strain LARG-1/ cultures grown under space flight conditions
A80-50074
CHOROID MEMBRANES
Vestibular reactions in patients during occlusion form of chorioependymitis
[NASA-TM-76356] N80-32080
CIRCADIAN RHYTHMS
Temporal precision in circadian systems - A reliable neuronal clock from unreliable components
A80-49849
CIVIL AVIATION
Symposium on human factors in civil aviation. II
A80-47791
Man, aircraft and navigation systems - An evaluation for the 80s
A80-48137
CLAYS
Clays in prebiological chemistry
A80-49871
The possible role of metal ions and clays in prebiotic chemistry
A80-50060
CLINICAL MEDICINE
Implications of probability analysis on the strategy used for noninvasive detection of coronary artery disease
A80-49022
Automatic contouring for two-dimensional echocardiography
A80-50912
COAGULATION
Effects of hirudin-induced activation of nonenzymatic fibrinolysis during immobilization stress
[NASA-TM-76189] N80-32065
COCHLEA
Certain features of the cochleovestibular syndrome in the residual stage of traumatic brain disease
[NASA-TM-76337] N80-32073
COCKPIT SIMULATORS
Response time effects of alerting tone and semantic context for synthesized voice cockpit warnings
A80-48950
COCKPITS
Analysis and measurement of helmeted aircrewman response resulting from birdstrike
[AD-A087737] N80-32082
Thermal conditions in the cockpit of USAF aircraft: Inflight measurements from the A-7, A-10, F-4, F-15, and YC-14
[AD-A087273] N80-32104
COGNITION
Individual difference relations in psychometric and experimental cognitive tasks
[AD-A086057] N80-32093
COGNITIVE PSYCHOLOGY
Individual difference relations in psychometric and experimental cognitive tasks
[AD-A086057] N80-32093
COLD ACCLIMATIZATION
Changes in the system of external respiration /respiration mechanics/ during cold adaptation
A80-48615
COLD WATER
Design concepts of survival suits for cold water immersion and their thermal protection performance
A80-50221
COLD WEATHER
Cold weather stress on humans. Citations from the NTIS data base
[PB80-810989] N80-31035
COLLISION AVOIDANCE
Air-to-air target acquisition factors and means of improvement
[AD-A087848] N80-32095
COLOR VISION
Wavelength difference limit for binocular color fusion
A80-48519
COMFORT
A design tool for estimating passenger ride discomfort within complex ride environments
A80-48949
COMMAND AND CONTROL
Requirements definition and design guidelines for man-machine interface in C3 system acquisition
[AD-A087258] N80-32102
COMMERCIAL AIRCRAFT
Man, aircraft and navigation systems - An evaluation for the 80s
A80-48137
Emergency medicine and the airline passenger
A80-50129
COMPUTER ASSISTED INSTRUCTION
Methods for collecting and analyzing task analysis data
[AD-A087710] N80-32094
COMPUTER PROGRAMS
Advanced flight design systems subsystem performance models. Executive summary
[NASA-CR-160768] N80-31044
COMPUTER SYSTEMS DESIGN
Requirements definition and design guidelines for man-machine interface in C3 system acquisition
[AD-A087258] N80-32102
COMPUTERIZED SIMULATION
Advanced flight design systems subsystem performance models. Executive summary
[NASA-CR-160768] N80-31044

Advanced flight design systems subsystem performance models. Sample model: Environmental analysis routine library [NASA-CR-160770] N80-31046

CONFERENCES

Life sciences and space research. Volume 18 - Proceedings of the Open Meeting of the Working Group on Space Biology, Bangalore, India, May 29-June 9, 1979 A80-50051

Joint Committee on Aviation Pathology, Scientific Session, 11th, U.S. Naval Academy, Annapolis, Md., September 5-8, 1978, Proceedings A80-50101

Proceedings Of a Workshop on Thermal Physiology [PB80-187867] N80-32087

CONJUNCTIVA

Topographical simulation of the blood vessels of the human bulbar conjunctiva and application to pressure-flow relationships N80-31033

CONSCIOUSNESS

Coincident loss of consciousness and ventricular tachycardia during +Gz stress A80-48096

CONTACT LENSES

A sclerocorneal electrode for the study of the characteristics of primate vision under condition of space flight A80-50067

CONTINUUM MECHANICS

Methods of continuum mechanics in investigations of respiration and blood circulation A80-50563

CONTOURS

Automatic contouring for two-dimensional echocardiography A80-50912

CONTROL EQUIPMENT

Man-machine interaction in aerospace control systems A80-50196

COOLING

Fluid-electrolyte shifts and thermoregulation - Rest and work in heat with head cooling A80-48086

The effect of alcohol on body heat loss A80-50102

CORONARY ARTERY DISEASE

Implications of probability analysis on the strategy used for noninvasive detection of coronary artery disease A80-49022

Coronary heart disease - An expensive Air Force problem A80-50115

CORTI ORGAN

Certain features of the cochleovestibular syndrome in the residual stage of traumatic brain disease [NASA-TM-76337] N80-32073

CORTICOSTEROIDS

Effect of sinusoidal modulated currents and acute hypoxia on corticosterone content and activity of certain dehydrogenases in tissues of different rat organs during hypokinesia [NASA-TM-76161] N80-32057

COSMIC RAYS

Predicted LET-spectra of HZE-particles for the Free Flyer Biostack Experiment on the Long Duration Exposure Facility mission A80-50066

COSMONAUTS

Physiological aspects of automatic physical training control by biofeedback in weightlessness A80-50069

COSMOS 936 SATELLITE

Change of biomechanical properties of rat's bones produced by a 19-day spaceflight in the artificial satellite Cosmos-936 A80-47693

COSTS

Coronary heart disease - An expensive Air Force problem A80-50115

CRASH INJURIES

Role of radiology in aviation accident investigation A80-50107

Dental identification in fatal aircraft accidents A80-50108

Summary of the means used to positively identify the American victims in the Canary Islands crash A80-50111

CYTOGENESIS

A paraboloidal flow cytometer for improved fluorescence analysis of single cells N80-31029

D

DAMAGE ASSESSMENT

Laser protective eyewear program at the Los Alamos Scientific Laboratory [LA-UR-80-1036] N80-31049

DATA PROCESSING

The influence of visual-spatial ability and study procedures on map learning skill [AD-A087247] N80-32089

DENTISTRY

Dental identification in fatal aircraft accidents A80-50108

DEOXYRIBONUCLEIC ACID

Possible role of RNA-dependent DNA-polymerase in early stages of evolution A80-50709

A paraboloidal flow cytometer for improved fluorescence analysis of single cells N80-31029

DESERTS

Endolithic microbial life in hot and cold deserts A80-50704

DIAGNOSIS

Automatic contouring for two-dimensional echocardiography A80-50912

Diagnosis of latent forms of labyrinthine affections [NASA-TM-76338] N80-32074

DIFFUSION

Molecular mechanisms of the epithelial transport of toxic metal ions, particularly mercury, cadmium, lead, arsenic, zinc, and copper [COO-2792-3] N80-32085

DIRECT CURRENT

Technique of electrical stimulation of the vestibular analyzer under clinical conditions [NASA-TM-76347] N80-32075

DISASTERS

An organizational concept for pathologic identification in mass disasters A80-50106

DISPLAY DEVICES

Ground-referenced visual orientation with imaging displays --- psychophysiology [AD-A081882] N80-32063

DIURETICS

Tissue analysis for thiazide diuretics A80-50105

DIURNAL VARIATIONS

The effects of various regimes of work and rest following a 64-72 hour period of wakefulness on sleep dynamics A80-48613

DIVING (UNDERWATER)

Thermal insulation materials for diver's underwear garment [AD-A086743] N80-31048

DROSOPHILA

Variations in the recombination rate of Drosophila melanogaster induced by balloon flight A80-50072

E

EAR

Occupational changes in the organ of hearing and equilibrium in sailors and fishermen [NASA-TM-76335] N80-32072

Diagnosis of latent forms of labyrinthine affections [NASA-TM-76338] N80-32074

Review of book-Ultrasound in Otorhinolaryngology [NASA-TM-76349] N80-32076

EARTH ENVIRONMENT

Early photosynthetic microorganisms and environmental evolution A80-50062

EARTH HYDROSPHERE

Biological limits of temperature and pressure A80-50703

Experiments on the amplification of optical activity --- molecular chirality in earth biosphere
A80-50707

ECHOCARDIOGRAPHY
Automatic contouring for two-dimensional echocardiography
A80-50912
Ultrasonics in medicine. Citations from the NTIS data base
[PB80-810922] N80-31037
Ultrasonic in medicine. Citations from the Engineering Index data base

EDUCATION
Team training applications of voice processing technology
[AD-A085999] N80-32092
Methods for collecting and analyzing task analysis data
[AD-A087710] N80-32094

ELECTRIC CURRENT
The influence of modulated sinusoidal current on the state of chrometin from neurons of the cerebral cortex of rats in hypokinesia
[NASA-TM-76160] N80-32056
The dynamics of certain indicators of nuclein metabolism during hypokinesia in rats of different ages under the influence of sinusoidal modulated currents and measured physical load
[NASA-TM-76162] N80-32058

ELECTRIC DIPOLES
Irradiation of prolate spheroidal models of humans in the near field of a short electric dipole
A80-49868

ELECTRIC STIMULI
Technique of electrical stimulation of the vestibular analyzer under clinical conditions
[NASA-TM-76347] N80-32075

ELECTROCHEMISTRY
Introduction to electrochemistry of nerve membranes
[PB80-178908] N80-31036

ELECTROENCEPHALOGRAPHY
Changes in alpha activity during decreases in human operator work capacity
A80-48612

ELECTROPHYSIOLOGY
Introduction to electrochemistry of nerve membranes
[PB80-178908] N80-31036

ELECTRORETINOGRAPHY
A sclerocorneal electrode for the study of the characteristics of primate vision under condition of space flight
A80-50067

EMERGENCIES
Emergency medicine and the airline passenger
A80-50129

EMOTIONAL FACTORS
Changes in gas exchange, tissue respiration and glycolysis in rats during hypokinesia
[NASA-TM-76149] N80-32055

ENCEPHALITIS
Ultrasonic in medicine. Citations from the Engineering Index data base
[PB80-810930] N80-31038

ENDOCRINE SYSTEMS
Therapeutic gymnastics in comprehensive treatment of patients with generalized myasthenia
[NASA-TM-76312] N80-32069

ENERGY ABSORPTION
Analysis and measurement of helmeted aircrewman response resulting from birdstrike
[AD-A087737] N80-32082

ENVIRONMENT EFFECTS
Health and environmental research related to energy development and use --- biomolecular and cellular science, environmental biology, and nuclear medicine
[UCLA-12-1217] N80-32061

ENVIRONMENT MODELS
Advanced flight design systems subsystem performance models. Sample model: Environmental analysis routine library
[NASA-CR-160770] N80-31046

ENVIRONMENT SIMULATION
Further studies on the environmental capabilities of fungi - Interactions of salinity, ultraviolet irradiation, and temperature in Penicillium
A80-50058

ENVIRONMENTAL CONTROL
Advanced flight design systems subsystem performance models. User guide: Environmental analysis routine library
[NASA-CR-160769] N80-31045
Thermal conditions in the cockpit of USAF aircraft: Inflight measurements from the A-7, A-10, F-4, F-15, and YC-14
[AD-A087273] N80-32104

ENZYMES
Effects of hirudin-induced activation of nonenzymatic fibrinolysis during immobilization stress
[NASA-TM-76189] N80-32065

EPITHELIUM
Molecular mechanisms of the epithelial transport of toxic metal ions, particularly mercury, cadmium, lead, arsenic, zinc, and copper
[COO-2792-3] N80-32085

EQUIPMENT SPECIFICATIONS
Project FIRES. Volume 1: Program overview and summary, phase 1B

FEMUR
Femur-bending properties as influenced by gravity. IV - Limits after high and low weight-bearing
A80-50127

FIGHTER AIRCRAFT
Physical standards for high-performance fighter aircraft pilots
A80-50114

FIRE FIGHTING
Project FIRES. Volume 1: Program overview and summary, phase 1B
[NASA-CR-161529] N80-32098
Project FIRES. Volume 4: Prototype protective ensemble qualification test report, phase 1B
[NASA-CR-161532] N80-32099
Project FIRES. Volume 3: Protective ensemble design and procurement specification, phase 1B
[NASA-CR-161531] N80-32100

FIRST AID
Tap water, an efficient method for cooling heatstroke victims - A model in dogs
A80-50122

FLAMMABILITY
Flame testing of two samples of exposure suit material
[AD-A086739] N80-31047

FLICKER
Velocity specificity of the flicker to pattern sensitivity ratio in human vision
A80-48518

FLIGHT CLOTHING
Adhesive coatings for DH-411 helmets
[AD-A087319] N80-32105

FLIGHT CONDITIONS
Preparation for long-duration flights
A80-50279

FLIGHT CREWS
Coincident loss of consciousness and ventricular tachycardia during +Gz stress
A80-48096
Asymptomatic atherosclerotic occlusive vascular disease - Its significance in the evaluation of aircrew members
A80-50116
Pulmonary and symptom threshold effects of ozone in airline passenger and cockpit crew surrogates
A80-50125
Effects of different body positions on the Eustachian tube function in the selection of airmen
A80-50128
Incidence of complications from coronary angiography in 463 USAF aviators
A80-50131

FLIGHT FITNESS
Myocardial ischemia and its risk factors
A80-47783

FLIGHT HAZARDS
Analysis and measurement of helmeted aircrewman response resulting from birdstrike
[AD-A087737] N80-32082

FLIGHT SAFETY
F/A-18 foot strikes - An update --- During ejection process
A80-50222

FLIGHT STRESS (BIOLOGY)
The Environmental Symptoms Questionnaire - Revisions and new field data --- for monitoring health effects of flight stress
A80-50124

FLIGHT TRAINING
Pilot study on the value of a beta-blocking drug in initial helicopter training
A80-50130
Airborne performance measurement assessment: Low altitude tactical formation in two operating environments
[AD-A087068] N80-32090

FLIR DETECTORS
Human operator interface with FLIR displays
[AD-A086284] N80-31041

FLUID MECHANICS
Methods of continuum mechanics in investigations of respiration and blood circulation
A80-50563

FLUORESCENCE
A paraboloidal flow cytometer for improved fluorescence analysis of single cells
N80-31029

FORECASTING
Differentially weighting linear models of behavior: An empirical comparison of six methods
[AD-A086876] N80-31043

FOVEA
Foveal and peripheral displacement thresholds as a function of stimulus luminance, line length and duration of movement
A80-48520

FUNGI
Further studies on the environmental capabilities of fungi - Interactions of salinity, ultraviolet irradiation, and temperature in Penicillium
A80-50058
Development of higher fungi under weightlessness
A80-50075

G

GAS CHROMATOGRAPHY
Tissue analysis for thiazide diuretics
A80-50105

GAS EXCHANGE
Changes in gas exchange, tissue respiration and glycolysis in rats during hypokinesia
[NASA-TM-76149] N80-32055

GAS GENERATORS
Man-rating of the Navy/Air Force Oxygen Generating System (NAOGS)
[AD-A087270] N80-32103

GASTROINTESTINAL SYSTEM
Psychological features of the pilot's personality in the case of diseases of the gastrointestinal tract
A80-49021

GENETICS
Genetic effects of space hadrons on bacteriophage under Alpine conditions
A80-50068

GEOCHEMISTRY
Clays in prebiological chemistry
A80-49871
The possible role of metal ions and clays in prebiotic chemistry
A80-50060

GLUCOSE
Hypothermia induced by 5-thio-D-glucose - Effects on treadmill performance in the heat
A80-48087
Altitude convulsion threshold and time to altitude convulsion in gold thioglucose obese mice
A80-48089

GLYCOLYSIS
Changes in gas exchange, tissue respiration and glycolysis in rats during hypokinesia
[NASA-TM-76149] N80-32055
Mechanisms of oxygen toxicity at the cellular level
[AD-A087831] N80-32084

GOGGLES
A human performance/workload evaluation of the AN/PVS-5 bifocal night vision goggles
A80-48093

GRAVITATIONAL EFFECTS
Gravity and land plant evolution - Experimental induction of lignification by simulated hypergravity and water stress
A80-50073
Femur-bending properties as influenced by gravity. IV - Limits after high and low weight-bearing
A80-50127
Thermoregulation in rats: Effects of varying duration of hypergravic fields
[NASA-CR-163481] N80-31030

GROWTH
Growth and cell structure of Proteus vulgaris when cultivated in weightlessness in the Cytos apparatus
A80-50076

H

HADRONS
Genetic effects of space hadrons on bacteriophage under Alpine conditions
A80-50068

HANDBOOKS
Methods for collecting and analyzing task analysis data
[AD-A087710] N80-32094

HEAD (ANATOMY)
Fluid-electrolyte shifts and thermoregulation - Rest and work in heat with head cooling
A80-48086
Analysis and measurement of helmeted aircrewman response resulting from birdstrike
[AD-A087737] N80-32082

HEAD MOVEMENT
Space motion sickness - Skylab revisited
A80-48094
The sensing of retinal motion
A80-50249

HEALTH PHYSICS
Health and environmental research related to energy development and use --- biomolecular and cellular science, environmental biology, and nuclear medicine
[UCLA-12-1217] N80-32061

HEARING
Towards a better understanding of temporary threshold shift of hearing
[RAE-TM-FS-319] N80-32086

HEART DISEASES
Significance of the heart factor in manifestations of the initial insufficiency of cerebral blood circulation in pilots
A80-50331
Ultrasonic in medicine. Citations from the Engineering Index data base
[PB80-810930] N80-31038

HEAT STROKE
Tap water, an efficient method for cooling heatstroke victims - A model in dogs
A80-50122

HEAVY IONS
Late degeneration in rabbit tissues after irradiation by heavy ions
A80-50065
Predicted LET-spectra of HZE-particles for the Free Flyer Biostack Experiment on the Long Duration Exposure Facility mission
A80-50066

HELICOPTERS
Pilot study on the value of a beta-blocking drug in initial helicopter training
A80-50130

HELMETS
Analysis and measurement of helmeted aircrewman response resulting from birdstrike
[AD-A087737] N80-32082
Adhesive coatings for DH-411 helmets
[AD-A087319] N80-32105
Helmets: Construction, effectiveness, and human factors. Citations from the NTIS data base
[PB80-810963] N80-32106

HEMODYNAMIC RESPONSES
Hemodynamic effects of extreme positive pressure breathing using a two-pressure flying suit
A80-50119

HIGH ALTITUDE BREATHING
Hemodynamic effects of extreme positive pressure breathing using a two-pressure flying suit
A80-50119
Pulmonary and symptom threshold effects of ozone in airline passenger and cockpit crew surrogates
A80-50125

HIGH ALTITUDE ENVIRONMENTS
The effect of mountain conditions on work capacity and acclimatization times
A80-49020
Genetic effects of space hadrons on bacteriophage under Alpine conditions
A80-50068

HIGH TEMPERATURE ENVIRONMENTS
Endolithic microbial life in hot and cold deserts
A80-50704

HUMAN BEHAVIOR
An analysis of human reliability measures in visual inspection
A80-50267
Instrument scanning and controlling: Using eye movement data to understand pilot behavior and strategies
[NASA-CR-3306] N80-31039
Differentially weighting linear models of behavior: An empirical comparison of six methods
[AD-A086876] N80-31043

HUMAN BEINGS
The effect of alcohol on body heat loss
A80-50102

HUMAN BODY
Deformations of human skull produced by impact /experimental studies and modeling problems/. II - The dynamics of the skull base during impact loading of the vault
A80-47692
Effects of whole-body vibrations on standing posture in man
A80-48091
On human response to prolonged repeated whole-body vibration
A80-49401
Occupational changes in the organ of hearing and equilibrium in sailors and fisherman
[NASA-TM-76335] N80-32072
Use of physical culture to increase resistance of sailors to motion sickness
[NASA-TM-76355] N80-32079

HUMAN CENTRIFUGES
Coincident loss of consciousness and ventricular tachycardia during +Gz stress
A80-48096

HUMAN FACTORS ENGINEERING
Symposium on human factors in civil aviation. II
A80-47791
A design tool for estimating passenger ride discomfort within complex ride environments
A80-48949
Investigation of life change as a contributing factor in aircraft accidents - A prospectus
A80-50104
Cold weather stress on humans. Citations from the NTIS data base
[PB80-810989] N80-31035
The psychomotor performance of men and women wearing two types of body armor
[AD-A086742] N80-31040
A review of USAFSAM studies employing multiple-tasks performance devices
[AD-A087272] N80-32091

Project FIRES. Volume 1: Program overview and summary, phase 1B
[NASA-CR-161529] N80-32098
Project FIRES. Volume 3: Protective ensemble design and procurement specification, phase 1B
[NASA-CR-161531] N80-32100
Helmets: Construction, effectiveness, and human factors. Citations from the NTIS data base
[PB80-810963] N80-32106

HUMAN PATHOLOGY
Joint Committee on Aviation Pathology, Scientific Session, 11th, U.S. Naval Academy, Annapolis, Md., September 5-8, 1978, Proceedings
A80-50101
An organizational concept for pathologic identification in mass disasters
A80-50106
Role of radiology in aviation accident investigation
A80-50107
Dental identification in fatal aircraft accidents
A80-50108
Blood group determination from teeth
A80-50109
Summary of the means used to positively identify the American victims in the Canary Islands crash
A80-50111
Asymptomatic atherosclerotic occlusive vascular disease - Its significance in the evaluation of aircrew members
A80-50116

HUMAN PERFORMANCE
An analysis of human reliability measures in visual inspection
A80-50267
Restoration of physical performance capacity of athletes after prolonged restriction of their motor activity
[NASA-TM-76305] N80-32066
Detection of moving targets in peripheral vision
[AD-A082541] N80-32083
Individual difference relations in psychometric and experimental cognitive tasks
[AD-A086057] N80-32093

HUMAN REACTIONS
A design tool for estimating passenger ride discomfort within complex ride environments
A80-48949
On human response to prolonged repeated whole-body vibration
A80-49401
Effects of aerosols, oxides of nitrogen, and oxidants on human health
[PB80-184583] N80-32088

HUMAN TOLERANCES
Acceleration forces on the human subject
A80-50103
Orthostatic tolerance testing - Comparison of LBNP and HUT methods --- Lower Body Negative Pressure Head-up Tilting
A80-50629
The effect of physical conditioning on +GZ tolerance
N80-31031

HUMAN WASTES
Development of a preprototype vapor compression distillation water recovery subsystem
[NASA-CR-160779] N80-32101

HYDRAZINES
The importance of ammonia in the metabolic effects of hydrazine
A80-50126

HYPEROXIA
The oxygen-adapted rat model - Tolerance to oxygen at 1.5 and 2 ATA
A80-48090
Mechanisms of oxygen toxicity at the cellular level
[AD-A087831] N80-32084

HYPERTHERMIA
Fluid-electrolyte shifts and thermoregulation - Rest and work in heat with head cooling
A80-48086

HYPODYNAMIA
The dynamics of certain indicators of nuclein metabolism during hypokinesia in rats of different ages under the influence of sinusoidal modulated currents and measured physical load
[NASA-TM-76162] N80-32058
Physical exercises on a bicycle-ergometer and running track to prevent hypodynamia in workers of intellectual labor
[NASA-TM-76306] N80-32067

HYPOKINESIA
The structure of oxygen debt in humans following prolonged hypokinesis
A80-48614
Changes in gas exchange, tissue respiration and glycolysis in rats during hypokinesia
[NASA-TM-76149] N80-32055
The influence of modulated sinusoidal current on the state of chromatin from neurons of the cerebral cortex of rats in hypokinesia
[NASA-TM-76160] N80-32056
Effect of sinusoidal modulated currents and acute hypoxia on corticosterone content and activity of certain dehydrogenases in tissues of different rat organs during hypokinesia
[NASA-TM-76161] N80-32057
The dynamics of certain indicators of nuclein metabolism during hypokinesia in rats of different ages under the influence of sinusoidal modulated currents and measured physical load
[NASA-TM-76162] N80-32058
Changes in bone tissue under conditions of hypokinesia and in connection with age
[NASA-TM-76154] N80-32064
Restoration of physical performance capacity of athletes after prolonged restriction of their motor activity
[NASA-TM-76305] N80-32066
Effect of hypokinesia on blood microcirculation
[NASA-TM-76308] N80-32068

HYPOTHALAMUS
Altitude convulsion threshold and time to altitude convulsion in gold thioglucose obese mice
A80-48089

HYPOTHERMIA
Hypothermia induced by 5-thio-D-glucose - Effects on treadmill performance in the heat
A80-48087

HYPOXIA
Altitude convulsion threshold and time to altitude convulsion in gold thioglucose obese mice
A80-48089
The effects of water-salt stresses on orthostatic test endurance under conditions of hypoxia
A80-48611
Living without oxygen: Closed and open systems in hypoxia tolerance --- Book
A80-50354
Effect of sinusoidal modulated currents and acute hypoxia on corticosterone content and activity of certain dehydrogenases in tissues of different rat organs during hypokinesia
[NASA-TM-76161] N80-32057

I

IMAGING TECHNIQUES
Ultrasonics in medicine. Citations from the NTIS data base
[PB80-810922] N80-31037

IMPACT DAMAGE
Deformations of human skull produced by impact /experimental studies and modeling problems/. II - The dynamics of the skull base during impact loading of the vault
A80-47692

INFORMATION MANAGEMENT
An investigation of the dual task performance relationship to hemispheric specialization
[AD-A086808] N80-31042

INFORMATION THEORY
The use of information transmission as nonparametric correlation in the analysis of complex behavior: A preliminary report
[AD-A087832] N80-32096

INPUT/OUTPUT ROUTINES
Advanced flight design systems subsystem performance models. User guide: Environmental analysis routine library
[NASA-CR-160769] N80-31045

INSPECTION
An analysis of human reliability measures in visual inspection
A80-50267

INSTRUMENT APPROACH
Instrument scanning and controlling: Using eye movement data to understand pilot behavior and strategies
[NASA-CR-3306] N80-31039
INTEGRAL EQUATIONS
Irradiation of prolate spheroidal models of humans in the near field of a short electric dipole
A80-49868
INTEL 8080 MICROPROCESSOR
A microprocessor-based instrument for neural pulse wave analysis
A80-50322
INTELLECT
Physical exercises on a bicycle-ergometer and running track to prevent hypodynamia in workers of intellectual labor
[NASA-TM-76306] N80-32067
INTERSTELLAR GAS
Optical activity and evolution --- of substances of biological origin in outer space
A80-50706
INTESTINES
Absorption of thiamine and nicotinic acid in the rat intestine during fasting and immobilization stress
[NASA-TM-76193] N80-32059
INTOXICATION
Effect of alcohol on man's response to mild physical activity in a cold environment
A80-48092
INVESTIGATION
An organizational concept for pathologic identification in mass disasters
A80-50106
An investigation of cardiac threshold variability relative to stimulus shape and respiratory cycle
N80-31032
ION IRRADIATION
Late degeneration in rabbit tissues after irradiation by heavy ions
A80-50065
IRRADIATION
Irradiation of prolate spheroidal models of humans in the near field of a short electric dipole
A80-49868
ISCHEMIA
Myocardial ischemia and its risk factors
A80-47783

L

LABYRINTH
Diagnosis of latent forms of labyrinthine affections
[NASA-TM-76338] N80-32074
Technique of electrical stimulation of the vestibular analyzer under clinical conditions
[NASA-TM-76347] N80-32075
LABYRINTHECTOMY
Diagnosis of latent forms of labyrinthine affections
[NASA-TM-76338] N80-32074
LEARNING THEORY
The influence of visual-spatial ability and study procedures on map learning skill
[AD-A087247] N80-32089
LEAST SQUARES METHOD
Differentially weighting linear models of behavior: An empirical comparison of six methods
[AD-A086876] N80-31043
LIFE SCIENCES
Altitude convulsion threshold and time to altitude convulsion in gold thioglucose obese mice
A80-48089
The oxygen-adapted rat model - Tolerance to oxygen at 1.5 and 2 ATA
A80-48090
Paths of the origin of life
A80-49425
Development of higher fungi under weightlessness
A80-50075
Living without oxygen: Closed and open systems in hypoxia tolerance --- Book
A80-50354
LIFE SUPPORT SYSTEMS
Advanced flight design systems subsystem performance models. Executive summary
[NASA-CR-160768] N80-31044
Advanced flight design systems subsystem performance models. User guide: Environmental analysis routine library
[NASA-CR-160769] N80-31045
Advanced flight design systems subsystem performance models. Sample model: Environmental analysis routine library
[NASA-CR-160770] N80-31046
Project FIRES. Volume 1: Program overview and summary, phase 1B
[NASA-CR-161529] N80-32098
Project FIRES. Volume 3: Protective ensemble design and procurement specification, phase 1B
[NASA-CR-161531] N80-32100
Man-rating of the Navy/Air Force Oxygen Generating System (NAOGS)
[AD-A087270] N80-32103
LIGNIN
Gravity and land plant evolution - Experimental induction of lignification by simulated hypergravity and water stress
A80-50073
LINEAR ENERGY TRANSFER (LET)
Predicted LET-spectra of HZE-particles for the Free Flyer Biostack Experiment on the Long Duration Exposure Facility mission
A80-50066
LIPIDS
Lipids as a principle for the identification of Archaebacteria
A80-50063
Facilitated diffusion as a method for selective accumulation of materials from the primordial oceans by a lipid-vesicle protocell
A80-50710
LIQUID COOLING
Tap water, an efficient method for cooling heatstroke victims - A model in dogs
A80-50122
LIVER
Effect of sinusoidal modulated currents and acute hypoxia on corticosterone content and activity of certain dehydrogenases in tissues of different rat organs during hypokinesia
[NASA-TM-76161] N80-32057
LONG DURATION EXPOSURE FACILITY
Predicted LET-spectra of HZE-particles for the Free Flyer Biostack Experiment on the Long Duration Exposure Facility mission
A80-50066
LONG DURATION SPACE FLIGHT
Preparation for long-duration flights
A80-50279
LOW TEMPERATURE
Effect of alcohol on man's response to mild physical activity in a cold environment
A80-48092
LOW TEMPERATURE ENVIRONMENTS
Endolithic microbial life in hot and cold deserts
A80-50704
LOWER ATMOSPHERE
Biological limits of temperature and pressure
A80-50703
Experiments on the amplification of optical activity --- molecular chirality in earth biosphere
A80-50707
LUNGS
Blood filling and flow in lungs during change in body position in space
[NASA-TM-76333] N80-32071

M

MAN MACHINE SYSTEMS
Symposium on human factors in civil aviation. II
A80-47791
Man-machine interaction in aerospace control systems
A80-50196
F/A-18 foot strikes - An update --- During ejection process
A80-50222
Human operator interface with FLIR displays
[AD-A086284] N80-31041
A review of USAFSAM studies employing multiple-tasks performance devices
[AD-A087272] N80-32091

The use of information transmission as nonparametric correlation in the analysis of complex behavior: A preliminary report
[AD-A087832] N80-32096
Requirements definition and design guidelines for man-machine interface in C3 system acquisition
[AD-A087258] N80-32102

MAPPING
The influence of visual-spatial ability and study procedures on map learning skill
[AD-A087247] N80-32089

MARS SURFACE SAMPLES
On the possibility of life on Mars
A80-50056

MATERIAL ABSORPTION
Absorption of thiamine and nicotinic acid in the rat intestine during fasting and immobilization stress
[NASA-TM-76193] N80-32059

MATHEMATICAL MODELS
Deformations of human skull produced by impact /experimental studies and modeling problems/. II - The dynamics of the skull base during impact loading of the vault
A80-47692
Temporal precision in circadian systems - A reliable neuronal clock from unreliable components
A80-49849
Differentially weighting linear models of behavior: An empirical comparison of six methods
[AD-A086876] N80-31043
Advanced flight design systems subsystem performance models. Executive summary
[NASA-CR-160768] N80-31044
Advanced flight design systems subsystem performance models. User guide: Environmental analysis routine library
[NASA-CR-160769] N80-31045
Advanced flight design systems subsystem performance models. Sample model: Environmental analysis routine library
[NASA-CR-160770] N80-31046
Visual scene perception. Frequency domain data and model parameter estimation procedure
[NLR-MP-79009-U] N80-32097

MEASURING INSTRUMENTS
Mass measurement under conditions of weightlessness --- for astronaut body weight determination
A80-47932

MEDICAL SCIENCE
Ultrasonics in medicine. Citations from the NTIS data base

MICROWAVES
Proceedings Of a Workshop on Thermal Physiology
[PB80-187867] N80-32087

MILITARY AVIATION
Incidence of complications from coronary angiography in 463 USAF aviators
A80-50131

MILITARY PSYCHOLOGY
A questionnaire study of psychological background factors in U.S. Navy aircraft accidents
A80-50121
Pilot study on the value of a beta-blocking drug in initial helicopter training
A80-50130

MODULATION
The influence of modulated sinusoidal current on the state of chromatin from neurons of the cerebral cortex of rats in hypokinesia
[NASA-TM-76160] N80-32056
The dynamics of certain indicators of nuclein metabolism during hypokinesia in rats of different ages under the influence of sinusoidal modulated currents and measured physical load
[NASA-TM-76162] N80-32058

MOLECULAR BIOLOGY
Life sciences and space research. Volume 18 - Proceedings of the Open Meeting of the Working Group on Space Biology, Bangalore, India, May 29-June 9, 1979
A80-50051
Optical activity and evolution --- of substances of biological origin in outer space
A80-50706
Health and environmental research related to energy development and use --- biomolecular and cellular science, environmental biology, and nuclear medicine
[UCLA-12-1217] N80-32061

MOON ILLUSION
Ground-referenced visual orientation with imaging displays --- psychophysiology
[AD-A081882] N80-32063

MOTION PERCEPTION
Multiple sensory and motor cues enhance the accuracy of pursuit eye movements
A80-50120
Equiperception maneuvers --- aircraft motion perception
A80-50123
The sensing of retinal motion
A80-50249

MOTION SICKNESS
Space motion sickness - Skylab revisited
A80-48094
Use of physical culture to increase resistance of sailors to motion sickness
[NASA-TM-76355] N80-32079

MOUNTAINS
The effect of mountain conditions on work capacity and acclimatization times
A80-49020

MUSCULAR FUNCTION
Sensations of heaviness in man --- Thesis
A80-50353
Therapeutic gymnastics in comprehensive treatment of patients with generalized myasthenia
[NASA-TM-76312] N80-32069

MUSCULOSKELETAL SYSTEM
Effects of factors of prolonged space flight on conditions of tortoise skeleton
[NASA-TM-76352] N80-32060
MUTATIONS
Variations in the recombination rate of Drosophila melanogaster induced by balloon flight
A80-50072

N

NAVIGATION SATELLITES
Man, aircraft and navigation systems - An evaluation for the 80s
A80-48137
NAVY
A questionnaire study of psychological background factors in U.S. Navy aircraft accidents
A80-50121
NEAR FIELDS
Irradiation of prolate spheroidal models of humans in the near field of a short electric dipole
A80-49868
NERVES
Introduction to electrochemistry of nerve membranes
[PB80-178908] N80-31036
NERVOUS SYSTEM
Introduction to electrochemistry of nerve membranes
[PB80-178908] N80-31036
NEUROLOGY
A microprocessor-based instrument for neural pulse wave analysis
A80-50322
NEUROMUSCULAR TRANSMISSION
Therapeutic gymnastics in comprehensive treatment of patients with generalized myasthenia
[NASA-TM-76312] N80-32069
NICOTINIC ACID
Absorption of thiamine and nicotinic acid in the rat intestine during fasting and immobilization stress
[NASA-TM-76193] N80-32059
NIGHT VISION
A human performance/workload evaluation of the AN/PVS-5 bifocal night vision goggles
A80-48093
NITROGEN OXIDES
Effects of aerosols, oxides of nitrogen, and oxidants on human health
[PB80-184583] N80-32088
NOISE INJURIES
Noise-induced hearing loss and vestibular dysfunction
A80-48095
NOISE INTENSITY
A design tool for estimating passenger ride discomfort within complex ride environments
A80-48949
NONFLAMMABLE MATERIALS
Flame testing of two samples of exposure suit material
[AD-A086739] N80-31047
NUCLEOTIDES
Effect of polynucleotides and a basic protein on the condensation of phenylalanyl adenylate --- implications for abiogenesis
A80-50711

O

OBESITY
Altitude convulsion threshold and time to altitude convulsion in gold thioglucose obese mice
A80-48089
OCCLUSION
Vestibular reactions in patients during occlusion form of chorioependymitis
[NASA-TM-76356] N80-32080
OCEAN MODELS
The influence of life on the evolution of the atmosphere
A80-50061
Facilitated diffusion as a method for selective accumulation of materials from the primordial oceans by a lipid-vesicle protocell
A80-50710
OPERATIONAL HAZARDS
Airborne performance measurement assessment: Low altitude tactical formation in two operating environments
[AD-A087068] N80-32090
OPERATOR PERFORMANCE
Changes in alpha activity during decreases in human operator work capacity
A80-48612
The effects of various regimes of work and rest following a 64-72 hour period of wakefulness on sleep dynamics
A80-48613
Man-machine interaction in aerospace control systems
A80-50196
OPERATORS (PERSONNEL)
Human operator interface with FLIR displays
[AD-A086284] N80-31041
OPTICAL ACTIVITY
Experiments on the amplification of optical activity --- molecular chirality in earth biosphere
A80-50707
OPTIMAL CONTROL
Visual scene perception. Frequency domain data and model parameter estimation procedure
[NLR-MP-79009-U] N80-32097
ORBITAL WORKSHOPS
Astronauts keep queuing up for Space Shuttle
A80-48796
ORGANIC COMPOUNDS
Paths of the origin of life
A80-49425
Clays in prebiological chemistry
A80-49871
Template-directed synthesis and selective adsorption of oligoadenylates in hydroxyapatite
A80-49873
ORGANISMS
Is aluminum an essential element for life
A80-50712
The dynamics of certain indicators of nuclein metabolism during hypokinesia in rats of different ages under the influence of sinusoidal modulated currents and measured physical load
[NASA-TM-76162] N80-32058
ORTHOSTATIC TOLERANCE
Effects of whole-body vibrations on standing posture in man
A80-48091
The effects of water-salt stresses on orthostatic test endurance under conditions of hypoxia
A80-48611
Orthostatic tolerance testing - Comparison of LBNP and HUT methods --- Lower Body Negative Pressure Head-up Tilting
A80-50629
OSTEOPOROSIS
Changes in bone tissue under conditions of hypokinesia and in connection with age
[NASA-TM-76154] N80-32064
OTOLARYNGOLOGY
Review of book-Ultrasound in Otorhinolaryngology
[NASA-TM-76349] N80-32076
OTOLOGY
Review of book-Ultrasound in Otorhinolaryngology
[NASA-TM-76349] N80-32076
OXIDIZERS
Effects of aerosols, oxides of nitrogen, and oxidants on human health
[PB80-184583] N80-32088
OXIMETRY
Effects of aerosols, oxides of nitrogen, and oxidants on human health
[PB80-184583] N80-32088
OXYGEN
Mechanisms of oxygen toxicity at the cellular level
[AD-A087831] N80-32094
OXYGEN CONSUMPTION
The structure of oxygen debt in humans following prolonged hypokinesis
A80-48614
OXYGEN METABOLISM
Living without oxygen: Closed and open systems in hypoxia tolerance --- Book
A80-50354
OXYGEN PRODUCTION
Man-rating of the Navy/Air Force Oxygen Generating System (NAOGS)
[AD-A087270] N80-32103

OXYGEN SUPPLY EQUIPMENT
Man-rating of the Navy/Air Force Oxygen Generating System (NAOGS)
[AD-A087270] N80-32103
OXYGEN TENSION
The oxygen-adapted rat model - Tolerance to oxygen at 1.5 and 2 ATA
A80-48090
OZONE
Pulmonary and symptom threshold effects of ozone in airline passenger and cockpit crew surrogates
A80-50125

P

PASSENGERS
A design tool for estimating passenger ride discomfort within complex ride environments
A80-48949
Emergency medicine and the airline passenger
A80-50129
Physiological reactions of a passenger to transportation conditions
[NASA-TM-76350] N80-32077
PATHOGENESIS
Review of book vestibular crises
[NASA-TM-76354] N80-32078
Vestibular reactions in patients during occlusion form of chorioependymitis
[NASA-TM-76356] N80-32080
PATHOLOGICAL EFFECTS
Joint Committee on Aviation Pathology, Scientific Session, 11th, U.S. Naval Academy, Annapolis, Md., September 5-8, 1978, Proceedings
A80-50101
PATHOLOGY
An organizational concept for pathologic identification in mass disasters
A80-50106
PATTERN RECOGNITION
Velocity specificity of the flicker to pattern sensitivity ratio in human vision
A80-48518
Automatic contouring for two-dimensional echocardiography
A80-50912
PEPTIDES
Studies of the chemical basis of the origin of protein synthesis Initiation and direction of peptide growth
A80-49872
PERCEPTION
Sensations of heaviness in man --- Thesis
A80-50353
Individual difference relations in psychometric and experimental cognitive tasks
[AD-A086057] N80-32093
PERFORMANCE TESTS
Design concepts of survival suits for cold water immersion and their thermal protection performance
A80-50221
A review of USAFSAM studies employing multiple-tasks performance devices
[AD-A087272] N80-32091
Project FIRES. Volume 4: Prototype protective ensemble qualification test report, phase 1B
[NASA-CR-161532] N80-32099
PERIPHERAL VISION
Foveal and peripheral displacement thresholds as a function of stimulus luminance, line length and duration of movement
A80-48520
PERSONALITY TESTS
Psychological features of the pilot's personality in the case of diseases of the gastrointestinal tract
A80-49021
A questionnaire study of psychological background factors in U.S. Navy aircraft accidents
A80-50121
PERSONNEL SELECTION
Astronauts keep queuing up for Space Shuttle
A80-48796
Effects of different body positions on the Eustachian tube function in the selection of airmen
A80-50128
PETROLOGY
Endolithic microbial life in hot and cold deserts
A80-50704
PHARMACOLOGY
Tissue analysis for thiazide diuretics
A80-50105
PHENYLS
Effect of polynucleotides and a basic protein on the condensation of phenylalanyl adenylate --- implications for abiogenesis
A80-50711
PHOTOSYNTHESIS
Early photosynthetic microorganisms and environmental evolution
A80-50062
PHYSICAL EXAMINATIONS
Asymptomatic atherosclerotic occlusive vascular disease - Its significance in the evaluation of aircrew members
A80-50116
PHYSICAL EXERCISE
Fluid-electrolyte shifts and thermoregulation - Rest and work in heat with head cooling
A80-48086
Hypothermia induced by 5-thio-D-glucose - Effects on treadmill performance in the heat
A80-48087
Effect of alcohol on man's response to mild physical activity in a cold environment
A80-48092
The structure of oxygen debt in humans following prolonged hypokinesis
A80-48614
Physiological aspects of automatic physical training control by biofeedback in weightlessness
A80-50069
The effect of physical conditioning on +GZ tolerance
N80-31031
Restoration of physical performance capacity of athletes after prolonged restriction of their motor activity
[NASA-TM-76305] N80-32066
Physical exercises on a bicycle-ergometer and running track to prevent hypodynamia in workers of intellectual labor
[NASA-TM-76306] N80-32067
Therapeutic gymnastics in comprehensive treatment of patients with generalized myasthenia
[NASA-TM-76312] N80-32069
Use of physical culture to increase resistance of sailors to motion sickness
[NASA-TM-76355] N80-32079
PHYSICAL FITNESS
Physical standards for high-performance fighter aircraft pilots
A80-50114
The effect of physical conditioning on +GZ tolerance
N80-31031
PHYSICAL WORK
Changes in the system of external respiration /respiration mechanics/ during cold adaptation
A80-48615
The effect of mountain conditions on work capacity and acclimatization times
A80-49020
The relationship between pulse count and energy expenditure at sub maximal work under different ambient temperatures
A80-50577
PHYSIOLOGICAL EFFECTS
Effects of whole-body vibrations on standing posture in man
A80-48091
Effects of factors of prolonged space flight on conditions of tortoise skeleton
[NASA-TM-76352] N80-32060
Effect of hypokinesia on blood microcirculation
[NASA-TM-76308] N80-32068
Occupational changes in the organ of hearing and equilibrium in sailors and fisherman
[NASA-TM-76335] N80-32072
Physiological reactions of a passenger to transportation conditions
[NASA-TM-76350] N80-32077
Use of physical culture to increase resistance of sailors to motion sickness
[NASA-TM-76355] N80-32079
Proceedings Of a Workshop on Thermal Physiology
[PB80-187867] N80-32087

PHYSIOLOGICAL RESPONSES
On human response to prolonged repeated whole-body vibration A80-49401
Physiological reactions during acute adaptation to reduced gravity A80-50070
Analysis of human auditory brainstem responses for complex stimuli N80-31034
PHYSIOLOGICAL TESTS
Implications of probability analysis on the strategy used for noninvasive detection of coronary artery disease A80-49022
An investigation of cardiac threshold variability relative to stimulus shape and respiratory cycle N80-31032
PILOT ERROR
A questionnaire study of psychological background factors in U.S. Navy aircraft accidents A80-50121
PILOT PERFORMANCE
Symposium on human factors in civil aviation. II A80-47791
A human performance/workload evaluation of the AN/PVS-5 bifocal night vision goggles A80-48093
Response time effects of alerting tone and semantic context for synthesized voice cockpit warnings A80-48950
Investigation of life change as a contributing factor in aircraft accidents - A prospectus A80-50104
Physical standards for high-performance fighter aircraft pilots A80-50114
Equiperception maneuvers --- aircraft motion perception A80-50123
Pilot study on the value of a beta-blocking drug in initial helicopter training A80-50130
An investigation of the dual task performance relationship to hemispheric specialization [AD-A086808] N80-31042
Airborne performance measurement assessment: Low altitude tactical formation in two operating environments [AD-A087068] N80-32090
PILOT SELECTION
Physical standards for high-performance fighter aircraft pilots A80-50114
Asymptomatic atherosclerotic occlusive vascular disease - Its significance in the evaluation of aircrew members A80-50116
PILOT TRAINING
Pilot study on the value of a beta-blocking drug in initial helicopter training A80-50130
Methods for collecting and analyzing task analysis data [AD-A087710] N80-32094
PILOTS (PERSONNEL)
Psychological features of the pilot's personality in the case of diseases of the gastrointestinal tract A80-49021
PLANETARY ENVIRONMENTS
Further studies on the environmental capabilities of fungi - Interactions of salinity, ultraviolet irradiation, and temperature in Penicillium A80-50058
PLANETARY EVOLUTION
Paths of the origin of life A80-49425
Gravity and land plant evolution - Experimental induction of lignification by simulated hypergravity and water stress A80-50073
Optical activity and evolution --- of substances of biological origin in outer space A80-50706
PLANTS (BOTANY)
Gravity and land plant evolution - Experimental induction of lignification by simulated hypergravity and water stress A80-50073
PLASTIC COATINGS
Adhesive coatings for DH-411 helmets [AD-A087319] N80-32105
POLAR REGIONS
Endolithic microbial life in hot and cold deserts A80-50704
POLYMERIZATION
Effect of polynucleotides and a basic protein on the condensation of phenylalanyl adenylate --- implications for abiogenesis A80-50711
POLYURETHANE FOAM
Thermal insulation materials for diver's underwear garment [AD-A086743] N80-31048
POSTURE
Effects of whole-body vibrations on standing posture in man A80-48091
Orthostatic tolerance testing - Comparison of LBNP and HUT methods --- Lower Body Negative Pressure Head-up Tilting A80-50629
Orthoclinostatic test as one of the methods for evaluating the human functional state [NASA-TM-76321] N80-32070
POTABLE WATER
Development of a preprototype vapor compression distillation water recovery subsystem [NASA-CR-160779] N80-32101
PREFLIGHT ANALYSIS
Advanced flight design systems subsystem performance models. Executive summary [NASA-CR-160768] N80-31044
Advanced flight design systems subsystem performance models. Sample model: Environmental analysis routine library [NASA-CR-160770] N80-31046
PRESSURE BREATHING
Hemodynamic effects of extreme positive pressure breathing using a two-pressure flying suit A80-50119
PRESSURE SUITS
Hemodynamic effects of extreme positive pressure breathing using a two-pressure flying suit A80-50119
PRIMITIVE EARTH ATMOSPHERE
The influence of life on the evolution of the atmosphere A80-50061
PROBABILITY THEORY
Implications of probability analysis on the strategy used for noninvasive detection of coronary artery disease A80-49022
PROLATE SPHEROIDS
Irradiation of prolate spheroidal models of humans in the near field of a short electric dipole A80-49868
PROTECTIVE CLOTHING
Flame testing of two samples of exposure suit material [AD-A086739] N80-31047
Thermal insulation materials for diver's underwear garment [AD-A086743] N80-31048
Project FIRES. Volume 1: Program overview and summary, phase 1B [NASA-CR-161529] N80-32098
Project FIRES. Volume 4: Prototype protective ensemble qualification test report, phase 1B [NASA-CR-161532] N80-32099
Project FIRES. Volume 3: Protective ensemble design and procurement specification, phase 1B [NASA-CR-161531] N80-32100
PROTEINS
Studies of the chemical basis of the origin of protein synthesis Initiation and direction of peptide growth A80-49872
Effect of polynucleotides and a basic protein on the condensation of phenylalanyl adenylate --- implications for abiogenesis A80-50711

PHOTOBIOLOGY
Facilitated diffusion as a method for selective accumulation of materials from the primordial oceans by a lipid-vesicle protocell A80-50710

PROTOPLANETS
Optical activity and evolution --- of substances of biological origin in outer space A80-50706

PSYCHOLOGICAL EFFECTS
Psychological features of the pilot's personality in the case of diseases of the gastrointestinal tract A80-49021

PSYCHOMOTOR PERFORMANCE
The psychomotor performance of men and women wearing two types of body armor [AD-A086742] N80-31040
A review of USAFSAM studies employing multiple-tasks performance devices [AD-A087272] N80-32091

PSYCHOPHYSICS
Psychophysical comparison of vertical and angular vibrations [AMRL-TR-80-46] A80-48088

PSYCHOPHYSIOLOGY
Sensations of heaviness in man --- Thesis A80-50353
Ground-referenced visual orientation with imaging displays --- psychophysiology [AD-A081882] N80-32063

PUBLIC HEALTH
Effects of aerosols, oxides of nitrogen, and oxidants on human health [PB80-184583] N80-32088

PULMONARY FUNCTIONS
Pulmonary and symptom threshold effects of ozone in airline passenger and cockpit crew surrogates A80-50125

PULSE RATE
The relationship between pulse count and energy expenditure at sub maximal work under different ambient temperatures A80-50577

PULSED LASERS
Laser protective eyewear program at the Los Alamos Scientific Laboratory [LA-UR-80-1038] N80-31049

PURSUIT TRACKING
Multiple sensory and motor cues enhance the accuracy of pursuit eye movements A80-50120

R

RADIATION DAMAGE
Late degeneration in rabbit tissues after irradiation by heavy ions A80-50065
Variations in the recombination rate of Drosophila melanogaster induced by balloon flight A80-50072

RADIATION EFFECTS
Laser protective eyewear program at the Los Alamos Scientific Laboratory [LA-UR-80-1038] N80-31049
Health and environmental research related to energy development and use --- biomolecular and cellular science, environmental biology, and nuclear medicine [UCLA-12-1217] N80-32061

RADIATION PROTECTION
Proceedings Of a Workshop on Thermal Physiology [PB80-187867] N80-32087

RADIO FREQUENCIES
Proceedings Of a Workshop on Thermal Physiology [PB80-187867] N80-32087

RADIOBIOLOGY
Irradiation of prolate spheroidal models of humans in the near field of a short electric dipole A80-49868
Life sciences and space research. Volume 18 - Proceedings of the Open Meeting of the Working Group on Space Biology, Bangalore, India, May 29-June 9, 1979 A80-50051
Genetic effects of space hadrons on bacteriophage under Alpine conditions A80-50068
Variations in the recombination rate of Drosophila melanogaster induced by balloon flight A80-50072
Health and environmental research related to energy development and use --- biomolecular and cellular science, environmental biology, and nuclear medicine [UCLA-12-1217] N80-32061

RADIOGRAPHY
Role of radiology in aviation accident investigation A80-50107
Dental identification in fatal aircraft accidents A80-50108

RADIOLOGY
Role of radiology in aviation accident investigation A80-50107

RADIOPATHOLOGY
Late degeneration in rabbit tissues after irradiation by heavy ions A80-50065

REACTION TIME
Response time effects of alerting tone and semantic context for synthesized voice cockpit warnings A80-48950
An investigation of the dual task performance relationship to hemispheric specialization [AD-A086808] N80-31042

RECOGNITION
Individual difference relations in psychometric and experimental cognitive tasks [AD-A086057] N80-32093

REDUCED GRAVITY
Physiological reactions during acute adaptation to reduced gravity A80-50070

REGRESSION ANALYSIS
Differentially weighting linear models of behavior: An empirical comparison of six methods [AD-A086876] N80-31043

REQUIREMENTS
Requirements definition and design guidelines for man-machine interface in C3 system acquisition [AD-A087258] N80-32102

RESPIRATION
An investigation of cardiac threshold variability relative to stimulus shape and respiratory cycle N80-31032
Changes in gas exchange, tissue respiration and glycolysis in rats during hypokinesia [NASA-TM-76149] N80-32055

RESPIRATORY PHYSIOLOGY
Changes in the system of external respiration /respiration mechanics/ during cold adaptation A80-48615
Effects of aerosols, oxides of nitrogen, and oxidants on human health [PB80-184583] N80-32088

RESPIRATORY SYSTEM
Methods of continuum mechanics in investigations of respiration and blood circulation A80-50563

RETINA
The sensing of retinal motion A80-50249

RIBONUCLEIC ACIDS
Possible role of RNA-dependent DNA-polymerase in early stages of evolution A80-50709

RIDING QUALITY
Physiological reactions of a passenger to transportation conditions [NASA-TM-76350] N80-32077

RISK
Myocardial ischemia and its risk factors A80-47783

ROCKET-BORNE INSTRUMENTS
Description of an apparatus for studying micro-organisms in the upper atmosphere A80-50057

ROTATING ENVIRONMENTS
A preliminary study of vestibular equilibrium in primates under space flight conditions A80-50071

RUNNING
Physical exercises on a bicycle-ergometer and running track to prevent hypodynamia in workers of intellectual labor [NASA-TM-76306] N80-32067

S

SALINITY
Further studies on the environmental capabilities of fungi - Interactions of salinity, ultraviolet irradiation, and temperature in Penicillium
A80-50058
SCANNING
Instrument scanning and controlling: Using eye movement data to understand pilot behavior and strategies
[NASA-CR-3306] N80-31039
SEA ROUGHNESS
Use of physical culture to increase resistance of sailors to motion sickness
[NASA-TM-76355] N80-32079
SENSORIMOTOR PERFORMANCE
Multiple sensory and motor cues enhance the accuracy of pursuit eye movements
A80-50120
Sensations of heaviness in man --- Thesis
A80-50353
SENSORY PERCEPTION
Equiperception maneuvers --- aircraft motion perception
A80-50123
SIGNS AND SYMPTOMS
Certain features of the cochleovestibular syndrome in the residual stage of traumatic brain disease
[NASA-TM-76337] N80-32073
SINUSES
Review of book-Ultrasound in Otorhinolaryngology
[NASA-TM-76349] N80-32076
SKULL
Deformations of human skull produced by impact /experimental studies and modeling problems/. II - The dynamics of the skull base during impact loading of the vault
A80-47692
SKYLAB PROGRAM
Space motion sickness - Skylab revisited
A80-48094
SODIUM CHLORIDES
The effects of water-salt stresses on orthostatic test endurance under conditions of hypoxia
A80-48611
SOUND PRESSURE
Towards a better understanding of temporary threshold shift of hearing
[BAE-TN-PS-319] N80-32086
SPACE EXPLORATION
Life sciences and space research. Volume 18 - Proceedings of the Open Meeting of the Working Group on Space Biology, Bangalore, India, May 29-June 9, 1979
A80-50051
SPACE FLIGHT
A sclerocorneal electrode for the study of the characteristics of primate vision under condition of space flight
A80-50067
Development of higher fungi under weightlessness
A80-50075
Growth and cell structure of Proteus vulgaris when cultivated in weightlessness in the Cytos apparatus
A80-50076
SPACE FLIGHT STRESS
Change of biomechanical properties of rat's bones produced by a 19-day spaceflight in the artificial satellite Cosmos-936
A80-47693
Space motion sickness - Skylab revisited
A80-48094
A preliminary study of vestibular equilibrium in primates under space flight conditions
A80-50071
Effects of factors of prolonged space flight on conditions of tortoise skeleton
[NASA-TM-76352] N80-32060
Blood filling and flow in lungs during change in body position in space
[NASA-TM-76333] N80-32071
SPACE FLIGHT TRAINING
Preparation for long-duration flights
A80-50279
SPACE PERCEPTION
The sensing of retinal motion
A80-50249
Ground-referenced visual orientation with imaging displays --- psychophysiology
[AD-A081882] N80-32063
The influence of visual-spatial ability and study procedures on map learning skill
[AD-A087247] N80-32089
SPACE SHUTTLES
Astronauts keep queuing up for Space Shuttle
A80-48796
SPACEBORNE EXPERIMENTS
Predicted LET-spectra of HZE-particles for the Free Flyer Biostack Experiment on the Long Duration Exposure Facility mission
A80-50066
Biological studies of Chlorella pyrenoidosa /strain LARG-1/ cultures grown under space flight conditions
A80-50074
SPACECRAFT ENVIRONMENTS
Advanced flight design systems subsystem performance models. Executive summary
[NASA-CR-160768] N80-31044
Advanced flight design systems subsystem performance models. Sample model: Environmental analysis routine library
[NASA-CR-160770] N80-31046
SPACECREWS
Development of a preprototype vapor compression distillation water recovery subsystem
[NASA-CR-160779] N80-32101
SPEECH RECOGNITION
Team training applications of voice processing technology
[AD-A085999] N80-32092
STATISTICAL ANALYSIS
Implications of probability analysis on the strategy used for noninvasive detection of coronary artery disease
A80-49022
STRESS (PHYSIOLOGY)
The effects of water-salt stresses on orthostatic test endurance under conditions of hypoxia
A80-48611
Cold weather stress on humans. Citations from the NTIS data base
[PB80-810989] N80-31035
The influence of modulated sinusoidal current on the state of chromatin from neurons of the cerebral cortex of rats in hypokinesia
[NASA-TM-76160] N80-32056
The dynamics of certain indicators of nuclein metabolism during hypokinesia in rats of different ages under the influence of sinusoidal modulated currents and measured physical load
[NASA-TM-76162] N80-32058
Absorption of thiamine and nicotinic acid in the rat intestine during fasting and immobilization stress
[NASA-TM-76193] N80-32059
Effects of hirudin-induced activation of nonenzymatic fibrinolysis during immobilization stress
[NASA-TM-76189] N80-32065
STRESS (PSYCHOLOGY)
Cold weather stress on humans. Citations from the NTIS data base
[PB80-810989] N80-31035
SUBMERGED BODIES
Physiological reactions during acute adaptation to reduced gravity
A80-50070
SUBMERGING
Design concepts of survival suits for cold water immersion and their thermal protection performance
A80-50221
SUITS
Design concepts of survival suits for cold water immersion and their thermal protection performance
A80-50221
Thermal insulation materials for diver's underwear garment
[AD-A086743] N80-31048
SURVIVAL EQUIPMENT
Design concepts of survival suits for cold water immersion and their thermal protection performance
A80-50221

SYNTHETIC FIBERS
Thermal insulation materials for diver's underwear garment
[AD-A086743] N80-31048
SYSTEMS ANALYSIS
Advanced flight design systems subsystem performance models. Executive summary
[NASA-CR-160768] N80-31044
Advanced flight design systems subsystem performance models. User guide: Environmental analysis routine library
[NASA-CR-160769] N80-31045
Methods for collecting and analyzing task analysis data
[AD-A087710] N80-32094
The use of information transmission as nonparametric correlation in the analysis of complex behavior: A preliminary report
[AD-A087832] N80-32096
Requirements definition and design guidelines for man-machine interface in C3 system acquisition
[AD-A087258] N80-32102

T

TACHYCARDIA
Coincident loss of consciousness and ventricular tachycardia during +Gz stress
A80-48096
TARGET ACQUISITION
Air-to-air target acquisition factors and means of improvement
[AD-A087848] N80-32095
TARGET RECOGNITION
Detection of moving targets in peripheral vision
[AD-A082541] N80-32083
TEAMS
Team training applications of voice processing technology
[AD-A085999] N80-32092
TECHNOLOGY TRANSFER
Methods for collecting and analyzing task analysis data
[AD-A087710] N80-32094
TECHNOLOGY UTILIZATION
Man, aircraft and navigation systems - An evaluation for the 80s
A80-48137
TEETH
Blood group determination from teeth
A80-50109
TEMPLATES
Template-directed synthesis and selective adsorption of oligoadenylates in hydroxyapatite
A80-49873
THERMAL INSULATION
Thermal insulation materials for diver's underwear garment
[AD-A086743] N80-31048
THERMAL PROTECTION
Design concepts of survival suits for cold water immersion and their thermal protection performance
A80-50221
Proceedings Of a Workshop on Thermal Physiology
[PB80-187867] N80-32087
THERMOREGULATION
Fluid-electrolyte shifts and thermoregulation - Rest and work in heat with head cooling
A80-48086
Effect of alcohol on man's response to mild physical activity in a cold environment
A80-48092
Tap water, an efficient method for cooling heatstroke victims - A model in dogs
A80-50122
Thermoregulation in rats: Effects of varying duration of hypergravic fields
[NASA-CR-163481] N80-31030
THIAMINE
Absorption of thiamine and nicotinic acid in the rat intestine during fasting and immobilization stress
[NASA-TM-76193] N80-32059
Mechanisms of oxygen toxicity at the cellular level
[AD-A087831] N80-32084
THRESHOLDS (PERCEPTION)
Velocity specificity of the flicker to pattern sensitivity ratio in human vision
A80-48518
Foveal and peripheral displacement thresholds as a function of stimulus luminance, line length and duration of movement
A80-48520
An investigation of cardiac threshold variability relative to stimulus shape and respiratory cycle
N80-31032
Towards a better understanding of temporary threshold shift of hearing
[RAE-TM-FS-319] N80-32086
Visual scene perception. Frequency domain data and model parameter estimation procedure
[NLR-MP-79009-U] N80-32097
THROMBIN
Effects of hirudin-induced activation of nonenzymatic fibrinolysis during immobilization stress
[NASA-TM-76189] N80-32065
TISSUES (BIOLOGY)
Late degeneration in rabbit tissues after irradiation by heavy ions
A80-50065
Tissue analysis for thiazide diuretics
A80-50105
Changes in bone tissue under conditions of hypokinesia and in connection with age
[NASA-TM-76154] N80-32064
TOLERANCES (PHYSIOLOGY)
The oxygen-adapted rat model - Tolerance to oxygen at 1.5 and 2 ATA
A80-48090
Living without oxygen: Closed and open systems in hypoxia tolerance --- Book
A80-50354
TOPOGRAPHY
Topographical simulation of the blood vessels of the human bulbar conjunctiva and application to pressure-flow relationships
N80-31033
TOXIC DISEASES
The importance of ammonia in the metabolic effects of hydrazine
A80-50126
TOXIC HAZARDS
Pulmonary and symptom threshold effects of ozone in airline passenger and cockpit crew surrogates
A80-50125
The importance of ammonia in the metabolic effects of hydrazine
A80-50126
TOXICITY
Mechanisms of oxygen toxicity at the cellular level
[AD-A087831] N80-32084
Molecular mechanisms of the epithelial transport of toxic metal ions, particularly mercury, cadmium, lead, arsenic, zinc, and copper
[COO-2792-3] N80-32085
TRANQUILIZERS
Pilot study on the value of a beta-blocking drug in initial helicopter training
A80-50130
TREADMILLS
Hypothermia induced by 5-thio-D-glucose - Effects on treadmill performance in the heat
A80-48087

U

ULTRASONIC RADIATION
Automatic contouring for two-dimensional echocardiography
A80-50912
Ultrasonic in medicine. Citations from the Engineering Index data base
[PB80-810930] N80-31038
ULTRASONICS
Ultrasonics in medicine. Citations from the NTIS data base
[PB80-810922] N80-31037
Ultrasonic in medicine. Citations from the Engineering Index data base
[PB80-810930] N80-31038
Review of book-Ultrasound in Otorhinolaryngology
[NASA-TM-76349] N80-32076
ULTRAVIOLET RADIATION
Further studies on the environmental capabilities of fungi - Interactions of salinity, ultraviolet irradiation, and temperature in Penicillium
A80-50058

UNIVERSE
Paths of the origin of life
A80-49425
Is aluminum an essential element for life
A80-50712
UPPER ATMOSPHERE
Description of an apparatus for studying micro-organisms in the upper atmosphere
A80-50057
USER MANUALS (COMPUTER PROGRAMS)
Advanced flight design systems subsystem performance models. User guide: Environmental analysis routine library
[NASA-CR-160769] N80-31045
USER REQUIREMENTS
Project FIRES. Volume 1: Program overview and summary, phase 1B
[NASA-CR-161529] N80-32098
Project FIRES. Volume 3: Protective ensemble design and procurement specification, phase 1B
[NASA-CR-161531] N80-32100

V

VAPORIZING
Development of a preprototype vapor compression distillation water recovery subsystem
[NASA-CR-160779] N80-32101
VARIABILITY
Differentially weighting linear models of behavior: An empirical comparison of six methods
[AD-A086876] N80-31043
VASOCONSTRICTION
Asymptomatic atherosclerotic occlusive vascular disease - Its significance in the evaluation of aircrew members
A80-50116
VERTEBRATES
Temporal precision in circadian systems - A reliable neuronal clock from unreliable components
A80-49849
VERTICAL PERCEPTION
Review of book vestibular crises
[NASA-TM-76354] N80-32078
Vestibular reactions in patients during occlusion form of chorioependymitis
[NASA-TM-76356] N80-32080
VERTIGO
Review of book vestibular crises
[NASA-TM-76354] N80-32078
Vestibular reactions in patients during occlusion form of chorioependymitis
[NASA-TM-76356] N80-32080
VESTIBULAR NYSTAGMUS
Technique of electrical stimulation of the vestibular analyzer under clinical conditions
[NASA-TM-76347] N80-32075
Vestibular reactions in patients during occlusion form of chorioependymitis
[NASA-TM-76356] N80-32080
VESTIBULAR TESTS
Noise-induced hearing loss and vestibular dysfunction
A80-48095
A preliminary study of vestibular equilibrium in primates under space flight conditions
A80-50071
Certain features of the cochleovestibular syndrome in the residual stage of traumatic brain disease
[NASA-TM-76337] N80-32073
Diagnosis of latent forms of labyrinthine affections
[NASA-TM-76338] N80-32074
Review of book vestibular crises
[NASA-TM-76354] N80-32078
Vestibular reactions in patients during occlusion form of chorioependymitis
[NASA-TM-76356] N80-32080
VESTIBULES
Orthoclinostatic test as one of the methods for evaluating the human functional state
[NASA-TM-76321] N80-32070
Occupational changes in the organ of hearing and equilibrium in sailors and fisherman
[NASA-TM-76335] N80-32072
VIBRATION EFFECTS
Effects of whole-body vibrations on standing posture in man
A80-48091
A design tool for estimating passenger ride discomfort within complex ride environments
A80-48949
On human response to prolonged repeated whole-body vibration
A80-49401
VIBRATION PERCEPTION
Psychophysical comparison of vertical and angular vibrations
[AMRL-TR-80-46] A80-48088
VISION
A sclerocorneal electrode for the study of the characteristics of primate vision under condition of space flight
A80-50067
VISUAL ACCOMMODATION
Ground-referenced visual orientation with imaging displays --- psychophysiology
[AD-A081882] N80-32063
VISUAL CONTROL
An analysis of human reliability measures in visual inspection
A80-50267
VISUAL PERCEPTION
Velocity specificity of the flicker to pattern sensitivity ratio in human vision
A80-48518
Wavelength difference limit for binocular color fusion
A80-48519
Multiple sensory and motor cues enhance the accuracy of pursuit eye movements
A80-50120
The sensing of retinal motion
A80-50249
Detection of moving targets in peripheral vision
[AD-A082541] N80-32083
The influence of visual-spatial ability and study procedures on map learning skill
[AD-A087247] N80-32089
Air-to-air target acquisition factors and means of improvement
[AD-A087848] N80-32095
Visual scene perception. Frequency domain data and model parameter estimation procedure
[NLR-MP-79009-U] N80-32097
VISUAL STIMULI
Velocity specificity of the flicker to pattern sensitivity ratio in human vision
A80-48518
Foveal and peripheral displacement thresholds as a function of stimulus luminance, line length and duration of movement
A80-48520
VOICE COMMUNICATION
Response time effects of alerting tone and semantic context for synthesized voice cockpit warnings
A80-48950
Team training applications of voice processing technology
[AD-A085999] N80-32092
VOICE DATA PROCESSING
Team training applications of voice processing technology
[AD-A085999] N80-32092

W

WAKEFULNESS
The effects of various regimes of work and rest following a 64-72 hour period of wakefulness on sleep dynamics
A80-48613
WARNING SYSTEMS
Response time effects of alerting tone and semantic context for synthesized voice cockpit warnings
A80-48950
WATER BALANCE
The effects of water-salt stresses on orthostatic test endurance under conditions of hypoxia
A80-48611
WATER TREATMENT
Development of a preprototype vapor compression distillation water recovery subsystem
[NASA-CR-160779] N80-32101

WAVEFORMS
A microprocessor-based instrument for neural pulse wave analysis A80-50322

WEIGHT (MASS)
Sensations of heaviness in man --- Thesis A80-50353

WEIGHT MEASUREMENT
Mass measurement under conditions of weightlessness --- for astronaut body weight determination A80-47932
Device for mass measurement under zero-gravity conditions A80-51000

WEIGHTLESSNESS
Change of biomechanical properties of rat's bones produced by a 19-day spaceflight in the artificial satellite Cosmos-936 A80-47693
Mass measurement under conditions of weightlessness --- for astronaut body weight determination A80-47932
Physiological aspects of automatic physical training control by biofeedback in weightlessness A80-50069
A preliminary study of vestibular equilibrium in primates under space flight conditions A80-50071
Biological studies of Chlorella pyrenoidosa /strain LARG-1/ cultures grown under space flight conditions A80-50074
Development of higher fungi under weightlessness A80-50075
Growth and cell structure of Proteus vulgaris when cultivated in weightlessness in the Cytos apparatus A80-50076
Device for mass measurement under zero-gravity conditions A80-51000

WORK CAPACITY
Changes in alpha activity during decreases in human operator work capacity A80-48612
The effect of mountain conditions on work capacity and acclimatization times A80-49020

WORK-REST CYCLE
The effects of various regimes of work and rest following a 64-72 hour period of wakefulness on sleep dynamics A80-48613

WORKLOADS (PSYCHOPHYSIOLOGY)
A human performance/workload evaluation of the AN/PVS-5 bifocal night vision goggles A80-48093

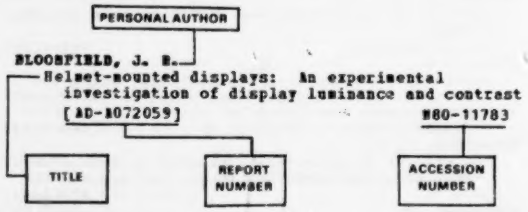
X

X RAY ANALYSIS
Changes in bone tissue under conditions of hypokinesia and in connection with age [NASA-TM-76154] N80-32064

PERSONAL AUTHOR INDEX

AEROSPACE MEDICINE AND BIOLOGY / *A Continuing Bibliography (Suppl. 213)* DECEMBER 1980

Typical Personal Author Index Listing



PERSONAL AUTHOR
BLOOMFIELD, J. R.
Helmet-mounted displays: An experimental investigation of display luminance and contrast
[AD-A072059]
N80-11783
TITLE
REPORT NUMBER
ACCESSION NUMBER

The title of the document is used to provide the user with a brief description of the subject matter. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstract in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

A

ABELES, F. J.
Project FIRES. Volume 1: Program overview and summary, phase 1B
[NASA-CR-161529] N80-32098
Project FIRES. Volume 4: Prototype protective ensemble qualification test report, phase 1B
[NASA-CR-161532] N80-32099
Project FIRES. Volume 3: Protective ensemble design and procurement specification, phase 1B
[NASA-CR-161531] N80-32100
AINSLIE, P. J.
Analysis of human auditory brainstem responses for complex stimuli
N80-31034
AKOEV, I. G.
Genetic effects of space hadrons on bacteriophage under Alpine conditions
A80-50068
ALEKSANDROV, P. N.
Effect of hypokinesia on blood microcirculation
[NASA-TM-76308] N80-32068
ALKOV, R. A.
A questionnaire study of psychological background factors in U.S. Navy aircraft accidents
A80-50121
ARIFDZHANOV, B. K.
Vestibular reactions in patients during occlusion form of chorioependymitis
[NASA-TM-76356] N80-32080
ATHEY, T. W.
Proceedings Of a Workshop on Thermal Physiology
[PB80-187867] N80-32087
AUDET, N. F.
Thermal insulation materials for diver's underwear garment
[AD-A086743] N80-31048
AZHEVSKII, P. IA.
The effects of water-salt stresses on orthostatic test endurance under conditions of hypoxia
A80-48611

B

BABSKII, V. G.
Growth and cell structure of Proteus vulgaris when cultivated in weightlessness in the Cytos apparatus
A80-50076
BALAKHOVSKII, I. S.
The effects of water-salt stresses on orthostatic test endurance under conditions of hypoxia
A80-48611
BALASUBRAMANIAN, R.
Possible role of RNA-dependent DNA-polymerase in early stages of evolution
A80-50709
BALLDIN, U. I.
Hemodynamic effects of extreme positive pressure breathing using a two-pressure flying suit
A80-50119
BARANSKI, S.
Physiological aspects of automatic physical training control by biofeedback in weightlessness
A80-50069
BARBER, P. W.
Irradiation of prolate spheroidal models of humans in the near field of a short electric dipole
A80-49868
BARER, A. S.
Deformations of human skull produced by impact /experimental studies and modeling problems/. II - The dynamics of the skull base during impact loading of the vault
A80-47692
BASKOVA, I. P.
Effects of hirudin-induced activation of nonenzymatic fibrinolysis during immobilization stress
[NASA-TM-76189] N80-32065
BASTEK, R.
On human response to prolonged repeated whole-body vibration
A80-49401
BELKIN, V. S.
Genetic effects of space hadrons on bacteriophage under Alpine conditions
A80-50068
BENEL, R. A.
A review of USAFSAM studies employing multiple-tasks performance devices
[AD-A087272] N80-32091
BENSEL, C. K.
The psychomotor performance of men and women wearing two types of body armor
[AD-A086742] N80-31040
BEREGOVOI, G.
Preparation for long-duration flights
A80-50279
BERGTOLD, D. S.
Late degeneration in rabbit tissues after irradiation by heavy ions
A80-50065
BIRK, J.
Orthostatic tolerance testing - Comparison of LBNP and HUT methods
A80-50629
BLAGOVESHCHENSKAIA, N. S.
Review of book vestibular crises
[NASA-TM-76354] N80-32078
BLAIR, N. E.
Experiments on the amplification of optical activity
A80-50707
BOCHAGOVA, O. P.
Growth and cell structure of Proteus vulgaris when cultivated in weightlessness in the Cytos apparatus
A80-50076
BONSHTEYN, O. Z.
Orthoclinostatic test as one of the methods for evaluating the human functional state
[NASA-TM-76321] N80-32070

BONNER, W. A.
Experiments on the amplification of optical activity
A80-50707

BORGER, H.-J.
Orthostatic tolerance testing - Comparison of LBNP and HUT methods
A80-50629

BOROWSKY, M. S.
A questionnaire study of psychological background factors in U.S. Navy aircraft accidents
A80-50121

BRACCHI, F.
A microprocessor-based instrument for neural pulse wave analysis
A80-50322

BRAEUER, D.
On human response to prolonged repeated whole-body vibration
A80-49401

BROCK, P. J.
Fluid-electrolyte shifts and thermoregulation - Rest and work in heat with head cooling
A80-48086

BROWN, O. R.
Mechanisms of oxygen toxicity at the cellular level
[AD-A087831] N80-32084

BUCHHOLZ, CH.
On human response to prolonged repeated whole-body vibration
A80-49401

BUCKLEY, C. J.
Asymptomatic atherosclerotic occlusive vascular disease - Its significance in the evaluation of aircrew members
A80-50116

BURGEAT, M.
A preliminary study of vestibular equilibrium in primates under space flight conditions
A80-50071

BZHALAVA, I. I.
Physiological reactions during acute adaptation to reduced gravity
A80-50070

C

CARROLL, J. B.
Individual difference relations in psychometric and experimental cognitive tasks
[AD-A086057] N80-32093

CHEN, M.
Gravity and land plant evolution - Experimental induction of lignification by simulated hypergravity and water stress
A80-50073

CHERKESOVA, L. U.
Effects of hirudin-induced activation of nonenzymatic fibrinolysis during immobilization stress
[NASA-TM-76189] N80-32065

CHERNUKH, A. M.
Effect of hypokinesia on blood microcirculation
[NASA-TM-76308] N80-32068

CLEVENSON, S. A.
A design tool for estimating passenger ride discomfort within complex ride environments
A80-48949

COOK, K. M.
Femur-bending properties as influenced by gravity. IV - Limits after high and low weight-bearing
A80-50127

COSTANZA, E. B.
Air-to-air target acquisition factors and means of improvement
[AD-A087848] N80-32095

COX, A. B.
Late degeneration in rabbit tissues after irradiation by heavy ions
A80-50065

D

DALTON, J.
Effect of alcohol on man's response to mild physical activity in a cold environment
A80-48092

DEHART, R. M.
Coronary heart disease - An expensive Air Force problem
A80-50115

DEMAIO, J. C.
Airborne performance measurement assessment: Low altitude tactical formation in two operating environments
[AD-A087068] N80-32090

DEMPSEY, T. K.
A design tool for estimating passenger ride discomfort within complex ride environments
A80-48949

DEVRIES, P. B., JR.
Methods for collecting and analyzing task analysis data
[AD-A087710] N80-32094

DICK, A. O.
Instrument scanning and controlling: Using eye movement data to understand pilot behavior and strategies
[NASA-CR-3306] N80-31039

DLUSSKAIA, I. G.
The effects of water-salt stresses on orthostatic test endurance under conditions of hypoxia
A80-48611

DONALDSON, E.
Pilot study on the value of a beta-blocking drug in initial helicopter training
A80-50130

DOOLING, D.
Astronauts keep queuing up for Space Shuttle
A80-48796

DOROFEEVA, I. K.
On the possibility of life on Mars
A80-50056

DOSKIN, V. A.
Orthoclinostatic test as one of the methods for evaluating the human functional state
[NASA-TM-76321] N80-32070

DUBININ, N. P.
Biological studies of Chlorella pyrenoidosa /strain LARG-1/ cultures grown under space flight conditions
A80-50074

DUDRAGNE, R.
A sclerocorneal electrode for the study of the characteristics of primate vision under condition of space flight
A80-50067

DUMBAI, V. N.
Changes in alpha activity during decreases in human operator work capacity
A80-48612

DURNEY, C. H.
Irradiation of prolate spheroidal models of humans in the near field of a short electric dipole
A80-49868

E

EDDOWES, E. E.
Airborne performance measurement assessment: Low altitude tactical formation in two operating environments
[AD-A087068] N80-32090

EDELSON, E. H.
The possible role of metal ions and clays in prebiotic chemistry
A80-50060

EGOROV, A. D.
Mass measurement under conditions of weightlessness
A80-47932
Device for mass measurement under zero-gravity conditions
A80-51000

ELIVANOV, V. A.
Effects of factors of prolonged space flight on conditions of tortoise skeleton
[NASA-TM-76352] N80-32060

ENRIGHT, J. T.
Temporal precision in circadian systems - A reliable neuronal clock from unreliable components
A80-49849

EPPERSON, W. L.
The effect of physical conditioning on +GZ tolerance
N80-31031

EPSTEIN, S. E.
Implications of probability analysis on the strategy used for noninvasive detection of coronary artery disease
A80-49022

EPSTEIN, Y.
Tap water, an efficient method for cooling heatstroke victims - A model in dogs
A80-50122

ESCHENBRENNER, A. J., JR.
Methods for collecting and analyzing task analysis data
[AD-A087710] N80-32094

EVDOKIMOVA, N. D.
On the possibility of life on Mars
A80-50056

F

FANG, H. S.
Altitude convulsion threshold and time to altitude convulsion in gold thioglucose obese mice
A80-48089

FEDOROV, B. M.
Effect of hypokinesia on blood microcirculation
[NASA-TM-76308] N80-32068

FEDYNSKII, A. V.
Description of an apparatus for studying micro-organisms in the upper atmosphere
A80-50057

FEIGIN, D. S.
Role of radiology in aviation accident investigation
A80-50107

FELDMAN, G. L.
Changes in alpha activity during decreases in human operator work capacity
A80-48612

FENTON, B. M.
Topographical simulation of the blood vessels of the human bulbar conjunctiva and application to pressure-flow relationships
N80-31033

FINK, D. S.
The psychomotor performance of men and women wearing two types of body armor
[AD-A086742] N80-31040

FINOGEYEV, V. I.
Restoration of physical performance capacity of athletes after prolonged restriction of their motor activity
[NASA-TM-76305] N80-32066

FISHER, A. B.
The oxygen-adapted rat model - Tolerance to oxygen at 1.5 and 2 ATA
A80-48090

FLOYD, W. N., JR.
The importance of ammonia in the metabolic effects of hydrazine
A80-50126

FORMAN, H. J.
The oxygen-adapted rat model - Tolerance to oxygen at 1.5 and 2 ATA
A80-48090

FRANCESCONI, R. P.
Hypothermia induced by 5-thio-D-glucose - Effects on treadmill performance in the heat
A80-48087

FREIDEL, V. R.
Mass measurement under conditions of weightlessness
A80-47932

FRENKEL, I. D.
Effect of sinusoidal modulated currents and acute hypoxia on corticosterone content and activity of certain dehydrogenases in tissues of different rat organs during hypokinesia
[NASA-TM-76161] N80-32057

FRIEDMANN, E. I.
Endolithic microbial life in hot and cold deserts
A80-50704

FROELICHER, V. F.
Incidence of complications from coronary angiography in 463 USAF aviators
A80-50131

FUCHS, R. J.
Incidence of complications from coronary angiography in 463 USAF aviators
A80-50131

FUNKE, D. J.
An analysis of human reliability measures in visual inspection
A80-50267

G

GANDEVIA, S. C.
Sensations of heaviness in man
A80-50353

GARRISON, J. B.
Automatic contouring for two-dimensional echocardiography
A80-50912

GARSHIN, M. I.
Certain features of the cochleovestibular syndrome in the residual stage of traumatic brain disease
[NASA-TM-76337] N80-32073

GASAWAY, D. C.
USAFSAM microprocessor audiometer: System reference manual
[AD-A087342] N80-32081

GAUTHIER, G. M.
Effects of whole-body vibrations on standing posture in man
A80-48091

GAZENKO, O. G.
Effect of hypokinesia on blood microcirculation
[NASA-TM-76308] N80-32068

GEBHARDT, U.
Orthostatic tolerance testing - Comparison of LBNP and HUT methods
A80-50629

GIBBS, D.
Template-directed synthesis and selective adsorption of oligoadenylates in hydroxyapatite
A80-49873

GIESS, M. C.
Variations in the recombination rate of Drosophila melanogaster induced by balloon flight
A80-50072

GISSEN, L. D.
Orthoclinostatic test as one of the methods for evaluating the human functional state
[NASA-TM-76321] N80-32070

GLADYSHEV, G. P.
Optical activity and evolution
A80-50706

GLICK, D. D.
A human performance/workload evaluation of the AN/PVS-5 bifocal night vision goggles
A80-48093

GOBLE, L. G.
Human operator interface with FLIR displays
[AD-A086284] N80-31041

GOGEL, W. C.
The sensing of retinal motion
A80-50249

GOLDOVSKAYA, M. D.
Effects of hirudin-induced activation of nonenzymatic fibrinolysis during immobilization stress
[NASA-TM-76189] N80-32065

GOLUBIC, S.
Early photosynthetic microorganisms and environmental evolution
A80-50062

GOSWAMI, D. C.
The relationship between pulse count and energy expenditure at sub maximal work under different ambient temperatures
A80-50577

GRAHAM, T.
Effect of alcohol on man's response to mild physical activity in a cold environment
A80-48092

GRALL, Y.
A sclerocorneal electrode for the study of the characteristics of primate vision under condition of space flight
A80-50067

GRANT-THOMSON, J.
Pilot study on the value of a beta-blocking drug in initial helicopter training
A80-50130

GRAYBIEL, A.
Space motion sickness - Skylab revisited
A80-48094

GRECHKO, G. M.
Growth and cell structure of Proteus vulgaris when cultivated in weightlessness in the Cytos apparatus
A80-50076

GREENLEAF, J. E.
Fluid-electrolyte shifts and thermoregulation - Rest and work in heat with head cooling
A80-48086

GRIGORIAN, S. S.
Methods of continuum mechanics in investigations of respiration and blood circulation
A80-50563

GROTE, P.
Effects of different body positions on the Eustachian tube function in the selection of airmen
A80-50128

H

HAAKONSON, N. H.
Investigation of life change as a contributing factor in aircraft accidents - A prospectus
A80-50104

HACKNEY, J. D.
Effects of aerosols, oxides of nitrogen, and oxidants on human health
[PB80-184583] N80-32088

HAGENSON, M. J. S.
A paraboloidal flow cytometer for improved fluorescence analysis of single cells
N80-31029

HALLETT, J. W., JR.
Asymptomatic atherosclerotic occlusive vascular disease - Its significance in the evaluation of aircrew members
A80-50116

HANSON, C. A.
Summary of the means used to positively identify the American victims in the Canary Islands crash
A80-50111

HANSON, T.
Human operator interface with FLIR displays

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

CALIFORNIA
University of California, Berkeley
COLORADO
University of Colorado, Boulder
DISTRICT OF COLUMBIA
Library of Congress
GEORGIA
Georgia Institute of Technology, Atlanta
ILLINOIS
The John Crerar Library, Chicago
MASSACHUSETTS
Massachusetts Institute of Technology, Cambridge
MISSOURI
Linda Hall Library, Kansas City
NEW YORK
Columbia University, New York
OKLAHOMA
University of Oklahoma, Bizzell Library
PENNSYLVANIA
Carnegie Library of Pittsburgh
WASHINGTON
University of Washington, Seattle

NASA publications (those indicated by an "*" following the accession number) are also received by the following public and free libraries:

CALIFORNIA
Los Angeles Public Library
San Diego Public Library
COLORADO
Denver Public Library
CONNECTICUT
Hartford Public Library
MARYLAND
Enoch Pratt Free Library, Baltimore

Seattle Public Library
WISCONSIN
Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols "#" and "*", from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

II

INTRODUCTION

This Supplement to *Aerospace Medicine and Biology* (NASA SP-7011) lists 118 reports, articles and other documents announced during April 1981 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*. The first issue of the bibliography was published in July 1964; since that time, monthly supplements have been issued.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the earth's atmosphere or in interplanetary space. References describing similar effects of biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis is placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion.

Each entry in the bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged in two major sections: *IAA Entries* and *STAR Entries*, in that order. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR*, including the original accession numbers from the respective announcement journals. This procedure, which saves time and money, accounts for the slight variation in citation appearances.

Two indexes -- subject and personal author -- are included.

An annual index will be prepared at the end of the calendar year covering all documents listed in the 1981 Supplements.

BEST DOCUMENT AVAILABLE

AVAILABILITY OF CITED PUBLICATIONS

IAA ENTRIES (A81-10000 Series)

All publications abstracted in this Section are available from the Technical Information Service, American Institute of Aeronautics and Astronautics, Inc. (AIAA) as follows: Paper copies of accessions are available at $7.00 per document up to a maximum of 40 pages. The charge for each additional page is $0.25. Microfiche[1] of documents announced in *IAA* are available at the rate of $3.00 per microfiche on demand, and at the rate of $1.25 per microfiche for standing orders for all *IAA* microfiche. The price for the *IAA* microfiche by category is available at the rate of $1.50 per microfiche plus a $1.00 service charge per category per issue. Microfiche of all the current AIAA Meeting Papers are available on a standing order basis at the rate of $1.50 per microfiche.

Minimum air-mail postage to foreign countries is $1.00 and all foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to AIAA Technical Information Service. Please refer to the accession number when requesting publications.

STAR ENTRIES (N81-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code followed by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page vii.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard $3.50 price, for those documents identified by a # symbol.)

---

[1] A microfiche is a transparent sheet of film, 105 by 148 mm in size, containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction).

BEST DOCUMENT AVAILABLE

Avail NASA Public Document Rooms Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Documents Room (Room 126), 600 Independence Ave S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory

Avail DOE Depository Libraries Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts* Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center

Avail Univ Microfilms Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation

Avail USGS Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction

Avail HMSO Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI

Avail BLL (formerly NLL) British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England Photocopies available from this organization at the price shown (If none is given, inquiry should be addressed to the BLL.)

Avail Fachinformationszentrum Karlsruhe Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM)

Avail Issuing Activity, or Corporate Author, or no indication of availability Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document

Avail U.S. Patent and Trademark Office Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free

Other availabilities If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line

SUBSCRIPTION AVAILABILITY

This publication is available on subscription from the National Technical Information Service (NTIS). The annual subscription rate for the monthly supplements, excluding the annual cumulative index, is $65.00 domestic; $130.00 foreign. All questions relating to the subscriptions should be referred to NTIS.

A81-10775 * **Renal responses to central vascular expansion are suppressed at night in conscious primates.** D. A. Kass, F. M. Sulzman, C. A. Fuller, and M. C. Moore-Ede (Harvard University, Boston, Mass.) *American Journal of Physiology*, vol. 239, Oct. 1980, p. F343-F351. 42 refs. Grant No. NsG-9054.

The renal and hemodynamic responses of squirrel monkeys to central vascular volume expansion induced by lower body positive pressure (LBPP) during the day and night are investigated. Twelve unanesthetized animals trained to sit in a metabolism chair in which they were restrained only at the waist by a partition separating upper and lower body chambers were subjected to 4 h of continuous LBPP during the day and night, and hemodynamic, urinary and drinking data were monitored. LBPP during day and night is found to induce similar increases in central venous pressure, rises in heart rate and elevations in mean arterial blood pressure. However, although daytime LBPP induced a significant increase in urine flow and sodium excretion, a marked nocturnal inhibition of the renal response to LBPP is observed. Analysis of the time course and circadian regulation patterns of the urinary responses suggests that several separate efferent control pathways are involved. A.L.W.

IAA ENTRIES

A81-19678 # **Heliobiological research - Present status and prospects (Geliobiologicheskie issledovaniia - Sovremennoe sostoianie i perspektivy).** V. N. Benevolenskii and A. D. Voskresenskii. *Akademiia Nauk SSSR, Vestnik*, no. 10, 1980, p. 54-64. 13 refs. In Russian.

The state of knowledge on the relationships in the system 'sun-biosphere' is reviewed with reference to statistics on disease incidence and rate of mortality from suicides, noninfectious diseases, and road accidents correlated with aperiodic (magnetic storms) and periodic solar events. Consideration is given to the mechanisms of biological effects of heliophysical factors and specific reactions of living organisms to external influences related to solar activity. V.L.

A81-19711 **Current concepts in clinical cardiology; Proceedings of the Tenth Conference on Cardiovascular Disease, Aspen, Colo., January 15-19, 1979.** Edited by J. H. K. Vogel (Goleta Valley Community Hospital, Santa Barbara, Calif.). Basel, S. Karger AG (Advances in Cardiology. Volume 27), 1980. 367 p. $118.75.

Papers are presented concerning the current status of clinical cardiology in the areas of high-altitude effects, noninvasive cardiographic techniques, coronary artery disease, pediatric heart disease, valvular heart disease and the management of cardiological disorders. Specific topics include the clinical treatment of acute mountain sickness, methodologies and applications of two-dimensional echocardiography, the status of radionuclide imaging in the evaluation of patients with cardiovascular disease, the applicability of electrocardiographic stress testing in the detection of coronary artery disease, means for infarct size reduction and the detection and management of asymptomatic patients with coronary artery disease. Attention is also given to the state of open heart surgery in the first year of life, the status of valvular xenograft and valvular xenobioprosthesis, the implications and treatment of premature ventricular complexes, and the role of biochemical factors in ventricular dysrhythmia accompanying ischemia. A.L.W.

A81-19712 **Speculations on the pathogenesis of high-altitude pulmonary edema.** R. F. Grover (Colorado, University, Denver, Colo.). In: Current concepts in clinical cardiology; Proceedings of the Tenth Conference on Cardiovascular Disease, Aspen, Colo., January 15-19, 1979. Basel, S. Karger AG, 1980, p. 1-5. 9 refs. Grant No. NIH-14985.

Possible mechanisms for the onset of high-altitude pulmonary edema upon the extended exposure of certain healthy, fit individuals to hypoxia at altitudes above 9000 ft are considered. Evidence is presented which indicates that pulmonary hypertension is a major cause of the pulmonary edema, and possible sources of the obstruction to pulmonary blood flow are discussed, including the constriction of small muscular pulmonary arteries, the mechanical plugging of vessels by platelet clumps or thrombi, and endothelial swelling due to exercise at high altitude. On the basis of these considerations, it is postulated that the individual susceptible to high-altitude pulmonary edema is characterized by a poor hyperventilatory response to high altitude, possibly related to an inherently small hypoxic ventilatory response. A.L.W.

A81-19713 **Acute mountain sickness - The clinical approach.** P. H. Hackett (Colorado, University, Medical Center, Denver, Colo.). In: Current concepts in clinical cardiology; Proceedings of the Tenth Conference on Cardiovascular Disease, Aspen, Colo., January 15-19, 1979. Basel, S. Karger AG, 1980, p. 6-10. 7 refs.

The clinical evaluation and management of acute mountain sickness are discussed. It is pointed out that although the only definitive therapy for acute mountain sickness is descent, it may not be necessary or possible in certain cases, and a scheme for the management of acute mountain sickness is presented based on the severity of the symptoms. Effective treatments are indicated for high-altitude headache (the first sign of mountain sickness), mild acute mountain sickness, which is characterized by any combination of headache, nausea or lack of appetite, insomnia and lassitude, and serious acute mountain sickness, which is characterized by additional symptoms including vomiting, severe headache, ataxia and severe shortness of breath. Treatment to be performed prior to and during descent in cases of high-altitude pulmonary edema and cerebral edema are also pointed out. It is noted that persons having recovered from acute mountain sickness can usually reascend, as long as it is done slowly and cautiously, and with proper prophylactic measures. A.L.W.

A81-19714 **Two-dimensional echocardiography - Methodology and application in clinical cardiology.** R. P. Martin (Virginia, University, Charlottesville, Va.). In: Current concepts in clinical cardiology; Proceedings of the Tenth Conference on Cardiovascular Disease, Aspen, Colo., January 15-19, 1979. Basel, S. Karger AG, 1980, p. 17-39. 14 refs.

The clinical application of two-dimensional echocardiography as a diagnostic tool is discussed. The development of wide-angle real-time systems which could produce tomographic sections or images of the heart in a dynamic format is reviewed, and the various types of electrical and mechanical real-time sector scanners are presented, including linear and phased arrays, and single and multiple transducers. The views affordable by two-dimensional echocardiography are then examined, with attention given to the advantages and means of obtaining the parasternal long-axis view, the parasternal short-axis views, the apical long-axis view, the apical short-axis view and the subxyphoid views. Means of applying two-dimensional echocardiography in the evaluation of left ventricular function and coronary artery disease, myopathies, valvular abnormalities and pericardial abnormalities are discussed, and limitations to the current state of the art are pointed out. A.L.W.

A81-19715 **Echocardiographic studies evaluating the effects of exercise training on the heart.** V. F. Froelicher (University Hospital, San Diego, Calif.). In: Current concepts in clinical

BEST DOCUMENT AVAILABLE

cardiology; Proceedings of the Tenth Conference on Cardiovascular Disease, Aspen, Colo., January 15-19, 1979.
Basel, S. Karger AG, 1980, p. 51-57. 10 refs. Grant No. NIH-HL-17682.

A81-19716 **Electrocardiographic stress testing - The debate goes on /probably/.** J. S. Forrester (Cedars-Sinai Medical Center, Los Angeles, Calif.) and G. A. Diamond (California, University, Los Angeles, Calif.). In: Current concepts in clinical cardiology; Proceedings of the Tenth Conference on Cardiovascular Disease, Aspen, Colo., January 15-19, 1979. Basel, S. Karger AG, 1980, p. 83-92. 18 refs.

Various approaches to the interpretation of the results of electrocardiographic stress testing are evaluated in light of the current controversy over the diagnostic value of the stress test. Consideration is given to the values and limitations of the categorical approach, whereby the stress test is categorized as positive or negative based on the ST segment response alone, the judgemental approach, which includes the judgement of an experienced clinician, the ordinal approach, which assigns arbitrary weightings to judgemental factors, the multivariate approach, in which each clinical modifier is mathematically weighted, and the probabilistic approach, which determines the probability of coronary artery disease in a patient on the basis of Bayes' theorem. It is suggested that due to the strengths and weaknesses of all the approaches examined, a combination of techniques, specifically initial probabilistic analysis modified by judgemental interpretation, may represent the optimum synthesis of the most desirable aspects of the various methods of electrocardiographic stress test interpretation. A.L.W.

A81-19717 **Detection and management of the asymptomatic patient with coronary artery disease.** C. R. Conti (Florida, University, Gainesville, Fla.). In: Current concepts in clinical cardiology; Proceedings of the Tenth Conference on Cardiovascular Disease, Aspen, Colo., January 15-19, 1979.
Basel, S. Karger AG, 1980, p. 181-190. 9 refs.

Methods for the detection and management of coronary artery disease in patients lacking coronary symptoms are discussed. Results of a study illustrating the inconsistency of symptoms in patients with transient electrocardiographic evidence of myocardial ischemia are indicated, and a case history demonstrating the problems of interpreting a positive exercise stress test in an asymptomatic individual is presented. Experimental confirmations performed by means of exercise thallium perfusion and exercise isotope angiography of coronary artery disease in asymptomatic patients are pointed out, as well as the confirmation by angiography of coronary artery disease in 10 out of a sample of 17 asymptomatic patients with a positive stress test. Guidelines are presented for the systematic evaluation of asymptomatic individuals who present with a positive exercise stress test, and an approach is suggested to the management of patients who have not exhibited pain during exercise-induced S-T segment depression and who have undergone coronary angiography. A.L.W.

A81-19718 **Does exercise protect from coronary artery disease.** V. F. Froelicher (University Hospital, San Diego, Calif.). In: Current concepts in clinical cardiology; Proceedings of the Tenth Conference on Cardiovascular Disease, Aspen, Colo., January 15-19, 1979. Basel, S. Karger AG, 1980, p. 237-242. Grant No. NIH-HL-17682.

Results of recent epidemiological studies of the relation of physical activity levels to the incidence of coronary artery disease are presented in an attempt to evaluate the relative contributions of physical activity per se and selection for physical activity to the observed lower incidence of the disease in physically active populations. Consideration is given to the longitudinal studies of longshoremen and college alumni with different levels of energy output reported by Paffenbarger et al. (1978). The studies are shown to support the protective rather than the selective effects of physical exercise, which is found to most likely decrease the risk for coronary heart disease as well as other risk factors for coronary disease. A.L.W.

A81-19719 **Premature ventricular complexes - Therapeutic dilemmas and decisions.** D. W. Snyder, D. J. Sheridan, and B. E. Sobel (Washington University, St. Louis, Mo.). In: Current concepts in clinical cardiology; Proceedings of the Tenth Conference on Cardiovascular Disease, Aspen, Colo., January 15-19, 1979.
Basel, S. Karger AG, 1980, p. 322-342. 80 refs. Grant No. NIH-HL-17646.

The diagnosis, incidence and treatment of ventricular ectopic activity (VEA) are discussed. The diagnostic features of typical premature ventricular complexes (PVCs) are indicated, and the Lown classification of PVC severity on the basis of frequency, electrocardiographic morphology and timing is introduced. The incidence of VEA in the pre-hospital, early hospital, late hospital and convalescent phases of acute myocardial infarction, in ambulatory patients with stable coronary artery disease and in ostensibly normal subjects is examined, and it is pointed out that adult subjects with high-grade VEA have an increased risk of sudden death, most likely reflecting a predisposition to ventricular fibrillation. Approaches to the pharmocological, electrical and surgical management of VEA are considered, indications for treatment are discussed, and it is argued that low-grade VEA does not require treatment in ambulatory patients without specific indications. A.L.W.

A81-19720 **The role of biochemical factors in ventricular dysrhythmia accompanying ischemia.** P. B. Corr and B. E. Sobel (Washington University, St. Louis, Mo.). In: Current concepts in clinical cardiology; Proceedings of the Tenth Conference on Cardiovascular Disease, Aspen, Colo., January 15-19, 1979.
Basel, S. Karger AG, 1980, p. 346-360. 50 refs. Grants No. NIH-NL-17646; No. NIH-HL-21654.

The role of biochemical factors in precipitating the electrophysiological changes characterizing malignant ventricular dysrhythmia which accompany ischemia is discussed. The nature of the electrophysiological changes observed in vitro and in vivo in heart tissue after ischemia is considered, and the possible roles of slow-response action potentials in dysrhythmias early after the onset of ischemia and of reperfusion are pointed out. The effects of metabolic and biochemical factors, including hypoxia, lactate, pH and mono- and divalent cation concentrations, on ventricular electrophysiology are then examined, together with the possible influence of the autonomic nervous system, cyclic AMP accumulation, free fatty acids and fatty acid esters and lysophosphoglycerides. It is concluded that regional, heterogeneous accumulations of noxious ions and metabolites as well as hypoxia play a significant role in mediating the effects of ischemia on ventricular function, and that elucidation of the biochemical mechanisms responsible is of particular importance to the development of therapeutic interventions of high specificity. A.L.W.

A81-19841 **A hierarchical programming approach to robot assembly.** D. S. Seltzer. In: Advanced manufacturing technology: Programming research and operations logistics; Proceedings of the Fourth International Conference, Ann Arbor, Mich., May 21-23, 1979. Amsterdam, North-Holland Publishing Co., 1980, p. 237-246. 11 refs.

A software control system was developed for industrial assemblies by a multiaxis manipulator which partitions the programming tasks into a four level programmer hierarchy. This allows the operation of a sophisticated software system by floor personnel without programming experience. The first level of the hierarchy is the Systems Programmer responsible for the framework of the run-time system; a Strategy Programmer writes a library of general Fortran strategy routines; a Task Sequence Programmer uses this library in solving particular tasks; and finally, the Shop Floor Programmer/Operator provides the real world positioning information using the manipulator arm as a surveying instrument. A.T.

BEST DOCUMENT AVAILABLE

A81-19842 **Partly unmanned machining.** O. Bjorke and A. Rolstadas. In: Advanced manufacturing technology: Programming research and operations logistics; Proceedings of the Fourth International Conference, Ann Arbor, Mich., May 21-23, 1979. Amsterdam, North-Holland Publishing Co., 1980, p. 271-284. 6 refs.

A manufacturing system design using the building block principle so that it is constructed of conventional parts permitting evolutionary development is discussed. Motion, state survey, and diagnostic functions can be included in a system which is implemented as a hierarchy consisting of the machine tool, the cell, and the total factory. The control system can be divided into management, technology, direct equipment, and diagnosis control portions. A.T.

A81-19900 # **Dynamics of the state of redox systems in structural elements of the cerebral cortex during oxygen deficiency /cytophotometric study in vivo/ (Dinamika sostoianiia redoks-sistem strukturnykh elementov kory mozga pri kislorodnom golodanii /prizhiznennoe tsitofotometricheskoe issledovanie/).** M. O. Samoilov, D. G. Semenov, and A. N. Derii (Akademiia Nauk SSSR, Institut Fiziologii, Leningrad, USSR). *Akademiia Nauk SSSR, Doklady*, vol. 255, no. 3, 1980, p. 766-768. 11 refs. In Russian.

Quantitative studies were used to determine redox system dynamics in various types of pyramidal neurons and in adjacent areas of the sensomotor region in the cerebral cortex of cats and rabbits. In vivo measurements of nearby oxygen tension and spectrophotometric recordings of oxidized forms of staining solutions were employed to study effects of hypoxia levels. Factors responsible for disturbances of redox processes on the cellular level are discussed. T.M.

A81-20052 # **Effects of internal noise on helicopter operation - An aircrew view.** J. E. Maitland (RAF, London, England). In: Symposium on Internal Noise in Helicopters, Southampton, England, July 17-20, 1979, Proceedings. Southampton, England, University of Southampton, 1980, p. A1 1, A1 2.

Various factors bearing on internal helicopter noise are discussed in the context of effective helicopter operation. Light structures, such as honeycomb, are necessary to ensure structural integrity under battle conditions, even though such structures may increase internal noise levels owing to their resonance. It is also noted that quilted insulating materials add to the weight and pose a fire hazard when saturated with oil or hydraulic fluid. Noise can even be useful; changes in pitch or intensity may warn of such faults as fluctuations in rotor RPM or trouble in an ancillary drive. On the other hand, noise interferes with communication between crew members. It also induces fatigue and makes direct-voice rebriefing of troops being transported by helicopter difficult. Noise may also raise the stress experienced by a rescued person. Improvements must therefore be made only when all operational needs are considered. C.R.

A81-20056 # **The effective acoustic environment of helicopter crewman.** R. T. Camp, Jr. (U.S. Army, Aeromedical Research Laboratory, Fort Rucker, Ala.). In: Symposium on Internal Noise in Helicopters, Southampton, England, July 17-20, 1979, Proceedings. Southampton, England, University of Southampton, 1980, p. B1 1-B1 4.

One of the primary reasons for quantification of the acoustic noise in helicopters is to assess the acoustic hazards to the crew and passengers. The usual sound-level meter or dosimeter measures of the internal and external noise levels do not yield a good estimate of the actual or 'effective acoustic environment' of the crew and passengers. Realistic estimates of the effective acoustic environments require the application of reliable narrow-band analyses of the noise from all sources including the system noise of electronic communication systems, the spectra of which must be corrected for its attenuation characteristics of helmets and hearing protectors. The problems of ascertaining the composite acoustic stimuli and the application of corrections for other variables that affect the effective acoustic environment are included in this presentation. (Author)

A81-20057 * # **Acceptance and control of aircraft interior noise and vibration.** D. G. Stephens and J. D. Leatherwood (NASA, Langley Research Center, Hampton, Va.). In: Symposium on Internal Noise in Helicopters, Southampton, England, July 17-20, 1979, Proceedings. Southampton, England, University of Southampton, 1980, p. B2 1-B2 14. 22 refs.

Ride quality criteria for noise, vibration, and their combination in the helicopter cabin environment are discussed. Results are presented of laboratory and field studies of passenger responses to interior noise and vibration during the performance of a listening task and during reverie, as well as to the interaction of noise with multi-frequency and multi-axis vibration. A study of means for reducing helicopter interior noise based on analytical, experimental and flight studies of the near-field noise source characteristics of the aircraft, the transmission of noise through aircraft structures and the attenuation of ~~noise by~~ various noise control treatments is then presented which has resulted in a reduction of 3 dB in helicopter cabin noise. Finally, a model under development to evaluate passenger acceptance of a helicopter noise and vibration environment is indicated which incorporates the observed noise and vibration effects on comfort and is expected to provide insights for more effective noise and vibration control. A.L.W.

A81-20059 **Factors affecting acceptable noise levels in helicopters.** K. R. Maslen (Royal Aircraft Establishment, Human Engineering Div., Farnborough, Hants., England). In: Symposium on Internal Noise in Helicopters, Southampton, England, July 17-20, 1979, Proceedings. Southampton, England, University of Southampton, 1980, p. B4 1-B4 9. 14 refs.

Difficulties encountered in defining acceptable noise levels inside helicopters are discussed. Since the bulk of helicopter noise is of low frequency and contains narrow bands of high sound pressure levels, there is a danger of indirect masking of speech and other signals. The low-frequency noise and infrasound, especially when combined with vibration, may have disturbing subjective effects, and isolated noise peaks may cause annoyance. It is thought that the danger of incurring permanent hearing loss in helicopter noise will differ from that in fixed-wing aircraft for the same A-weighted levels at the ear. C.R.

A81-20467 * **Human factors by descent energy management.** R. E. Curry (NASA, Ames Research Center, Aviation Safety Research Office, Moffett Field, Calif.). In: Conference on Decision and Control, and Symposium on Adaptive Processes, 18th, Fort Lauderdale, Fla., December 12-14, 1979, Proceedings. Volume 1. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1979, p. 422-426. 5 refs.

This paper describes some of the results of a human factors study of energy management during descent using standard aircraft displays. Discussions with pilots highlighted the practical constraints involved and the techniques (algorithms) used to accomplish the descent. The advantages and disadvantages of these algorithms are examined with respect to workload and their sensitivity to disturbances. Vertical navigation and flight performance computers are discussed in terms of the information needed for effective pilot monitoring and takeover. (Author)

A81-20499 * **Mental workload in decision and control.** T. B. Sheridan (MIT, Cambridge, Mass.). In: Conference on Decision and Control, and Symposium on Adaptive Processes, 18th, Fort Lauderdale, Fla., December 12-14, 1979, Proceedings. Volume 2. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1979, p. 977-982. 21 refs. U.S. Department of Transportation Contract No. OS-70055; Grant No. NsG-2118.

This paper briefly reviews the problems of defining and measuring the 'mental workload' of aircraft pilots and other human operators of complex dynamic systems. Of the alternative approaches the author indicates a clear preference for the use of subjective scaling. Some recent experiments from MIT and elsewhere

BEST DOCUMENT AVAILABLE

are described which utilize subjective mental workload scales in conjunction with human decision and control tasks in the laboratory. Finally a new three-dimensional mental workload rating scale, under current development for use by IFR aircraft pilots, is presented. (Author)

A81-20500 **Frequency domain measures of human performance under G-stress.** J. Korn, D. L. Kleinman (Connecticut, University, Storrs, Conn.), and D. W. Repperger (USAF, Aerospace Medical Research Laboratories, Wright-Patterson AFB, Ohio). In: Conference on Decision and Control, and Symposium on Adaptive Processes, 18th, Fort Lauderdale, Fla., December 12-14, 1979, Proceedings. Volume 2. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1979, p. 983-988. 13 refs. Contract No. F33615-78-C-0517.

Results of compensatory tracking experiments under G-stress are presented which confirm the hypothesis that human performance deteriorates under linear acceleration. The optimal control model (OCM) validates the experimental data. It is shown that the OCM parameters which are most affected include the motor noise, observation noise, neuromotor time constant, and reaction time-delay, all of which significantly increase under G-stress. In addition, some accumulative G-effects are evident as the neuromotor time constant remains higher than nominal in the post-G runs, reflecting a lower control bandwidth and perhaps fatigue. V.L.

A81-20501 * **Human controller modeling in environments that include non-control tasks.** T. Govindaraj (Purdue University, West Lafayette, Ind.), and W. B. Rouse. In: Conference on Decision and Control, and Symposium on Adaptive Processes, 18th, Fort Lauderdale, Fla., December 12-14, 1979, Proceedings. Volume 2. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1979, p. 989-994. 7 refs. Grant No. NsG-2119.

In complex environments where the human operator is a supervisor, he must allocate his attention between different kinds of tasks for optimum overall performance. When a portion of the future reference trajectory for the control task is available for preview, scheduling various activities is possible. A model has been developed for this situation using dynamic programming to solve an optimal control problem. An experiment was conducted where subjects controlled an airplane symbol over a map, shown a fixed distance into the future. Discrete, non-control tasks were introduced as number entry tasks. Results from the model are compared with experimental results. (Author)

A81-20502 **Helicopter pilot performance and workload as a function of night vision symbologies.** E. J. Hartzell (U.S. Army, Aeromechanics Laboratory, Moffett Field, Calif.). In: Conference on Decision and Control, and Symposium on Adaptive Processes, 18th, Fort Lauderdale, Fla., December 12-14, 1979, Proceedings. Volume 2. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1979, p. 995, 996.

A full six-degree-of-freedom motion simulation of an advanced U.S. Army helicopter flying a night time nap-of-the-earth scenario was conducted in order to assess pilot performance, training requirements, and workload as a function of the flight control symbologies used. The results of the time estimation techniques used in conjunction with this experiment support the predicted levels of difficulty designed into the flight scenario. Time estimation provides a relative scale of workload between hover maneuvers and suggests that there is no significant difference in workload between the three symbology types studied. V.L.

A81-20503 **Evaluation and prediction of the vertical situation from a horizontal situation display.** S. G. Hart and L. L. Loomis (Tufts University, Medford, Mass.). In: Conference on Decision and Control, and Symposium on Adaptive Processes, 18th, Fort Lauderdale, Fla., December 12-14, 1979, Proceedings. Volume 2. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1979, p. 997-1001.

This study was designed to provide additional information about the content, symbology, and format of a cockpit display of traffic information (CDTI). Several different symbols for other aircraft and different ways to display information about its status that pilots had preferred in an earlier survey based on static displays and pilot opinion were evaluated. In addition, different features of the vertical and horizontal situation of two aircraft (e.g. angular separation, relative altitude, difference in ground speed) were studied to determine the interaction between parameters of an encounter between two aircraft displayed on a simple dynamic CDTI and display symbologies on pilot perception of relative motion and separation. (Author)

A81-20511 * **An analysis of the human as a predictor model.** J. G. Kreifeldt (Tufts University, Medford, Mass.). In: Conference on Decision and Control, and Symposium on Adaptive Processes, 18th, Fort Lauderdale, Fla., December 12-14, 1979, Proceedings. Volume 2. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1979, p. 1074-1077. 7 refs. Grant No. NsG-2156.

A hybrid sampled data-continuous impulse response of a preview tracker using a fast time model predictor aid is derived. The model can accept transient and nontransient imputs and is suitable for studying a human preview tracker using an internalized or externalized predictor display. The model is shown to behave reasonably in a simple example and its implications for modeling studies are discussed. (Author)

A81-20845 # **The colony-forming capacity of bone marrow cells in a tissue culture after uniform and nonuniform radiation (O kolonieobrazuiushchei sposobnosti kletok kostnogo mozga v kul'ture tkani posle ravnomernogo i neravnomernogo oblucheniia).** L. P. Parfenov and V. M. Abramova (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *Akademiia Nauk SSSR, Doklady*, vol. 256, no. 1, 1981, p. 254-256. 15 refs. In Russian.

The generative cycle of Arabidopsis thaliana, paca Enkheim-1 seeds was observed under weightless conditions of spaceflight for 18 days from the fertilization stage through its ripening. The number of fertile seeds sharply decreased and the quantity of abortive formations increased during the flight, this increase resulted from unfavorable conditions of weightlessness, and were not of hereditary nature. A.T.

A81-20916 * **Cockpit displayed traffic information and distributed management in air traffic control.** J. G. Kreifeldt (Tufts University, Medford, Mass.). *Human Factors*, vol. 22, Dec. 1980, p. 671-691. 24 refs. Grant No. NsG-2156.

A graphical display of information (such as surrounding aircraft and navigation routes) in the cockpit on a cathode ray tube has been proposed for improving the safety, orderliness, and expeditiousness of the air traffic control system. An investigation of this method at NASA-Ames indicated a large reduction in controller verbal work load without increasing pilot verbal load, the visual work may be increased. The cockpit displayed traffic and navigation information system reduced response delays permitting pilots to maintain their spacing more closely and precisely than when depending entirely on controller-issued radar vectors and speed command. A.T.

A81-20917 **Predicting search performance for multiple targets.** T. Morawski, C. G. Drury, and M. H. Karwan (New York, State University, Amherst, N.Y.). *Human Factors*, vol. 22, Dec. 1980, p. 707-718. 18 refs.

BEST DOCU

Performance in a visual search task is usually measured by the cumulative probability of locating a target, F(t), in a given time (t). Two extreme F(t) against (t) relationships have been postulated, one assuming that search is random, and the other assuming that search is systematic. However, these relationships have been available for the situation in which each search field contains a single occurrence of a single type of target. This paper extends both search models (random and systematic) first to the case of multiple occurrences of a single fault type within a search field and second to the case of multiple fault types. For systematic search, these two cases can be combined to predict the effects of multiple occurrences of multiple fault types. The general F(t) relationships are given in each case and illustrated with a worked example. (Author)

A81-20925 **Implications of a critical level in the ear for assessment of noise hazard at high intensities.** G. R. Price (U.S. Army, Human Engineering Laboratory, Aberdeen Proving Ground, Md.). *Acoustical Society of America, Journal*, vol. 69, Jan. 1981, p. 171-177. 33 refs.

The argument is advanced that there is a critical level (CL) for the ear at high intensities where the loss mechanism undergoes a fundamental change. In physiological terms, CL probably represents the intensity at which a given level of mechanical stress is reached in the Organ of Corti. Electrophysiological, histological, and threshold shift data support this contention. Further, CL varies as a function of the spectrum of the sound. A preliminary estimate of the freefield SPL reaching CL in the human ear has been calculated as has been the distribution of CL. The implications for human exposure and damage-risk criteria are discussed. (Author)

A81-21020 **A recursive Lagrangian formulation of manipulator dynamics and a comparative study of dynamics formulation complexity.** J. M. Hollerbach (MIT, Cambridge, Mass.). *IEEE Transactions on Systems, Man, and Cybernetics*, vol. SMC-10, Nov. 1980, p. 730-736. 23 refs. Contract No. N00014-77-C-0389.

An efficient Lagrangian formulation of manipulator dynamics has been developed. The efficiency derives from recurrence relations for the velocities, accelerations, and generalized forces. The number of additions and multiplications varies linearly with the number of joints, as opposed to past Lagrangian dynamics formulations with a fourth-power joint number dependence. With this formulation it should be possible in principle to compute the Lagrangian dynamics in real time. The computational complexities of this and other dynamic formulations including recent Newton-Euler formulations and tabular formulations are compared. It is concluded that recursive formulations based either on the Lagrangian or Newton-Euler dynamics offer the best method of dynamics calculation. (Author)

A81-21023 **A stochastic differential game theory approach to human operators in adversary tracking encounters.** J. L. Speyer (Texas, University, Austin, Tex.), S. Samn, and R. Albanese (USAF, School of Aerospace Medicine, Brooks AFB, Tex.). *IEEE Transactions on Systems, Man, and Cybernetics*, vol. SMC-10, Nov. 1980, p. 755-762. 22 refs.

The paper examines whether conclusions based upon passive signal analysis using linear quadratic Gaussian differential game theory with perfect state information are applicable to the complex adversary encounter. It is shown that the available information on passive (compensatory) tracking may be extended to the case when the display is perturbed by a second intelligent operator acting as an adversary. Conclusions based on passive encounter usually do not predict the active encounter; an example is given of the tracking error variance and control effort computed for the passive case which are smaller than that predicted by the active encounter. A.T.

A81-21024 **Master-slave manipulator performance for various dynamic characteristics and positioning task parameters.** W. J. Book and D. P. Hannema (Georgia Institute of Technology, Atlanta, Ga.). *IEEE Transactions on Systems, Man, and Cybernetics*, vol. SMC-10, Nov. 1980, p. 764-771. 17 refs. Research supported by Du Pont de Nemours and Co.; Grant No. NIH-5-505-R-7-24-10.

The relationship between the performance of an experimental master-slave manipulator and natural frequency, Coulomb friction, and backlash was quantified by time measurements for accomplishing a simple positioning task. Statistical analysis indicated that a simple linear model could be constructed to relate the task parameters of distance and width to manipulator performance and characteristics. The results can be used for the cost-performance tradeoff of the manipulator design; they have been interpreted in terms of an information transmission model of the man-machine system with separate transmission rates for gross motions and a point of transfer between the two motions. A.T.

A81-21031 **Learning and control for a compliant computer-controlled manipulator.** A. Liegeois, E. Dombre, and P. Borrel (Montpellier II, Université, Montpellier, France). *IEEE Transactions on Automatic Control*, vol. AC-25, Dec. 1980, p. 1097-1102. 18 refs.

Precise automated manipulation and assembly by means of a computer-controlled manipulator with elastic drives require a model of the compliant structure. A calibration procedure based on a learning technique is used to identify the structural parameters of the model. The force reflecting performances of the cable drives makes possible simple continuous active accommodations to adapt the apparent compliance in the task space during fine motions. The damping of oscillations induced by fast transient motions is carried out by means of measurements of cable deformations and their derivatives. Experimental results with a computer-controlled slave telemanipulator show that performance may be improved by adaptive control. (Author)

A81-21125 # **Data acquistion system for thermal stress studies.** R. P. Layton and W. H. Mints, Jr. (U.S. Naval Medical Research Institute, Bethesda, Md.). *American Society of Mechanical Engineers, Winter Annual Meeting, Chicago, Ill., Nov. 16-21, 1980, Paper 80-WA/OCE-14.* 3 p. Members, $2.00; nonmembers, $4.00.

A system is described that monitors cutaneous heat flow and temperature at individual body sites using commerical thermoelectric heat flow transducers and thermistors. The system can operate either dry or immersed in water at pressures up to 16 atmospheres absolute (ATA) and at ambient temperatures between 0 C and 50 C. The data output from the 15 heat flux transducers and 15 thermistor temperature sensors are presented as a two-channel multiplexed signal. The small size of the system and output cable give the subject freedom of movement for performing various tasks with minimal hindrance from the monitoring package. Designed to monitor exposure to cold stress in hyperbaric environments, this system is directly applicable to studies of thermal stress in general and easily can be adapted to accommodate the requirements of other physiological studies. (Author)

A81-21450 # **On the binaural processing of stimuli with different interaural phase relations.** J. Raatgever. Delft, Technische Hogeschool, Doctor in de technische Wetenschappen Dissertation, 1980. 133 p. 99 refs.

Binaural hearing mechanisms are examined with regard to the processing of interaural time differences. The internal coding of interaural time differences in the temporal fine structure of binaural stimuli is investigated, consequently, signals containing frequency parts below 1600 Hz are of interest. Particular consideration is given to dichotic pitch, lateralization of low-frequency signals, a spectral model for lateralization and dichotic pitch, lateralization of different dichotic pitch phenomena, and binaural masking with dichotic pitch stimuli. B.J.

A81-21471 **Control of breathing during prolonged exercise.** R. J. Martin, E. J. Morgan, C. W. Zwillich, and J. V. Weil (Colorado, University, Medical Center, Denver, Colo.). *Journal of*

BEST DOCUMENT AVAILABLE

Applied Physiology: Respiratory, Environmental and Exercise Physiology, vol. 50, Jan. 1981, p. 27-31. 30 refs. Grant No. NIH-HL-14985.

Mechanisms for the steady upward drift of minute ventilation throughout prolonged heavy exercise are investigated. The roles of elevated body temperature, lactate and catecholamine levels, increased metabolic rate and changes in respiratory pattern were examined during one hour of bicycle ergometer exercise at 2/3 maximal aerobic capacity in ten healthy subjects, during which minute ventilation was observed to increase by 13%. The rise in ventilation is not found to be affected by an artificial elevation of body temperature, and to occur despite unchanged arterial CO2 pressure, lactate and pH levels and CO2 ventilation. The ventilation increase is attributed to increased dead space ventilation, with tidal volume unchanged, which cannot be accounted for by rapid shallow breathing. The factors responsible for the observed upward drift in minute ventilation thus remain undetermined. A.L.W.

A81-21472 **Responses to dry heat of men and women with similar aerobic capacities.** A. J. Frye and E. Kamon (Pennsylvania State University, University Park, Pa.). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 50, Jan. 1981, p. 65-70. 25 refs.

A81-21473 * **Plasma volume, osmolality, vasopressin, and renin activity during graded exercise in man.** V. A. Convertino, L. C. Keil, E. M. Bernauer, and J. E. Greenleaf (NASA, Ames Research Center, Biomedical Research Div., Moffett Field, Calif.). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 50, Jan. 1981, p. 123-128. 33 refs. Grant No. NCA2-OR-180-703.

The influence of work intensity on plasma volume, osmolality, vasopressin and renin activity and the interrelationships between these responses are investigated. Plasma volume, renin activity and osmotic, sodium and arginine vasopressin concentrations were measured in venous blood samples taken from 15 healthy male subjects before and after six minutes of bicycle ergometer exercise at 100, 175 and 225 W. Plasma volume is found to decrease significantly with increasing work intensity, while increases in Na(+) concentration, osmolality and vasopressin are only observed to be significant when the work intensity exceeds 40% maximal aerobic capacity and plasma renin activity increased linearly at all work levels. In addition, significant correlations are observed between plasma volume and osmolality and sodium changes, and between vasopressin and osmolality and sodium content changes. Data thus support the hypotheses that (1) vasopressin may be the primary controlling endocrine for fluid and electrolyte levels following exercise; (2) an exercise intensity greater than 40% maximal aerobic capacity is required to stimulate vasopressin release through changes in plasma osmolality; and (3) the stimulation of the renin-angiotensin system is a more general stress response. A.L.W.

A81-21474 **Diffusing capacity of the lung during hypoxia - Role of capillary recruitment.** R. L. Capen, L. P. Latham, and W. W. Wagner, Jr. (Colorado, University, Denver, Colo.). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 50, Jan. 1981, p. 165-171 34 refs. Grants No. NIH-HL-14985; No. NIH-HL-07171.

The effects of lung capillary recruitment induced by hypoxia on the diffusing capacity of the lung are investigated. In vivo microscopy of healthy adult dogs was performed to monitor capillary recruitment in the upper part of the lung, and lung diffusing capacity for carbon monoxide was measured during conditions of normoxia, hypoxia, hypoxia with the intravenous infusion of a vasodilator, and normoxia with continuing vasodilator infusion. The pulmonary diffusing capacity as measured by a rebreathing technique is found to be significantly correlated with the extent of capillary perfusion under both hypoxic and normoxic conditions, even with the acceleration of the reaction rate between carbon monoxide and hemoglobin under hypoxic conditions taken into account. The evidence thus suggests that the capillary recruitment elicited during airway hypoxia causes an increase in the diffusion rate and is of physiological benefit, and that the microscopic observations are representative of much of the lung. A.L.W.

A81-21726 * **The role of simulation in Space Shuttle training.** J. W. Bilodeau (NASA, Johnson Space Center, Houston, Tex.). In: Summer Computer Simulation Conference, Toronto, Canada, July 16-18, 1979, Proceedings. Montvale, N.J., AFIPS Press, 1980, p. 813-818.

The content and the scope of the flight crew training program for the Space Shuttle are discussed with emphasis on the role of simulation in such training. The training flow chart is presented and requirements in hours are given for each of the subject areas. V.L.

A81-21727 **An integrated training approach.** A. D. Windsor (U.S. Navy, Corpus Christi, Tex.) and H. Brouwer (Gould, Inc., Melville, N.Y.). In: Summer Computer Simulation Conference, Toronto, Canada, July 16-18, 1979, Proceedings. Montvale, N.J., AFIPS Press, 1980, p. 821, 822.

The training program for U.S. Navy pilots that has evolved in response to high turnover and rising costs is discussed. It is noted that the Navy Integrated Flight Training System introduces instrument flying skills very early in the pilot's course. Here, systems operations training is facilitated by the use of specially designed, computer driven graphic panels that provide visual representation of system functions in both normal and degraded conditions. Trainees move next to the procedures trainer and then to the flight simulator. It is noted that training devices provide effective initial training for student pilots, maintain and improve the proficiency of experienced pilots, reduce training and operating costs, and conserve scarce resources, such as energy, weapons, and ammunition. C.R.

A81-21728 **Task segmentation - An approach to simulator task fidelity.** E. A. Stark (Singer Co., Link Div., Binghamton, N.Y.). In: Summer Computer Simulation Conference, Toronto, Canada, July 16-18, 1979, Proceedings. Montvale, N.J., AFIPS Press, 1980, p. 835-838.

It is noted that the complex motion and visual cuing systems offered by simulators today provide more information than is required for effective training. Attention is also given to the high cost of these simulators. The need for a careful identification of task/cue relationships and dynamics is stressed. A method of analyzing skilled operator tasks as more or less complex procedures is proposed as a way of identifying the minimum simulator complexity required for full task fidelity. Three distinct phases of learning - cognitive, perceptual, and psychomotor - are identified, and the role to be played by the simulator in each phase is discussed. It is noted that the first approach to the definition of minimum cue requirements is in the segmentation of the maneuvers to be learned. It is concluded that while providing very little information by itself, segmentation furnishes a structure in which simulator designers, training analysts, instructors, and pilots can explore the processes by which flight skills are developed and maintained. C.R.

A81-21923 # **Analysis and modeling of the cephalic response of a human operator subjected to binaural stimulation in a sound localization task (Analyse et modélisation de la réponse céphalique d'un opérateur humain soumis à une stimulation binauriculaire dans une tâche de localisation d'un son).** J.-P. Bourrieres. Lille I, Université, Docteur-Ingénieur Thesis, 1979. 181 p. 43 refs. In French. Research supported by the Direction des Recherches, Etudes et Techniques.

Systematic relationships are obtained between the physical characteristics of binaural sound stimuli and the perception of the lateral position of the sound source. The objective parameters of binaural hearing are reviewed, with particular attention given to the spatial and energetic characteristics of binaural stimulation. An

BEST DOCUMENT AVAILABLE

experimental apparatus developed to investigate perceptual responses to binaural stimulation is then presented in which head position is used to indicate the sound source position, and in which the operator is placed in the loop as the error detector. Means for the processing of the input signal and output head response data are examined, and statistical results concerning the abilities of the 10 subjects to localize the sources are presented. A behavioral model is then proposed to explain the results based on the mean response to a position corresponding to the eccentricity of the sound source. A.L.W.

A81-21987 # **Development of a secondary task method for measuring operator workload. II - A change of secondary task performance with acquisition of flying skill by Link Trainer.** Y. Nagasawa, H. Hagihara, S. Aramaki, and N. Utsuki (Japan Air Self-Defense Force, Aeromedical Laboratory, Tachikawa, Japan). *Japan Air Self Defence Force, Aeromedical Laboratory, Reports,* vol. 21, June 1980, p. 61-73. 6 refs. In Japanese, with abstract in English.

A81-21988 # **Experimental studies on the survival capacity in the sealed environment. I - Effect of cooping up in the individual sealed chamber of various volume on survival time in rats of various body weight.** H. Fujiwara (Japan Air Self-Defense Force, Aeromedical Laboratory, Tachikawa, Japan). *Japan Air Self Defence Force, Aeromedical Laboratory, Reports,* vol. 21, June 1980, p. 75-86. 37 refs. In Japanese, with abstract in English.

The effects of sealed environments on the survival times and the lethal concentration of oxygen and carbon dioxide in 45 Sprague-Dawley male rats is evaluated. Mean survival times are given for each group of 60, 210 and 420 grams in body weight for sealed chambers of 10, 20 and 30 liter volume. The mean lethal concentrations of oxygen and carbon dioxide were 2.9 plus or minus .9% and 14.7 plus or minus .3% respectively for all groups. L.S.

A81-21989 # **Structural analysis of factor patterns on EEG under various states of consciousness.** Y. Kurihara (Japan Air Self-Defense Force, Aeromedical Laboratory, Tachikawa, Japan). *Japan Air Self Defence Force, Aeromedical Laboratory, Reports,* vol. 21, June 1980, p. 87-101. 58 refs. In Japanese, with abstract in English.

The direct varimax method of factor analysis was applied to the electroencephalogram to investigate the effects under 12 situations of consciousness. A small number of common factors in the EEG were used. Correlation coefficients of the factor loading patterns were very high, suggesting the stability of the factor loading. L.S.

A81-22077 **Evaluation of full-head enclosed breathing system for extended exposure at high altitude.** G. Dixon, J. D. Adams, and A. Moore (USAF, School of Aerospace Medicine, Brooks AFB, Tex.). In: Survival and Flight Equipment Association, Annual Symposium, 17th, Las Vegas, Nev., December 2-6, 1979, Proceedings. Canoga Park, Calif., Survival and Flight Equipment Association, 1980, p. 12-14.

An evaluation of a full-head enclosed breathing system for oxygen prebreathing prior to high-altitude exposure or EVA is presented. The breathing system, consisting of a completely enclosed stocking cap type of rubberized head enclosure with oxygen or air supply through an oro-nasal diffuser or a spray bar extending across the upper portion of the face plate, was measured for rates of oxygen flow, breathing resistance, mask pressures and ease and comfort to the wearer over periods of five to seven hours. Results obtained indicate the mask to be adequate in providing oxygen in a high-altitude environment, characterized by ease of operation and long-term comfort, the provision of oxygen with minimal negative pressure or increased breathing resistance, and no apparent leakage when properly fit. A.L.W.

A81-22081 **An improved oxygen mask for high-altitude protection.** W. Sears, J. Ernsting, R. Krutz, Jr., R. Shaffstall, R. Holden (USAF, School of Aerospace Medicine, Brooks AFB, Tex.), and D. Root (USAF, Aeronautical Systems Div., Wright-Patterson AFB, Ohio). In: Survival and Flight Equipment Association, Annual Symposium, 17th, Las Vegas, Nev., December 2-6, 1979, Proceedings. Canoga Park, Calif., Survival and Flight Equipment Association, 1980, p. 42, 43.

In a continuing effort to provide nonencumbering short-duration protection at altitudes above 50,000 ft, several studies have been completed using the RAF high-altitude protective ensemble. Recently six samples of the RAF P/Q masks have been modified to be compatible with standard USAF helmets and intercommunication systems. Basic changes included: reducing the microphone impedance from 300 to 7 ohms; a new harness and mask hookup assembly; and a synthetic rather than the natural rubber facepiece. The modified masks have been shown to withstand windblast to 650 knots, with good retention, on a manikin, and the results of preliminary inflight and groundlevel tests of the masks have been very encouraging. The new mask, coupled with a jerkin and g-suit, provides: compatibility with standard USAF life-support and intercommunications equipment; nonencumbering high-altitude protection; low-breathing resistance; an increased shelf life, and improved retention during high-g maneuvering. (Author)

A81-22082 **Onboard oxygen generation.** R. L. Miller, K. G. Ikels, and L. J. Luskus (USAF, School of Aerospace Medicine, Brooks AFB, Tex.). In: Survival and Flight Equipment Association, Annual Symposium, 17th, Las Vegas, Nev., December 2-6, 1979, Proceedings. Canoga Park, Calif., Survival and Flight Equipment Association, 1980, p. 44-47. 5 refs.

The basic operating characteristics of two systems for the in-flight generation of aviators' breathing gas to replace stored oxygen supplies are discussed in relation to potential applications in Air Force aircraft. Consideration is given to the concepts and realizations of the fluomine system, in which a solid cobalt chelate forms a reversible complex with molecular oxygen which is released at higher temperature, and the molecular seive system, in which synthetic zeolites selectively absorb nitrogen and most other compounds from the ambient air, thus concentrating the oxygen in the effluent breathing gas. Advantages of simplicity, relatively long chemical lifetime, effective filtration and a built-in dilution mechanism inherent in the molecular sieve concept are pointed out, and it is concluded that molecular sieves are most suitable for fighter, attack, and trainer aircraft with a maximum of three crew. Conversely, the fluomine system appears to scale more easily to larger crew sizes, but suffers from system complexity, a high power penalty and low chemical lifetime. A.L.W.

A81-22083 **Development of an automatic opening lap belt buckle for aircrew restraint systems.** E. D. Kenzie (Irvin Industries Canada, Ltd., Fort Erie, Ontario, Canada). In: Survival and Flight Equipment Association, Annual Symposium, 17th, Las Vegas, Nev., December 2-6, 1979, Proceedings. Canoga Park, Calif., Survival and Flight Equipment Association, 1980, p. 65-69.

The design of an automatic-opening lap belt buckle currently under development for ejection seat restraint harnesses is presented. The buckle was designed in view of potential problems such as inadvertent release, environmental durability, gas pressure retention, actuation pressure, manual override, operating simplicity, maintainability, durability and reliability to permit both manual and automatic release of the restraint harness. The basic buckle concept is that of a main base ring with the top interior rim providing the latching surface for hook-type harness lugs, with a spool-shaped cover moving up and down in the center of the ring to hold or release the harness lug hooks. Supplementary features include a parachute

BEST DOCUMENT AVAILABLE

arming lanyard key, an automatic parachute arming lanyard key, an override push button, a safety interlock socket, and gas operation of the automatic release. Results of limited tests of prototype units have been found encouraging. A.L.W.

A81-22084 New developments in restraint systems. L. Farris (Pacific Scientific Co., Anaheim, Calif.). In: Survival and Flight Equipment Association, Annual Symposium, 17th, Las Vegas, Nev., December 2-6, 1979, Proceedings. Canoga Park, Calif., Survival and Flight Equipment Association, 1980, p. 70-72.

The development of hardware and theories for aircrew restraint systems for use in current and future high-performance aircraft is discussed. Attention is given to a two-motion lift-lever buckle for lap belt systems, a heavy-duty rotary buckle, a two-motion rotary buckle, a mini rotary buckle with dual inertia lock reels, a gas-operated lift-lever buckle, the use of polyester webbing, a recyclable powered inertia lock reel for command prepositioning the aircrew during adverse maneuvers, limb restraints during ejection, and a dual tension inertia reel. The current need for the development of advanced aircrew restraints for high performance aircraft is emphasized as a means of preventing injury and saving lives. A.L.W.

A81-22085 Physiological responses of human subjects wearing thermal protective clothing assemblies in varying environments. D. C. Johanson, S. M. Reeps, and L. J. SantaMaria (U.S. Naval Material Command, Naval Air Development Center, Warminster, Pa.). In: Survival and Flight Equipment Association, Annual Symposium, 17th, Las Vegas, Nev., December 2-6, 1979, Proceedings. Canoga Park, Calif., Survival and Flight Equipment Association, 1980, p. 77-83.

A group of representative free world anti-exposure suit configurations was selected for a test program designed to evaluate their relative effects on aviator performance in the areas of mobility loss, heat stress, and immersion hypothermia protection. Sequential testing was utilized to eliminate those configurations which did not meet predetermined requirements to satisfy the operational need of naval forces. Mobility loss and heat stress testing at 35 C have been completed. Immersion hypothermia testing in 7.2 C water is currently being conducted with tests in 0 C water to follow. (Author)

A81-22086 Effectiveness and wearability of immersion hypothermia protection equipment. R. M. Harnett, E. M. O'Brien, F. R. Sias (Clemson University, Clemson, S.C.), and J. R. Pruitt (Oconee Memorial Hospital, Seneca, S.C.). In: Survival and Flight Equipment Association, Annual Symposium, 17th, Las Vegas, Nev., December 2-6, 1979, Proceedings. Canoga Park, Calif., Survival and Flight Equipment Association, 1980, p. 84-87. 6 refs. U.S. Department of Transportation Contract No. CG-72074-A.

A wide range of personal equipment for protection from immersion hypothermia was studied through experiments involving human volunteers. Immersion experiments in a tank of refrigerated water revealed the protection effectiveness of each test article. This effectiveness is expressed in terms of estimates of survival time in 35 F water for 'thin, average and heavy' individuals. 'Wearability' was established (through stress testing) in terms of reductions in mobility, heat loading and fatigue induced during selected exercises as compared to similar results obtained while the subjects were wearing nominal clothing. The results indicate clear trade-offs between effectiveness and wearability and provide a basis for informed selections of protection equipment. (Author)

A81-22092 Crew station assessment using the Bioman modeling system. G. D. Frisch (U.S. Naval Aerospace Medical Center, Naval Aerospace Medical Research Laboratory, New Orleans, La.) and L. A. D'Aulerio (U.S. Naval Material Command, Naval Air Development Center, Warminster, Pa.). In: Survival and Flight Equipment Association, Annual Symposium, 17th, Las Vegas, Nev., December 2-6, 1979, Proceedings. Canoga Park, Calif., Survival and Flight Equipment Association, 1980, p. 132-137. 9 refs.

The use of the Bioman modeling system in the evaluation of the physical compatibility of crew members with crew stations under emergency egress conditions is demonstrated. The Bioman system, which is comprised of cockpit geometry, occupant anthropometry and gross motion simulation subprograms, was used to evaluate the proposed F-18 crew station, and simulation results were compared with those obtained from track and tower tests using instrumented dummies and physiological acceptance tests using human subjects. Results of the simulations indicated a possible foot-instrument panel contact problem that was confirmed by the dummy and human tests. Further modeling was then undertaken to quantify the severity of the problem, and the simulated acceleration profiles were found to be in good agreement with experimental measurements. As a result of the simulation and the dummy and human tests, the proposed crew station configuration was deemed unacceptable, and modifications to the station, including a dynamic kick plate to prevent foot-instrument panel contact during ejection, were analyzed. A81-22105 Long-term follow-up of lung volume measurements in initially healthy young aviators. N. R. MacIntyre, R. E. Mitchell, A. Oberman, W. R. Harlan, and A. Graybiel (U.S. Naval Aerospace Medical Center, Naval Aerospace Medical Research Laboratory, Pensacola, Fla.; Alabama, University, Birmingham, Ala.). *Aviation, Space, and Environmental Medicine*, vol. 52, Jan. 1981, p. 1-5. 19 refs.

Lung volume measurements on a large number of initially healthy young military aviators were recorded periodically in follow-up from 1940-69. Vital capacities were measured spirometrically and total lung capacities were measured planimetrically from chest roentgenograms. Residual volumes were calculated by subtracting the vital capacity from the total lung capacity in each subject. Additional variables available for analysis were cigarette smoking histories, family histories, aviation career patterns, pulmonary symptoms, cardiac disease diagnoses, and anthropometric measurements. Multiple linear regression techniques were used on these variables to construct prediction equations for each lung volume in 1969. From these longitudinal analyses, cigarette smoking and pulmonary symptoms were found to be associated with an obstructive lung volume pattern in 1969, while coronary artery disease and weight gain were found to be associated with a restrictive lung volume pattern in 1969. A career in military aviation had no significant association with lung volumes. (Author)

A81-22106 Response to transient haemorrhage after acute and chronic section of the carotid sinus nerves. A. Howe and A. N. Nicholson. *Aviation, Space, and Environmental Medicine*, vol. 52, Jan. 1981, p. 11-15. 25 refs.

Adaptation to denervation of the carotid sinus region was studied in cats during hypotension induced by a controlled hemorrhage. After denervation, the fall in arterial pressure in response to hemorrhage was increased, but the partial recovery of blood pressure was preserved. In chronic animals, this pattern of response was also seen, but a resting hypertension developed and ensured that the minimal blood pressure and the recovery reached during the hemorrhage were similar to those of intact animals. The studies suggest that the primary role of the carotid receptors is to minimize the effect of stresses which lead to hypotension, rather than to set the level of the resting blood pressure. A81-22107 Cardiovascular and biochemical response to simulated space flight entry. J. R. Hordinsky, U. Gebhardt, H. M. Wegmann, and G. Schafer (Deutsche Forschungs- und Versuchsanstalt fur Luft- und Raumfahrt, Institut fur Flugmedizin, Bonn, West Germany). *Aviation, Space, and Environmental Medicine*, vol. 52, Jan. 1981, p. 16-18. 7 refs.

Twelve men and 12 women were exposed to two types of short-duration (6 h) space flight entry simulation: bedrest (no head-down tilt) and water immersion (to the neck). Preceding and following the simulation, orthostatic tolerance testing using LBNP

BEST DOCUMENT AVAILABLE

(Lower Body Negative Pressure) was performed. Male LBNP tolerance was greater than female LBNP tolerance at all four comparison points (pre- and post-bedrest, pre- and post-water immersion); whereas the short-duration bedrest reduces female LBNP tolerance about as effectively as water immersion, only water immersion leads to marked LBNP intolerance in the male subjects. If the water immersion model simulates zero G, loss of male and female orthostatic tolerance will be about equal after short-duration space flight. On the other hand, the bedrest simulation would indicate a greater loss of orthostatic tolerance for females. (Author)

A81-22108 Dopaminergic agonists and conditioned avoidance response in normoxic or hypoxic rats. C. Saligaut, N. Moore, J.-L. Leclerc, and F. Boismare (Rouen, Université, Rouen, France). *Aviation, Space, and Environmental Medicine*, vol. 52, Jan. 1981, p. 19-23. 30 refs.

The actions of four dopaminergic agonists (apomorphine, bromocriptine, amantadine, piribedil) on a conditioned avoidance response were studied in normoxic or hypobaric hypoxic rats. Low doses of agonists have no effects in normoxis, but induce an anthihypoxic protection (improvement of learning in hypoxia). In contrast, the higher doses impair learning both in normoxia and hypobaric hypoxia. The possibility of an antihypoxic property induced by dopaminergic post-synaptic receptors stimulation is discussed and seems to be the main phenomenon while action or other nonspecific sites seems to be responsible for the high dose-induced impairment of learning and of resistance to hypoxia. (Author)

A81-22109 Postmortem coronary atherosclerosis findings in general aviation accident pilot fatalities - 1975-77. C. F. Booze, J. K. Pidkowicz, A. W. Davis, and F. A. Bolding (FAA, Civil Aeromedical Institute, Oklahoma City, Okla.). *Aviation, Space, and Environmental Medicine*, vol. 52, Jan. 1981, p. 24-27. 7 refs.

The autopsies of 764 pilots involved in fatal general aviation accidents during the years 1976-77 were reviewed to appraise the age specific prevalence of coronary atherosclerosis among the autopsied group. Of the pilots killed in aircraft accidents and autopsied during 1975-77, 51% were found to have some degree of coronary atherosclerosis ranging from minimal to severe. However, only about 5% of the autopsied group were categorized as having severe coronary atherosclerosis. The rate per 1,000 of severe coronary atherosclerosis increased with age from 14.5 for ages less than 30, to 89.9 for ages 50 years and above; the rate nearly tripled from ages 30-39 to 40-49 (22.1 to 63.6). The prevalence of coronary atherosclerosis among this group of autopsied airmen is less than would have been expected based on the results of other recent studies. (Author)

A81-22110 Effect of body supination angle on subjective response to whole-body vibration. C. B. Harrah and R. W. Shoenberger (USAF, Aerospace Medical Research Laboratory, Wright-Patterson AFB, Ohio). *Aviation, Space, and Environmental Medicine*, vol. 52, Jan. 1981, p. 28-32. 6 refs. Contract No. F33615-79-C-0509.

Three experiments were conducted to evaluate the subjective symptomatology associated with various combinations of supination angle and vibration spectral composition. Sinusoidal, sum-of-sine, and random vibration were used in the first, second, and third experiments, respectively. All exposure periods were 40 s and the supination angle was varied from 13-65 deg. Subjective response was evaluated by means of a physical symptom survey incorporating a discomfort rating scale. For all three experiments, the results indicated a primary effect of supination angle was to shift the vibration-induced sensations across body regions. Small angles (nearly seated upright) were most often associated with stomach, abdomen, and head discomfort; large angles were most often associated with upper back, neck, and sacral discomfort. With respect to the calculated total-body response, results indicated a preference for the 30 deg supination angle for both complex vibration spectrums used and for all three sinusoidal frequencies. This finding suggests the existence of an optimal supination angle for comfort under vibration. (Author)

A81-22111 Brain/computer communication to reduce human error - A perspective. C. W. Sem-Jacobsen (EEG Research Institute, Oslo, Norway). *Aviation, Space, and Environmental Medicine*, vol. 52, Jan. 1981, p. 33-37. 10 refs.

Recent developments in physiology and neurophysiology, biomedical monitoring, and micro-processors has made it possible to give the pilot improved electronic support and to increase flight safety. Direct brain/computer communication is a new way to combat human error. Monitoring ECG will give information on the operator's physical and mental load/overload situation as well as on impending cardiac failure. Information presented to the operator will elicit different biological patterns whether the operator is alert and takes the information into his stream of thoughts or not. Together with the reaction time, this will give needed information about the operator's alertness and responsiveness. In the future, with this approach, the computer may know on-line to what extent the operator perceives all the information given, as well as the operator's physical and mental load/overload situation and health. Brain/computer communication should be developed to support key-operating personnel and to reduce human error. (Author)

A81-22112 Antidiuretic hormone excretion at high altitude. M. J. Harber (Kidney Research Unit for Wales Foundation, Institute of Renal Disease, Cardiff, Wales), J. D. Williams (Welsh National School of Medicine, Cardiff, Wales), and J. J. Morton (Medical Research Council, Blood Pressure Unit, Glasgow, Scotland). *Aviation, Space, and Environmental Medicine*, vol. 52, Jan. 1981, p. 38-40. 15 refs. Research supported by the Kidney Research Unit for Wales Foundation.

Urinary excretion of electrolytes, creatinine, urea, and antidiuretic hormone - measured as arginine vasopressin (AVP) by radioimmunoassay - was investigated in eight Himalayan mountaineers during ascent on foot from 1900-5400 m. Specimens were collected from each individual whenever urine was voided, preserved with 1% boric acid, and subsequently pooled to give samples representative of 24-h collections. AVP was found to be reasonably stable under simulated conditions of storage. In all subjects, the observed AVP excretion rates were mostly in the lower region of the normal range and there was generally no correlation with altitude, urine osmolality, electrolyte excretion, or occurrence of AMS symptoms - even in a fatal case of cerebral oedema. It is concluded that AVP does not play a primary role in the changes in fluid balance which accompany either acclimatization to high altitude or the onset of AMS. (Author)

A81-22113 2,3-diphosphoglycerate and night vision. W. J. Schull, J. Clench, R. E. Ferrell, S. A. Barton (Texas, University, Houston, Tex.), R. I. Goldsmith (Michigan, University, Ann Arbor, Mich.), and F. Rothhammer (Universidad de Chile, Santiago, Chile). *Aviation, Space, and Environmental Medicine*, vol. 52, Jan. 1981, p. 41-44. 14 refs. Grant No. NIH-19514.

Recovery of night vision at altitude has been examined in relationship to changes in 2,3-diphosphoglycerate (DPG). It appears that, if DPG influences night adaptation, its effect is small. Inter-individual variability is large, both in terms of DPG and performance on the MESOP, the device used to measure dark adaptation. (Author)

A81-22114 The physician's determination of personnel reliability in sensitive occupations. D. K. Kentsmith (Mental Hygiene Clinic, Omaha, Neb.). *Aviation, Space, and Environmental Medicine*, vol. 52, Jan. 1981, p. 45-49. 14 refs.

The Air Force Medical Officer through AFR 35-99 (Personnel Reliability Program) is responsible for the medical evaluation, psychological assessment, and surveillance of persons who will work in sensitive occupations. This paper addresses various personality factors which indicate poor personnel reliability and suggest an interviewing technique of open-ended questions and developmental

history assessment to help determine reliability. Once a person is selected into a Personnel Reliability Program, the physician must be alert to the importance of social stress on personnel reliability and performance. (Author)

A81-22550 # **The response of a realistic computer model for sitting humans to different types of shocks.** H. Mertens and L. Vogt (Deutsche Forschungs- und Versuchsanstalt fur Luft- und Raumfahrt, Institut fur Flugmedizin, Bonn, West Germany). *Deutsche Gesellschaft fur Luft- und Raumfahrt, Symposium uber Aerodynamischen Wiederstand, Cologne, West Germany, Nov. 25, 26, 1980, Paper.* 17 p. 10 refs.

A mechanical model of the human body in the sitting posture is described. The model parameters were derived from the results of steady state vibration experiments conducted under various levels of static acceleration up to +4 Gz. The resulting nonlinear behavior of the human body was modeled by calculating the characteristics of the model elements. To investigate the model's response under impact loads, the characteristics of the elements were extrapolated beyond 4 G. The results show that the model is able to predict the forces in the vertebral column for arbitrary input pulse shapes. The fact that a rectangular acceleration pulse of 20 Gz causes spinal injuries could be demonstrated by the response of the model. (Author)

A81-22610 * # **Advanced control techniques for teleoperation in earth orbit.** A. K. Bejczy and T. L. Brooks (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, Calif.). In: Association for Unmanned Vehicle Systems, Annual Technical Symposium, 7th, Dayton, Ohio, June 16-18, 1980, Proceedings.

Dayton, Ohio, Association for Unmanned Vehicle Systems, 1980, p. 59-74. 23 refs. Contracts No. NAS7-100; No. N00014-77-C-0256.

Emerging teleoperation tasks in space invite advancements in teleoperator control technology. This paper briefly summarizes the generic issues related to earth orbital applications of teleoperators, and describes teleoperator control technology development work including visual and non-visual sensors and displays, kinesthetic feedback and computer-aided controls. Performance experiments were carried out using sensor and computer aided controls with promising results which are briefly summarized. (Author)

A81-23092 **Histochemical study of lipid-like material in photochemically formed jeewanu, the protocell, with formaldehyde partially replaced by other organic sources.** K. Bahadur and P. K. Varma (Allahabad University, Allahabad, India). *British Interplanetary Society, Journal (Interstellar Studies)*, vol. 34, Mar. 1981, p. 100-102. 14 refs.

A81-23093 **Hominid evolution and SETI.** E. J. Coffey. *British Interplanetary Society, Journal (Interstellar Studies)*, vol. 34, Mar. 1981, p. 107-114. 30 refs.

Various preconceptions about human origins and the character of the processes of thinking are shown to be misleading. The extent of the relationship between perceiving and thinking is revealed. It is shown that understanding human evolution requires consideration of human biological adaptations, rather than any supposed human uniqueness. Evidence from various sources is shown to be consistent with the notion of man as a neotenous ape. Bipedalism is shown to be the basic hominid adaptation, and a necessary precondition for the emergence of both technology and language. Hominid evolution is shown to have involved two stages. On the basis of these, the concept of the parallel evolution of intelligence, and the possibility of emergence of creatures with a human-like behavioral capacity, are considered. The unlikelihood of either is indicated. (Author)

A81-23097 **The effect of expectations on slow oculomotor control. III - Guessing unpredictable target displacements.** E. Kowler (New York University, New York, N.Y.) and R. M. Steinman (Maryland, University, College Park, Md.). *Vision Research*, vol. 21, no. 2, 1981, p. 191-203. 15 refs. NSF Grant No. BNS 77-16474.

Previously, we had shown that expectations about the direction of future target motion produce involuntary anticipatory smooth eye movements in the direction of the expected target motion (Kowler and Steinman, 1979). The present experiments extend these results to expected target motions in unpredictable directions. Subjects showed anticipatory smooth eye movements while tracking an unfamiliar pattern of right- and left-going target steps while they were guessing the direction of the expected steps. Eye velocity increased when subjects became certain that they knew what the pattern was. Guesses also produced anticipatory smooth eye movements for both expected target steps and ramps in one of 12 unknown directions. Anticipatory smooth eye movements produced by guesses and by certain knowledge of target direction were not affected when subjects performed a distracting task (mental arithmetic). These results show that the effect of expectations on slow eye movements cannot be removed simply by making target motions unpredictable. Models of the slow oculomotor subsystems, to be complete, require development of techniques to predict the direction and certainty of human expectations about unpredictable patterns of target motion. A technique, which may serve this purpose, is described. (Author)

A81-23098 **Displacement detection in human vision.** G. E. Legge (Minnesota, University, Minneapolis, Minn.) and F. W. Campbell (Cambridge University, Cambridge, England). *Vision Research*, vol. 21, no. 2, 1981, p. 205-213. 46 refs.

The displacement threshold is defined to be the smallest instantaneous target displacement that can be detected. Properties of the displacement threshold for a small, luminous spot were measured psychophysically. In a structureless field the displacement threshold was near 1.5 arcmin subject to individual variation. The effects of pattern were studied by measuring displacement thresholds at the centers of a set of annuli ranging from 2.85-728 arcmin in diameter. Displacement thresholds were reduced by the presence of the annuli and were as low as 0.3 arcmin. This threshold reduction could not be fully attributed to processes of relative spatial localization because displacement thresholds were lower than spatial localization thresholds for annulus diameters greater than 20 arcmin. The displacement threshold is virtually independent of orientation and pupil size. It increased about 75% with a three log unit decrease in photopic target luminance. Displacement detection appears to depend upon the motion sense rather than the position sense. It may be limited by fixation accuracy. (Author)

A81-23099 **Direction-specific and position-specific effects upon detection of displacements during saccadic eye movements.** S. Heywood and J. Churcher (Warwick, University, Coventry, England). *Vision Research*, vol. 21, no. 2, 1981, p. 255-261. 15 refs. Medical Research Council Grant No. G976 154 N.

NEUROENDOCRINE STRATEGIES FOR ADAPTATION TO HIGH ALTITUDE Ph.D. Thesis
Susan Fong Akana 1980 145 p
Avail: Univ. Microfilms Order No 8029309

Some of the neuroendocrine adaptations which occur in rats after exposure to high altitude are addressed, particularly the responses of the adrenal cortex and their relation to certain aspects of central and peripheral neurotransmitter metabolism. Whether the enhancement of tyrosine hydroxylase activity which occurs in rats at high altitude in select regions of the brain and in the adrenal gland is induced by high levels of corticosterone was experimentally investigated. Major results confirm an increase in tyrosine hydroxylase in the brain and adrenal gland and an increase in corticosterone levels in the juvenile rat developing at high altitude as compared to the young sea level controls. When the adrenocortical function was depressed by administration of metyrapone, both at sea level and high altitude, tyrosine hydroxylase activity remained unchanged. It is suggested from the data that the increase in adrenocortical function and the increase in tyrosine hydroxylase activity in brain and adrenal gland of rats born and maintained at high altitude are two independent adapations to the hypoxic environment.

The absence of the force of gravity has a negative effect on plant life. Plants grown on spacecraft have died prematurely. Tests are being made to discover whether or not electricity will compensate for the absence of gravitation. It was found that an onion under current is not subject to the force of gravity. Tremendous possibilities are opened up by these experiments.

CARDIORESPIRATORY AND PERCEPTUAL RECOVERY FROM A MARATHON RUN BY NOVICE AND EXPERIENCED WOMEN MARATHON RUNNERS Ph.D. Thesis
Carol Lynette Christensen 1980 133 p
Avail: Univ. Microfilms Order No 8101001

Subjects performed tests of maximum oxypen consumption (VO2max), 7-9 days before, and 15-16 days after a marathon. They also completed four 30 minute runs on the treadmill at their planned race pace, 6-7 days before, and 2-3 days, 6-7 days, and 13-14 days after the marathon. The five novice and eight experienced women marathon runners who served as subjects in the second experiment, performed VO2max tests 8-11 days before, and 7-9 days after a marathon held approximately 5 months after the first experiment. Cardiorespiratory and perceptual parameters do not appear to be decremented by a marathon run nor does marathon running experience appear to affect the time-course of recovery of these parameters. Other factors, such as stiffness, soreness, motivation, and biochemical indices may recover more slowly, but are apparently not reflected in the gross metabolic response to exercise or feelings of exertion following a marathon run. Dissert. Abstr.

PRESSURE-FLOW HYSTERESIS IN THE PULMONARY VASCULATURE Ph.D. Thesis
Kenneth Charles Beck 1980 94 p
Avail: Univ. Microfilms Order No 8029733

Pulmonary vessels are composed of soft tissue that contains smooth muscle, and are embedded in the soft tissue of lung parenchyma. Both vascular tissue and pulmonary parenchyma were shown to be hysteretical, i.e., the tissues do not have a unique length-tension or pressure-volume relationship, their mechanical properties depending strongly on stress history. Therefore, the pulmonary vascular bed as a whole should not have a unique pressure-volume relationship. Furthermore, vascular resistance should also be history-dependent, in a way that ought to parallel pressure-volume hysteresis. Pressure-flow hysteresis was studied by fixing outflow pressure (P sub pv) and cycling flow (Q) while measuring inflow pressure (P sub pa) and fixing Q and cycling P sub pv while measuring P sub pa. Vascular volume changes were estimated from changes in the perfusion circuit reservoir. Dissert. Abstr.

The effect of isometric muscular exertion on the human body was investigated by having subjects perform basic movements in a sitting position in the conventional manner with additional muscle tension at 50% maximum force and at maximum force. The pulse, arterial pressure, skin temperature, respiratory rate, minute respiratory volume and electrical activity of the muscles involved were all measured. Performance of the exercises with maximum muscular exertion for 20 sec and without movement resulted in the greatest shifts in these indices; in the conventional manner substantial changes did not occur; and with isometric muscular exertion with 50% maximum force with and without movement, optimal functional shifts resulted. The latter is recommended for use in industrial exercises for the prevention of hypodynamia. Ten exercises are suggested. E.D.K.

Autoregulation of cerebral blood flow (ACBF) under orthostatic tests (OT) was estimated in acute experiments on rabbits and rats under local anesthesia according to changes of perfusion pressure (PP) in carotid arteries, cerebral blood flow, pressure in the venous system of the brain, and resistance of cerebral vessels. The OT were conducted by turning a special table with the animal fastened to it from a horizontal to a vertical (head up or head down) position at 40 to 80 deg. In most experiments ACBF correlated with the changes of PP. Different variations of ACBF and its possible mechanisms are discussed. E.D.K.

(NASA-TM-76375) Avail: NTIS HC A02/MF A01 CSCL 06P

In view of the fact that the convergence effect of vestibular impulsation may both stimulate and inhibit intra and intersystemic coordination of physiological processes, an attempt was made to define the physiological effect on the spinal reflex apparatus of the convergence of cervicolabyrinthine impulsation on a model of the unconditioned motor reflex as a mechanism of the common final pathway conditioning the formation and realization of a focused beneficial result of human motor activities. More than 100 persons subjected to rolling effect and angular acceleration during complexly coordinated muscular loading were divided according to typical variants of the functional structure of the patella reflex in an experiment requiring 30 rapid counterclockwise head revolutions at 2/sec with synchronous recording of a 20 item series of patella reflex acts. A knee jerk coefficient was used in calculations. In 85 percent of the cases 2 patellar reflexograms show typical braking and release of knee reflex and 1 shows an extreme local variant. The diagnostic and prognostic value of these tests is suggested for determining adaptive possibilities of functional systems in respect to acceleration and proprioceptive stimuli. T.M.

RHEOENCEPHALOGRAPHY IN MENIERE'S DISEASE
M. P. Nikolayev and O. N. Mertsalova Sep. 1980 7 p refs Transl. into ENGLISH from Vestn. Otorinol-Laringol. (USSR), no. 3, May-Jun. 1979 p 12-15 Transl. by Kanner (Leo) Associated, Redwood City, Calif. Original doc. prep. by Botkin Clinical Hospital
(Contract NASw-3199)
(NASA-TM-76387) Avail: NTIS HC A02/MF A01 CSCL 06E

Rheoencephalography (REG) was used on 35 patients with Meniere's disease to determine tonus and perfusion of cerebral vessels. The analysis took account of age, duration of the disease and presence or absence of cervical osteochondrosis. Hypertensive symptoms in the vertebro-basilar system predominated in the under 45 age group, while for the over 45 patients and those suffering for more than 5 years, hypertensive symptoms were likewise noted in the internal carotid arterial system. Signs of angiospasm were revealed both for patients with cervical osteochondrosis and without it. Hypertensive signs were noted in 88.5% of patients with Meniere's disease and as a rule they were noted in the entire vertebro-basilar system without respect to the presence or absence of concurrent cervical osteochondrosis and uni- or bilateral affection of the labyrinth; in patients over 45 who had suffered more than 5 years this also applied to the internal carotid arterial system. Identification of the condition of cerebral circulation and the planning of more effective therapy that influences vascular tone is made possible by REG. E.D.K.

(NASA-TM-75432) Avail: NTIS HC A02/MF A01 CSCL 06P

The mechanical behavior of the vessels and blood is mathematically analyzed at the point of aortic bifurcation using a homogeneous single layer channel as a model of the aorta. Allowance is made for the fact that the aortic intima is considerobley less rigid than the other layers. For analysis of blood flow in the major arteries, the blood is treated as a viscous Newtonian fluid whose movements are described by Navier-Stokes equations and a continuity equation. Blood flow dynamics at the aortic bifurcation are discussed on the basis of the results. E.D.K.

RELATIVE TOXICITY TESTING OF SPACECRAFT MATERIALS. 1: SPACECRAFT MATERIALS Annual Report, 10 Nov. 1978 - 9 Nov. 1980
W. H. Lawrence 6 Nov. 1980 83 p refs
(Contract NAS9-15670)
(NASA-CR-160908) Avail: NTIS HC A05/MF A01 CSCL 06T

In chamber thermodegradation procedures were used to access the lethality to rats of the pyrolysis/combustion products of three foams, an adhesive backed metallic tape and RTV silicone rubber adhesive sealant used in spacecraft construction. The role of carbon monoxide in the overall pyrolysate toxicity was also investigated. Post exposure observation of the rats, histological evaluation of selected organs, carbon monoxide concentration in the chamber atmosphere during exposure and the percent carboxyhemoglobin in the animals expiring in the chamber are discussed. Thermogravimetric analysis and dosage response results are given. The lethal effect of the RTV silicon appears to be due to physical obstruction of the respiratory system by particulate matter from pyrolysis. A.R.H.

RELATIVE TOXICITY TESTING OF SPACECRAFT MATERIALS. 2: AIRCRAFT MATERIALS Annual Report, 10 Nov. 1978 - 9 Nov. 1980
W. H. Lawrence 6 Nov. 1980 111 p refs
(Contract NAS9-15670)
(NASA-CR-160907) Avail: NTIS HC A06/MF A01 CSCL 06T

The relative toxicity of thermodegradation (pyrolysis/combustion) products of aircraft materials was studied. Two approaches were taken to assess the biological activity of the pyrolysis/combustion products of these materials: (1) determine the acute lethality to rats from inhalation of these pyrolysates and (2) examine the tendency for sublethal exposure to the pyrolysates to disrupt behavioral (shock avoidance) performance of exposed rats. The relative importance of lethality vs. behavioral effects in selection of a material may be dictated by whether or not individuals potentially exposed to such products, would have an opportunity to escape if they were behaviorally capable of doing so. If so, the second parameter would assume greater importance, but if not the first parameter may be of much greater importance in selecting materials. E.D.K.

The intent of this three year research program has been to evaluate detection and recognition processes as observers view dynamic sensor imagery for target acquisition purposes. Moreover, we have attempted to specify differences in human performance which can be attributed to inherent differences between IR and TV target signatures. In all experiments, we have emulated the image dynamics associated with a ground-stabilized, narrow FOV sensor. Further, we have used experienced observers as subjects in these experiments. The operational characteristics of certain attack aircraft and imaging missiles led us to examine initial slant ranges to target of 30,000, 15,000, and 5,000 ft. Comparisons of operator performance with simulated IR vs. TV imagery at all initial slant ranges indicated that IR targets were detected more quickly and at greater stand-off ranges than comparable TV targets, especially when targets were embedded in background scenes of medium or high complexity. This occurred even though we simulated optimal visibility conditions, with no significant atmospheric attenuation or distortion of the energy received by the imaging sensor. GRA

EFFECTS OF OZONE (0.30 PARTS PER MILLION, APPROXIMATELY 600 MU G/M 3) ON SEDENTARY MEN REPRESENTATIVE OF AIRLINE PASSENGERS AND COCKPIT CREWMEMBERS
E. A. Higgins, M. T. Lategola, C. E. Melton, and J. A. Vaughan Mar. 1980 54 p refs
(AD-A092268; FAA-AM-80-9) Avail: NTIS HC A04/MF A01 CSCL 01/2

This study was undertaken to determine the effects of 0.30 ppmv ozone on 40 men representative of airline pilots. All were medically fit; 20 were smokers and 20 were nonsmokers. Subjects were divided into two age groups, 40-49 years and 50-59 years. The experiments consisted of exposure to 0.30 ppmv ozone and, on another occasion, to air only for 3 h at a simulated altitude of 6,000 ft mean sea level. Subjects were sedentary throughout the experiment. Ozone had no effect on heart rate and short-term memory. The group showed a statistically significant incidence of symptoms related to ozone exposure; most were shown by the 40 to 49 year old nonsmoking group while at altitude and postaltitude, and in smokers in the 50 to 59 year age group only at altitude. Eye irritation was the commonest symptom, followed by headache, nasal irritation, and throat irritation. Data showed significant effects of ozone on forced expiratory volume, 1 second forced expiratory volume, and forced end-expiratory flow. The pulmonary effect of ozone appears to be principally on the small airways. Impairment of visual accommodation was associated with ozone. Dark adaptation threshold was elevated in ozone in the 50 to 59 year nonsmoking age group. Retinal bleach recovery time was retarded and blink rate was higher during ozone exposure. It is concluded that 0.30 ppmv ozone is near threshold for adverse effects of ozone. The data are also applicable to passengers who fit into the same category as these sedentary subjects. GRA

(AF Proj. 7757)
(AD-A092731; SAM-TR-80-30) Avail: NTIS HC A03/MF A01 CSCL 06/16

A method for simulating radiofrequency radiation (RFR) heating at 1.2 GHz E-field oriented in the rat using warm moist (90% relative humidity) air is presented. The method can adequately simulate the overall linear rate of internal heating in the rate and the peak temperature excursion but fails to simulate the initial rapid rate of temperature rise due to RFR. Even with this shortcoming it appears that this moist heat simulation is superior to previous hot air simulations. GRA

A system designed to transmit energy to intracorporeal blood pumps was developed. This system utilized polytetrafluroethylene (PTFE) to provide a connective tissue biomaterial seal limiting epidermal migration and sinus formation. Eight iterations were evaluated in vivo. These studies have demonstrated that PTFE will support ingrowth and that this ingrowth limits epidermal migration. The interface is protected by a polyester velour covered skirt which provides strain relief and this must be implanted subdermally. Mobility of the tissues surrounding the device is important to allow displacement which provides additional strain relief. A semiquantitative swab culture technique predicts incipient infection. Nutritional deprivation adversely affects biomaterial tissue interactions. GRA

Work on this contract examined various applications of human information processing, focusing on the analysis of human error. As a result of the contract investigations, several areas of potential application were identified. One area of immediate possible application is in the design of human-machine interfaces, with particular concern for aspects of system design that lead to human error, taking into account what is known about human attentional and short-term memory limitations. The major focus of the research effort was devoted to the study of human error, especially those made by highly skilled operators in complex, high-demand systems. A classification scheme for these errors was developed. GRA

DEVELOPMENT AND FABRICATION OF AN ADVANCED LIQUID COOLING GARMENT Final Report
C. W. Hixon 6 Mar 1978 87 p
(Contract NAS2-9026)
(NASA-CR-152101; Rept-2-53200/8R-3462) Avail: NTIS HC A05/MF A01 CSCL 06G

A tube/fin concept liquid cooling garment head cooler was developed, fabricated and delivered to NASA-ARC. The head cooler was fabricated from polyurethane film which sandwiches the transport fluid tubing and a thermally conductive fin material. The head cooler garment is sewn to form a skull cap and covered with a comfort liner. In addition, two Neonate heating garments were fabricated and supplied to NASA for further finishing and use in medical tests. The resulting garment is flexible, elastic and conforms to the head comfortably. Tests on a tube/fin element of identical construction as the head cooler demonstrated good thermal effectiveness. Use of commercially available materials and development of relatively simple fabrication techniques give the potential for a low garment cost. Author

HUMAN VISUAL PERFORMANCE AND FLAT PANEL DISPLAY IMAGE QUALITY
Harry L. Snyder Jul. 1980 463 p refs
(Contract N00014-78-C-0238; NR Proj. 196-155)
(AD-A092685; VPI-HFL-80-1/ONR-80-1) Avail: NTIS HC A20/MF A01 CSCL 05/5

This is the Final Technical Report of Task I. Human Engineering Survey and Analysis of the subject contract. The task is a survey of the pertinent visual performance, display system capability, and human engineering design requirements for flat panel visual displays, as applied to U.S. Navy Airborne, Shipborne, and Land-Based Systems. The report contains two application examples of the selection of flat panel displays for both airborne and ship-based information systems. It also surveys the current state-of-the-art of flat panel display technologies, and the manner by which existing visual performance and theory can be applied to the selection and evaluation of flat panel technologies for various applications. The flat panel technologies surveyed are light emitting diodes, electroluminescence, liquid crystal, electrochromic, electrophoretic, and gas (plasma) discharge. A uniform set of performance variables is used to compare the various technologies, both among themselves and with the traditional cathode ray tube. Similarly, these technologies are evaluated against design criteria and current models of image quality which relate human performance to display characteristics. Pertinent human visual performance data are presented as the basis for selecting and applying image quality models. Data gaps and needs are summarized at the end of the report. GRA

DEVELOPMENT OF GUAYULE (PARTHENIUM ARGENTATUM) RESEARCH IN CELL CULTURE Final Report
Ernest A. Bell 1 Jan. 1981 14 p refs Prepared for JPL
(Contracts NAS7-100; JPL-954955)
(NASA-CR-163945; UCI-59913) Avail: NTIS HC A02/MF A01 CSCL 08C

Utilizing the lateral buds of known high rubber producing plants as explants in culture medium specifically designed to engender shoot development and to prevent callus formation, unlimited numbers of replicate plants can be produced. Each has the same genotype as the parent. This procedure has long been used to rid plants of virus, the latter generally does not occur in the embryonic tissues of the bud; it also, by virtue of its axenic nature, eliminates all microorganisms characteristic of the parent plant. Auxins were found essential to callus formation, but since the latter is known to bring about chromosomal aberrations, it was avoided. The cytokinin benzylaminopurine strongly stimulated shoot growth, and the number of regenerated buds on the inoculum was proportional to its concentration. These buds produced shoots several centimeters in length which were caused to root on medium containing indolebutyric acid. Transferred to the septic condition of soil, the plantlets were gradually brought into full sunlight where they showed a brief vegetative growth with production of mature leaves, and flowered. PHYTOPLANKTON STUDIES AND NUTRIENT CONCENTRATIONS IN THE VICINITY OF THE C. P. CRANE GENERATING STATION Final Report, Jul. 1979 - Mar. 1980
K. C. Sellner, L. A. Lyons, R. K. Mahoney, M. M. Olson, and E. S. Perry 17 Sep. 1980 75 p refs Sponsored by Maryland Dept. of Natural Resources
(PB81-114746; PPSP-CPC-80-5) Avail: NTIS HC A04/MF A01 CSCL 06F

Plant operations appeared to stimulate phytoplankton productivity at plant discharge and in upper Saltpeter Creek. Carbon fixation rates and assimulation ratios were enhanced in wholewater and nanoplankton size fractions for the three upper Saltpeter Creek stations compared to data collected at intake (Seneca Creek). However, few significant alterations in phytoplankton biomass (chlorophyll alpha) resulting plant operations were noted in the vicinty of the C.P. Crane plant. Enhanced productivities were probably a function of ambient water temperature. Delta Ts observed between intake and the impacted areas and species composition of the phytoplankton. GRA

PHYSIOLOGICAL AND HEMATOLOGICAL RESPONSES TO SUMMER AND WINTER DRY-HEAT ACCLIMATION
Yair Shapiro, Roger W. Hubbard, Claire M. Kimbrough, and Kent B. Pandolf 25 Jul. 1980 35 p refs
(AD-A093194; USARIEM-M-31/80) Avail: NTIS HC A03/MF A01 CSCL 06/19

Differences between acclimation to heat at the end of winter (W) and at the end of summer (S) were studied on the same 8 male volunteers. Subjects were exposed to 40 C, 30% rh for 10 days on two separate occasions approximately 5 months apart (S and W). Daily exposures lasted 120 min: 10 min rest, 50 min walking 1.34m/s on the level, 10 min rest, 50 min walking. During W acclimation, rectal temperature (Tre) and heart rate (HR) decreased, sweat rate (msw) remained unchanged, and plasma and red cell volume of the blood expanded. During S acclimation, HR decreased while Tre and msw remained unchanged, and plasma volume increased. The Tre of the acclimated subjects remained higher in W and msw lower than in S. It was concluded that acclimation does not totally eliminate the seasonal differences in thermoregulatory set-point and sweat sensitivity. Further, acclimation to a more severe heat did not improve the thermoregulatory set-point that was achieved by natural acclimatization to a milder heat, but affected the cardiovascular adjustment and caused greater plasma volume expansion. W acclimation caused both plasma and blood cell volume expansion while S acclimation affected only plasma volume. GRA

PHYSIOLOGICAL MECHANISMS OF SPATIAL DISORIENTATION NOT OF VISUAL ORIGIN [LES MECHANISMS PHYSIOLOGIQUES DE LA DESORIENTATION SPATIALE D'ORIGINE NON VISUELLE]

J. Colin *In* AGARD Spatial Disorientation in Flight Oct. 1980 6 p refs In FRENCH

Avail: NTIS HC A05/MF A01

Spatial orientation involves the complex integration of data emanating from numerous receptors. In most cases, a disorientation occurs when the visual system, which plays the principle role, can no longer perform its function and the other systems are influenced by a gravito-inertial environment. The reactions thrown out of gear by linear and radial acceleration and then by angular acceleration are reviewed. For a third time the factors modifying the intensity of these reactions are recalled. This permits insisting on the concept of visual dominance and vestibular suppression, which is at the origin of the essential means of preventing spatial disorientation in flight. An aeromedical formation of the crew is particularly important in the visual presentation of information required for piloting, for repeated carry over for flight formation and for flight without visibility. Transl. by A.R.H.

PERCENTUAL ERRORS IN FLIGHT: A SURVEY OF 100 MILITARY PILOTS ON ACTIVE DUTY

Pietro DeGiosa *In* AGARD Spatial Disorientation in Flight Oct. 1980 7 p refs
Avail: NTIS HC A05/MF A01

A survey was given to 80 pilots and 20 cadet pilots in flight activity to determine some of the problems associated with perceptive disturbances in flight. The survey consisted of 116 questions, divided into 6 major parts: the first contains biographical data such as age, total hours of flight and the hours of flight activity during 1979, type of aircraft piloted, flight accident if any; the second part is relative to the possible correlation between on the one hand psycho-affective or psycho-social situation and type of mission and on the other hand disturbances if any; the third part refers to the correlation between on the one hand physical conditions, life, habits, the use of drugs and on the other hand possible perceptive alterations they can cause; the fourth part investigates the relations between the type of aircrafts and perceptive alterations; the fifth part deals with different atmospheric conditions in which the flight is possible; with some of the questions we investigate the duration of the disturbances and the time of the disappearance of these perceptive disturbances initially felt; and the last part investigates the perceptive disturbances suffered out of the flight and the quality considered indispensable in avoiding them. R.C.T.

N81-17702# Pennsylvania State Univ., University Park.

THE AMBIENT VISUAL SYSTEM AND SPATIAL ORIENTATION

H. W. Liebowitz and J. Dichgans (Tuebingen Univ.) *In* AGARD Spatial Disorientation in Flight Oct. 1980 4 p refs

(Grants MH-08061; EY-03276)
Avail: NTIS HC A05/MF A01

Two modes of processing visual information are reviewed with particular emphasis on their independent functions and the role of the ambient visual system in orientation. The multisensory basis of orientation and the central integration of signals are discussed. Disorientation is assumed to result from a mismatch, in comparison with the previous experience of the individual, of these simultaneously occurring signal patterns. It is suggested that disorientation in aircraft under instrument flight conditions may result from the substitution of an unnatural symbolic indicator to replace the visual stimuli normally involved in orientation and the failure of a learned cognitive skill to compensate for mismatched signals. R.C.T.

N81-17703# School of Aerospace Medicine, Brooks AFB, Tex. Ophthalmology Branch.

VISUAL ILLUSIONS AS A PROBABLE CAUSE OF AIRCRAFT ACCIDENTS

Thomas J. Tredici *In* AGARD Spatial Disorientation in Flight Oct. 1980 5 p refs

Avail: NTIS HC A05/MF A01

Spatial disorientation, visual restrictions, and illusions were examined as the possible causal factors in aircraft accidents. A number of aircraft accidents were analyzed in which visual illusions appear to be a significant or contributing factor in the accident. It is shown that such factors as rain on the windshield,

BEST DOCUMENT AVAILABLE

flashblindness by high intensity strobe lights, disorientation by flickering lights, and ground light intensity variations appear to have led to errors in judgement, thus directly contributing to the aircraft accident. It is concluded that a studied awareness of these factors is the pilot's best corrective action available.

DISORIENTATION IN ARMY HELICOPTER OPERATIONS: A GENERAL REVIEW
K. Edgingtom and C. J. Box *In* AGARD Spatial Disorientation in Flight Oct. 1980 9 p refs

Avail: NTIS HC A05/MF A01

Accidents involving aircraft mishandled during takeoff, landing or tactical low flying (or nap of the earth flight) were investigated. Special emphasis was placed on examining those accidents which occurred as a result of flight disorientation. Orientation error rates, the type of accidents as well as influencing factors were reviewed. Significant results are reported. R.C.T.

ILLUSIONS OF ATTITUDE AND MOVEMENT DURING EARTH-HORIZONTAL ROTATION
Alain Leger, Jack P. Landolt, and Kenneth E. Money *In* AGARD Spatial Disorientation in Flight Oct. 1980 19 p refs In ENGLISH and FRENCH Prepared in cooperation with Defence and Civil Inst. of Environmental Medicine, Downsview, Ontario

Avail: NTIS HC A05/MF A01

Ten voluntary males underwent a sequence of experiments to determine the effect of rotation about the horizontal axis. Each subject underwent nine separate tests of rotation about the horizontal axis. The number of tests was determined by the number of combinations of the three subject axes (X, Y and Z) and three visual conditions (no visual reference, internal visual reference, and external visual reference). In the first condition, the subject was in total darkness (NVR). The internal visual reference (IVR) was produced by lighting the interior of the gondola. Finally, in the external visual reference (EVR) condition, the gondola hatch was left open and the subject could see the surrounding laboratory, with a visual field of about 60 X 50 deg. The order of tests for each subject was determined by a nine by nine Latin square. In spite of the strong visual input, convincing illusions of attitude and movement were found in the IVR condition. Similar illusions, of course, were experienced in the NVR condition. Comparable illusions occurred during the X-axis and Y-axis rotations, as well as during the (usually employed) Z-axis rotations. In most subjects, the illusions were absent in the EVR condition, but, in some subjects, there was perceptible illusory movement inspite of clear visual reference to the real motion. R.C.T.

ORTHOSTATIC DISORDER. A CONTRIBUTING FACTOR TO MOTION SICKNESS?
G. R. Froehlich *In* AGARD Spatial Disorientation in Flight Oct. 1980 4 p refs

Avail: NTIS HC A05/MF A01

Pilot candidates were subjected to the vestibular adroitness test to determine the effects of orthostatic disorders on motion sickness. The test consisted of bending the head once 60 degrees downward and back to the upright position while being rotated at 180 degrees/sec. The test was divided into four categories; each category producing a varying degree of motion sickness symptoms (i.e., mild nausea to severe nausea). Significant results as well as the conclusions are presented in detail. R.C.T.

A GENERALIZED TRANSFER FUNCTION FOR DESCRIBING MECHANONEURAL SEMICIRCULAR-CANAL DYNAMICS
Jack P. Landolt (Texas Univ., Galveston) and Manning J. Correia *In* AGARD Spatial Disorientation in Flight Oct. 1980 10 p refs
Avail: NTIS HC A05/MF A01

The dynamic response characteristics of the semicircular canal to rotational head movements were determined via a generalized transfer function. The adequacy of the model was tested by recording the neural activity of the primary efferent fibers inervating the semicircular canals as they respond to appropriate stimulation. Specifically the mechanoneural response characteristics of primary afferent, semicircular canal units in the pigeon were studied to determine whether the model could be used in describing the neurodynamics in other species. THE ROYAL AIR FORCE SPATIAL DISORIENTATION FAMILIARISATION DEVICES (SDFD)
A. J. Benson *In* AGARD Spatial Disorientation in Flight Oct. 1980 10 p refs
Avail: NTIS HC A05/MF A01

The Spatial Disorientation Familiarization Device (SDFD) was designed to demonstrate to aircrew the fallibility of their senses and the errors of perception that can lead to spatial disorientation in flight. The SDFD is a servocontrolled turntable on which the subject is seated 1 m from the axis of rotation, inside a light-tight cab. Displays within the cab show the subject that his sensations of rotation and attitude are in error, and permit the demonstration of oculogyral, oculogravic, cross coupled (Coriolis) and autokinetic phenomena. Control of the velocity trajectory of the turntable and the illumination of the various displays may be preprogrammed and recorded along with a commentary on magnetic tape. This facility allows an optimized training sequence to be delivered consistently, even by relatively unskilled operators. R.C.T.

ON THE PRACTICE OF MEASURING SENSORY THRESHOLDS: SIGNAL DETECTION AND THE ADAPTIVE METHOD [ZUR PRAXIS DER WAHRNEHMUNGSSCHWELLENMESSUNG: SIGNALENTDECKUNGSANALYSE UND ADAPTIVE VERFAHREN]
S. Trispel May 1979 117 p refs In GERMAN; ENGLISH summary Prepared in cooperation with Helmholtz-Inst. fuer Biomed. Tech.
(FB-43) Avail: NTIS HC A06/MF A01; Fachinformationszentrum, Karlsruhe, West Ger. DM 10

After an introduction to the principles of psychophysical threshold measurement, the fundamentals of signal detection theory and of adaptive measurement techniques, in each case confined to absolute threshold measurement, are discussed. Both procedures are compared regarding their practical usefulness and levels of significance. The application of both procedures is described for the same situation, subjects had to detect a step like velocity change (with a given a priori probability) of a horizontally moving object on a CRT screen. The results, gathered from relatively small groups of subjects, demonstrate in detail some of the inherent effects of these procedures. An adaptive, automatized test for visual acuity measurement is described as an example for the construction of an adaptive measurement strategy. Finally, the differences between both procedures as to

BEST DOCUMENT AVAILABLE

their range of applications are considered. It is concluded that the results of signal detection analysis yield true threshold values, whereas results from adaptive experiments often are influenced by the employed adaptive logic. Author (ESA)

MAGNITUDE OF VISUAL ACCOMMODATION TO A HEAD-UP DISPLAY
Edward F. Leitner and Richard F. Haines Feb. 1981 12 p refs
(NASA-TP-1796; A-8379; HUD-15) Avail: NTIS HC A02/MF A01 CSCL 01D

The virtual image symbology of head-up displays (HUDs) is presented at optical infinity to the pilot. This design feature is intended to help pilots maintain visual focus distance at optical infinity. However, the accommodation response could be nearer than optical infinity, due to an individual's dark focus response. Accommodation responses were measured of two age groups of airline pilots to: (1) static symbology on a HUD; (2) a landing site background at optical infinity; (3) the combination of the HUD symbology and the landing site background; and (4) complete darkness. Results indicate that magnitude of accommodation to HUD symbology, with and without the background, is not significantly different from an infinity focus response for either age group. The dark focus response is significantly closer than optical infinity for the younger pilots, but not the older pilots, a finding consistent with previous research. R.C.T.

DESIGNER'S GUIDE FOR THE PANEL PROGRAM Technical Interim Report
Medhat Korna and Nilss Aume Oct. 1980 68 p
(Contract F33615-78-C-0507; AF Proj. 7184)
(AD-A093989; UDR-TR-80-64; AMRL-TR-80-124) Avail: NTIS HC A04/MF A01 CSCL 09/2

This designer's guide describes an interactive computer graphics program intended for the computer aided design of avionics control and display panels. Using this program, a designer can specify the basic panel on which all other components will be mounted as well as the components themselves. Also, he can locate and relocate the components, add graphic elements (text, lines, circles), and call for printed, punched, or hard copy (plot) output. The requirements and considerations of several applicable MIL-STANDARDS have been incorporated into the program to facilitate the design process. The Guide to the operation of the PANEL program includes descriptions of the processing available for each of the program functions and subfunctions. A listing of the program is also included along with a brief description of most of the subroutines. GRA

COMPUTER-AIDED DEVELOPMENT OF CONTROL CONSOLE, CONTROL PANEL, AND DISPLAY USER INSTRUCTIONS AND TRAINING MATERIALS
S. A. Solow and W. O. Mills Oct. 1980 13 p
(AD-A093891; R80EMH9) Avail: NTIS HC A02/MF A01 CSCL 09/2

This technical information series (TIS) outlines a procedure for developing instructions and training materials for control panel operation and indicator and display interpretation. The method is particularly advantageous when the operator has to observe and respond to large amounts of data and manipulate many controls. The process is described in this TIS as it is applied to the preparation of information for the tactical towed array sonar (TACTAS) System Operator's Manual. However, it can be applied with slight modification to systems having similarly complex man-machine interfaces. Data input, storage, processing, and output are performed by the time-share subsystem (TSS) of the Honeywell 520 Data Processing System (level 66). GRA

ERGONOMIC STUDY OF THE INFLUENCE OF ROTARY VIBRATIONS [ERGONOMISCHE UNTERSUCHUNGEN UEBER DIE EINWIRKUNG ROTATORISCHER SCHWINGUNGEN. BEANSPRUCHUNG DURCH ROLLSCHWINGUNGSBELASTUNG]
Wilhelm Ilgmann Bonn Bundesministerium fuer Verteidigung 1979 133 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Verteidigung
(BMVg-FBWT-79-33) Avail: NTIS HC A01/MF A01; DOKZENTBW, Bonn DM 40

For the measurement of the effects of sinusoidal rotary whole-body vibrations on man, a two-degree of freedom motion simulator for roll and pitch vibrations was designed and built. Using the method of producing stimuli ratios, roll vibration strain up to the tolerance limit was investigated in the frequency range from 1 to 10 Hz. Results demonstrate that the psychophysical law of Stevens is appropriate to describe the relationship between vibration stress and subjective sensation. Although the deviation between subjects is quite large, in the frequency range investigated the exponent of the psychophysical law is found to be constant. The correlation between subject's individual reaction and physiological data, such as weight and stature, is small. In consequence of the divergent results concerning the magnitude of sensation related to the same intensity level of vibration, percentiles are recommended to set exposure limits.

MONITORING AND DECISION MAKING BY PEOPLE IN MAN MACHINE SYSTEMS [UEBERWACHUNGS- UND ENTSCHEIDUNGSVERHALTEN DES MENSCHEN IN MENSCH-MASCHINE-SYSTEMEN]
G. Johannsen May 1979 92 p refs Partly in GERMAN and ENGLISH
(Grant NSG-2119)
(NASA-CR-164026; FB-44) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 10 CSCL 05H

The analysis of human monitoring and decision making behavior as well as its modeling are described. Classic and optimal control theoretical, monitoring models are surveyed. The relationship between attention allocation and eye movements is discussed. As an example of applications, the evaluation of predictor displays by means of the optimal control model is explained. Fault detection involving continuous signals and decision making behavior of a human operator engaged in fault diagnosis during different operation and maintenance situations are illustrated. Computer aided decision making is considered as a queueing problem. It is shown to what extent computer aids can be based on the state of human activity as measured by psychophysiological quantities. Finally, management information systems for different application areas are mentioned. The possibilities of mathematical modeling of human behavior in complex man machine systems are also critically assessed.

ENVIRONMENTAL CONTAMINANTS IN FOOD. VOLUME 2, PART B: WORKING PAPERS
Jan. 1980 557 p refs Sponsored by Office of Technology Assessment, Washington
(PB81-116774-Vol-2-Pt-B) Avail: NTIS HC A24/MF A01 CSCL 06F

The contents include: toxic substances in food information systems: design and management; assessment of carcinogenic risks from PCBs in food; economic analysis of alternative action levels in the regulation of environmental contaminants in food and analysis of foods for radioactivity. Approaches to monitoring environmental contaminants in food and analytical systems for the determination of metals in food and water supplies are described. Assessment of methods for regulating 'unavoidable' contaminants in the food supply and consumer risk from environmental contaminants in food were determined. GRA

CLINICAL MEDICINE
Current concepts in clinical cardiology; Proceedings of the Tenth Conference on Cardiovascular Disease, Aspen, Colo., January 15-19, 1979 A81-19711
Acute mountain sickness - The clinical approach A81-19713
Two-dimensional echocardiography - Methodology and application in clinical cardiology A81-19714
Echocardiographic studies evaluating the effects of exercise training on the heart A81-19715
Electrocardiographic stress testing - The debate goes on /probably/ A81-19716
Detection and management of the asymptomatic patient with coronary artery disease A81-19717
CLOTHING
Thermal comfort in an era of energy shortage [AD-A093193] N81-17696
COCKPIT SIMULATORS
An integrated training approach A81-21727
COCKPITS
Evaluation and prediction of the vertical situation from a horizontal situation display --- pilot perception of motion and separation in cockpit display of air traffic information A81-20503
Cockpit displayed traffic information and distributed management in air traffic control A81-20916
Effects of ozone (0.30 parts per million, approximately 600 mu g/m 3) on sedentary men representative of airline passengers and cockpit crewmembers [AD-A092268] N81-16734
COLD WATER
Effectiveness and wearability of immersion hypothermia protection equipment A81-22086
COMBUSTION PRODUCTS
Relative toxicity testing of spacecraft materials. 1: Spacecraft materials --- lethality of pyrolysates [NASA-CR-160908] N81-16731
Relative toxicity testing of spacecraft materials. 2: Aircraft materials [NASA-CR-160907] N81-16732
COMPENSATORY TRACKING
A stochastic differential game theory approach to human operators in adversary tracking encounters A81-21023
COMPOSITION (PROPERTY)
Effects of ozone (0.30 parts per million, approximately 600 mu g/m 3) on sedentary men representative of airline passengers and cockpit crewmembers [AD-A092268] N81-16734
COMPUTER GRAPHICS
Designer's guide for the panel program [AD-A093989] N81-17712
COMPUTER PROGRAMMING
A hierarchical programming approach to robot assembly A81-19841
COMPUTERIZED DESIGN
Partly unmanned machining A81-19842
Navy manager's guide for the design sections of MIL-M-46855 [AD-A092009] N81-16742
Designer's guide for the panel program [AD-A093989] N81-17712
COMPUTERIZED SIMULATION
Task segmentation - An approach to simulator task fidelity A81-21728
The response of a realistic computer model for sitting humans to different types of shocks A81-22550
CONDITIONED REFLEXES
Dopaminergic agonists and conditioned avoidance response in normoxic or hypoxic rats A81-22108
CONFERENCES
Current concepts in clinical cardiology; Proceedings of the Tenth Conference on Cardiovascular Disease, Aspen, Colo., January 15-19, 1979 A81-19711
Spatial disorientation in flight: Current problems [AGARD-CP-287] N81-17698
CONFIGURATION MANAGEMENT
Navy manager's guide for the design sections of MIL-M-46855 [AD-A092009] N81-16742
CONSCIOUSNESS
Structural analysis of factor patterns on EEG under various states of consciousness A81-21989
CONSOLES
Computer-aided development of control console, control panel, and display user instructions and training materials [AD-A093891] N81-17713
CONTAMINANTS
Environmental contaminants in food. Volume 2, part B: Working papers [PB81-116774-VOL-2-PT-B] N81-17716
CONTROL BOARDS
Designer's guide for the panel program [AD-A093989] N81-17712
Computer-aided development of control console, control panel, and display user instructions and training materials [AD-A093891] N81-17713
CORONARY ARTERY DISEASE
Detection and management of the asymptomatic patient with coronary artery disease A81-19717
Does exercise protect from coronary artery disease A81-19718
The role of biochemical factors in ventricular dysrhythmia accompanying ischemia A81-19720
Postmortem coronary atherosclerosis findings in general aviation accident pilot fatalities - 1975-77 A81-22109
COSMIC RAYS
Dosimetric investigations of cosmic radiation aboard the Kosmos-936 AES (joint Soviet-American experiment K-206) [NASA-TM-75772] N81-16730
COSMONAUTS
Antibodies to myofibril antigens in cosmonauts after spaceflights [NASA-TM-76300] N81-16722
CREW STATIONS
Crew station assessment using the Bioman modeling system A81-22092
CULTURE TECHNIQUES
Development of guayule (Parthenium argentatum) research in cell culture [NASA-CR-163945] N81-17691

BEST DOCUMENT AVAILABLE

22

CYTOGENESIS
Development of guayule (Parthenium argentatum) research in cell culture [NASA-CR-163985] N81-17691

D

DARK ADAPTATION
2,3-diphosphoglycerate and night vision A81-22113

DATA ACQUISITION
Data acquistion system for thermal stress studies --- cutaneous heat flow and temperature monitors for individual human body sites [ASME PAPER 80-WA/OCE-14] A81-21125

DECISION MAKING
Mental workload in decision and control A81-20499
Monitoring and decision making by people in man machine systems [NASA-CR-164026] N81-17715

DECONTAMINATION
Environmental contaminants in food. Volume 2, part B: Working papers [PB81-116774-VOL-2-PT-B] N81-17716

DESCENT TRAJECTORIES
Human factors by descent energy management A81-20467

DIAGNOSIS
Two-dimensional echocardiography - Methodology and application in clinical cardiology A81-19714
Electrocardiographic stress testing - The debate goes on /probably/ A81-19716
Detection and management of the asymptomatic patient with coronary artery disease A81-19717
Premature ventricular complexes - Therapeutic dilemmas and decisions A81-19719

DIFFUSION
Autoregulation of cerebral blood circulation under orthostatic tests [NASA-TM-76372] N81-16725

DISORIENTATION
Physiological mechanisms of spatial disorientation not of visual origin N81-17699

DISPLACEMENT
Displacement detection in human vision A81-23098
Direction-specific and position-specific effects upon detection of displacements during saccadic eye movements A81-23099

DISPLAY DEVICES
Evaluation and prediction of the vertical situation from a horizontal situation display --- pilot perception of motion and separation in cockpit display of air traffic information A81-20503
An analysis of the human as a predictor model A81-20511
Cockpit displayed traffic information and distributed management in air traffic control A81-20916
Human visual performance and flat panel display image quality [AD-A092685] N81-16743
Designer's guide for the panel program [AD-A093989] N81-17712
Computer-aided development of control console, control panel, and display user instructions and training materials [AD-A093891] N81-17713

DOPA
Dopaminergic agonists and conditioned avoidance response in normoxic or hypoxic rats A81-22108

DOSAGE
Pharmacological activity and toxicity of some neurotropic agents under conditions of experimental hypodynamia [NASA-TM-76371] N81-16724

DOSIMETERS
Dosimetric investigations of cosmic radiation aboard the Kosmos-936 AES (joint Soviet-American experiment K-206) [NASA-TM-75772] N81-16730

DRY HEAT
Responses to dry heat of men and women with similar aerobic capacities A81-21472
Physiological and hematological responses to summer and winter dry-heat acclimation [AD-A093194] N81-17695

DURABILITY
Further study for fabrication, evaluation, and testing of monolayer woven materials for space suit insulation [NASA-CR-166140] N81-16740

DYNAMIC CONTROL
A recursive Lagrangian formulation of manipulator dynamics and a comparative study of dynamics formulation complexity A81-21020

DYNAMIC RESPONSE
The response of a realistic computer model for sitting humans to different types of shocks A81-22550

E

EAR
Implications of a critical level in the ear for assessment of noise hazard at high intensities A81-20925

EARTH ORBITS
Advanced control techniques for teleoperation in earth orbit A81-22610

ECHOCARDIOGRAPHY
Two-dimensional echocardiography - Methodology and application in clinical cardiology A81-19714
Echocardiographic studies evaluating the effects of exercise training on the heart A81-19715

EDEMA
Speculations on the pathogenesis of high-altitude pulmonary edema A81-19712

EDUCATION
Computer-aided development of control console, control panel, and display user instructions and training materials [AD-A093891] N81-17713

EFFERENT NERVOUS SYSTEMS
Effect of cervicolabyrinthine impulsation on the spinal reflex apparatus [NASA-TM-76375] N81-16726

EJECTION SEATS
Development of an automatic opening lap belt buckle for aircrew restraint systems A81-22083
Crew station assessment using the Bioman modeling system A81-22092

ELECTRIC FIELDS
Life of the onion not knowing up from down [NASA-TM-76353] N81-16718

ELECTRICAL RESISTANCE
Use of an electrical resistance hygrometer to measure human sweat rates [NASA-TM-81223] N81-17692

ELECTROCARDIOGRAPHY
Electrocardiographic stress testing - The debate goes on /probably/ A81-19716

ELECTROENCEPHALOGRAPHY
Structural analysis of factor patterns on EEG under various states of consciousness A81-21989

ELECTRONIC EQUIPMENT
Data acquistion system for thermal stress studies --- cutaneous heat flow and temperature monitors for individual human body sites [ASME PAPER 80-WA/OCE-14] A81-21125

ELECTROPHYSIOLOGY
The role of biochemical factors in ventricular dysrhythmia accompanying ischemia A81-19720

BEST DOCUMENT AVAILABLE

ENCOUNTERS
A stochastic differential game theory approach to human operators in adversary tracking encounters
A81-21023
ENDOCRINOLOGY
Neuroendocrine strategies for adaptation to high altitude
N81-16717
ENERGY CONSERVATION
Human factors by descent energy management
A81-20467
ENERGY TRANSFER
Development of percutaneous energy transmission systems
[PB81-109381] N81-16737
ENZYME ACTIVITY
Plasma volume, osmolality, vasopressin, and renin activity during graded exercise in man
A81-21473
ERRORS
Errors in human performance
[AD-A091925] N81-16738
EULER-LAGRANGE EQUATION
A recursive Lagrangian formulation of manipulator dynamics and a comparative study of dynamics formulation complexity
A81-21020
EVALUATION
Evaluation of simulated radiofrequency heating procedures
[AD-A092731] N81-16735
Use of an electrical resistance hygrometer to measure human sweat rates
[NASA-TM-81223] N81-17692
EVAPORATION
Use of an electrical resistance hygrometer to measure human sweat rates
[NASA-TM-81223] N81-17692
EXERCISE PHYSIOLOGY
Ways of increasing muscular activity by means of isometric muscular exertion
[NASA-TM-76307] N81-16723
EXOBIOLOGY
The flowering and ripening of Arabidopsis seeds under weightlessness conditions - Biosatellite Kosmos 1129 experiment
A81-20849
EXPECTATION
The effect of expectations on slow oculomotor control. III - Guessing unpredictable target displacements
A81-23097
EYE MOVEMENTS
The effect of expectations on slow oculomotor control. III - Guessing unpredictable target displacements
A81-23097

F

FABRICS
Further study for fabrication, evaluation, and testing of monolayer woven materials for space suit insulation
[NASA-CR-166140] N81-16740
FACTOR ANALYSIS
Structural analysis of factor patterns on EEG under various states of consciousness
A81-21989
Thermal comfort in an era of energy shortage
[AD-A093193] N81-17696
FLIGHT CLOTHING
Development and fabrication of an advanced liquid cooling garment
[NASA-CR-152101] N81-16741
FLIGHT CREWS
The effective acoustic environment of helicopter crewman
A81-20056
Development of an automatic opening lap belt buckle for aircrew restraint systems
A81-22093
Effects of ozone (0.30 parts per million, approximately 600 mu g/m 3) on sedentary men representative of airline passengers and cockpit crewmembers
[AD-A092268] N81-16734
Technical evaluation report of the Aerospace Medical Panel Working Group WG-08 on Evaluation of Methods to Assess Workload
[AGARD-AR-139] N81-16739
FLIGHT OPERATIONS
Disorientation in Army helicopter operations: A general review --- accident investigation
N81-17704
FLIGHT SAFETY
New developments in restraint systems
A81-22084
Brain/computer communication to reduce human error - A perspective
A81-22111
FLIGHT SIMULATION
The role of simulation in Space Shuttle training
A81-21726
FLIGHT SIMULATORS
Development of a secondary task method for measuring operator workload. II - A change of secondary task performance with acquisition of flying skill by Link Trainer
A81-21987
FLIGHT STRESS
Frequency domain measures of human performance under G-stress
A81-20500
FLIGHT STRESS (BIOLOGY)
Spatial disorientation in flight: Current problems
[AGARD-CP-287] N81-17698
Physiological mechanisms of spatial disorientation not of visual origin
N81-17699
An update of findings regarding spatial disorientation in flight: A reconsideration of underlying mechanisms
N81-17700
Perceptual errors in flight: A survey of 100 military pilots on active duty
N81-17701
FLIGHT TRAINING
Development of a secondary task method for measuring operator workload. II - A change of secondary task performance with acquisition of flying skill by Link Trainer
A81-21987
A multistation spatial disorientation demonstrator
N81-17708
FLIR DETECTORS
Dynamic target acquisiton: Empirical models of operator performance
[AD-A092263] N81-16733
FLOW EQUATIONS
Hydroelastic effects in the aorta bifurcation zone
[NASA-TM-75432] N81-16728
FLOW RESISTANCE
Pressure-flow hysteresis in the pulmonary vasculature
N81-16721
FLUID DYNAMICS
Hydroelastic effects in the aorta bifurcation zone
[NASA-TM-75432] N81-16728
FLUID FLOW
Pressure-flow hysteresis in the pulmonary vasculature
N81-16721
FLUORESCENCE
Antibodies to myofibril antigens in cosmonauts after spaceflights
[NASA-TM-76300] N81-16722
FOOD PROCESSING
Environmental contaminants in food. Volume 2, part B: Working papers
[PB81-116774-VOL-2-PT-B] N81-17716
FORMALDEHYDE
Histochemical study of lipid-like material in photochemically formed jeewanu, the protocell, with formaldehyde partially replaced by other organic sources
A81-23092

G

GAME THEORY
A stochastic differential game theory approach to human operators in adversary tracking encounters
A81-21023

BEST DOCUMENT AVAILABLE

GRAVITATIONAL EFFECTS
Life of the onion not knowing up from down [NASA-TM-76353] N81-16718

H

HAZARDS
The effective acoustic environment of helicopter crewman A81-20056
Implications of a critical level in the ear for assessment of noise hazard at high intensities A81-20925

HEAD (ANATOMY)
Development and fabrication of an advanced liquid cooling garment [NASA-CR-152101] N81-16741

HEAD-UP DISPLAYS
Magnitude of visual accommodation to a head-up display [NASA-TP-1796] N81-17711

HEART DISEASES
Current concepts in clinical cardiology; Proceedings of the Tenth Conference on Cardiovascular Disease, Aspen, Colo., January 15-19, 1979 A81-19711
Premature ventricular complexes - Therapeutic dilemmas and decisions A81-19719

HEART FUNCTION
Echocardiographic studies evaluating the effects of exercise training on the heart A81-19715

HEART RATE
Cardiorespiratory and perceptual recovery from a marathon run by novice and experienced women marathon runners N81-16720

HEAT ACCLIMATIZATION
Responses to dry heat of men and women with similar aerobic capacities A81-21472
Physiological and hematological responses to summer and winter dry-heat acclimation [AD-A093194] N81-17695

HEAT TOLERANCE
Responses to dry heat of men and women with similar aerobic capacities A81-21472
Thermal comfort in an era of energy shortage [AD-A093193] N81-17696

HEAT TRANSFER
Evaluation of simulated radiofrequency heating procedures [AD-A092731] N81-16735
Use of an electrical resistance hygrometer to measure human sweat rates [NASA-TM-81223] N81-17692

HEAVY NUCLEI
Dosimetric investigations of cosmic radiation aboard the Kosmos-936 AES (joint Soviet-American experiment K-206) [NASA-TM-75772] N81-16730

HELICOPTER PERFORMANCE
The effective acoustic environment of helicopter crewman A81-20056

HELICOPTERS
Effects of internal noise on helicopter operation - An aircrew view A81-20052
Acceptance and control of aircraft interior noise and vibration A81-20057
Factors affecting acceptable noise levels in helicopters A81-20059
Helicopter pilot performance and workload as a function of night vision symbologies A81-20502
Disorientation in Army helicopter operations: A general review --- accident investigation N81-17704

HELMETS
Development and fabrication of an advanced liquid cooling garment [NASA-CR-152101] N81-16741

HEMATOLOGY
2,3-diphosphoglycerate and night vision A81-22113
Toxicology and metabolism of nickel compounds: Comprehensive report of overall activities during the three-year period from 1 December 1977 - 30 November 1980 [DOE/EV-03140/5-T1] N81-17697

HEMODYNAMIC RESPONSES
Hemorheological changes, the state of microcirculation, and blood acid-base balance in rats under conditions of a 30-day limiting of the motor activity [NASA-TM-76464] N81-16719

HEMORRHAGES
Response to transient haemorrhage after acute and chronic section of the carotid sinus nerves A81-22106

HIGH ALTITUDE BREATHING
Speculations on the pathogenesis of high-altitude pulmonary edema A81-19712
Acute mountain sickness - The clinical approach A81-19713
Evaluation of full-head enclosed breathing system for extended exposure at high altitude A81-22077
An improved oxygen mask for high-altitude protection A81-22081

HIGH ALTITUDE ENVIRONMENTS
Acute mountain sickness - The clinical approach A81-19713
Antidiuretic hormone excretion at high altitude A81-22112
2,3-diphosphoglycerate and night vision A81-22113

HISTOCHEMICAL ANALYSIS
Histochemical study of lipid-like material in photochemically formed jeewanu, the protocell, with formaldehyde partially replaced by other organic sources A81-23092

HOMEOSTASIS
Physiological and hematological responses to summer and winter dry-heat acclimation [AD-A093194] N81-17695

HORIZONTAL ORIENTATION
Evaluation and prediction of the vertical situation from a horizontal situation display --- pilot perception of motion and separation in cockpit display of air traffic information A81-20503

HORMONES
Antidiuretic hormone excretion at high altitude A81-22112

HUMAN BEINGS
Hominid evolution and SETI A81-23093

HUMAN BODY
The response of a realistic computer model for sitting humans to different types of shocks A81-22550
Use of an electrical resistance hygrometer to measure human sweat rates [NASA-TM-81223] N81-17692

HUMAN FACTORS ENGINEERING
Human factors by descent energy management A81-20467
Crew station assessment using the Bioman modeling system A81-22092
Navy manager's guide for the design sections of MIL-H-46855 [AD-A092009] N81-16742
Human visual performance and flat panel display image quality [AD-A092685] N81-16743
Magnitude of visual accommodation to a head-up display [NASA-TP-1796] N81-17711
Ergonomic study of the influence of rotary vibrations [BMVG-FBWT-79-33] N81-17714

HUMAN PERFORMANCE
Errors in human performance [AD-A091925] N81-16738

BEST DOCUMENT AVAILABLE

Technical evaluation report of the Aerospace Medical Panel Working Group WG-08 on Evaluation of Methods to Assess Workload [AGARD-AR-139] N81-16739
Human visual performance and flat panel display image quality [AD-A092685] N81-16743

HUMAN TOLERANCES
Responses to dry heat of men and women with similar aerobic capacities A81-21472
Effectiveness and wearability of immersion hypothermia protection equipment A81-22086
Physiological and hematological responses to summer and winter dry-heat acclimation [AD-A093194] N81-17695
Thermal comfort in an era of energy shortage [AD-A093193] N81-17696

HYDROELASTICITY
Hydroelastic effects in the aorta bifurcation zone [NASA-TM-75432] N81-16728

HYGROMETERS
Use of an electrical resistance hygrometer to measure human sweat rates [NASA-TM-81223] N81-17692

HYPERCAPNIA
Experimental studies on the survival capacity in the sealed environment. I - Effect of cooping up in the individual sealed chamber of various volume on survival time in rats of various body weight A81-21988

HYPODYNAMIA
Hemorheological changes, the state of microcirculation, and blood acid-base balance in rats under conditions of a 30-day limiting of the motor activity [NASA-TM-76464] N81-16719
Ways of increasing muscular activity by means of isometric muscular exertion [NASA-TM-76307] N81-16723
Pharmacological activity and toxicity of some neurotropic agents under conditions of experimental hypodynamia [NASA-TM-76371] N81-16724

HYPOTENSION
Orthostatic hypotension [NASA-TM-75433] N81-16729

HYPOTHERMIA
Effectiveness and wearability of immersion hypothermia protection equipment A81-22086

HYPOXIA
Speculations on the pathogenesis of high-altitude pulmonary edema A81-19712
Dynamics of the state of redox systems in structural elements of the cerebral cortex during oxygen deficiency /cytophotometric study in vivo/ A81-19900
Diffusing capacity of the lung during hypoxia - Role of capillary recruitment A81-21474
Experimental studies on the survival capacity in the sealed environment. I - Effect of cooping up in the individual sealed chamber of various volume on survival time in rats of various body weight A81-21988
Dopaminergic agonists and conditioned avoidance response in normoxic or hypoxic rats A81-22108
Neuroendocrine strategies for adaptation to high altitude N81-16717

HYSTERESIS
Pressure-flow hysteresis in the pulmonary vasculature N81-16721

I

IMAGERY
Human visual performance and flat panel display image quality [AD-A092685] N81-16743

IMMUNOLOGY
Antibodies to myofibril antigens in cosmonauts after spaceflights [NASA-TM-76300] N81-16722

IMPACT LOADS
The response of a realistic computer model for sitting humans to different types of shocks A81-22550

INDUSTRIAL PLANTS
Phytoplankton studies and nutrient concentrations in the vicinity of the C. P. Crane Generating Station [PB81-114746] N81-17693

INFORMATION MANAGEMENT
Cockpit displayed traffic information and distributed management in air traffic control A81-20916

INFORMATION SYSTEMS
Cockpit displayed traffic information and distributed management in air traffic control A81-20916

ISCHEMIA
The role of biochemical factors in ventricular dysrhythmia accompanying ischemia A81-19720

L

LEARNING MACHINES
Learning and control for a compliant computer-controlled manipulator A81-21031

LETHALITY
Relative toxicity testing of spacecraft materials. 1: Spacecraft materials --- lethality of pyrolysates [NASA-CR-160908] N81-16731

LIPIDS
Histochemical study of lipid-like material in photochemically formed jeewanu, the protocell, with formaldehyde partially replaced by other organic sources A81-23092

LIQUID COOLING
Development and fabrication of an advanced liquid cooling garment [NASA-CR-152101] N81-16741

LUNG MORPHOLOGY
Diffusing capacity of the lung during hypoxia - Role of capillary recruitment A81-21474

LUNGS
Speculations on the pathogenesis of high-altitude pulmonary edema A81-19712
Long-term follow-up of lung volume measurements in initially healthy young aviators A81-22105

M

MACHINING
Partly unmanned machining A81-19842

MAGNETIC FIELDS
Magnetic fields of the cerebral cortex [AD-A086288] N81-16736

MAN MACHINE SYSTEMS
Human controller modeling in environments that include non-control tasks A81-20501
Evaluation and prediction of the vertical situation from a horizontal situation display --- pilot perception of motion and separation in cockpit display of air traffic information A81-20503
An analysis of the human as a predictor model A81-20511
Master-slave manipulator performance for various dynamic characteristics and positioning task parameters A81-21024
Crew station assessment using the Bioman modeling system A81-22092
Brain/computer communication to reduce human error - A perspective A81-22111

BEST DOCUMENT AVAILABLE

Errors in human performance
[AD-A091925] N81-16738
An assessment of undersea teleoperators
[PB81-102535] N81-16744
Computer-aided development of control console, control panel, and display user instructions and training materials
[AD-A093891] N81-17713
Monitoring and decision making by people in man machine systems
[NASA-CR-164026] N81-17715

MANIPULATORS
A hierarchical programming approach to robot assembly
A81-19841
A recursive Lagrangian formulation of manipulator dynamics and a comparative study of dynamics formulation complexity
A81-21020
Master-slave manipulator performance for various dynamic characteristics and positioning task parameters
A81-21024
Learning and control for a compliant computer-controlled manipulator
A81-21031
An assessment of undersea teleoperators
[PB81-102535] N81-16744

MANUAL CONTROL
Mental workload in decision and control
A81-20499
A stochastic differential game theory approach to human operators in adversary tracking encounters
A81-21023
Master-slave manipulator performance for various dynamic characteristics and positioning task parameters
A81-21024

MANUFACTURING
Partly unmanned machining
A81-19842

MATHEMATICAL MODELS
Analysis and modeling of the cephalic response of a human operator subjected to binaural stimulation in a sound localization task --- French thesis
A81-21923
Hydroelastic effects in the aorta bifurcation zone
[NASA-TM-75432] N81-16728
Dynamic target acquisiton: Empirical models of operator performance
[AD-A092263] N81-16733

MEDICAL ELECTRONICS
Two-dimensional echocardiography - Methodology and application in clinical cardiology
A81-19714

MENTAL PERFORMANCE
Mental workload in decision and control
A81-20499

METABOLISM
Toxicology and metabolism of nickel compounds: Comprehensive report of overall activities during the three-year period from 1 December 1977 - 30 November 1980
[DOE/EV-03140/5-T1] N81-17697

MICROPROCESSORS
Brain/computer communication to reduce human error - A perspective
A81-22111

MILITARY AIRCRAFT
Onboard oxygen generation
A81-22082
Technical evaluation report of the Aerospace Medical Panel Working Group WG-08 on Evaluation of Methods to Assess Workload
[AGARD-AR-139] N81-16739

MILITARY PSYCHOLOGY
The physician's determination of personnel reliability in sensitive occupations
A81-22114

MILITARY TECHNOLOGY
New developments in restraint systems
A81-22084

MISSION PLANNING
Technical evaluation report of the Aerospace Medical Panel Working Group WG-08 on Evaluation of Methods to Assess Workload
[AGARD-AR-139] N81-16739

MOLECULAR BIOLOGY
Dynamics of the state of redox systems in structural elements of the cerebral cortex during oxygen deficiency /cytophotometric study in vivo/
A81-19900

MORTALITY
Experimental studies on the survival capacity in the sealed environment. I - Effect of cooping up in the individual sealed chamber of various volume on survival time in rats of various body weight
A81-21988

MOTION PERCEPTION
Displacement detection in human vision
A81-23098
Direction-specific and position-specific effects upon detection of displacements during saccadic eye movements
A81-23099

MOTION SICKNESS
Orthostatic disorder. A contributing factor to motion sickness?
N81-17706

MOTION SIMULATORS
Task segmentation - An approach to simulator task fidelity
A81-21728

MUSCULAR FUNCTION
Effect of cervicolabyrinthine impulsation on the spinal reflex apparatus
[NASA-TM-76375] N81-16726

MYOCARDIUM
Antibodies to myofibril antigens in cosmonauts after spaceflights
[NASA-TM-76300] N81-16722

N

NAVIGATION AIDS
Cockpit displayed traffic information and distributed management in air traffic control
A81-20916

NERVES
Response to transient haemorrhage after acute and chronic section of the carotid sinus nerves
A81-22106

NEUROPHYSIOLOGY
Brain/computer communication to reduce human error - A perspective
A81-22111

NEUROTRANSMITTERS
Neuroendocrine strategies for adaptation to high altitude
N81-16717

NEUROTROPISM
Pharmacological activity and toxicity of some neurotropic agents under conditions of experimental hypodynamia
[NASA-TM-76371] N81-16724

NEUTRON IRRADIATION
Dosimetric investigations of cosmic radiation aboard the Kosmos-936 AES (joint Soviet-American experiment K-206)
[NASA-TM-75772] N81-16730

NEWTONIAN FLUIDS
Hydroelastic effects in the aorta bifurcation zone
[NASA-TM-75432] N81-16728

NICKEL COMPOUNDS
Toxicology and metabolism of nickel compounds: Comprehensive report of overall activities during the three-year period from 1 December 1977 - 30 November 1980
[DOE/EV-03140/5-T1] N81-17697

NIGHT VISION
Helicopter pilot performance and workload as a function of night vision symbologies
A81-20502
2,3-diphosphoglycerate and night vision
A81-22113

NOISE INTENSITY
The effective acoustic environment of helicopter crewman
A81-20056
Factors affecting acceptable noise levels in helicopters
A81-20059

BEST DOCUMENT AVAILABLE

Implications of a critical level in the ear for assessment of noise hazard at high intensities
A81-20925

NOISE REDUCTION
Effects of internal noise on helicopter operation - An aircrew view
A81-20052
The effective acoustic environment of helicopter crewman
A81-20056
Acceptance and control of aircraft interior noise and vibration
A81-20057
Factors affecting acceptable noise levels in helicopters
A81-20059

NOISE TOLERANCE
Implications of a critical level in the ear for assessment of noise hazard at high intensities
A81-20925

NUMERICAL CONTROL
A hierarchical programming approach to robot assembly
A81-19841
A recursive Lagrangian formulation of manipulator dynamics and a comparative study of dynamics formulation complexity
A81-21020
Learning and control for a compliant computer-controlled manipulator
A81-21031

O

OCCUPATION
The physician's determination of personnel reliability in sensitive occupations
A81-22114

OCULOGRAVIC ILLUSIONS
Illusions of attitude and movement during Earth-horizontal rotation --- oculogravic illusions
N81-17705

OCULOMOTOR NERVES
The effect of expectations on slow oculomotor control. III - Guessing unpredictable target displacements
A81-23097

OPERATING SYSTEMS (COMPUTERS)
Computer-aided development of control console, control panel, and display user instructions and training materials
[AD-A093891] N81-17713

OPERATOR PERFORMANCE
Mental workload in decision and control
A81-20499
Predicting search performance for multiple targets --- in human operator visual tasks
A81-20917
A stochastic differential game theory approach to human operators in adversary tracking encounters
A81-21023
Master-slave manipulator performance for various dynamic characteristics and positioning task parameters
A81-21024
Analysis and modeling of the cephalic response of a human operator subjected to binaural stimulation in a sound localization task --- French thesis
A81-21923
Dynamic target acquisiton: Empirical models of operator performance
[AD-A092263] N81-16733

OPERATORS (PERSONNEL)
Monitoring and decision making by people in man machine systems
[NASA-CR-164026] N81-17715

OPTICAL ILLUSION
Visual illusions as a probable cause of aircraft accidents
N81-17703

OPTIMAL CONTROL
Monitoring and decision making by people in man machine systems
[NASA-CR-164026] N81-17715

ORBITAL SERVICING
Advanced control techniques for teleoperation in earth orbit
A81-22610

ORTHOSTATIC TOLERANCE
Cardiovascular and biochemical response to simulated space flight entry
A81-22107
Autoregulation of cerebral blood circulation under orthostatic tests
[NASA-TM-76372] N81-16725
Orthostatic hypotension
[NASA-TM-75433] N81-16729
Orthostatic disorder. A contributing factor to motion sickness?
N81-17706

OXYGEN CONSUMPTION
Cardiorespiratory and perceptual recovery from a marathon run by novice and experienced women marathon runners
N81-16720

OXYGEN MASKS
Evaluation of full-head enclosed breathing system for extended exposure at high altitude
A81-22077
An improved oxygen mask for high-altitude protection
A81-22081

OXYGEN SUPPLY EQUIPMENT
Onboard oxygen generation
A81-22082

OZONE
Effects of ozone (0.30 parts per million, approximately 600 mu g/m 3) on sedentary men representative of airline passengers and cockpit crewmembers
[AD-A092268] N81-16734

P

PASSENGER AIRCRAFT
Acceptance and control of aircraft interior noise and vibration
A81-20057

PASSENGERS
Effects of ozone (0.30 parts per million, approximately 600 mu g/m 3) on sedentary men representative of airline passengers and cockpit crewmembers
[AD-A092268] N81-16734

PATHOGENESIS
Speculations on the pathogenesis of high-altitude pulmonary edema
A81-19712

PATHOLOGY
Orthostatic hypotension
[NASA-TM-75433] N81-16729

PERCEPTUAL ERRORS
Evaluation and prediction of the vertical situation from a horizontal situation display --- pilot perception of motion and separation in cockpit display of air traffic information
A81-20503

PERFORMANCE PREDICTION
An analysis of the human as a predictor model
A81-20511
Predicting search performance for multiple targets --- in human operator visual tasks
A81-20917

PERSONALITY
The physician's determination of personnel reliability in sensitive occupations
A81-22114

PERSONNEL SELECTION
The physician's determination of personnel reliability in sensitive occupations
A81-22114

PERSPIRATION
Use of an electrical resistance hygrometer to measure human sweat rates
[NASA-TM-81223] N81-17692
Thermal comfort in an era of energy shortage
[AD-A093193] N81-17696

PHARMACOLOGY
Dopaminergic agonists and conditioned avoidance response in normoxic or hypoxic rats
A81-22108

BEST DOCUMENT AVAILABLE

Pharmacological activity and toxicity of some neurotropic agents under conditions of experimental hypodynamia
[NASA-TM-76371] N81-16724

PHOTOCHEMICAL REACTIONS
Histochemical study of lipid-like material in photochemically formed jeewanu, the protocell, with formaldehyde partially replaced by other organic sources
A81-23092

PHYSICAL EXAMINATIONS
Statistical studies on blood pressure of JASDF pilots. III - Relationship between physical constitution and blood pressure
A81-21990

PHYSICAL EXERCISE
Echocardiographic studies evaluating the effects of exercise training on the heart
A81-19715
Electrocardiographic stress testing - The debate goes on /probably/
A81-19716
Does exercise protect from coronary artery disease
A81-19718
Control of breathing during prolonged exercise
A81-21471
Plasma volume, osmolality, vasopressin, and renin activity during graded exercise in man
A81-21473
Ways of increasing muscular activity by means of isometric muscular exertion
[NASA-TM-76307] N81-16723

PHYSICAL FACTORS
Does exercise protect from coronary artery disease
A81-19718

PHYSIOLOGICAL EFFECTS
Echocardiographic studies evaluating the effects of exercise training on the heart
A81-19715
Ways of increasing muscular activity by means of isometric muscular exertion
[NASA-TM-76307] N81-16723
Effects of ozone (0.30 parts per million, approximately 600 mu g/m 3) on sedentary men representative of airline passengers and cockpit crewmembers
[AD-A092268] N81-16734
Toxicology and metabolism of nickel compounds: Comprehensive report of overall activities during the three-year period from 1 December 1977 - 30 November 1980
[DOE/EV-03140/5-T1] N81-17697
Orthostatic disorder. A contributing factor to motion sickness?
N81-17706

PHYSIOLOGICAL RESPONSES
Acute mountain sickness - The clinical approach
A81-19713
The role of biochemical factors in ventricular dysrhythmia accompanying ischemia
A81-19720
Responses to dry heat of men and women with similar aerobic capacities
A81-21472
Analysis and modeling of the cephalic response of a human operator subjected to binaural stimulation in a sound localization task --- French thesis
A81-21923
Physiological responses of human subjects wearing thermal protective clothing assemblies in varying environments
A81-22085
Response to transient haemorrhage after acute and chronic section of the carotid sinus nerves
A81-22106
Cardiovascular and biochemical response to simulated space flight entry
A81-22107
Dopaminergic agonists and conditioned avoidance response in normoxic or hypoxic rats
A81-22108
Effect of body supination angle on subjective response to whole-body vibration
A81-22110
Antidiuretic hormone excretion at high altitude
A81-22112
Effect of cervicolabyrinthine impulsation on the spinal reflex apparatus
[NASA-TM-76375] N81-16726
Physiological and hematological responses to summer and winter dry-heat acclimation
[AD-A093194] N81-17695
Spatial disorientation in flight: Current problems
[AGARD-CP-287] N81-17698
Physiological mechanisms of spatial disorientation not of visual origin
N81-17699

PHYSIOLOGICAL TESTS
Diffusing capacity of the lung during hypoxia - Role of capillary recruitment
A81-21474
Experimental studies on the survival capacity in the sealed environment. I - Effect of cooping up in the individual sealed chamber of various volume on survival time in rats of various body weight
A81-21988

PHYSIOLOGY
Orthostatic hypotension
[NASA-TM-75433] N81-16729
Use of an electrical resistance hygrometer to measure human sweat rates
[NASA-TM-81223] N81-17692

PILOT ERROR
Perceptual errors in flight: A survey of 100 military pilots on active duty
N81-17701

PILOT PERFORMANCE
Mental workload in decision and control
A81-20499
Frequency domain measures of human performance under G-stress
A81-20500
Human controller modeling in environments that include non-control tasks
A81-20501
Helicopter pilot performance and workload as a function of night vision symbologies
A81-20502
An analysis of the human as a predictor model
A81-20511
Development of a secondary task method for measuring operator workload. II - A change of secondary task performance with acquisition of flying skill by Link Trainer
A81-21987
Statistical studies on blood pressure of JASDF pilots. III - Relationship between physical constitution and blood pressure
A81-21990
Physiological responses of human subjects wearing thermal protective clothing assemblies in varying environments
A81-22085
Brain/computer communication to reduce human error - A perspective
A81-22111

PILOT TRAINING
An integrated training approach
A81-21727
Task segmentation - An approach to simulator task fidelity
A81-21728
The Royal Air Force Spatial Disorientation Familiarisation Devices (SDFD)
N81-17709

PITCH (INCLINATION)
Ergonomic study of the influence of rotary vibrations
[BMVG-FBWT-79-33] N81-17714

PLANKTON
Phytoplankton studies and nutrient concentrations in the vicinity of the C. P. Crane Generating Station
[PB81-114746] N81-17693

PLANT STRESS
Life of the onion not knowing up from down
[NASA-TM-76353] N81-16718

PLANTS (BOTANY)
The flowering and ripening of Arabidopsis seeds under weightlessness conditions - Biosatellite Kosmos 1129 experiment
A81-20849
Life of the onion not knowing up from down
[NASA-TM-76353] N81-16718

BEST DOCUMENT AVAILABLE

PORTABLE LIFE SUPPORT SYSTEMS
An improved oxygen mask for high-altitude protection
A81-22081
POSITION (LOCATION)
Direction-specific and position-specific effects upon detection of displacements during saccadic eye movements
A81-23099
POTABLE WATER
Environmental contaminants in food. Volume 2, part B: Working papers
[PB81-116774-VOL-2-PT-B] N81-17716
PRESSURE EFFECTS
Pressure-flow hysteresis in the pulmonary vasculature
N81-16721
PROBABILITY DISTRIBUTION FUNCTIONS
Predicting search performance for multiple targets --- in human operator visual tasks
A81-20917
PROCESS CONTROL (INDUSTRY)
A hierarchical programming approach to robot assembly
A81-19841
Partly unmanned machining
A81-19842
PRODUCT DEVELOPMENT
Development and fabrication of an advanced liquid cooling garment
[NASA-CR-152101] N81-16741
PRODUCTION MANAGEMENT
Partly unmanned machining
A81-19842
PROJECT SETI
Hominid evolution and SETI
A81-23093
PROTECTIVE CLOTHING
Physiological responses of human subjects wearing thermal protective clothing assemblies in varying environments
A81-22085
Effectiveness and wearability of immersion hypothermia protection equipment
A81-22086
Development and fabrication of an advanced liquid cooling garment
[NASA-CR-152101] N81-16741
PSYCHOLOGICAL FACTORS
The physician's determination of personnel reliability in sensitive occupations
A81-22114
PSYCHOLOGICAL SETS
The effect of expectations on slow oculomotor control. III - Guessing unpredictable target displacements
A81-23097
PSYCHOMETRICS
On the practice of measuring sensory thresholds: Signal detection and the adaptive method
[FB-43] N81-17710
PSYCHOPHYSICS
Displacement detection in human vision
A81-23098
On the practice of measuring sensory thresholds: Signal detection and the adaptive method
[FB-43] N81-17710
PSYCHOPHYSIOLOGY
The ambient visual system and spatial orientation --- flight stress (biology)
N81-17702
PUBLIC HEALTH
Heliobiological research - Present status and prospects
A81-19678
Toxicology and metabolism of nickel compounds: Comprehensive report of overall activities during the three-year period from 1 December 1977 - 30 November 1980
[DOE/EV-03140/5-T1] N81-17697
Environmental contaminants in food. Volume 2, part B: Working papers
[PB81-116774-VOL-2-PT-B] N81-17716
PULMONARY CIRCULATION
Diffusing capacity of the lung during hypoxia - Role of capillary recruitment
A81-21474
Pressure-flow hysteresis in the pulmonary vasculature
N81-16721
PULMONARY FUNCTIONS
Long-term follow-up of lung volume measurements in initially healthy young aviators
A81-22105
PURSUIT TRACKING
The effect of expectations on slow oculomotor control. III - Guessing unpredictable target displacements
A81-23097
PYROLYSIS
Relative toxicity testing of spacecraft materials. 2: Aircraft materials
[NASA-CR-160907] N81-16732

R

RADIATION DOSAGE
Dosimetric investigations of cosmic radiation aboard the Kosmos-936 AES (joint Soviet-American experiment K-206)
[NASA-TM-75772] N81-16730
RADIO FREQUENCY HEATING
Evaluation of simulated radiofrequency heating procedures
[AD-A092731] N81-16735
RADIOBIOLOGY
The colony-forming
A81-20845
RATS
Hemorheological changes, the state of microcirculation, and blood acid-base balance in rats under conditions of a 30-day limiting of the motor activity
[NASA-TM-76464] N81-16719
RECURSIVE FUNCTIONS
A recursive Lagrangian formulation of manipulator dynamics and a comparative study of dynamics formulation complexity
A81-21020
REDOX CELLS
Dynamics of the state of redox systems in structural elements of the cerebral cortex during oxygen deficiency /cytophotometric study in vivo/
A81-19900
REFLEXES
Effect of cervicolabyrinthine impulsation on the spinal reflex apparatus
[NASA-TM-76375] N81-16726
REMOTE CONTROL
Advanced control techniques for teleoperation in earth orbit
A81-22610
REMOTE HANDLING
Master-slave manipulator performance for various dynamic characteristics and positioning task parameters
A81-21024
RESPIRATORY DISEASES
Speculations on the pathogenesis of high-altitude pulmonary edema
A81-19712
RESPIRATORY PHYSIOLOGY
Control of breathing during prolonged exercise
A81-21471
Diffusing capacity of the lung during hypoxia - Role of capillary recruitment
A81-21474
RESPIRATORY RATE
Cardiorespiratory and perceptual recovery from a marathon run by novice and experienced women marathon runners
N81-16720
RHEOENCEPHALOGRAPHY
Rheoencephalography in Meniere's disease
[NASA-TM-76387] N81-16727
RHEOLOGY
Hemorheological changes, the state of microcirculation, and blood acid-base balance in rats under conditions of a 30-day limiting of the motor activity
[NASA-TM-76464] N81-16719
RISK
Pharmacological activity and toxicity of some neurotropic agents under conditions of experimental hypodynamia
[NASA-TM-76371] N81-16724

BEST DOCUMENT AVAILABLE

ROBOTS
A hierarchical programming approach to robot assembly
A81-19841
Partly unmanned machining
A81-19842

ROLL
Ergonomic study of the influence of rotary vibrations
[BMVG-FBWT-79-33] N81-17714

RUBBER
Development of guayule (Parthenium argentatum) research in cell culture
[NASA-CR-163945] N81-17691

RUNNING
Cardiorespiratory and perceptual recovery from a marathon run by novice and experienced women marathon runners
N81-16720

S

SACCADIC EYE MOVEMENTS
Direction-specific and position-specific effects upon detection of displacements during saccadic eye movements
A81-23099

SAFETY DEVICES
New developments in restraint systems
A81-22084

SEARCHING
Predicting search performance for multiple targets --- in human operator visual tasks
A81-20917

SEAT BELTS
Development of an automatic opening lap belt buckle for aircrew restraint systems
A81-22083

SEEDS
The flowering and ripening of Arabidopsis seeds under weightlessness conditions - Biosatellite Kosmos 1129 experiment
A81-20849

SEMICIRCULAR CANALS
A generalized transfer function for describing mechanoneural semicircular-canal dynamics
N81-17707

SENSORIMOTOR PERFORMANCE
The ambient visual system and spatial orientation --- flight stress (biology)
N81-17702

SENSORY PERCEPTION
Spatial disorientation in flight: Current problems
[AGARD-CP-287] N81-17698
Physiological mechanisms of spatial disorientation not of visual origin
N81-17699

SEX FACTOR
Responses to dry heat of men and women with similar aerobic capacities
A81-21472

SIGNATURE ANALYSIS
Dynamic target acquisiton: Empirical models of operator performance
[AD-A092263] N81-16733

SIMULATION
Evaluation of simulated radiofrequency heating procedures
[AD-A092731] N81-16735

SINUSES
Development of percutaneous energy transmission systems
[PB81-109381] N81-16737

SITTING POSITION
The response of a realistic computer model for sitting humans to different types of shocks
A81-22550

SKIN TEMPERATURE (BIOLOGY)
Data acquistion system for thermal stress studies --- cutaneous heat flow and temperature monitors for individual human body sites
[ASME PAPER 80-WA/OCE-14] A81-21125

SOCIOLOGY
Errors in human performance
[AD-A091925] N81-16738

SOLAR ACTIVITY EFFECTS
Heliobiological research - Present status and prospects
A81-19678

SOLAR RADIATION
Heliobiological research - Present status and prospects
A81-19678

SOLAR TERRESTRIAL INTERACTIONS
Heliobiological research - Present status and prospects
A81-19678

SOUND LOCALIZATION
Analysis and modeling of the cephalic response of a human operator subjected to binaural stimulation in a sound localization task --- French thesis
A81-21923

SPACE FLIGHT
Antibodies to myofibril antigens in cosmonauts after spaceflights
[NASA-TM-76300] N81-16722

SPACE FLIGHT STRESS
Cardiovascular and biochemical response to simulated space flight entry
A81-22107

SPACE FLIGHT TRAINING
The role of simulation in Space Shuttle training
A81-21726

SPACE SHUTTLE ORBITERS
The role of simulation in Space Shuttle training
A81-21726

SPACE SUITS
Further study for fabrication, evaluation, and testing of monolayer woven materials for space suit insulation
[NASA-CR-166140] N81-16740

SPACEBORNE EXPERIMENTS
The flowering and ripening of Arabidopsis seeds under weightlessness conditions - Biosatellite Kosmos 1129 experiment
A81-20849

SPACECRAFT CONSTRUCTION MATERIALS
Relative toxicity testing of spacecraft materials. 1: Spacecraft materials --- lethality of pyrolysates
[NASA-CR-160908] N81-16731

SPACECRAFT ENVIRONMENTS
Life of the onion not knowing up from down
[NASA-TM-76353] N81-16718

SPINAL CORD
Effect of cervicolabyrinthine impulsation on the spinal reflex apparatus
[NASA-TM-76375] N81-16726

STOCHASTIC PROCESSES
A stochastic differential game theory approach to human operators in adversary tracking encounters
A81-21023

STRESS (PHYSIOLOGY)
Electrocardiographic stress testing - The debate goes on /probably/
A81-19716
An update of findings regarding spatial disorientation in flight: A reconsideration of underlying mechanisms
N81-17700

SUBMERGING
Effectiveness and wearability of immersion hypothermia protection equipment
A81-22086

SUPINE POSITION
Effect of body supination angle on subjective response to whole-body vibration
A81-22110

SURVIVAL EQUIPMENT
Onboard oxygen generation
A81-22082

SWITZERLAND
Orthostatic hypotension
[NASA-TM-75433] N81-16729

SYSTEMS EFFECTIVENESS
Effectiveness and wearability of immersion hypothermia protection equipment
A81-22086

T

TARGET ACQUISITION
The effect of expectations on slow oculomotor control. III - Guessing unpredictable target displacements
A81-23097

BEST DOCUMENT AVAILABLE

Displacement detection in human vision
A81-23098
Direction-specific and position-specific effects upon detection of displacements during saccadic eye movements
A81-23099
Dynamic target acquisiton: Empirical models of operator performance
[AD-A092263] N81-16733

TARGET RECOGNITION
Predicting search performance for multiple targets --- in human operator visual tasks
A81-20917

TASK COMPLEXITY
Human controller modeling in environments that include non-control tasks
A81-20501
Task segmentation - An approach to simulator task fidelity
A81-21728

TECHNOLOGY ASSESSMENT
Human visual performance and flat panel display image quality
[AD-A092685] N81-16743
An assessment of undersea teleoperators
[PB81-102535] N81-16744

TELEOPERATORS
Learning and control for a compliant computer-controlled manipulator
A81-21031
Advanced control techniques for teleoperation in earth orbit
A81-22610
An assessment of undersea teleoperators
[PB81-102535] N81-16744

TEMPERATURE CONTROL
Evaluation of simulated radiofrequency heating procedures
[AD-A092731] N81-16735

TEMPERATURE SENSORS
Data acquistion system for thermal stress studies --- cutaneous heat flow and temperature monitors for individual human body sites
[ASME PAPER 80-WA/OCE-14] A81-21125

THERAPY
Premature ventricular complexes - Therapeutic dilemmas and decisions
A81-19719

THERMAL DEGRADATION
Relative toxicity testing of spacecraft materials. 1: Spacecraft materials --- lethality of pyrolysates
[NASA-CR-160908] N81-16731

THERMAL INSULATION
Further study for fabrication, evaluation, and testing of monolayer woven materials for space suit insulation
[NASA-CR-166140] N81-16740
Thermal comfort in an era of energy shortage
[AD-A093193] N81-17696

THERMAL PROTECTION
Physiological responses of human subjects wearing thermal protective clothing assemblies in varying environments
A81-22085

THERMAL STRESSES
Data acquistion system for thermal stress studies --- cutaneous heat flow and temperature monitors for individual human body sites
[ASME PAPER 80-WA/OCE-14] A81-21125

THRESHOLDS (PERCEPTION)
Displacement detection in human vision
A81-23098
On the practice of measuring sensory thresholds: Signal detection and the adaptive method
[PB-43] N81-17710

TISSUES (BIOLOGY)
The colony-forming
A81-20845

TOXIC HAZARDS
Relative toxicity testing of spacecraft materials. 2: Aircraft materials
[NASA-CR-160907] N81-16732
Environmental contaminants in food. Volume 2, part B: Working papers
[PB81-116774-VOL-2-PT-B] N81-17716

TOXICITY
Pharmacological activity and toxicity of some neurotropic agents under conditions of experimental hypodynamia
[NASA-TM-76371] N81-16724
Relative toxicity testing of spacecraft materials. 1: Spacecraft materials --- lethality of pyrolysates
[NASA-CR-160908] N81-16731

TOXICOLOGY
Toxicology and metabolism of nickel compounds: Comprehensive report of overall activities during the three-year period from 1 December 1977 - 30 November 1980
[DOE/EV-03140/5-T1] N81-17697

TRACKING (POSITION)
An analysis of the human as a predictor model
A81-20511

TRAINING DEVICES
An integrated training approach
A81-21727

TRAINING SIMULATORS
Task segmentation - An approach to simulator task fidelity
A81-21728
The Royal Air Force Spatial Disorientation Familiarisation Devices (SDFD)
N81-17709

TRAJECTORY OPTIMIZATION
Human controller modeling in environments that include non-control tasks
A81-20501

TRANSFER FUNCTIONS
A generalized transfer function for describing mechanoneural semicircular-canal dynamics
N81-17707

U

UNDERWATER VEHICLES
An assessment of undersea teleoperators
[PB81-102535] N81-16744

URINE
Antidiuretic hormone excretion at high altitude
A81-22112

V

VASCULAR SYSTEM
Rheoencephalography in Meniere's disease
[NASA-TM-76387] N81-16727

VEGETATION GROWTH
Life of the onion not knowing up from down
[NASA-TM-76353] N81-16718

VENTILATION
Control of breathing during prolonged exercise
A81-21471

VERTICAL PERCEPTION
Evaluation and prediction of the vertical situation from a horizontal situation display --- pilot perception of motion and separation in cockpit display of air traffic information
A81-20503

VERTIGO
Rheoencephalography in Meniere's disease
[NASA-TM-76387] N81-16727

VIBRATION DAMPING
Acceptance and control of aircraft interior noise and vibration
A81-20057

VIBRATION PERCEPTION
Ergonomic study of the influence of rotary vibrations
[BMVG-FBWT-79-33] N81-17714

VIBRATIONAL STRESS
Effect of body supination angle on subjective response to whole-body vibration
A81-22110

VISUAL ACUITY
Displacement detection in human vision
A81-23098

VISUAL AIDS
Magnitude of visual accommodation to a head-up display
[NASA-TP-1796] N81-17711

VISUAL FIELDS
The ambient visual system and spatial orientation --- flight stress (biology)
N81-17702

BEST DOCUMENT AVAILABLE

A multistation spatial disorientation demonstrator
N81-17708

VISUAL PERCEPTION
Direction-specific and position-specific effects upon detection of displacements during saccadic eye movements
A81-23099
Visual illusions as a probable cause of aircraft accidents
N81-17703

VISUAL STIMULI
The ambient visual system and spatial orientation --- flight stress (biology)
N81-17702

VISUAL TASKS
Predicting search performance for multiple targets --- in human operator visual tasks
A81-20917
Task segmentation - An approach to simulator task fidelity
A81-21728

W

WATER POLLUTION
Phytoplankton studies and nutrient concentrations in the vicinity of the C. P. Crane Generating Station
[PB81-114746] N81-17693

WEAPON SYSTEMS
Navy manager's guide for the design sections of MIL-H-46855
[AD-A092009] N81-16742

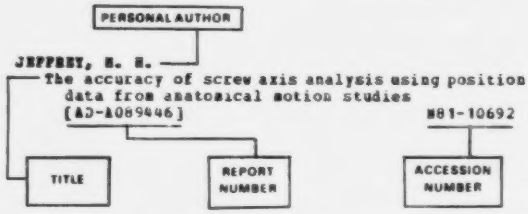
WORK CAPACITY
Technical evaluation report of the Aerospace Medical Panel Working Group WG-08 on Evaluation of Methods to Assess Workload
[AGARD-AR-139] N81-16739

WORKLOADS (PSYCHOPHYSIOLOGY)
Mental workload in decision and control
A81-20499
Helicopter pilot performance and workload as a function of night vision symbologies
A81-20502
Development of a secondary task method for measuring operator workload. II - A change of secondary task performance with acquisition of flying skill by Link Trainer
A81-21987
Perceptual errors in flight: A survey of 100 military pilots on active duty
N81-17701

BEST DOCUMENT AVAILABLE

PERSONAL AUTHOR INDEX

Typical Personal Author Index Listing



PERSONAL AUTHOR
JEFFREY, R. H.
The accuracy of screw axis analysis using position data from anatomical motion studies
[AD-A089446]
N81-10692
TITLE
REPORT NUMBER
ACCESSION NUMBER

The title of the document is used to provide the user with a brief description of the subject matter. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstract in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

A

ABRAMOVA, V. N.
The flowering and ripening of Arabidopsis seeds under weightlessness conditions - Biosatellite Kosmos 1129 experiment
A81-20849

ADAMS, J. D.
Evaluation of full-head enclosed breathing system for extended exposure at high altitude
A81-22077

AKANA, S. F.
Neuroendocrine strategies for adaptation to high altitude
N81-16717

ALDANESE, E.
A stochastic differential game theory approach to human operators in adversary tracking encounters
A81-21023

ARAMAKI, S.
Development of a secondary task method for measuring operator workload. II - A change of secondary task performance with acquisition of flying skill by Link Trainer
A81-21987

AUNE, N.
Designer's guide for the panel program
[AD-A093989] N81-17712

B

BAHADUR, K.
Histochemical study of lipid-like material in photochemically formed jeewanu, the protocell, with formaldehyde partially replaced by other organic sources
A81-23092

BALL, E. A.
Development of guayule (Parthenium argentatum) research in cell culture
[NASA-CR-163945] N81-17691

BARTON, S. A.
2,3-diphosphoglycerate and night vision
A81-22113

BECK, K. C.
Pressure-flow hysteresis in the pulmonary vasculature
N81-16721

BEIDEMAN, L. R.
Dynamic target acquisiton: Empirical models of operator performance
[AD-A092263] N81-16733

BEJCZY, A. K.
Advanced control techniques for teleoperation in earth orbit
A81-22610

BENEVOLENSKII, V. N.
Heliobiological research - Present status and prospects
A81-19678

BENSON, A. J.
Spatial disorientation in flight: Current problems
[AGARD-CP-287] N81-17698
The Royal Air Force Spatial Disorientation Familiarisation Devices (SDFD)
N81-17709

BENTON, E. V.
Dosimetric investigations of cosmic radiation aboard the Kosmos-936 AES (joint Soviet-American experiment K-206)
[NASA-TM-75772] N81-16730

BERNAUER, E. M.
Plasma volume, osmolality, vasopressin, and renin activity during graded exercise in man
A81-21473

BILODEAU, J. W.
The role of simulation in Space Shuttle training
A81-21726

BJORKE, O.
Partly unmanned machining
A81-19842

BOISMARE, F.
Dopaminergic agonists and conditioned avoidance response in normoxic or hypoxic rats
A81-22108

BOLDING, F. A.
Postmortem coronary atherosclerosis findings in general aviation accident pilot fatalities - 1975-77
A81-22109

BOOK, W. J.
Master-slave manipulator performance for various dynamic characteristics and positioning task parameters
A81-21024

BOOZE, C. F.
Postmortem coronary atherosclerosis findings in general aviation accident pilot fatalities - 1975-77
A81-22109

BORREL, P.
Learning and control for a compliant computer-controlled manipulator
A81-21031

BOURRIERES, J.-P.
Analysis and modeling of the cephalic response of a human operator subjected to binaural stimulation in a sound localization task
A81-21923

BOX, C. J.
Disorientation in Army helicopter operations: A general review
N81-17704

BROOKS, T. L.
Advanced control techniques for teleoperation in earth orbit
A81-22610

BROUWER, W.
An integrated training approach
A81-21727

BURR, J. C.
Evaluation of simulated radiofrequency heating procedures
[AD-A092731] N81-16735

BEST DOCUMENT AVAILABLE

A81-21023

SAMOILOV, N. G.
Dynamics of the state of redox systems in structural elements of the cerebral cortex during oxygen deficiency /cytophotometric study in vivo/
A81-19900

SANTAMARIA, L. J.
Physiological responses of human subjects wearing thermal protective clothing assemblies in varying environments
A81-22085

SCHAEFER, G.
Cardiovascular and biochemical response to simulated space flight entry
A81-22107

SCHELLER, C. E.
Development of percutaneous energy transmission systems
[PB81-109381] N81-16737

SCHULL, W. J.
2,3-diphosphoglycerate and night vision
A81-22113

SEARS, W.
An improved oxygen mask for high-altitude protection
A81-22081

SELLNER, K. G.
Phytoplankton studies and nutrient concentrations in the vicinity of the C. P. Crane Generating Station
[PB81-114746] N81-17693

SELTZER, D. S.
A hierarchical programming approach to robot assembly
A81-19841

SEM-JACOBSEN, C. W.
Brain/computer communication to reduce human error - A perspective
A81-22111

SEMENOV, D. G.
Dynamics of the state of redox systems in structural elements of the cerebral cortex during oxygen deficiency /cytophotometric study in vivo/
A81-19900

SHAFFSTALL, R.
An improved oxygen mask for high-altitude protection
A81-22081

SHAPIRO, Y.
Physiological and hematological responses to summer and winter dry-heat acclimation
[AD-A093194] N81-17695

SHERIDAN, D. J.
Premature ventricular complexes - Therapeutic dilemmas and decisions
A81-19719

SHERIDAN, T. B.
Mental workload in decision and control
A81-20499

An assessment of undersea teleoperators
[PB81-102535] N81-16744

SHOENBERGER, R. W.
Effect of body supination angle on subjective response to whole-body vibration
A81-22110

SHORT, R.
Further study for fabrication, evaluation, and testing of monolayer woven materials for space suit insulation
[NASA-CR-166140] N81-16740

SHTYKHNO, Y. M.
Hemorheological changes, the state of microcirculation, and blood acid-base balance in rats under conditions of a 30-day limiting of the motor activity
[NASA-TM-76464] N81-16719

SIAS, F. R.
Effectiveness and wearability of immersion hypothermia protection equipment
A81-22086

SNYDER, D. W.
Premature ventricular complexes - Therapeutic dilemmas and decisions
A81-19719

SNYDER, H. L.
Human visual performance and flat panel display image quality
[AD-A092685] N81-16743

SOBEL, B. E.
Premature ventricular complexes - Therapeutic dilemmas and decisions
A81-19719

The role of biochemical factors in ventricular dysrhythmia accompanying ischemia
A81-19720

SOFYANOS, T. N.
An assessment of undersea teleoperators
[PB81-102535] N81-16744

SOLOW, S. A.
Computer-aided development of control console, control panel, and display user instructions and training materials
[AD-A093891] N81-17713

SPEYER, J. L.
A stochastic differential game theory approach to human operators in adversary tracking encounters
A81-21023

STARK, E. A.
Task segmentation - An approach to simulator task fidelity
A81-21728

STEINMAN, R. M.
The effect of expectations on slow oculomotor control. III - Guessing unpredictable target displacements
A81-23097

STEPHENS, D. G.
Acceptance and control of aircraft interior noise and vibration
A81-20057

SUGA, T.
Use of an electrical resistance hygrometer to measure human sweat rates
[NASA-TM-81223] N81-17692

SUNDERMAN, F. W., JR.
Toxicology and metabolism of nickel compounds: Comprehensive report of overall activities during the three-year period from 1 December 1977 - 30 November 1980
[DOE/EV-03140/5-T1] N81-17697

SZYCHER, M.
Development of percutaneous energy transmission systems
[PB81-109381] N81-16737

T

TASHPULATOV, R. Y.
Antibodies to myofibril antigens in cosmonauts after spaceflights
[NASA-TM-76300] N81-16722

TREDICI, T. J.
Visual illusions as a probable cause of aircraft accidents
N81-17703

TRISPEL, S.
On the practice of measuring sensory thresholds: Signal detection and the adaptive method
[FB-43] N81-17710

U

UDOVICHENKO, V. I.
Hemorheological changes, the state of microcirculation, and blood acid-base balance in rats under conditions of a 30-day limiting of the motor activity
[NASA-TM-76464] N81-16719

UTSUKI, N.
Development of a secondary task method for measuring operator workload. II - A change of secondary task performance with acquisition of flying skill by Link Trainer
A81-21987

V

VARMA, P. K.
Histochemical study of lipid-like material in photochemically formed jeewanu, the protocell, with formaldehyde partially replaced by other organic sources
A81-23092

VAUGHAN, J. A.
Effects of ozone (0.30 parts per million, approximately 600 mu g/m 3) on sedentary men representative of airline passengers and cockpit crewmembers
[AD-A092268] N81-16734

VOGEL, J. H. K.
Current concepts in clinical cardiology: Proceedings of the Tenth Conference on Cardiovascular Disease, Aspen, Colo., January 15-19, 1979
A81-19711

VOGT, L.
The response of a realistic computer model for sitting humans to different types of shocks
A81-22550

VOLMIR, A. S.
Hydroelastic effects in the aorta bifurcation zone
[NASA-TM-75432] N81-16728

VOSKRESENSKII, A. D.
Heliobiological research - Present status and prospects
A81-19678

W

WAGNER, W. W., JR.
Diffusing capacity of the lung during hypoxia - Role of capillary recruitment
A81-21474

WARREN, R. G.
Development of percutaneous energy transmission systems
[PB81-109381] N81-16737

WEGMANN, H. M.
Cardiovascular and biochemical response to simulated space flight entry
A81-22107

WEIL, J. V.
Control of breathing during prolonged exercise
A81-21471

WILLIAMS, J. D.
Antidiuretic hormone excretion at high altitude
A81-22112

WILLIAMSON, S. J.
Magnetic fields of the cerebral cortex
[AD-A086288] N81-16736

WINDSOR, A. D.
An integrated training approach
A81-21727

WORTHINGTON, H.
Development of percutaneous energy transmission systems
[PB81-109381] N81-16737

Y

YAROTSKIY, A. I.
Effect of cervicolabyrinthine impulsation on the spinal reflex apparatus
[NASA-TM-76375] N81-16726

Z

ZNAMENSKIY, V. S.
Antibodies to myofibril antigens in cosmonauts after spaceflights
[NASA-TM-76300] N81-16722

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

CALIFORNIA
University of California, Berkeley
COLORADO
University of Colorado, Boulder
DISTRICT OF COLUMBIA
Library of Congress
GEORGIA
Georgia Institute of Technology, Atlanta
ILLINOIS
The John Crerar Library, Chicago
MASSACHUSETTS
Massachusetts Institute of Technology, Cambridge
MISSOURI
Linda Hall Library, Kansas City
NEW YORK
Columbia University, New York
OKLAHOMA
University of Oklahoma, Bizzell Library
PENNSYLVANIA
Carnegie Library of Pittsburgh
WASHINGTON
University of Washington, Seattle

NASA publications (those indicated by an "*" following the accession number) are also received by the following public and free libraries:

CALIFORNIA
Los Angeles Public Library
San Diego Public Library
COLORADO
Denver Public Library
CONNECTICUT
Hartford Public Library
MARYLAND
Enoch Pratt Free Library, Baltimore
MASSACHUSETTS
Boston Public Library
MICHIGAN
Detroit Public Library
MINNESOTA
Minneapolis Public Library
MISSOURI
Kansas City Public Library
St. Louis Public Library
NEW JERSEY
Trenton Public Library
NEW YORK
Brooklyn Public Library
Buffalo and Erie County Public Library
Rochester Public Library
New York Public Library
OHIO
Akron Public Library
Cincinnati Public Library
Cleveland Public Library
Dayton Public Library
Toledo Public Library
TENNESSEE
Memphis Public Library
TEXAS
Dallas Public Library
Fort Worth Public Library
WASHINGTON
Seattle Public Library
WISCONSIN
Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019

EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols "#" and "*", from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

NASA CONTINUING BIBLIOGRAPHY SERIES

NUMBER	TITLE	FREQUENCY
NASA SP-7011	AEROSPACE MEDICINE AND BIOLOGY Aviation medicine, space medicine, and space biology	Monthly
NASA SP-7037	AERONAUTICAL ENGINEERING Engineering, design, and operation of aircraft and aircraft components	Monthly
NASA SP-7039	NASA PATENT ABSTRACTS BIBLIOGRAPHY NASA patents and applications for patent	Semiannually
NASA SP-7041	EARTH RESOURCES Remote sensing of earth resources by aircraft and spacecraft	Quarterly
NASA SP-7043	ENERGY Energy sources, solar energy, energy conversion, transport, and storage	Quarterly
NASA SP-7500	MANAGEMENT Program, contract, and personnel management, and management techniques	Annually
